- Students should acquire and use knowledge of economics, mathematics, statistics, and computing flexibly in a variety of contexts, providing the foundation for success in graduate studies and careers in the public and private sectors.
- Students should be able to apply their economic tools to formulate positions on a wide range of social and economic problems and engage effectively in policy debates.
- Students should use the investigative skills necessary for conducting original economic research and participating effectively in project teams.
- Students should be able to deliver effective presentations in which they combine visual communication design with oral arguments and/or the written word.

Academic Standards and Policies

Undergraduate economics students are in the unique position of belonging to two CMU colleges, Marianna Brown Dietrich College of Humanities and Social Sciences and the Tepper School of Business. To find a detailed description of the college and program policies governing economics students, please visit the program website (https://www.cmu.edu/tepper/programs/undergraduate-economics/curriculum).

Advising

The Undergraduate Economics Program is committed to providing students with the opportunity to have meaningful and informative discussions about their academic, intellectual, and career interests with a wide range of advisors and mentors. Advising meetings are extended discussions which may address both immediate and long-term interests, concerns, and desires/needs. Students pursuing a degree in economics are assigned an economics advisor who meets with them on a regular basis. Any CMU undergraduate student interested in taking an economics courses is invited to meet with an economics advisor. To facilitate scheduling advising meetings, please use the online appointment scheduler (https://meetme.so/CMUEconomics).

The economics curriculum is cumulative; higher-level courses build upon the foundations learned in the core courses. This results in students needing to be aware of course-sequencing and the schedule of classes. Students are encouraged to meet frequently with their Undergraduate Economics Program academic advisor to ensure that their courses fulfill the requirements towards their degree and are appropriately sequenced. Successful students check-in with their advisor frequently and seek the advice of their academic advisor in selecting courses, pursuing additional degrees, and planning ahead for study abroad.

First-Year Advising

First-year students who major in economics enter Carnegie Mellon University as Dietrich College students, and are assigned a Dietrich College Academic Advisory Center (http://www.cmu.edu/hss/advisory-center) (AAC) advisor. While the AAC advisors are the advisors of record until students formally declare their majors, students who are considering majoring in economics are encouraged to contact the Undergraduate Economics Program academic advisor so that they will have access to program resources; program-level advising; and the community of faculty, staff, and students.

First–year students are **not** expected to know which degree option they wish to pursue. For this reason, the first–year curricula are quite similar for the four primary degrees awarded by the program. As students become involved in their course work, participate in the extra– and co–curricular activities sponsored by the Undergraduate Economics Program, and have discussions with faculty and economics advisors, the decision of which degree to pursue becomes evident.

Study Abroad

The Undergraduate Economics Program encourages students to consider enriching their undergraduate experience by studying abroad at some point during their undergraduate tenure. Studying abroad is widely defined as either study, work, internship, volunteer, or research opportunities abroad during your college career. Studying abroad provides students with not only more awareness of cultural literacies, but it further enhances their education by providing them with the opportunity to compare and contrast different economies and regimes. Many students consider their study abroad experience to be a watershed moment in their studies. With a bit of careful planning, study abroad can be worked into most any economics student's 4-year schedule.

Preparation for Professional School Programs

Many economics students will attend professional graduate school programs (e.g., DDS, JD, MBA, MD, MPP, M.Sc. Finance, etc.) immediately after graduation or within the first five years of earning their undergraduate degree. Students who are considering applying to professional graduate schools are encouraged to discuss their interests with an economics advisor early in their career at CMU. The economics advisors can provide structure and information that are invaluable during a student's intellectual and career exploration. Knowing that the choice of courses, student achievement, extra- and co-curricular activities, professional school entrance exam test scores (e.g., GMAT, LSAT, MCAT, etc), and faculty recommendations are key determinants of acceptance into these varied programs, the economics advisors will help you plan your time at CMU.

Preparation for Ph.D. Programs in Economics

The Undergraduate Economics Program has been successful in preparing students for admission into the nation's most competitive doctoral programs. The life of a researcher (whether in academia or in the private research sector) requires a set of skills that undergraduate students will begin to acquire through course work, research, and focused conversations with faculty and advisors. Doctoral programs in economics are looking for specific analytical skills. Key determinants of acceptance into these programs are the choice of courses, student achievement, research experience, graduate school entrance exam test scores (specifically the GRE), and faculty recommendations. Students who are considering pursuing a higher academic degree are encouraged to discuss their interests with an economics advisor early in their career at CMU. Interested students are encouraged to consider the B.S. in Economics and Mathematical Sciences curriculum.

Curriculum

In order to accommodate students' wide variety of goals, five primary degree programs are available: Bachelor of Arts in Economics, Bachelor of Science in Economics, Bachelor of Science in Economics and Mathematical Sciences (jointly administered by the Department of Mathematics and the Undergraduate Economics Program), Bachelor of Science in Economics and Statistics (jointly administered by the Department of Statistics and Data Science and the Undergraduate Economics Program), and Bachelor of Science in Economics and Politics (jointly administered by the Institute for Politics and Strategy and the Undergraduate Economics Program).

The five major degree programs have been designed to provide students with a solid understanding of the central theories and analytical tools of the field of economics, while maintaining the flexibility necessary to meet the needs of a diversity of career paths. The five degrees produce strong analytical thinkers who are able to model and analyze complex problems. Graduates of the Undergraduate Economics Program gain employment as economic analysts in both the private and public sectors; pursue advanced professional degrees in business, law, and public policy; as well as enter into Ph.D. programs in economics, statistics, finance, and related fields.

For students who major in other academic fields, additional major programs in Economics, Economics and Statistics, and Economics and Politics and a minor degree program in Economics are available.

Concentrations

The Undergraduate Economics Program offers six concentration areas which allow students to specialize in:

- Advanced Quantitative Economic Methods: For students considering a career in a field that requires expertise in both data analytics and economics, or those considering a graduate degree in economics.
- Strategy and Markets: Gain a more comprehensive perspective on the economics of modern business for a career path in consulting or industry.
- Global Markets and Finance: Essential for students interested in a career in international finance, central banking or macroeconomic consulting, this area explores the causes of financial crises, the role of the Federal Reserve in the economy, and the determination of exchange and interest rates.
- Policy and Social Impact: Understand the role of economics in healthcare, taxation, regulation, law, and education as a foundation for a career in government or industries impacted by policy making.
- Global Change and Disruption: Gain an understanding of the key trends reshaping the world economy — such as globalization and technological change — as an essential foundation for a career in strategic consulting, public policy or international organizations such as the IMF or World Bank.
- Market Design and the Digital Economy: For tech firms, consultancies, and many areas of business and public policy, market design — the new frontier of economics — is the key to success. Here, you'll explore why market arrangements succeed or fail, and how markets might be better designed.

Concentrations consist of groups of mutually reinforcing economics electives that build off the economics core curriculum. These focused sets of electives allow a student to explore a group of allied topics, and/or develop a specialized and advanced skill set appropriate for a desired career. Students are not required to complete a concentration in order to earn a degree. See the program website (https://www.cmu.edu/tepper/programs/undergraduate-economics/curriculum) for more details.

Major Degree Requirements and Sample Schedules

In addition to completing a minimum 360 units and fulfilling both the Dietrich General Education requirements and all University requirements, recipients of an undergraduate degree in economics must complete courses in mathematics, probability and statistics, writing, economic theory, and economic analysis, as well as a set of advanced electives and other specialized courses. It is important for students to realize that degree requirements are actually the "minimum" set of degree requirements. In fact, most economics students take more courses in their major than is strictly required.

Following the list of requirements for each degree are sample four-year course schedules for a student pursuing an undergraduate degree in economics. As there are many different ways of completing the requirements, students are strongly encouraged to meet with an economics advisor to tailor their courses to their own particular needs. Students are responsible for ensuring that they understand all of the program requirements and that they meet the necessary conditions for graduation. When planning course schedules, students must give consideration to all prerequisite and co-requisite requirements.

In addition to meeting university and college graduation requirements, the Undergraduate Economics Program has the additional requirement: Economics courses counting towards any economics primary degree, additional major, or minor must be completed with a grade of "C" or higher.

B.A. in Economics

The B.A. in Economics provides a strong foundation in economic analysis and quantitative methods. The curriculum's breadth incorporates the study of political, historical, and social institutions so that students may use the economic toolkit to address the current challenges humanity faces. Built into the degree is the opportunity to study political, historical, cultural, and social institutions from other CMU departments; these courses are referred to as "Special Electives". The capstone of the curriculum is the Senior Project course where students use their qualitative and quantitative skills to contribute to the body of knowledge in empirical, experimental, and/or theoretical studies. Students pursuing this degree will be well-equipped to pursue graduate work (professional and academic), enter directly into the business world, or pursue public service.

All economics courses counting towards an economics degree must be completed with a grade of "C" or higher.

B.A. in Economics Curriculum

Total Number of Units for the Major:	**157/166**

Mathematics Prerequisites (19 units)

Courses		Units
21-120	Differential and Integral Calculus Passing the MCS assessment test is an acceptable alternative to completing 21-120.	10
21-256	Multivariate Analysis	9

Sophomore Economics Colloquium (3 units)

		Units
73-210	Economics Colloquium I	3

Writing Requirement (9 units)

		Units
73-270	Professional Communication for Economists	9

Economic Theory Requirements (36 units)

		Units
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9

Quantitative Analysis Requirements (27 Units)

		Units
36-200	Reasoning with Data	9
or 36-207	Probability and Statistics for Business Applications	
or 70-207	Probability and Statistics for Business Applications	
73-265	Economics and Data Science	9
73-274	Econometrics I	9

Advanced Economics Electives (36 Units)

Students must take four advanced elective courses. Advanced elective courses are those numbered 73-300 through 73-495. Students have the option of earning a concentration (https://www.cmu.edu/tepper/programs/undergraduate-economics/curriculum/concentrations) by completing a set of interconnected electives. While a concentration area is not required for this degree, it is an additional option that allows students to explore a group of aligned topics and/or develop a specialized and advanced skill set appropriate for a desired career path. The electives required for this degree may count towards your concentration area. To fulfill a concentration, students must take four courses from the designated set of electives. Please make sure to consult an advisor when choosing these courses.

Special Electives (18 Units)

Students must take two special elective courses in the humanities and social sciences. Students should consult the degree audit system for courses that satisfy the special electives requirement. The list below is a sample of the courses that qualify as special electives; this is not a full list of qualifying courses. Students should consult an academic advisor when choosing special electives.

Course List

Sample List of Special Elective Courses		Units
19-402	Telecommunications Technology and Policy for the Internet Age	12
19-403	Policies of Wireless Systems	12
19-411	Global Competitiveness: Firms, Nations and Technological Change	9
19-421	Emerging Energy Policies	9
19-424	Energy and the Environment	9
19-443	Climate Change Science and Adaptation	9
19-425	Sustainable Energy for the Developing World	9
66-221	Topics of Law: Introduction to Intellectual Property Law	9
79-245	Capitalism and Individualism in American Culture	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-266	Russian History and Revolutionary Socialism	9
79-280	Coffee and Capitalism	9
79-283	Hungry World: Food and Famine in Global Perspective	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-300	Guns in American History: Culture, Violence, and Politics	9
79-305	Moneyball Nation: Data in American Life	9
79-310	Modern U. S. Business History: 1870 to the Present	9
79-315	Thirsty Planet: The Politics of Water in Global Perspective	9
79-320	Women, Politics, and Protest	9
79-343	Education, Democracy, and Civil Rights	9
79-383	The History of Capitalism	9
79-386	Entrepreneurs in Africa, Past, Present and Future	9
80-136	Social Structure, Public Policy & Ethics	9
80-249	AI, Society, and Humanity	9
80-305	Choices, Decisions, and Games	9
80-321	Causation, Law, and Social Policy	9
80-324	Philosophy of Economics	9
80-335	Social and Political Philosophy	9
80-348	Health, Human Rights, and International Development	9
84-310	International Political Economy	9
84-318	Politics of Developing Nations	9
84-362	Diplomacy and Statecraft	9
84-414	International and Subnational Security	9
84-387	Technology and Policy of Cyber War	9
88-411	Rise of the Asian Economies	9

Senior Work (9 Units; 18 Units for students working on an honors thesis in economics)

		Units
73-497	Senior Project	9
or 73-500 & 73-501	Tepper College Honors Thesis I and Tepper College Honors Thesis II	
or 66-501 & 66-502	H&SS Senior Honors Thesis I and H&SS Senior Honors Thesis II	

Sample Schedule for B.A. in Economics

The sample schedule below is an illustration of how students might plan their four-year schedules. This schedule has been designed to highlight the following characteristics of the degree program: 1) the work load is roughly 45-50 units per semester, hence there is no need for course overloading; and 2) room has been built into the schedule that would allow students to pursue additional degrees and/or study abroad. It is important for students to realize that degree requirements are the actually the "minimum" set of degree requirements. In fact, most economics students take more courses in their major than is strictly required.

Freshman		Sophomore	
Fall	Spring	Fall	Spring
36-200 Reasoning with Data	21-256 Multivariate Analysis	73-230 Intermediate Microeconomics	73-240 Intermediate Macroeconomics
21-120 Differential and Integral Calculus	73-103 Principles of Macroeconomics	73-210 Economics Colloquium I	73-274 Econometrics I
73-102 Principles of Microeconomics	-----	73-265 Economics and Data Science	Economics Elective
73-060 Economics: BaseCamp	-----	"Special Elective"	-----
-----*	-----	-----	-----
-----		-----	

Junior		Senior	
Fall	Spring	Fall	Spring
73-270 Professional Communication for Economists	Economics Elective	73-497 Senior Project	Economics Elective
"Special Elective"	-----	Economics Elective	-----
-----	-----	-----	-----
-----	-----	-----	-----
-----	-----	-----	-----

*In each semester, ----- represents courses that are not directly required for the major.

B.S. in Economics

The B.S. in Economics provides a strong foundation in economic theory and advanced quantitative analysis. The curriculum focuses on using "real-world" data to forecast behavior and to investigate the relationships between observed phenomenon and economic models. Combining these sophisticated economic modeling data analytic skills with our wide range of upper-level economic electives provides students with a rigorous analytical foundation that will allow them to pursue any career that interests them. The capstone of the curriculum is the Senior Project course where students use their qualitative and quantitative skills to contribute to the body of knowledge in empirical, experimental, and/or theoretical studies. Students completing this degree will be well-equipped to pursue graduate work (professional and academic) or enter directly into the business world or public service.

All economics courses counting towards an economics degree must be completed with a grade of "C" or higher.

B.S. in Economics Curriculum

Total Number of Units for the Major	**167/176**

Mathematics Requirement (29 Units)

		Units
21-120	Differential and Integral Calculus Passing the MCS assessment test is an acceptable alternative to completing 21-120.	10
21-256	Multivariate Analysis	9
or 21-259	Calculus in Three Dimensions	
21-240	Matrix Algebra with Applications	10
or 21-241	Matrices and Linear Transformations	

Sophomore Colloquium (3 Units)

		Units
73-210	Economics Colloquium I	3

Quantitative Analysis Requirements (27 Units)

		Units
73-265	Economics and Data Science	9
73-274	Econometrics I	9

B.S. in Economics and Mathematical Sciences

The B.S. in Economics and Mathematical Sciences is a collaborative effort between the Department of Mathematical Sciences and the Undergraduate Economics Program. Combining advanced mathematics with advanced economic theory is the hallmark of this curriculum. The curriculum provides students with courses that complement and develop depth of understanding of economic theory, applied economics, and applied mathematics. This degree offers an integrated curriculum, guiding students through a program of coursework that exploits and builds upon the synergies between mathematics and economics. This degree program equips students with the mathematical tools that are essential for success in Ph.D. programs in economics; mathematics; and key functional areas of business including finance, accounting, marketing, and information systems. Students pursuing this degree will be well prepared for the beginning of their research careers in academia, government, and industry. There are a limited number of student openings in this program; interested students may apply as early as their sophomore year. Acceptance into the degree program is based on academic performance, rigor of coursework, and initiative while at Carnegie Mellon. In order to graduate with the B.S. in Economics and Mathematical Sciences, students must maintain a cumulative Q.P.A. of 3.33.

All economics courses counting towards an economics degree must be completed with a grade of "C" or higher.

B.S. in Economics and Mathematical Sciences Curriculum

Total Number of Units for the Major	**239**

Economic Theory Requirements (36 Units)

		Units
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9

Quantitative Analysis Requirements (45 Units)

		Units
36-225	Introduction to Probability Theory	9
or 36-217	Probability Theory and Random Processes	
or 21-325	Probability	
36-226	Introduction to Statistical Inference	9
36-401	Modern Regression	9

73-274	Econometrics I	9
73-374	Econometrics II	9

Mathematical Sciences Requirements (85 Units)

		Units
21-120	Differential and Integral Calculus Passing the MCS assessment test is an acceptable alternative to completing 21-120.	10
21-122	Integration and Approximation	10
21-127	Concepts of Mathematics	10
21-228	Discrete Mathematics	9-12
or 15-251	Great Ideas in Theoretical Computer Science	
21-241	Matrices and Linear Transformations	10
21-259	Calculus in Three Dimensions	9-10
or 21-256	Multivariate Analysis	
or 21-268	Multidimensional Calculus	
or 21-269	Vector Analysis	
21-260	Differential Equations	9
21-355	Principles of Real Analysis I	9
21-356	Principles of Real Analysis II	9

Programming Requirement (10 Units)

		Units
15-110	Principles of Computing	10

Writing Requirement (9 Units)

		Units
73-270	Professional Communication for Economists	9

Advanced Economic Electives (27 Units)

Students must take three advanced economics elective courses. Advanced Elective courses are those courses numbered 73-300 through 73-495, (excluding 73-374 Econometrics II). Students are encouraged to work with their advisors to structure a set of courses which meet these requirements based on their particular interests, subject to course availability. Students have the option of earning a concentration (https://www.cmu.edu/tepper/programs/undergraduate-economics/curriculum/concentrations) by completing a set of interconnected electives. While a concentration area is not required for this degree, it is an additional option that allows students to explore a group of aligned topics and/or develop a specialized and advanced skill set appropriate for a desired career path. The electives required for this degree may count towards your concentration area. To fulfill a concentration, students must take four courses from the designated set of electives. Please make sure to consult an advisor when choosing these courses.

Recommended Advanced Economics Electives:

73-315	Market Design	9
73-338	Financial Crises and Risk	9
73-347	Game Theory for Economists	9
73-365	Firms, Market Structures, and Strategy	9
73-421	Emerging Markets	9

Mathematical Science Depth Electives (27 Units)

Students must take three advanced mathematics depth courses. Students are encouraged to work with their advisors to structure a set of courses which meet these requirements based on their particular interests, subject to course availability.

Recommended Mathematical Science Depth Electives:

21-292	Operations Research I	9
21-329	Set Theory	9
21-365	Projects in Applied Mathematics	9
21-366	Topics in Applied Mathematics	9
21-371	Functions of a Complex Variable	9
21-374	Field Theory	9
21-441	Number Theory	9
21-484	Graph Theory	9
21-499	Undergraduate Research Topic	9

Note: Only one of the following three courses may count towards the required Mathematical Sciences Depth Electives: 21-365, 21-366, or 21-499.

Sample Course Schedule for the B.S. in Economics and Mathematical Sciences

The sample schedule below is an illustration of how students might plan their four-year schedules. This schedule has been designed to highlight the following characteristics of the degree program: 1) the work load is roughly 45-50 units per semester, hence there is no need for course overloading; 2) room has built into the schedule that would allow students to pursue additional degrees and/or study abroad; and 3) the demands of this degree require students to carefully plan their degree program while keeping in mind the college-level and university-level graduation requirements. It is important for students to realize that degree requirements are the actually the "minimum" set of degree requirements. In fact, most economics students take more courses in their major than is strictly required.

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	15-110 Principles of Computing	21-122 Integration and Approximation	21-241 Matrices and Linear Transformations

*In each semester, ----- represents courses not directly required for the major. Please note that students pursuing the B.S. in Mathematical Sciences and Economics must fulfill the Mellon College General Education requirements and not the Dietrich College General Education requirements.

Bachelor of Science in Economics and Politics

Politics and economics are deeply interconnected. Political institutions and decision-making impact economic growth, income distribution, and many other aspects of economic life. Both fiscal and monetary policies affect the economy, but these policies are often employed with political considerations in mind and can influence political activity. Conversely, economic outcomes shape political preferences and policy choices. The overlap between these two disciplines is endless. For example, while the United Nations is often thought of in purely political terms, the Security Council can and does impose sanctions on countries- an example of an economic policy used for political change.

The Economics and Politics major is offered jointly between the Undergraduate Economics Program (https://www.cmu.edu/tepper/programs/undergraduate-economics) (UEP) and the Institute for Politics and Strategy (https://www.cmu.edu/ips) (IPS). Students are equal members of both academic units and receive advising from both units. The major will appeal to any student interested in the design, evaluation, and political implementation of policy. It will be especially attractive to students considering careers in politics, government agencies, political and business consulting, lobbying, or the law.

The B.S. in Economics and Politics is an interdisciplinary major. The major will develop the political context and underpinnings of economic policy making. It will explore how political institutions resolve the tradeoffs and disagreements associated with policymaking and how they can facilitate or impede desirable economic outcomes.

IPS strengths lie in topics like national security, grand strategy, and globalization. Economic policy is just one facet of grand strategy, through which an administration pursues domestic and international goals. This major will also address key issues such as the complementarity between the multilateral economic institutions such as the IMF and World Bank and the use of economic coercion, and enable students to understand economic statecraft more broadly. Whether coercion is successful depends not just on the levers of power but on also on variations in authoritarian regime structure, and complex linkages in the international economy. This is also important for our understanding of the relationship between international economics on human rights practices, extending even to how treaty commitments can facilitate compliance with a global initiative to combat climate change. And, not least important, there is broad recognition that the viability of the "Euro Zone" depends on whether the political-economic agreements necessary to mitigate institutional weaknesses are politically feasible or destined to failure.

Economics and Politics is available as both a primary and additional major.

Curriculum

Students must earn a grade of "C" or better in all courses taken in the Department of Economics (73-xxx).

Prerequisites

Students must complete all of the following courses.

21-120	Differential and Integral Calculus	10
or 21-112	Integral Calculus	
36-200	Reasoning with Data	9

Foundations (48 units)

Students must complete all of the following courses.

21-256	Multivariate Analysis	9
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
84-104	Decision Processes in American Political Institutions	9
84-275	Comparative Politics	9
73-210	Economics Colloquium I	3

Core (63 units)

Students must complete all of the following courses.

73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9
73-265	Economics and Data Science	9
73-274	Econometrics I	9
84-265	Political Science Research Methods	9
84-326	Theories of International Relations	9
84-310	International Political Economy	9

Communication (9 units)

Students must complete one course from the following list.

73-270	Professional Communication for Economists	9
84-250	Writing for Political Science and Policy	9

Electives (27 units)

Majors are required to take 27 units (three courses) from the elective lists below. At least one course (9 units) must be taken from Economics (73-xxx) and at least one course (9 units) must be taken from the Institute for Politics and Strategy (84-xxx). Students may complete electives through coursework in the Carnegie Mellon University Washington Semester Program (CMU/WSP) (https://www.cmu.edu/ips/cmuwsp) Politics and Public Policy elective sequence.

Economics Electives

73-328	Health Economics	12
73-332	Political Economy	9
73-338	Financial Crises and Risk	9
73-352	Public Economics	9
73-353	Economic Foundations of Regulation: Applications to Financial Markets	9
73-359	Benefit-Cost Analysis	9
73-365	Firms, Market Structures, and Strategy	9
73-367	Technology Jobs and the Future of Work	9
73-372	International Money and Finance	9
73-415	Data Driven Business and Public Policy Decision Making	9
73-421	Emerging Markets	9
73-427	Sustainability, Energy, and Environmental Economcs	9

Politics and Strategy Electives

84-308	Political Economy of Latin America	9
84-309	Political Behavior	9
84-311	International Development: Theory and Praxis	9
84-313	International Organizations and Law	9
84-318	Politics of Developing Nations	9
84-319	U.S. Foreign Policy and Interventions in World Affairs	9
84-322	Nonviolent Conflict and Revolution	9
84-323	War and Peace in the Contemporary Middle East	9
84-324	The Future of Democracy	6
84-325	Contemporary American Foreign Policy	9
84-362	Diplomacy and Statecraft	9
84-363	Comparative Legal Systems	9
84-364	Comparative Presidential Behavior: Leadership, Personality, and Decision Making	9
84-366	The American Presidency	9
84-369	Decision Science for International Relations	9
84-370	Global Nuclear Politics	9
84-372	Space and National Security	9
84-373	Emerging Technologies and the Law	9
84-380	Grand Strategy in the United States	9
84-386	The Privatization of Force	9
84-387	Technology and Policy of Cyber War	9
84-388	Concepts of War and Cyber War	6
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-393	Legislative Decision Making: US Congress	6
84-402	Judicial Politics and Behavior	6
84-405	The Future of Warfare	9
84-414	International and Subnational Security	9

CMU/WSP Politics and Public Policy Electives

84-330	The Shading of Democracy: The Influence of Race on American Politics	6
84-331	Money, Media, and the Power of Data in Decisionmaking	6
84-332	Effects of US Policy on Businesses: Perspectives of Asian Americans	6
84-333	Power and Levers for Change in Washington, DC	12
84-334	Presidential Power in a Constitutional System	6
84-336	Implementing Public Policy: From Good Idea To Reality	12
84-337	Biomedical Science Research, Policy, and Governance	6
84-340	Making Change: How Organized Interests Work in Washington	12
84-343	Language and Power: How to Understand and Use Political Speech	6
84-346	Legal Issues in Public Administration	6
84-348	Advocacy, Policy and Practice	6

Additional Electives

19-411	Global Competitiveness: Firms, Nations and Technological Change	9
19-425	Sustainable Energy for the Developing World	9
70-365	International Trade and International Law	9
70-430	International Management	9
79-280	Coffee and Capitalism	9
79-318	Sustainable Social Change: History and Practice	9
80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-321	Causation, Law, and Social Policy	9
80-335	Social and Political Philosophy	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9
88-366	Behavioral Economics of Poverty and Development	9

88-419	International Negotiation	9
88-444	Public Policy and Regulation	9

CAPSTONE (15-21 units)

Students must complete all of the following courses.

84-450	Policy Forum 12 units if taken during CMU/WSP, 6 units if taken in Pittsburgh	6
73-497	Senior Project or Senior Honors Thesis	9

SAMPLE Four Year Plan

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	21-256 Multivariate Analysis	73-210 Economics Colloquium I	73-240 Intermediate Macroeconomics
36-200 Reasoning with Data	73-103 Principles of Macroeconomics	73-230 Intermediate Microeconomics	Communication Course (84-250 or 73-270)
73-102 Principles of Microeconomics	84-275 Comparative Politics	73-265 Economics and Data Science	84-265 Political Science Research Methods
84-104 Decision Processes in American Political Institutions	Freshman Seminar	84-310 International Political Economy	73-274 Econometrics I
76-101 Interpretation and Argument	79-104 Global Histories	84-326 Theories of International Relations	Economics & Politics Elective 1
99-101 Computing @ Carnegie Mellon		Open 1	

Junior		Senior	
Fall	**Spring**	**Fall**	**Spring**
Economics & Politics Elective 2	Open 5	73-497 Senior Project or Senior Honors Thesis	84-450 Policy Forum May also be taken during the CMU/WSP
Economics & Politics Elective 3	Open 6	Open 10	Open 14
Open 2	Open 7	Open 11	Open 15
Open 3	Open 8	Open 12	Open 16
Open 4	Open 9	Open 13	Open 17

Economics and Politics students are highly encouraged to participate in the Carnegie Mellon University Washington Semester Program (CMU/WSP) (https://www.cmu.edu/ips/cmuwsp) during the junior year. Study abroad is also encouraged.

B.S. in Economics and Statistics

Samantha Nielsen, *Statistics & Data Science Lead Academic Advisor*
Kathleen Conway, *Economics Senior Academic Advisor*
Rebecca Nugent and Edward Kennedy, *Faculty Advisors*
Carol Goldburg, Executive Director, *Undergraduate Economics Program*

Statistics & Data Science Location: Baker Hall 132
statadvising@stat.cmu.edu

Economics Location: Tepper 2400
econprog@andrew.cmu.edu

The B.S. in Economics and Statistics is jointly advised by the Department of Statistics and Data Science and the Undergraduate Economics Program.

The Major in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. With joint curriculum from the Department of Statistics and Data Science and the Undergraduate Economics Program, the major provides students with a solid foundation in the theories and methods of both fields. Students in this major are trained to advance the understanding of economic issues through the analysis, synthesis and reporting of data using the advanced empirical research methods of statistics and econometrics. Graduates are well positioned for admission to competitive graduate programs, including those in statistics, economics and management, as well as for employment in positions requiring strong analytic and conceptual skills - especially those in economics, finance, education, and public policy.

All economics courses counting towards an economics degree must be completed with a grade of "C" or higher.

The requirements for the B.S. in Economics and Statistics are the following:

I. Prerequisites 38-39 units

1. Mathematical Foundations 38-39 units

Calculus

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Note: Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

Note: Taking/having credit for both 21-111 and 21-112 is equivalent to 21-120. The Mathematical Foundations total is then 48-49 units. The Economics and Statistics major would then total 201-211 units.

Linear Algebra

One of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	10
21-242	Matrix Theory	10

Note: 21-241 and 21-242 are intended only for students with a very strong mathematical background.

II. Foundations 18-36 units

2. Economics Foundations 18 units

73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9

3. Statistical Foundations 9-18 units

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data	9
36/70-207	Probability and Statistics for Business Applications	9
36-220	Engineering Statistics and Quality Control	9
36-247	Statistics for Lab Sciences	9

Note: Students who enter the program with 36-225 or 36-226 should discuss options with an advisor. Any 36-300 or 36-400 level course in Data Analysis that does not satisfy any other requirement for the Economics and Statistics Major may be counted as a Statistical Elective.

Intermediate*

Choose *one* of the following courses:

36-202	Statistics & Data Science Methods **	9
36-208	Regression Analysis	9
36-290	Introduction to Statistical Research Methodology	9
36-309	Experimental Design for Behavioral & Social Sciences	9

* Or extra data analysis course in Statistics

** Must take prior to 36-401 Modern Regression.

Advanced
Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9

36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Sequence 2 (For students beginning later in their college career)

Advanced
Choose *three* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

III. Disciplinary Core 126 units

1. Economics Core 45 units

73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9
73-270	Professional Communication for Economists	9
73-265	Economics and Data Science	9
73-274	Econometrics I	9
73-374	Econometrics II	9

2. Statistics Core 36 units

36-225	Introduction to Probability Theory *#	9

and *one* of the following two courses:

36-226	Introduction to Statistical Inference *	9
36-326	Mathematical Statistics (Honors) *	9

and *both* of the following two courses:

36-401	Modern Regression *	9
36-402	Advanced Methods for Data Analysis	9

*In order meet the prerequisite requirements for the major, a grade of C or better is required in 36-225 (or equivalents), 36-226 or 36-326 and 36-401.

#It is possible to substitute 36-217, 36-218, or 21-325 for 36-225 36-225 36-22536-225. (36-225 36-225 36-22536-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll), and 21-325 21-325 21-32521-325 is a rigorous Probability Theory course offered by the Department of Mathematics.)

3. Computing 9 units

36-350	Statistical Computing *	9

*In rare circumstances, a higher level *Statistical* Computing course, approved by your Statistics advisor, may be used as a substitute.

4. Advanced Electives 36 units

Students must take two advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-374) and two (or three - depending on previous coursework, see Section 3) advanced Statistics elective courses (numbered 36-303, 36-311, 36-315, 36-46x, 36-490, or 36-497).

Students pursuing a degree in Economics and Statistics also have the option of earning a concentration area (https://www.cmu.edu/tepper/programs/undergraduate-economics/curriculum/concentrations) by completing a set of interconnected electives. While a concentration area is not required for this degree, it is an additional option that allows students to explore a group of aligned topics and/or develop a specialized and advanced skill set appropriate for a desired career path. The electives required for this degree may count towards your concentration area. To fulfill a concentration, students must take four courses from the designated set of electives. Please make sure to consult an advisor when choosing these courses.

Total number of units for the major	**191-201 units**
Total number of units for the degree	**360 units**

Professional Development

Students are strongly encouraged to take advantage of professional development opportunities and/or coursework. One option is 73-210 Economics Colloquium I, a fall-only course that provides information about careers in Economics, job search strategies, and research opportunities. The Department of Statistics and Data Science also offers a series of workshops pertaining to resume preparation, graduate school applications, careers in the field, among other topics. Students should also take advantage of the Career and Professional Development Center.

Additional Major in Economics and Statistics

Students who elect Economics and Statistics as a second or third major must fulfill all Economics and Statistics degree requirements. Majors in many other programs would naturally complement an Economics and Statistics Major, including Tepper's undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Economics and three Statistics) that do not count for their primary major. If students do not have at least six, they typically take additional advanced data analysis or economics electives, depending on where the double counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a Major in Economics and Statistics.

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Economics and Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Economics and Statistics.

Sample Program

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

Freshman		**Sophomore**	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	36-202 Statistics & Data Science Methods	36-225 Introduction to Probability Theory	21-240 Matrix Algebra with Applications
36-200 Reasoning with Data	21-256 Multivariate Analysis	73-230 Intermediate Microeconomics	36-226 Introduction to Statistical Inference
73-102 Principles of Microeconomics	73-103 Principles of Macroeconomics	73-210 Economics Colloquium I *not required	73-240 Intermediate Macroeconomics
73-060 Economics: BaseCamp *not required	-----		73-274 Econometrics I
-----	-----	73-265 Economics and Data Science	-----

Junior		Senior	
Fall	Spring	Fall	Spring
36-350 Statistical Computing	36-402 Advanced Methods for Data Analysis	Statistics Elective	Economics Elective
36-401 Modern Regression	73-270 Professional Communication for Economists	Economics Elective	Statistics Elective
73-374 Econometrics II	-----	-----	-----
-----	-----	-----	-----
-----		-----	-----

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Prospective PhD students might add 21-127 fall of sophomore year, replace 21-240 with 21-241, add 21-260 in spring of junior year and 21-355 in fall of senior year.

Supplemental Programs

Honors Program in Economics

Outstanding students are eligible for the honors programs in both the Tepper School of Business and the Dietrich College of Humanities and Social Sciences. For more information, consult the Dietrich Honors Program website (http://www.cmu.edu/dietrich/undergraduate/programs/shp).

The Tepper Senior Honors Program in Economics (http://tepper.cmu.edu/prospective-students/undergraduate/economics/curriculum/research/senior-honors-program) provides qualified students with the opportunity to engage in original research during their senior year at Carnegie Mellon. The primary rewards of participating in the Honors Program in Economics are three-fold. First comes the satisfaction of undertaking and completing an original piece of research. Working independently or with a faculty member to identify a research question and claim ownership of its discovery process is a rewarding experience. Second is the opportunity to challenge oneself intellectually. The third advantage is the opportunity to graduate with Tepper Honors. For many, this process of intellectual inquiry and knowledge creation is the highlight and culmination of their undergraduate academic experience.

Students are invited into the Tepper Senior Honors Program in Economics during their junior year. Invitation is based on academic achievement at Carnegie Mellon University, ability to work independently, and tenacity of spirit.

Accelerated Master’s Degree Programs

Accelerated Master’s Degree programs enable exceptional students to earn both an undergraduate degree and a masters degree by remaining one additional year at Carnegie Mellon. The Heinz College of Information Systems and Public Policy offers seven professional accelerated masters degree options for CMU undergraduates: a Master of Science in Arts Management (https://www.heinz.cmu.edu/programs/arts-management-master), Master of Entertainment Industry Management (https://www.heinz.cmu.edu/programs/entertainment-industry-management-master), Master of Science in Health Care Analytics and IT (https://www.heinz.cmu.edu/programs/health-care-analytics-master), Master of Information Systems Management (https://www.heinz.cmu.edu/programs/information-systems-management-master), and Master of Science in Health Care Policy and Management (https://www.heinz.cmu.edu/programs/health-care-policy-management-master), Master of Science in Information Security Policy and Management (https://www.heinz.cmu.edu/programs/information-security-policy-management-master), and Master of Science in Public Policy and Management (https://www.heinz.cmu.edu/programs/public-policy-management-master). The Tepper School of Business offers one accelerated professional degree, a Master in Business Administration.

Dual Degree in Economics

A student pursuing a primary degree outside of the department may obtain a dual degree by completing all of the requirements for the B.S. in Economics or the B.S. in Economics and Statistics along with the Dietrich College general education requirements. In addition, the student’s total units completed must be at least 90 units in excess of the requirement for the student’s other degree(s) or at least 450 units, whichever is greater. Interested students should meet with an economics advisor.

Additional Major in Economics Curriculum

All university students are eligible to pursue an additional major in economics in conjunction with a major in any department in the university other than economics. The requirements for the Additional Major in Economics are the same as those for the B.S. in Economics, except that the Dietrich College General Education requirements are waived. In order to avoid “double counting” issues, students are encouraged to meet with an economics advisor. When courses are shared across degrees, students pursuing an Additional Major in Economics are asked to take additional advanced economics electives.

Additional Major in Economics and Statistics Curriculum

All university students are eligible to pursue a major in economics and statistics in conjunction with a major in any department in the university other than statistics or economics. The requirements for the Additional Major in Economics in Statistics are the same as those for the B.S. in Economics and Statistics, except that the Dietrich College General Education requirements are waived. In order to avoid “double counting” issues, students are encouraged to meet with an economics or statistics advisor. When courses are shared across degrees, students pursuing an Additional Major in Economics and Statistics are asked to take additional advanced economics or statistics electives.

Additional Major in Economics and Politics Curriculum

All university students are eligible to pursue a major in economics and politics in conjunction with a major in any department in the university other than economics or the Institute for Politics and Strategy. The requirements for the Additional Major in Economics in Politics are the same as those for the B.S. in Economics and Politics, except that the Dietrich College General Education requirements are waived. In order to avoid “double counting” issues, students are encouraged to meet with an economics or Institute for Politics and Strategy advisor. When courses are shared across degrees, students pursuing an Additional Major in Economics and Politics are asked to take additional electives.

Minor in Economics

In addition to preparing students to be better informed global citizens and consumers, the Minor in Economics provides students with the economic and data analytical toolkit that is the foundation of business/organizational decision-making.

All university students are eligible to pursue the Minor in Economics in conjunction with a major in any other department in the university. In order to avoid “double counting” issues, students are encouraged to meet with an economics advisor. When courses are shared across degrees, students pursuing a minor in Economics are asked to take additional advanced economics electives.

All economics courses counting towards the minor must be completed with a grade of "C" or higher.

Minor in Economics (Total Number of Units for the Minor: 82)

Mathematics Requirements (10 Units)

		Units
21-120	Differential and Integral Calculus	10

Economic Theory Requirements (27 Units)

		Units
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
73-160	Foundations of Microeconomics: Applications and Theory *	9

*Students may choose to replace 73-160 with 73-230 Intermediate Microeconomics or 73-240 Intermediate Macroeconomics. Most of the advanced economics electives require 73-230 and/or 73-240. Please note that 21-256 is a pre-requisite for 73-230.

Quantitative Analysis Requirements (18 Units)

The quantitative analysis path is often determined by the major requirements. The sequence is designed to give students an understanding of probability theory, regression analysis, and quantitative economic analysis. Students are encouraged to talk with an economics advisor to determine which requirements best complement their primary fields of study.

Option One		Units
36-200	Reasoning with Data	9
or 36-207	Probability and Statistics for Business Applications	
or 70-207	Probability and Statistics for Business Applications	
73-265	Economics and Data Science	9

Option Two		
36-220	Engineering Statistics and Quality Control	9
73-265	Economics and Data Science	9

Option Three		
36-217	Probability Theory and Random Processes	9
or 36-225	Introduction to Probability Theory	
73-265	Economics and Data Science	9

Advanced Economics Electives (27 Units)

Students must take three advanced elective courses. Advanced elective courses are those numbered 73-3xx through 73-49x. Students are encouraged to work with their economics advisor to structure a set of courses to meet these requirements based on their particular interests, subject to course availability.

Faculty

LAURENCE ALES, Associate Professor of Economics – Ph.D., University of Minnesota; Carnegie Mellon, 2008–

JAMES A. BEST, Assistant Professor of Economics – Ph.D., University of Edinburgh; Carnegie Mellon, 2018–

AISLINN BOHREN, Associate Professor of Economics – Ph.D., University of California, San Diego; Carnegie Mellon, 2018–

DAVID CHILDERS, Assistant Professor of Economics – Ph.D., Yale University; Carnegie Mellon, 2016–

KAREN B. CLAY, Professor of Economics and Public Policy, H. J. Heinz III College – Ph.D., Stanford University; Carnegie Mellon, 1998–

ROBERT M. DAMMON, Dean; Professor of Financial Economics – Ph.D., University of Wisconsin; Carnegie Mellon, 1984–

TIMOTHY P. DERDENGER, Associate Professor of Marketing and Strategy – Ph.D., University of Southern California; Carnegie Mellon, 2009–

KENNETH B. DUNN, Professor of Financial Economics, Emeritus – Ph.D., Purdue University; Carnegie Mellon, 1979–

DENNIS N. EPPLE, Thomas Lord University Professor of Economics – Ph.D., Princeton University; Carnegie Mellon, 1974–

SELMAN EROL, Assistant Professor of Economics – Ph.D., University of Pennsylvania; Carnegie Mellon, 2016–

CHRISTINA FONG, Senior Research Scientist in Social and Decision Sciences, Dietrich College of Humanities and Social Sciences – Ph.D., University of Massachusetts; Carnegie Mellon, 2001–

JOHN GASPER, Associate Teaching Professor of Economics – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2010–

MARTIN GAYNOR, E.J. Barone University Professor of Economics and Health Policy, H. J. Heinz III College – Ph.D., Northwestern University; Carnegie Mellon, 1995–

MARVIN GOODFRIEND, Friends of Allan Meltzer Professorship; Professor of Economics – Ph.D., Brown University; Carnegie Mellon, 2005–

BURTON HOLLIFIELD, Head, B.S. in Business Administration Program; PNC Professor of Finance; Professor of Financial Economics – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1999–

KARAM KANG, Assistant Professor of Economics – Ph.D., University of Pennsylvania; Carnegie Mellon, 2012–

ONUR KESTEN, Associate Professor of Economics – Ph.D., University of Rochester; Carnegie Mellon, 2005–

ALEXEY KUSHNIR, Assistant Professor of Economics – Ph.D., Pennsylvania State University; Carnegie Mellon, 2014–

FINN KYDLAND, The Richard P. Simons Distinguished Professorship; University Professor of Economics; Nobel Laureate (2004) – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1977–

REBECCA LESSEM, Assistant Professor of Economics – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2011–

BENNETT T. MCCALLUM, H. J. Heinz Professor of Economics, Emeritus – Ph.D., Rice University; Carnegie Mellon, 1981–

ROBERT A. MILLER, Richard M. Cyert and Morris DeGroot Professor of Economics and Statistics – Ph.D., University of Chicago; Carnegie Mellon, 1982–

NICHOLAS MULLER, Associate Professor of Economics, Engineering, and Public Policy – Ph.D., Yale University; Carnegie Mellon, 2017–

ANH NGUYEN, Assistant Professor of Economics – Ph.D., Columbia University; Carnegie Mellon, 2018–

JOHN R. O'BRIEN, Associate Dean, Carnegie Mellon University-Qatar; Associate Professor of Accounting and Experimental Economics – Ph.D., University of Minnesota; Carnegie Mellon, 1984–

MARYAM SAEEDI, Assistant Professor of Economics – Ph.D., University of Minnesota; Carnegie Mellon, 2016–

ALI SHOURIDEH, Assistant Professor of Economics – Ph.D., University of Minnesota; Carnegie Mellon, 2016–

CHRISTOPHER SLEET, Head, Economics Programs; Professor of Economics – Ph.D., Stanford University; Carnegie Mellon, 2005–

FALLAW B. SOWELL, Associate Professor of Economics – Ph.D., Duke University; Carnegie Mellon, 1988–

CHESTER S. SPATT, Pamela R. and Kenneth B. Dunn Professor of Finance – Ph.D., University of Pennsylvania; Carnegie Mellon, 1979–

STEPHEN E. SPEAR, Professor of Economics – Ph.D., University of Pennsylvania; Carnegie Mellon, 1982–

V. EMILY STARK, Assistant Teaching Professor of Business Communications – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2013–

CHRISTOPHER I. TELMER, Associate Professor of Financial Economics – Ph.D., Queen’s University (Canada); Carnegie Mellon, 1992–

SHU LIN WEE, Assistant Professor of Economics – Ph.D., University of Maryland; Carnegie Mellon, 2014–

SEVIN YELTEKIN, Senior Associate Dean, Education; Professor of Economics – Ph.D., Stanford University; Carnegie Mellon, 2005–

ARIEL ZETLIN-JONES, Associate Professor of Economics – Ph.D., University of Minnesota; Carnegie Mellon, 2012–

Visiting Faculty

CHARLES ZHENG, Visiting Professor of Economics – Ph.D., University of Minnesota; Carnegie Mellon, 2019–

Adjunct Faculty

CAROL B. GOLDBURG, Executive Director, Undergraduate Economics Program; Adjunct Professor of Economics – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2005–

MARGARITA PORTNYKH, Adjunct Professor of Economics – Ph.D., Clemson University; Carnegie Mellon, 2018–

Undergraduate Economics Program Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

73-060 Economics: BaseCamp
Fall: 3 units
This short course will launch you into the economics intellectual space and get you thinking like an economist. Through a series of presentations by some of CMU's great economics thinkers you will learn how economic reasoning harnessed to data can lead to better policy design and better business decision making. Presentations may cover the economics of bitcoin and crypto-currency, online market design, financial crises, the future of work, how to become involved in economics research, healthcare, the environment, and other topics. The presentations will be curated by one of CMU's research economists and there will be plenty of opportunities for discussion and debate. The course will also introduce you to the CMU approach to economics and map out the CMU economics major landscape.

73-102 Principles of Microeconomics
Fall and Spring: 9 units
A one-semester course that teaches the fundamentals of microeconomics. Students will learn how microeconomic analysis can explain market successes, market failures, and how government intervention might improve outcomes. In addition to an investigation of firm behavior and consumer behavior, attention will be paid to: Game Theory, Behavioral Economics, Economics of Time and Risk, Economics of Information, Experimental Economics, and Auctions and Market Design. Students will also learn how to integrate basic data analysis and statistics. Not open to students who have received credit for 73-100. (Lecture, 2 hours; Recitation, 1 hour).

73-103 Principles of Macroeconomics
All Semesters: 9 units
A one-semester course that teaches the fundamentals of macroeconomics. Students will learn how macroeconomic analysis can explain national economic activity and how government intervention might stabilize an economy. Topics include: defining and measuring national wealth, economic growth, credit markets, unemployment, interest rates, inflation, and the monetary system. Additional emphasis will be paid to: long-term economic development, political economy, financial crises and topics that are central to contemporary macroeconomic debates such as the impact of technological change, migration, and trade on the macroeconomy. Students will access macroeconomic databases, and then use basic statistics to describe and isolate empirical patterns in macro-data. Not open to students who have received credit for 73-100. (Lecture, 2 hours; Recitation, 1 hour).
Prerequisite: 73-102 Min. grade C

73-111 Internship I
All Semesters
The goal of this course is for you to reflect critically and constructively on your internship and to help you identify a path that will allow you to build on your internship experiences. By permission of the Undergraduate Economics Program. Open only to declared Economics, Economics and Mathematical Sciences, and Economics and Statistics majors.

73-112 Internship II
All Semesters: 3 units
The goal of this course is for you to reflect critically and constructively on your internship and to help you identify a path that will allow you to build on your internship experiences. By permission of the Undergraduate Economics Program. Open only to declared Economics, Economics and Mathematical Sciences, and Economics and Statistics majors.

73-113 Internship III
All Semesters: 3 units
The goal of this course is for you to reflect critically and constructively on your internship and to help you identify a path that will allow you to build on your internship experiences. By permission of the Undergraduate Economics Program. Open only to declared Economics, Economics and Mathematical Sciences, and Economics and Statistics majors.

73-160 Foundations of Microeconomics: Applications and Theory
Spring: 9 units
Intermediate level microeconomics stresses individual economic decision making in the context of consumer behavior, and firm behavior, and examines in detail how these behaviors interact in competitive market settings to answer the fundamental economic questions of what gets produced, how it gets produced, and who gets the output. These component theories of economic behavior are the building blocks of higher level economic analysis, as well as the basis for examining empirically-motivated deviations from classical economic predictions. As such, most of the course will be methodological in its focus, although many of the problems in the weekly assignments will involve everyday personal and business applications. The experiments we do will also give students hands-on experience with the phenomena that economic theories try to explain. (Lecture, 3 hours: Recitation: 1 hour). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 21-120 and (73-102 Min. grade C or 73-100 Min. grade C)

73-210 Economics Colloquium I
Fall: 3 units
Economics majors meet weekly for discussions about current research by faculty or students, presentations on economics from economists outside academia, and expository talks on selected economics topics not part of the usual curricula. The colloquium provides students with opportunities to grow personally and intellectually by introducing them to campus resources (including special interest to undergraduates such as preparation for graduate school) and using the economic toolbox to examine current economic topics in the press. It is recommended that students take this course during the sophomore year so that economics majors realize the range of resources that exist on campus. (Colloquium, 1 hour)

73-230 Intermediate Microeconomics
Fall and Spring: 9 units
This course is a calculus-based study of microeconomics. Topics in partial equilibrium analysis include supply and demand, consumer theory, theory of the firm, profit maximizing behavior, monopoly theory, and perfect competition. The course concludes with an introduction to general equilibrium analysis and the welfare laws. (Lecture, 3 hours; Recitation, 1 hour). Minimum grade of "C" required in all economics pre-requisite courses. Not open to first year student during S18.
Prerequisites: (21-268 or 21-269 or 21-256 or 21-259) and (73-100 Min. grade C or 73-102 Min. grade C)

73-240 Intermediate Macroeconomics
Fall and Spring: 9 units
Through macroeconomic models built upon microeconomic foundations, insights are developed into economic growth processes and business cycles. Topics include aggregation and measurement, national income, business cycle measurement, economic welfare theorems and social inefficiencies, the effect of government fiscal policy upon employment and productivity, and the relationship between investment, interest rates and economic growth. (Lecture, 3 hours; Recitation, 1 hour). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-256 and 73-100 Min. grade C) or (21-256 and 73-102 Min. grade C and 73-103 Min. grade C) or (73-100 Min. grade C and 21-259) or (21-259 and 73-103 Min. grade C and 73-102 Min. grade C)

73-255 Independent Study in Economics
Fall and Spring
The Independent Study course in economics allows students to pursue their own research interests in any of a variety of topics in economics. A typical independent study course involves a semester long project under the supervision of an appropriate faculty advisor. The nature and scope of the project are determined by the student and faculty advisor; the project proposal must be approved by an Undergraduate Economics Program staff member. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 21-120 and 73-160 Min. grade C

73-258 Developing Blockchain Use Case
Intermittent: 6 units
Blockchains, or distributed ledger and consensus technologies, hold tremendous promise for improving markets and organically handling private, secure data. As CMU develops its own blockchain and token—-CMU Coin—-a central concern is to determine the set of applications that such technology would be most useful for. This course is designed for students to propose and, potentially, develop applications or use cases for a campus blockchain. http://tinyurl.com/cmucoincourse The course begins with a brief introduction to blockchain using Bitcoin as an example of a blockchain protocol. We will examine the market failure Bitcoin was intended to resolve as well as the role of cryptography and distributed systems in enabling this new technology to create societal value. The course will go on to discuss the boundaries of the role of cryptography in blockchain. Next, we will use these tools to evaluate existing, real-world blockchain use cases with an eye towards developing our own applications of these emerging technologies. Along the way, we will learn practical development skills in distributed ledger technologies to understand blockchain programming and application development. Finally, students will propose their own blockchain use cases for CMU's own proprietary blockchain. No formal prerequisites, but familiarity with programming is highly recommended.

73-265 Economics and Data Science
Fall: 9 units
This course is at the intersection of economic analysis, computing and statistics. It develops foundational skills in these areas and provides students with hands-on experience in identifying, analyzing and solving real-world data challenges in economics and business. Students will learn the basics of database and data manipulation, how to visualize, present and interpret data related to economic and business activity by employing statistics and statistical analysis, machine learning, visualization techniques. Students will also be taught a programming language suitable for data science/analysis. Databases will include leading economic indicators; emerging market country indicators; bond and equity returns; exchange rates; stock options; education and income by zip code; sales data; innovation diffusion; experimental and survey data and many others. Applications will include analyzing the effectiveness of different Internet pricing strategies on firm sales, the impact of taking online classes on a worker's earnings, the relationship between regional employment and trade policies; constructing investment risk indices for emerging markets; predicting employee productivity with machine learning tools; assessing health (sleep and exercise) improvements associated with wearable technologies (e.g. FitBit). Additionally, the course will provide students with communication skills to effectively describe their findings for technical and non-technical audiences. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 21-120 and (36-200 Min. grade C or 36-201 Min. grade C) and (73-100 Min. grade C or 73-102 Min. grade C)

73-270 Professional Communication for Economists
Fall and Spring: 9 units
A writing course specifically designed for third-year Economics majors and additional majors. Students gain experience with technical writing techniques and skills needed for both their senior thesis and their eventual professional careers. The course emphasizes both individual and group projects. (Seminar, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 76-101 and (73-230 Min. grade C or 73-240 Min. grade C)

73-274 Econometrics I
Spring: 9 units
This course will provide an introduction to the analysis of economic field data. The first part of the course will discuss how data is generated and how this affects the inferences we can make. In particular, we will look at the difficulties of working with field data and learn how non-random sampling leads to poor inferences. We will then move on to some simple statistical techniques, in particular OLS and its extensions as well as Maximum Likelihood Estimators. We will also learn about the large sample properties of these estimators. At the end of the course, students should be able to understand what inferences can be made with field data and some basic statistical techniques that can be used to uncover patterns in the data. (Lecture, 3 hours; Recitation, 1 hour). Pre-reqs for those entering Fall 2018 and later: (21256 or 21259 or 21268 or 21269) and (73265) and (73230 or 73240). Students pursuing the ECOMTH or MTHECO degrees may enroll in 73-274 after the completion of 36-225. Minimum grade of "C" required in all economics and statistics pre-requisite courses.
Prerequisites: (21-256 or 21-259 or 21-268 or 21-269) and 73-265 Min. grade C and (73-240 Min. grade C or 73-230 Min. grade C)

73-315 Market Design
Spring: 9 units
The market design class is going to cover three main subjects: matching, auctions, and, time allowing, marketplaces. Matching topics may include: Two-Sided Matching and Medical Residents House Allocation and Kidney Exchange School Choice Law Clerks and College Early Admission Auction/ Marketplace topics may include: Designing Optimal Auctions Common Value Auctions Multi-Unit Auctions and Treasury Auctions Multi-Item Auctions and The Assignment Model Sponsored Search Auctions The FCC and Simultaneous Ascending Auctions Package Auctions and Radio Spectrum Introduction to the Economics of Platforms Internet Platforms: e-Commerce Internet Markets: Advertising (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-257 or 21-269 or 21-256 or 21-268) and 73-230 Min. grade C

73-327 Advanced Topics In Macroeconomics And Real Business Cycles
Intermittent: 9 units
For analysts and decision makers in a variety of positions, such as business managers and government policy makers, a thorough understanding of the economy as a whole helps to make well-informed decisions. Examples of important knowledge about the economy are its sources of growth, the main impulses that cause the economy to fluctuate over time and enter into booms and recessions, the way in which these impulses propagate over time, and the state of the economy in general. The main objective of this course is to lay the foundation for such an understanding and present a framework within which we can (and will) evaluate a variety of aggregate phenomena. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-269 or 21-256 or 21-259) and 73-240 Min. grade C

73-328 Health Economics
Fall: 12 units
This course will teach the student to use economic analysis to understand critical issues in health care and and health policy. We will address issues such as the following: 1. What factors best explain the level and rate of growth of U.S. health expenditures? 2. Does the recent high rate of growth of U.S. health care expenditures make U.S. firms less competitive in international markets? 3. What are some of the likely consequences (intended and unintended) of the proposed reforms to Medicare? 4. Can physicians induce demand for their services? 5. What are the impacts of managed care on the health care system? 6. Do strong affiliations between physicians and health plans hurt competition? (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses. Junior standing required.
Prerequisites: 21-120 and (73-230 Min. grade C or 73-160 Min. grade C)

73-332 Political Economy
Spring: 9 units
The Political Economy course looks at how groups within society organize for self-governance. The course will begin with an overview of the ways groups of individuals organize for collective action by examining different types of political institutions, the role these institutions play in different contexts, and the economic and strategic micro-foundations that give rise to these institutions. We will then examine the empirical evidence supporting this taxonomy, leading to a more detailed consideration of institutions that moderate social conflicts. The next part of the course examines basic results in social choice theory: the Condorcet paradox, Arrow's Impossibility Theorem, majority rule, median voter theories, and modern treatments of probabilistic voting models that allow for strategic behavior, misrepresentation of preferences, and policy manipulation. From this basis for understanding collective choice mechanisms, we will then examine how institutions foster cooperation, looking in detail at problems of public goods allocation, redistribution of income, the organization of clubs - interest groups and lobbying associations —in the private sector, and the organization of legislative activities in the public sector. In our examination of voting and electoral mechanisms, we will look at practical applications of the theory to problems of gerrymandering, voter suppression, and propaganda that feature prominently in contemporary political discourse.
Prerequisites: 73-230 Min. grade C and (84-275 Min. grade C or 84-104 Min. grade C)

73-338 Financial Crises and Risk
Fall: 9 units
This course provides an in-depth examination of the causes of financial crises as well as what governments can do to prevent them or at least reduce their cost. The course is designed to provide an understanding of individual attitudes towards risk and individual decision making about savings and investment under uncertainty, and to use this understanding to evaluate the various economic roles played by financial institutions in helping individuals manage risk, especially those roles which may lead to economic instability and crises. In addition, the course may cover bubbles and swindles, especially when these spillover to the broader macroeconomy; the role of information in banking in normal times and in bank runs; crisis resolution techniques; and the extensive history of attempts to improve regulation so as to reduce the frequency and cost of crises. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-269 or 21-259 or 21-256) and 73-230 Min. grade C and 73-240 Min. grade C

73-341 Within the Firm: Managing through Incentives
Spring: 9 units
We are living in an exciting age of information and knowledge when inspiring employees with a firm becomes increasingly more important Aligning the objectives of workers, managers, and owners by providing them with appropriate incentives becomes an emerging paradigm in the modern business world. In this course we learn how to reason about incentives both between managers and employees, managers and owners, and within a team of co-workers. We cover a broad range of topics including principle-agent problem, moral hazard, asymmetry of information, incentive in teams, collective decision making, and repeated interactions. These theoretical underpinnings will be illustrated with actual business experience and case studies. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-259 or 21-269 or 21-256) and (36-225 or 36-220 or 36-200 or 36-217) and 73-230 Min. grade C

73-347 Game Theory for Economists
Fall: 9 units
An introduction to the theory of non-cooperative games with an emphasis on economic applications. After an initial examination of two-person, zero-sum games, the notion of a Nash equilibrium in an n-person, non-cooperative game is considered. Existence of and refinements to the equilibrium concept are discussed in the context of both normal and extensive form games. Economic applications may include various topics, including Cournot and Bertrand oligopoly models, general competitive exchange equilibrium, and free rider problems. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-269 or 21-259 or 21-256) and 73-230 Min. grade C

73-348 Behavioral Economics
Spring: 9 units
This course introduces students to behavioral economics which is a subfield of economics that incorporates insights from other social sciences, such as psychology, into economic models and aims to explain the anomalies challenging some of the classical economic models. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-256 or 21-259 or 21-268 or 21-269) and 73-230 Min. grade C

73-352 Public Economics
Fall: 9 units
In this course, students analyze the role of governments in market economies and their impact on the behavior and welfare of citizens. Reasons for government intervention in markets are examined in light of some of the economic challenges faced by modern societies in an increasingly globalized marketplace. Topics include: taxation and expenditure policies, externalities and market failure, social security, public assistance and income redistribution programs. There will also be some coverage of the role of local governments in the economy with respect to such issues as crime, urban development and education. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-269 or 21-259 or 21-256) and 73-230 Min. grade C

73-353 Economic Foundations of Regulation: Applications to Financial Markets
Spring: 9 units
The financial crisis has focused attention on the role of regulation for our financial system and the broader economy. The course will address the foundations of regulation (?why regulate??) from various perspectives within the context of a market economy, highlighting the sources of "market failure" (such as externalities, adverse selection, and natural monopoly) and potential remedies (such as taxes and fees, disclosure, price regulation, guarantees). The conflicting goals among regulators (and why we have multiple regulators) and their impact on the meaning of regulation will be considered along with regulatory competition/arbitrage. Portions of the course will tackle relatively broad questions such as: Why regulate? What is the law of unintended consequences? What is the objective of a policy advocate? Are regulators and regulatory policies a systemic risk? Are our markets rigged? How can regulators enhance the predictability and credibility of their policies? How costly were government guarantees during the financial crisis? Should we bar insider trading? Should regulations be determined and motivated based upon cost-benefit analysis? How can we evaluate the success or failure of particular regulations and whether they have achieved their objectives? How does the Dodd-Frank Act promote financial stability? What basic aspects of the financial crisis did Dodd-Frank not address? (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-269 or 21-259 or 21-256) and 73-230 Min. grade C

73-359 Benefit-Cost Analysis
Intermittent: 9 units
The evaluation of public private sector projects. The theory of benefit-cost analysis and related techniques, such as cost-effectiveness analysis. Attention is given to such issues as valuing goods and services that are not normally traded in the marketplace (e.g., the value of an individuals life) and the social rate of discount. Applications are considered in detail. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-256 or 21-259 or 21-269) and 73-230 Min. grade C

73-365 Firms, Market Structures, and Strategy
Fall: 9 units
This course is concerned with the economic analysis of industrial markets that are not perfectly competitive. The effects of imperfect competition on firms' decisions (pricing, location, advertising, research and development, among others) are reviewed. Implications of these effects in terms of public policy are also discussed from a variety of perspectives. Finally, applications to actual markets are considered. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-256 or 21-259 or 21-269 or 21-268) and 73-230 Min. grade C

73-366 Designing the Digital Economy
Spring: 9 units
This class analyzes the economics of e-commerce and technology. It will identify the critical features that differentiate the technology firms from traditional industries, and examine the implications for business strategy. The class will discuss topics such as network effects, switching costs, and platform markets. To complement the economic theory, we will also consider a case study of a firm each week. These have three aims: to provide applications for the concepts developed in the lectures; to inform you about different industries; and to help develop your written, rhetorical and presentation skills. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-259 or 21-269 or 21-268 or 21-256) and 73-230 Min. grade C and (70-208 or 73-265 Min. grade C or 73-274 Min. grade C or 73-374 Min. grade C or 73-407 Min. grade C or 36-202 or 36-208 or 36-220 or 36-226)

73-367 Technology Jobs and the Future of Work
Spring: 9 units
The aim of this course to provide students with an in-depth analysis of the US labor market and what role technology has in shaping labor market outcomes. This course will look at the factors influencing wage returns, the outcomes of job-search and also require students to undertake a hands-on analysis of data. Topics of interest are as follows: 1. What affects wage outcomes of workers? 2. What's happening to the labor share and what are the reasons for its decline? 3. What is the role of comparative advantage and how has increasing automation changed the returns to job-search for some individuals? 4. What is job polarization and what are the factors affecting the mobility of workers between occupations and jobs? (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-259 or 21-256 or 21-269) and 73-230 Min. grade C and 73-240 Min. grade C

73-372 International Money and Finance
Spring: 9 units
The course introduces students to a micro-founded model of the global monetary system. The model is employed to assess the roles of money, banking, and central banking in the management of inflation, employment, and financial stability. Interest rates, the international exchange rate, the trade balance, and international capital flows are explored in terms of the model. The model is used to address controversial issues in international trade and financial relations, as well as current macroeconomic stabilization problems in China, the Euro area, the United States, and elsewhere. Theoretical points are illustrated with references to historical central bank practices from around the world in recent decades. The course concludes with student briefings on current central bank policies from around the world. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-269 or 21-256 or 21-259) and 73-240 Min. grade C

73-374 Econometrics II
Fall: 9 units
The material covered in this course extends from the material covered in Econometrics I (73-274). The course will include both the theory behind the methods and a hands-on analysis of actual data, providing students the tools for both research and industry jobs. Theories and methodologies covered will include: nonlinear regression models, qualitative response regression models, panel data estimators, simultaneous-equation models, and time series. (Lecture, 3 hours; Recitation, 1 hour). Minimum grade of "C" required in all economics and statistics pre-requisite courses.
Prerequisites: (21-268 or 21-269 or 21-256 or 21-259) and 73-230 Min. grade C and 73-274 Min. grade C

73-395 Independent Study in Economics
Fall and Spring
The Independent Study course in economics allows the student to pursue his or her own research interests in any of a variety of topics in economics. A typical independent study course involves a semester long project under the supervision of an appropriate faculty advisor. The nature and scope of the project are determined by the student and faculty advisor; the project proposal must be approved by an Undergraduate Economics Program staff member. Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-268 or 21-259 or 21-256 or 21-269) and (73-240 Min. grade C or 73-230 Min. grade C)

73-408 Law and Economics
Intermittent: 9 units
This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such aas regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differ from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 21-120 and (73-230 Min. grade C or 73-160 Min. grade C)

73-415 Data Driven Business and Public Policy Decision Making
Intermittent: 9 units
In this course students will learn to leverage data to inform business and policy decisions. The course will teach students various methods for data description, including techniques of data visualization and statistical techniques. Students will learn how to assess the precision of estimation techniques. The final part of the course covers examples taken from epidemiology, economics, business and public policy. (Lecture, 3 hours: Recitation: 1 hour). Minimum grade of "C" required in all economics and statistics pre-requisite courses.
Prerequisites: (21-259 or 21-269 or 21-256 or 21-268) and 73-230 Min. grade C and 73-265 Min. grade C

73-421 Emerging Markets
Fall: 9 units
The goal of the course is to study the economic and institutional forces that spur or hinder business activity and growth in emerging economies. The course is designed to provide both quantitative and theoretical foundations for the study of emerging markets. On the quantitative side, the course will introduce students to the empirical analysis of the growth forces and obstacles facing emerging markets by providing numerous hands-on opportunities using real-world data. On the theory side, the course will provide an overview of fiscal, trade and exchange rate policies adopted in emerging economies. The course will focus on successful emerging economies such as India, China, S. Korea and Ireland with broader lessons and comparisons drawn from developed countries. The course will also look at distressed economies, such as North Korea and Venezuela analyzing the challenges and opportunities faced by these developing nations today. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-256 or 21-259 or 21-268 or 21-269) and 73-240 Min. grade C

73-423 Forecasting for Economics and Business
Spring: 9 units
Governments forecast economic indicators (e.g., GDP, job growth, etc.); businesses forecast sales; portfolio managers forecast asset return; the list goes on. Accurate forecasts are critical to robust organizational decision-making. This course will introduce students to modern methods for forecasting in economic and business applications. Topics covered include Bayesian, statistical, and online learning approaches to forecast construction and assessment, univariate and multivariate time series models and algorithms, and principled combination of multiple methods and data sources along with subject matter expertise to improve performance. Methods will be motivated by applications in macroeconomics, technology, marketing, and finance, with cases drawn from forecasting processes in a variety of business and government organizations. Students will implement forecasting methods in R, including in a real data forecasting competition.
Prerequisites: (21-269 or 21-268 or 21-259 or 21-256) and (73-230 Min. grade C or 73-240 Min. grade C or 73-274 Min. grade C)

73-427 Sustainability, Energy, and Environmental Economcs
Fall: 9 units
Topics related to sustainability and the environment are increasingly important to businesses, policymakers, and the general public. This course applies the tools of economic analysis to the problems of environmental protection, natural resource management, and energy production and use. The course will begin by introducing students to how an economist approaches problems of market failure commonly found in environmental contexts. Next, we will explore models that characterize solutions to such environmental issues. We will then address questions regarding measurement, policy design, and, finally, we will apply the tools that we have developed during the semester to the problems of climate change, and the optimal management of non-renewable resources. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-256 or 21-259 or 21-268 or 21-269) and 73-230 Min. grade C

73-469 Global Electronic Markets: Economics and the Internet
Fall: 9 units
The information revolution brought about by the Internet is having a dramatic impact on the organization of economic activity. Long-term contractual relationships that once governed corporate procurement are being dismantled as manufacturers use the Internet to market directly to the public. New transportation networks that used to simply move goods from point A to point B are evolving into dynamic inventory pipelines that allow manufacturers to track and even reroute shipments in real time. At the same time, individuals are making use of sophisticated search engines to comparison shop at a scale that would have been physically exhausting even five years ago. We will use the basic tools of economic analysis to understand how and why the changes in information technology are reshaping the economic landscape. (Lecture, 3 hours). Minimum grade standard of "C" applies only to economics courses.
Prerequisites: (21-259 or 21-256 or 21-269 or 21-268) and (73-160 Min. grade C or 73-230 Min. grade C)

73-476 American Economic History
Fall: 9 units
The study of economic history provides important perspective on current economic institutions and policies. A failure to understand the historical evolution of economic institutions or the variety of past economic experience is perhaps the worst shortcoming of many economists. The study of economic history provides an opportunity to test currently fashionable theories against data different from those used in their construction. In fact, this is a course in applied economics. The theories developed in the intermediate courses will be applied to episodes from the past in ways that increase understanding both of the specific historical episodes considered and the economic theories employed. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: 21-120 and (73-230 Min. grade C or 73-160 Min. grade C)

73-497 Senior Project
Fall: 9 units
A fourth-year project course, open only to Economics primary and additional majors with Senior standing. The senior project is a capstone course in economics. The purpose of the course is to showcase the analytical and quantitative skills that you have acquired as an undergraduate at Carnegie Mellon. The course project should reflect some independent applied research that is genuinely your own work. Thus a "book report" or a "literature review" are not sufficient exercises to satisfy this requirement. The following research approaches are acceptable for the research project: an empirical study based on a data set that you put together, an experimental study based on an experiment that you conducted, an analysis of survey data based on a survey that you conducted, a theoretical analysis based on a model that you have developed, based on your own algorithm. Students who write an honor thesis are exempted from this class. (Lecture, 3 hours). Minimum grade of "C" required in all economics pre-requisite courses.
Prerequisites: (21-269 or 21-256 or 21-259 or 21-268) and (73-374 Min. grade C or 73-407 Min. grade C or 73-265 Min. grade C or 36-226 or 36-303 or 73-274 Min. grade C) and 73-230 Min. grade C and 73-240 Min. grade C

73-500 Tepper College Honors Thesis I
Fall and Spring
Economics majors with outstanding academic records and intellectual promise will be given the opportunity to undertake original research under the direction of individual faculty members. Research topics are selected by students and approved by faculty. Prerequisites: Senior standing in the Economics Program and permission of the Economics faculty. Minimum grade of "C" required in all economics and statistics pre-requisite courses.
Prerequisites: (21-256 or 21-259 or 21-268 or 21-269) and (73-265 Min. grade C or 73-274 Min. grade C or 36-226 Min. grade C) and 73-230 Min. grade C and 73-240 Min. grade C

73-501 Tepper College Honors Thesis II
Fall and Spring
Economics majors with outstanding academic records and intellectual promise will be given the opportunity to undertake original research under the direction of individual faculty members. Research topics are selected by students and approved by faculty. Prerequisites include: Senior standing in the Economics Program and permission of the Economics faculty. Minimum grade of "C" required in all economics and statistics pre-requisite courses, and a minimum grade of "B" required in Tepper College Honors Thesis I.
Prerequisites: (21-256 or 21-259 or 21-268 or 21-269) and 73-230 Min. grade C and 73-240 Min. grade C and 73-500 Min. grade B and (73-265 Min. grade C or 73-374 Min. grade C)

Department of English

Andreea Ritivoi, Department Head
Location: Baker Hall 259
english.cmu.edu

The Department of English at Carnegie Mellon engages students in the important study of reading and writing as intellectual activities embedded in historical, cultural, professional, technological, and literary practices. Working with experts in their areas, students become effective writers and analysts of various kinds of texts in a range of media, from traditional print documents to film, multimedia, and on-line texts. Faculty use distinctive methods of studying texts, but all share a deep commitment to working in small and intense workshops and seminars to help students learn to become experts in analyzing existing texts, and in producing original and distinctive work of their own.

The English Department offers the following degree programs:

- B.A. in Creative Writing
- B.A. in Film & Visual Media
- B.A. in Literature & Culture
- B.A. in Professional Writing
- B.S. in Technical Writing and Communication.

All five majors are structured to allow students to balance liberal and professional interests. Students in the **Creative Writing program** focus on analyzing and learning to produce poetic and narrative forms. Students in the **Film & Visual Media program** focus on cultural analysis, writing, production, and digital media. Students in the **Literature & Culture program** focus on the production and interpretation of print texts and other media in their social and cultural contexts. Students in the **Professional Writing program** focus on analyzing and producing non-fiction for a variety of professional contexts. Students in the **Technical Writing & Communication program** focus on integrating writing with technical expertise in a chosen area of concentration (*Technical Communication* or *Science & Medical Communication*). In addition to the five majors, we offer six minors departmental minors as well as two interdisciplinary minors, and we strongly encourage non-majors in the campus community to join us in English courses, beginning with offerings at the 200-level.

Students also get involved in a range of complementary activities, including a reading series of distinguished writers of poetry, fiction, and non-fiction; publishing, editing, and marketing through involvement with *The Oakland Review* and The Carnegie Mellon University Press; writing and editorial positions on the student newspaper, *The Tartan*, and other campus publications. We also offer a strong internship program that places student writers in media, non-profit, arts, corporate, and technical internships before they graduate. The end of every year culminates in a gala event to celebrate our students and their writing achievements in literary, academic, and professional writing. For this event, known as the Pauline Adamson Awards, we invite a well-known writer to do a public reading and then present and celebrate student writing awards in over a dozen categories, all judged anonymously by writing professionals from outside the university.

Majoring in English: The Five English Degree Options

The department of English offers students five degree options:

- The B.A. in Creative Writing
- The B.A. in Film & Visual Media
- The B.A. in Literature & Culture
- The B.A. in Professional Writing
- The B.S. in Technical Writing & Communication

Students who wish to broaden their experience with English courses may do so by taking more than the minimum requirements for each major or by combining two of the majors within the department for an additional major in English. Common combinations include, but are not limited to, a B.A. in Professional Writing with an additional major in Creative Writing; a B.A. in Creative Writing with an additional major in Literature & Culture; or a B.A. in Literature & Culture with an additional major in Professional Writing. Due to significant course overlap, students are not permitted to major in both Professional Writing and Technical Writing & Communication together. Consult the English Department and the section on "Completing an Additional Major in English" (http://coursecatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/departmentofenglish/#additionalmajorsminorstext) for further detail.

All of the English majors may be combined with majors and minors from other Carnegie Mellon departments and colleges. The English Department advisor can help you explore the available options and choose a major or combination of programs that is appropriate for your interests and goals.

How the Curriculum is Structured

In addition to Dietrich College requirements, English majors complete 11 to 13 courses (99 to 117 units) specifically related to their chosen major within English and structured as indicated below. Please note that courses between majors/minors in the Department of English may not double count, with the exception of the Film & Visual Media major, due to its courses being pulled from multiple programs within English. A maximum of two courses may double count between Film & Visual Media and programs inside the Department of English. A maximum of two courses may double count for programs outside of the Department of English.

Core Requirements for the Specific Major (7 to 10 courses, 63 to 84 units)

Complete seven to ten courses.

The Core Requirements differ for each major and are designed explicitly to provide both breadth and depth within the specific major the student has chosen.

English Electives (3 to 4 courses, 27 to 36 units)

Complete three to four elective courses.

Elective Courses for the majors are designed to add breadth to each student's study within English and to provide experience with the range of approaches to reading and writing available within the department. Students in all English majors are encouraged to sample widely from the Department's offerings.

The B.A. in Creative Writing

Carnegie Mellon is one of a small number of English departments in the country where undergraduates can major in Creative Writing (CW). In the CW major, students develop their talents in writing fiction, poetry, screenwriting, and creative nonfiction. While studying with faculty members who are writers, CW majors read widely in literature, explore the resources of their imaginations, sharpen their critical and verbal skills, and develop a professional attitude toward their writing. The extracurricular writing activities and a variety of writing internships available on and off campus provide Creative Writing majors with valuable experiences for planning their future. After graduation, many Creative Writing majors go on to graduate writing programs and to careers in teaching, publishing, public relations, advertising, TV and film, or freelance writing and editing.

Students in the CW major are required to take two of the introductory Survey of Forms courses, ideally in their sophomore year. Choices include:76-260 Survey of Forms: Fiction, 76-261 Survey of Forms: Creative Nonfiction, 76-262 Survey of Forms: Nonfiction, 76-265 Survey of Forms: Poetry, and 76-269 Survey of Forms: Screenwriting. In order to proceed into the upper-level courses, students must do well in these introductory courses (receive a grade of A or B). In their junior and senior years, Creative Writing majors take four workshops in fiction, poetry, screenwriting, or nonfiction where the students' work is critiqued and evaluated by peers and the faculty.

Opportunities

During their senior year, students may write a Senior Project or Honors Thesis (if they qualify for Dietrich College honors) under the supervision of a faculty member.

Carnegie Mellon also offers CW majors various extracurricular opportunities for professional development, including internships both on- and off-campus. For example, they may work as interns with the Carnegie Mellon University Press, which is housed in the English Department. The Press publishes scholarly works, as well as books of poetry and short stories by both new and established American writers.

Students may help edit and submit their work for publication to *The Oakland Review*, a Carnegie Mellon University-sponsored annual journal.

Students also have opportunities to read their works in a series of readings by student writers held in the Gladys Schmitt Creative Writing Center and to hear nationally known authors as part of the Carnegie Mellon Visiting Writers series. Additionally, the English Department offers prizes for students each year in the writing of fiction, non-fiction, poetry and screenwriting.

Curriculum

In addition to satisfying all of the Dietrich College degree requirements for B.A. candidates, Creative Writing majors must complete 11 courses in the following areas:

Creative Writing Core (7 courses, 63 units)

Survey of Forms Courses (2 courses, 18 units):

		Units
76-260	Survey of Forms: Fiction *	9
76-261	Survey of Forms: Creative Nonfiction *	9
76-262	Survey of Forms: Nonfiction	9
76-265	Survey of Forms: Poetry *	9
76-269	Survey of Forms: Screenwriting *	9

* A student must receive a grade of A or B in the Survey of Forms class in a specific genre in order to be eligible to enroll in a workshop of that genre. A student who receives a grade of C in a Survey of Forms course may enroll in a related workshop only with the permission of the workshop professor. A student who receives a D or R in Survey of Forms may not take a workshop in that genre.

Reading in Forms (1 course, 9 units):

		Units
76-363	Reading in Forms: Poetry: Intro to Literary Translation	9
76-364	Reading in Forms: Fiction	9

Four Creative Writing Workshops (4 courses, 36 units)

Complete four Creative Writing workshops, at least two in a single genre. Workshops in all genres may be taken more than once for credit, except for Literary Journalism and Magazine Writing.

		Units
76-360	Literary Journalism Workshop	9
76-365	Beginning Poetry Workshop	9
76-366	Essay Writing Workshop	9
76-375	Magazine Writing	9
76-460	Beginning Fiction Workshop	9
76-462	Advanced Fiction Workshop	9
76-465	Advanced Poetry Workshop	9
76-464	Creative Nonfiction Workshop: Magazines and Journals	9
76-469	Screenwriting Workshop: Screenwriting/ Television Writing	9

English Electives (4 courses, 36 units)

Complete four additional courses from the English Department's offerings. Two of the four English Electives must be courses that are designated as fulfilling the literature requirement and focus on close reading of literary texts. Please consult the list of courses published each semester by the Department for current offerings. English Electives may include any course offered by the Department, with the exception of 76-222 Creative Writing Matters. Additionally, English Electives can include no more than one course at the 200 level. The remaining English Electives must be at the 300 or 400 level. In choosing Electives, students are encouraged to sample courses from across the Department.

Transfer Courses

Students may transfer up to two courses from other programs toward the major in Creative Writing or the BHA in Creative Writing. Students may transfer one course from another program toward the minor in Creative Writing.

Creative Writing B.A. Sample Curriculum

This plan is presented as a two-year (junior-senior) plan for completing major requirements. Its purpose is to show that this program can be completed in as few as two years, not that it should or must be. In fact, as a department, we recommend beginning the major in the sophomore year if possible. Students in Dietrich College may declare a major as early as mid-semester of the spring of their first year and begin major requirements the following fall.

Junior		Senior

The B.A. in Film & Visual Media

The Film & Visual Media major trains students through a combination of coursework in:

- visual media,
- film history and analysis,
- screenwriting,
- and production of film and other visual media.

The major offers a comprehensive education in film and visual media, from theoretical framing and historical-cultural contextualization to training skills in both creating and analyzing film, and developing a complex blend of creative, professional, and technical competencies.

CMU's Department of English is an ideal home for the Film & Visual Media major due to the department's combination of creative writers, film and media studies scholars, film makers, digital humanities and visual communication researchers.

Curriculum

In additional to satisfying all of the Dietrich College degree requirements for B.A. candidates, Film & Visual Media majors must complete 12 courses in the following areas:

Required introductory courses (2 courses, 18 units)

Course		Units
76-239	Introduction to Film Studies	9
76-259	Introduction to Film History	9

Production Courses (2 courses, 18-21 units)

Required Course		Units
76-292	Film Production *	9

* * Students who have completed 76-239 Introduction to Film Studies and/or 76-269 Survey of Forms: Screenwriting will be given registration preference.

Additional Production Course (options include but are not limited to:)		Units
54-487	Dramaturgy: Production II	12
54-401	Through the Lens : Storytelling with the Camera	9
60-415	Advanced ETB: Animation Studio	10
60-416	Advanced ETB: Documentary Storytelling	10
76-374	IDeATe - Dietrich College Cuban Interactive Documentary Project	9
76-481	Introduction to Multimedia Design	12

Screenwriting Courses (2 courses, 18 units)

Required Courses		Units
76-269	Survey of Forms: Screenwriting	9
76-469	Screenwriting Workshop: Screenwriting/ Television Writing	9

Digital Media Courses (2 courses, 18-20 units)

Options include but are not limited to:		Units
15-104	Introduction to Computing for Creative Practice	10
60-141	Black and White Photography I	10
60-142	Digital Photography I	10
60-241	Black and White Photography II	10
60-242	Digital Photography II	10
60-245	Portrait Photography	10
60-353	Critical Studies: Media Performance - History, Theory, and Contemporary Practice	9
60-376	Large Format Photography: The Antiquarian Avant-Garde	10
62-150	IDeATe Portal: Introduction to Media Synthesis and Analysis	10
76-314	Data Stories	9
76-388	Coding for Humanists	9
76-419	Media in a Digital Age	9
76-429	Digital Humanities: Politics and Early Modern Drama	9
76-472	Topics in Journalism: Storytelling in a Digital Age	9

Literature & Cultural Studies Courses (2 courses, 18 units)

Course options include but are not limited to the following:

Course		Units
76-203	Pirates and Prostitutes in the 18th Century	9
76-205	Jane Austen	9
76-210	Banned Books	9
76-221	Books You Should Have Read by Now: 16th & 17th C. Pop Culture	9
76-232	Introduction to Black Literature	9
76-245	Shakespeare: Tragedies and Histories	9
76-247	Shakespeare: Comedies and Romances	9
76-281	Modern American Drama	9
76-310	Advanced Studies in Film and Media	9
76-313	19th Century British: Victorian Sensations	9
76-314	Data Stories	9
76-321	History of the British Novel	9
76-323	God: A Literary and Cultural History	9
76-329	Unruly Women in Early Modern Drama	9
76-333	Race and Controversy in the Arts	9
76-334	Literature of Wall Street	9
76-337	Representations of Islam in Early Modern England	9
76-353	Transnational Feminisms: Fiction and Film	9
76-361	Corpus Rhetorical Analysis	9
76-377	Shakespeare and Film	9
76-381	Mad-Men, Television, and the History of Advertising	9
76-410	The Long Eighteenth Century	Var.
76-412	Performance and 18th Century Theatrical Culture	9
76-414	Politics, Media, and Romantic Literature 1789-1830	9
76-419	Media in a Digital Age	9
76-429	Digital Humanities: Politics and Early Modern Drama	9
76-435	Politics and Popular Culture	9
76-439	Seminar in Film and Media Studies: Class, Race, & Gender in Film	9
76-440	Postcolonial Theory: Diaspora and Transnationalism	9
76-443	Shakespeare and Theory	9
76-444	History of Books and Reading	9
76-448	Shakespeare on Film	9

Topics in Film & Visual Media Studies Courses (2 courses, 18 units)

Course		Units
76-312	Crime and Justice in American Film	9
76-338	The American Cinema	9
76-339	Topics in Film and Media: Hollywood vs. the World Can be taken more than once.	9
76-353	Transnational Feminisms: Fiction and Film	9
76-367	Fact Into Film: Translating History into Cinema	9
76-377	Shakespeare and Film	9
76-438	The Wire: Crime, Realism, and Long-Form TV	9
76-439	Seminar in Film and Media Studies: Class, Race, & Gender in Film	9
76-448	Shakespeare on Film	9
76-449	Race and Media	9
79-214	Paris in Revolt: History, Literature, Film	6
79-225	West African History in Film	9
79-306	Fact into Film: Translating History into Cinema	9
79-308	Crime and Justice in American Film	9
79-309	The Chinese Revolution Through Film (1949-2000)	9
79-319	India Through Film	6
79-326	German History through Film	9
79-339	Juvenile Delinquency & Film: From Soul of Youth (1920) to West Side Story (1961)	6
79-340	Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)	6
79-341	The Cold War in Documents and Film	9
82-215	Arab Culture Through Film & Literature	9
82-278	Japanese Film and Literature: The Art of Storytelling	9
82-284	Multicultural Pittsburgh: A Creative Media Exploration of Cmmnty, Lang & Identit	9
82-296	A Century of Russian Film	9
82-355	Tpcs in Hispanic Std: Beyond the Film Screen: The Hispanic World Through Film	9

Transfer Courses

Students may transfer up to two courses from other programs toward the major in Film & Visual Media Studies.

B.A. in Film & Visual Media Sample Curriculum

Please note that this sample curriculum is only a guide and that, in close consultation with the Department of English academic advisor, students may adjust their course plan.

Freshman	Sophomore	
Spring	**Fall**	**Spring**
76-269 Survey of Forms: Screenwriting	76-239 Introduction to Film Studies	76-259 Introduction to Film History
		Digital Media Course

76-292 Film Production	Production Course	Literature & Cultural Studies Course	Topics in Film & Visual Media Studies Course
Digital Media Course	76-469 Screenwriting Workshop: Screenwriting/Television Writing	Topics in Film & Visual Media Studies Course	Literature & Cultural Studies Course

The B.A. in Literature & Culture

The Literature & Culture Major teaches students how to read, interpret and write persuasively about novels, poems, plays and other imaginative works across a variety of genres and media forms. Along with teaching students the analytical skills and methodological tools to interpret these works, this major teaches the importance of understanding imaginative works within their cultural and historical contexts. In addition, the major is designed to train students in strong professional and academic skills like critical thinking, inductive reasoning and persuasive argumentation that are applicable to other fields of study and a variety of career paths.

Curriculum

In additional to satisfying all of the Dietrich College degree requirements for B.A. candidates, Literature & Culture majors must complete 13 courses in the following areas:

Requirements

13 courses, 117.0 units total

Required Introductory Courses (3 courses, 27 units)

Course		Units
76-26x	Survey of Forms (Fiction, Creative Nonfiction, Poetry, or Screenwriting)	9
76-245	Shakespeare: Tragedies and Histories	9
or 76-247	Shakespeare: Comedies and Romances	
76-275	Critical Writing Workshop	9

200-Level Literature & Culture Courses (2 courses, 18 units)

Course options include but are not limited to the following:

Course		Units
76-203	Pirates and Prostitutes in the 18th Century	9
76-205	Jane Austen	9
76-210	Banned Books	9
76-217	Contempory American Literary & Cultural Studies	9
76-218	Special Topics in Literature: Medieval Romance & Arthurian Legends	9
76-221	Books You Should Have Read by Now: 16th & 17th C. Pop Culture	9
76-232	Introduction to Black Literature	9
76-238	What Was the Hip-Hop Generation?	9
76-245	Shakespeare: Tragedies and Histories	9
76-247	Shakespeare: Comedies and Romances	9
76-281	Modern American Drama	9

300-Level Literature & Culture Courses (2 Courses, 18 units)

Course options include but are not limited to the following:

Course		Units
76-310	Advanced Studies in Film and Media	9
76-313	19th Century British: Victorian Sensations	9
76-314	Data Stories	9
76-321	History of the British Novel	9
76-323	God: A Literary and Cultural History	9
76-329	Unruly Women in Early Modern Drama	9
76-333	Race and Controversy in the Arts	9
76-334	Literature of Wall Street	9
76-337	Representations of Islam in Early Modern England	9
76-341	Gender and Sexuality in Performance	9
76-343	Rise of the American Novel	9
76-344	Censored Texts	9
76-353	Transnational Feminisms: Fiction and Film	9
76-361	Corpus Rhetorical Analysis	9
76-367	Fact Into Film: Translating History into Cinema	9
76-377	Shakespeare and Film	9
76-381	Mad-Men, Television, and the History of Advertising	9

Theory Course (1 course, 9 units)

Course options include but are not limited to the following:

Course		Units
76-350	Theory from Classics to Contemporary	9

Rhetoric Course (1 course, 9 units)

Course options include but are not limited to the following:

Course		Units
76-319	Environmental Rhetoric	9
76-328	Visual Verbal Communication	9
76-355	Leadership, Dialogue, and Change	9
76-359	User Experience Methods for Documents	9
76-384	Race, Nation, and the Enemy	9
76-386	Language & Culture	9
76-388	Coding for Humanists	9
76-389	Rhetorical Grammar	9
76-396	Non-Profit Message Creation	9
76-415	Mediated Power and Propaganda	9
76-419	Media in a Digital Age	9
76-457	Rhetorical Invention	9
76-486	Argument Theory	9
76-492	Rhetoric of Public Policy	9

400-Level Capstone Seminar Course (1 course, 9 units)

Course options include but are not limited to the following:

Course		Units
76-410	The Long Eighteenth Century	Var.
76-412	Performance and 18th Century Theatrical Culture	9
76-414	Politics, Media, and Romantic Literature 1789-1830	9
76-419	Media in a Digital Age	9
76-429	Digital Humanities: Politics and Early Modern Drama	9
76-435	Politics and Popular Culture	9
76-439	Seminar in Film and Media Studies: Class, Race, & Gender in Film	9
76-440	Postcolonial Theory: Diaspora and Transnationalism	9
76-443	Shakespeare and Theory	9
76-444	History of Books and Reading	9
76-448	Shakespeare on Film	9

English Elective Courses (3 courses, 27 units)

Courses for the English Elective requirement can be fulfilled by choosing any of our 200- to 400-level courses. Students are encouraged to sample courses across our programs.

B.A. in Literature & Culture Sample Curriculum

We recommend students begin the major in the sophomore year if possible. Students in Dietrich College may declare a major as early as mid-semester of the spring of their first year and begin major requirements the following fall.

English Elective	

The B.A. in Professional Writing

Professional Writing (PW) combines a professional education with a strong foundation in rhetorical studies. The major prepares students for successful careers as writers and communications specialists in a range of fields, including but not limited to: editing and publishing, government, law, journalism, the non-profit sector, education, public and media relations, corporate communications, advocacy writing, and the arts.

The PW major includes 13 courses: 10 PW Core Requirements + 3 English Electives. The 10 Core Requirements include foundations courses in genre studies, editing, and argument, a professional seminar, plus a cluster of advanced rhetoric and specialized writing courses, all designed to closely integrate analysis and production. Through special topics courses — journalism, web design, advocacy writing, document design for print, science writing, public relations and corporate communications, writing for multimedia — students can pursue specializations while working with faculty who are both experts and practicing professionals in these fields. The 3-unit professional seminar, 76-300 Professional Seminar, which meets weekly during the fall term, provides majors with the opportunity to meet and network with practicing professionals in a range of communications fields. PW majors also gain experience in working on team- and client-based projects and receive focused support to develop a portfolio of polished writing samples to use in applying for internships and employment. Through English Electives in Rhetoric, Creative Writing, and Literary and Cultural Studies, students gain additional practice in the careful reading, writing, and analysis of both literary and non-fictional texts and important insights into how texts function in their historical and contemporary contexts. As a capstone experience, senior PW majors have the opportunity to complete a Senior Project or, upon invitation from the college, a Senior Honors Thesis in Rhetoric or Professional Writing. PW students can also apply for research grants through the Undergraduate Research Office to work on independent research projects with faculty.

While the major appeals to students with strong professional interests, both core and elective requirements develop the broad intellectual background one expects from a university education and prepare students to either enter the workplace or pursue graduate study in fields as diverse as communications, law, business, and education. PW majors also have the opportunity to apply for the Department's accelerated MA in Professional Writing, the MAPW 4+1, which allows them to complete the degree in 2 semesters instead of the usual 3. Because the major in Professional Writing is deliberately structured as a flexible degree that allows a broad range of options, PW majors should consult closely with their English Department advisors on choosing both elective and required courses and in planning for internships and summer employment.Various opportunities for writers to gain professional experience and accumulate material for their writing portfolios are available through campus publications, department-sponsored internships for academic credit, and writing-related employment on and off campus.

PW majors also have the option of taking writing internships for academic credit during their junior or senior year and are also strongly encouraged to seek professional internships throughout their undergraduate years and during their summers. Opportunities in public and media relations, newspaper and magazine writing, healthcare communication, publishing, technical writing, public service organizations, and writing for the web and new media illustrate both internship possibilities and the kinds of employment that Professional Writing majors have taken after graduation.

Curriculum

In addition to satisfying all of the Dietrich College degree requirements for B.A. candidates, Professional Writing majors must fulfill 13 requirements in the following areas:

Professional Writing Core (10 courses, 84 units)

Complete ten courses.

Departmental core requirement (1 courses, 9 units):

76-26x	Survey of Forms (Nonfiction, Fiction, Poetry, or Screenwriting)	9

professional writing core requirements (4 courses, 30 units):

76-271	Introduction to Professional and Technical Writing	9
76-300	Professional Seminar	3
76-373	Argument	9
76-390	Style	9

Rhetoric/language studies Requirement (1 course, 9 units):

Complete one course from a set of varied offerings in Rhetoric/Language Studies as designated each term by the English Department. These courses focus explicitly on language and discourse as objects of study and emphasize the relationships of language, text structure, and meaning within specific contexts. Courses include but are not limited to the following:

Course		Units
76-301	Internship	Var.
76-359	User Experience Methods for Documents	9
76-360	Literary Journalism Workshop	9
76-384	Race, Nation, and the Enemy	9
76-386	Language & Culture	9
76-388	Coding for Humanists	9
76-389	Rhetorical Grammar	9
76-395	Science Writing	9
76-396	Non-Profit Message Creation	9
76-415	Mediated Power and Propaganda	9
76-419	Media in a Digital Age	9
76-474	Software Documentation	9
76-476	Rhetoric of Science	9
76-494	Healthcare Communications	9

Advanced Writing/Rhetoric Courses (4 courses, 36-42 units):

Complete four courses from a set of varied offerings in Advanced Writing/Rhetoric as designated each term by the English Department. Options include all courses that fulfill the Rhetoric requirement, plus additional courses in specialized areas of professional writing. Students should select courses in consultation with their English Department advisor or the Director of Professional and Writing. Courses include but are not limited to the following:

		Units
76-301	Internship	Var.
76-302	Global Communication Center Practicum	6
76-359	User Experience Methods for Documents	9
76-360	Literary Journalism Workshop	9
76-372	News Writing	9
76-375	Magazine Writing	9
76-378	Literacy: Educational Theory and Community Practice	9
76-386	Language & Culture	9
76-389	Rhetorical Grammar	9
76-391	Document & Information Design	12
76-395	Science Writing	9
76-396	Non-Profit Message Creation	9
76-415	Mediated Power and Propaganda	9
76-419	Media in a Digital Age	9
76-425	Science in the Public Sphere	9
76-472	Topics in Journalism: Storytelling in a Digital Age	9
76-474	Software Documentation	9
76-476	Rhetoric of Science	9
76-481	Introduction to Multimedia Design	12
76-487	Web Design	12
76-491	Rhetorical Analysis	9
76-494	Healthcare Communications	9

English Electives (3 Courses, 27 Units)

Complete three courses from any of English Department’s offerings (exceptions include 76-270, which is designed for non-majors). One may be at the 200-level or above; the remaining two must be at the 300- or 400-level. Two must be courses designated as Text/Context Electives, which focus on the relationship between texts and their cultural and historical contexts.

Professional Writing B.A. Sample Curriculum

This plan is presented as a two-year (junior-senior) plan for completing major requirements. Its purpose is to show that this program can be completed in as few as two years, not that it should or must be. In fact, as a department, we recommend beginning the major in the sophomore year if possible. Students in Dietrich College may declare a major as early as mid-semester of the spring of their first year and begin major requirements the following fall.

Junior		Senior	
Fall	**Spring**	**Fall**	**Spring**
76-271 Introduction to Professional and Technical Writing	76-26x Survey of Forms	76-3xx/4xx Advanced Writing/Rhetoric Course	76-3xx/4xx Advanced Writing/Rhetoric Course
76-300 Professional Seminar	76-373 Argument	76-3xx/4xx Advanced Writing/Rhetoric Course	76-3xx/4xx Advanced Writing/Rhetoric Course
76-390 Style	76-3xx/4xx Rhetoric Course	76-3xx/4xx English Elective	76-3xx/4xx English Elective
76-2xx/3xx/4xx English Elective	Elective	Elective	Elective
Elective	Elective	Elective	Elective

The B.S. in Technical Writing & Communication

The B.S. in Technical Writing & Communication (TWC) is one of the oldest undergraduate technical communication degrees in the country with a history that stretches back to 1958. The degree is specifically designed to prepare students for successful careers involving scientific, technical, and computer-related communication, including writing and designing for digital media.

Today’s technical communicators have the strong backgrounds in technology, communication, and design needed to enter a broad range of information-based fields, and do work that both includes and goes well beyond writing documents for print distribution. The expanding range of options includes positions that involve organizing, managing, communicating, and facilitating the use of both technical and non-technical information in a range of fields and media.

Technical communicators develop and design web sites, explain science and technology to the public, develop print and multimedia materials, develop information management systems, design and deliver corporate training, and develop support systems for consumer products ranging from software for word processing or personal finances to complex data management systems.

The B.S. in TWC recognizes the important changes taking place in communication-based careers and includes two distinctive “tracks,” one in Technical Communication (TC) and one in Scientific and Medical Communication (SMC). Both tracks begin with a common core of foundation courses in print and on-line communication as well as a shared set of prerequisites in math, statistics, and computer programming. The two tracks differ in the set of theory/specialization courses beyond the core, with each track including a specialized set appropriate to its focus.

In both tracks, TWC students work on real projects for actual clients, learn group interaction and management skills, and develop a flexible repertoire of skills and strategies to keep up with advances in software and technology. Above all, they focus on developing structures and information strategies to solve a broad range of communication and information design problems.

TWC students are able to draw on exceptional resources on and off campus to enhance their education. Most obvious are the course offerings of Carnegie Institute of Technology, the Mellon College of Science, and the School of Computer Science. Additional course offerings in business, organizational behavior, policy and management, psychology, history, and design are also encouraged. As a capstone experience, Seniors have the opportunity to complete a Senior Project or, upon invitation from the college, a Senior Honors Thesis. TWC students can also apply for grants and fellowship through the Undergraduate Research Office to work on independent research projects with faculty.

While the major appeals to students with strong professional interests, both core and elective requirements develop the broad intellectual background one expects from a university education and prepare students to either enter the workplace upon graduation or pursue graduate study in fields as diverse as communications, business, instructional design, information design, education, and science and healthcare writing.

Various opportunities for writers to gain professional experience are available through campus publications, department-sponsored internships for academic credit, and writing-related employment on and off campus. TWC students have the option of doing internships for academic credit during their junior or senior year and are encouraged to pursue a series of internships throughout their 4 years and during their summers.

All TWC students are required to enroll in the English Department’s 3-unit course, Professional Seminar (76-300), which meets once a week during the fall term and provides majors with the opportunity to meet and network with practicing professionals in a range of communications fields.

The Technical Communication (TC) Track

The Technical Communication track (TC) prepares students for careers in the rapidly changing areas of software and digital media. Students learn the fundamentals of visual, verbal, and on-line communication as well as the technical skills needed to design, communicate, and evaluate complex communication systems and to manage the interdisciplinary teams needed to develop them. Students become fluent in both print-based and electronic media across a variety of information genres and learn to design information for a range of specialist and non-expert audiences. The TWC/TC major can be pursued as a primary major within Dietrich College or as an additional major for students in other Colleges with an interest in combining their specialized subject matter knowledge with strong writing and communications skills. Graduates of this track are likely to follow in the footsteps of previous TWC students from Carnegie Mellon who are currently employed as web designers, information specialists, technical writers, and information consultants in a range of technology and communication-based organizations including Salesforce, IBM, Oracle, Microsoft, Apple, and HP Vertica.

The Scientific and Medical Communication (SMC) Track

The Scientific and Medical Communication track (SMC) is designed for students who seek careers that focus on communication and information design problems in health, science, and medicine. It should appeal to students with interests in the health care professions, science and public policy, patient education, scientific journalism and related fields. Like the TC track, the SMC track is designed to provide both the technical and the communication skills needed to analyze and solve complex communication problems. Students learn the fundamentals of visual, verbal, and on-line communication as well as the technical skills needed to design, communicate, and evaluate complex information systems and to manage the interdisciplinary teams needed to develop them. Students become fluent in both print-based and electronic media across a variety of information genres and learn to design information for a range of specialist and non-expert audiences The TWC/SMC major can be pursued as a primary major within Dietrich College or as a secondary major for students in other Colleges, such as MCS, with an interest in science or medicine.

Curriculum

All Technical Writing & Communication majors must satisfy the Dietrich College requirements for the B.S. degree, and a set of 3 to 4 prerequisite courses in calculus, statistics, and computer science. All prerequisites should be completed by the beginning of the fall semester, junior year. Prerequisites may double count toward Dietrich College Requirements or requirements for other majors or minors.

Mathematics Prerequisite (1 course, 10 units):

Complete one of the following:		Units
21-111	Differential Calculus	10
21-112	Integral Calculus	10
21-120	Differential and Integral Calculus	10
21-127	Concepts of Mathematics	10

Statistics Prerequisite (1 course, 9 units):

36-201	Statistical Reasoning and Practice	9

Computer Science Prerequisites (1 - 2 courses*, 10 - 22 units):

Students in the Technical Communication track must complete two required Computer Science courses:		Units
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12

Students in the Scientific and Medical Communication track complete one required Computer Science course:		Units
15-110	Principles of Computing	10

15-110 Principles of Computing is designed for students with little or no prior programming experience and is appropriate for students in both the SMC and TC tracks. 15-112 Fundamentals of Programming and Computer Science prepares students in the TC track for all other advanced Computer Science courses.

Beyond these prerequisites, students in both TC and SMC tracks take a common set of 5 TWC Core Requirements in writing, communication, and information design. To complement these foundations courses, TWC students take a set of 3 Theory/Specialization courses specific to either TC or SMC. In addition, students in the SMC track take a series of 3 courses in the natural sciences or engineering relevant to their areas of interest, while TC students take 3 electives in management, technology, and social issues.

DEPARTMENTAL CORE REQUIREMENT (1 COURSE, 9 UNITS):

76-26x	Survey of Forms (Nonfiction, Fiction, Poetry, or Screenwriting)	9

TWC Core Requirements (5 courses, 45 units):

76-271	Introduction to Professional and Technical Writing	9
76-300	Professional Seminar	3
76-390	Style	9
76-391	Document & Information Design *	12
76-487	Web Design **	12

* prerequisite = 76-271 Introduction to Professional and Technical Writing
**prerequisite = 76-271 Introduction to Professional and Technical Writing + 76-391 Document & Information Design

Theory/Specialization Courses (3 courses, 27 units):

Complete 3 courses to deepen your area of speciality and complement your chosen track (TC or SMC) in the major. One must be chosen from among courses designated as Recommended Options for TWC majors. Theory/ Specialization courses, including those marked as Recommended Options, are advertised by the English Department on a semester-by-semester basis. TWC students should select courses in consultation with their faculty advisor.

Recommended courses include but are not limited to the following:		Units
76-319	Environmental Rhetoric	9
76-359	User Experience Methods for Documents	9
76-361	Corpus Rhetorical Analysis	9
76-388	Coding for Humanists	9
76-395	Science Writing	9
76-419	Media in a Digital Age	9
76-425	Science in the Public Sphere	9
76-428	Visual Verbal Communication	9
76-474	Software Documentation	9
76-476	Rhetoric of Science	9
76-481	Introduction to Multimedia Design *	12
76-491	Rhetorical Analysis	9
76-494	Healthcare Communications	9

Additional Options include but are not limited to the following:		Units
76-301	Internship	Var.
76-302	Global Communication Center Practicum	6
76-318	Communicating in the Global Marketplace	9
76-319	Environmental Rhetoric	9
76-325	Intertextuality	9
76-340	American English	9
76-351	Rhetorical Invention	9
76-355	Leadership, Dialogue, and Change	9
76-359	User Experience Methods for Documents	9
76-360	Literary Journalism Workshop	9
76-361	Corpus Rhetorical Analysis	9
76-372	News Writing	9
76-375	Magazine Writing	9
76-378	Literacy: Educational Theory and Community Practice	9
76-386	Language & Culture	9
76-388	Coding for Humanists	9
76-389	Rhetorical Grammar	9
76-391	Document & Information Design	12
76-395	Science Writing	9
76-396	Non-Profit Message Creation	9
76-419	Media in a Digital Age	9
76-420	The Cognition of Reading and Writing: Introduction to a Social/Cognitive Process	9
76-425	Science in the Public Sphere	9
76-428	Visual Verbal Communication	9
76-472	Topics in Journalism: Storytelling in a Digital Age	9
76-474	Software Documentation	9
76-475	Law, Performance, and Identity	9
76-476	Rhetoric of Science	9
76-481	Introduction to Multimedia Design	12
76-484	Discourse Analysis	9
76-487	Web Design	12
76-491	Rhetorical Analysis	9
39-605	Engineering Design Projects	12

Electives (3 courses, 27 units):

TWC majors take 3 courses outside of English to deepen their area of specialty in their track. Typcially, students in the Technical Communication (TC) track select courses that focus on management, technology, and social issues. Students in the Science and Medical Communication (SMC) track select courses in the natural sciences, engineering, statistics or (for example) healthcare-related courses in the Heinz School. Students should work with their academic advisor and the Program Director to select courses that are meaningful for their track. Courses in this category may double count with a major or minor in another department.

TWC Sample Curriculum

We strongly recommend beginning the major in the fall of the sophomore year if possible. This sample curriculum is only a guide and, in close consultation with the Department of English academic advisor, students may adjust their course plan. Please note that the below plan does not include the 3-4 prerequisite courses (see above), which should be completed by the junior year.

Sophomore		Junior	
Fall	**Spring**	**Fall**	**Spring**
76-26x Survey of Forms	76-390 Style	76-300 Professional Seminar	Theory/Specialization Course
76-271 Introduction to Professional and Technical Writing*		76-391 Document & Information Design*	TC or SMC Track Elective
		TC or SMC Track Elective	

Senior	
Fall	**Spring**
76-487 Web Design*	Theory/Specialization Course
Theory/Specialization Course	TC or SMC Track Elective

*These courses must be taken in the sequence indicated. 76-271 is offered all semesters and therefore can be taken fall or spring of sophomore year. 76-271 is a prerequisite for 76-391, and 76-271 + 76-391 are the prerequisites for 76-487. 76-391 and 76-487 are offered only in the fall semesters.

Completing an Additional Major in English

For Students with a Primary Major in the English Department

Students with a primary major in the English Department who have interests that include more than one of the department's majors have the option of completing an additional major within the department. Students may combine any of the departmental majors with one another, with the exception of Professional Writing and Technical Writing & Communication. Students may not combine these two majors because so many of the courses overlap.

Students with a primary major in the English Department and one or more additional majors in the English Department must fulfill the Core Requirements for each of those majors. The Survey of Forms requirement, common to all 5 majors, needs to be taken only once, with the exception of Creative Writing, which requires two Survey of Forms courses. For the English Department majors that require English Electives, students must complete the number of English Electives required by the major with the higher number of Electives. For example, a student with a primary major in Creative Writing and an additional major in Professional Writing would take

4 English Electives, as Creative Writing requires 4 English Electives, and Professional Writing requires only 3 English Electives.

Because students are only required to take a minimum of one Survey of Forms course, with the exception of Creative Writing, which requires two Survey of Forms courses, as well as the number of English Electives that is greater between the primary and additonal major(s), students can generally add an additional major within the English Department by completing 6 to 9 additional courses.

An example:

A student who has fulfilled all 11 departmental requirements for the B.A. in Creative Writing can complete the additional major in Professional Writing by adding 9 courses: 4 courses of the PW Core (76-271 Introduction to Professional and Technical Writing, 76-300 Professional Seminar, 76-373 Argument, 76-390 Style), one Rhetoric/Language Studies course, and 4 Advanced Writing/Rhetoric courses.

Because sequencing of courses can become an issue when doing multiple majors, students are strongly advised to consult closely with the English Department academic advisor about the sequence of their courses. The English Department academic advisor can also provide students with documents that clearly outline the requirements for additional majors based on their primary majors within the Department.

For Students with a Primary Major Outside of the English Department

Students in other departments who wish to complete an additional major in the English Department should contact the English Department's academic advisor. Additional majors in the five English programs are required to complete all requirements for the chosen major. The English Department will allow a maximum of two courses from the additional major to double count with the primary major requirements. The only exceptions to this rule are the Technical Communication Electives for the *Technical Communication* concentration in the Technical Writing & Communication major and the Natural Science and Engineering Electives for the *Science & Medical Communication* concentration in the Technical Writing & Communication major. All of those electives may double count with programs outside of the English Department. In planning schedules for an additional major, it is critically important that students consult with academic advisors in both departments in which they are majoring to be sure that all requirements for graduation can be met.

Minor in English

The English Department also offers minors in **Creative Writing, Humantities Analytics, Literature & Culture, Professional Writing,** and **Technical Writing**. The minors in English are available to all undergraduate students except English majors, who may not both major and minor in English.

For the minor, students may double count up to two courses with programs outside of the Department of English.

Courses that meet the various requirements are advertised on a semester-by-semester basis. Full descriptions are available each semester from the English Department main office.

Creative Writing Minor

Complete 6 courses and a minimum of 54 units, which includes First-Year Writing. Students may transfer one course from another program toward the Creative Writing minor.

Course		Units
First-Year Writing *		9
76-26x	One Survey of Forms Course +	9
76-xxx	Two 300/400 level Fiction, Poetry, or Screenwriting Workshop Classes	18
76-3xx	One Reading in Forms Course	9
76-2xx	One 200-level or above English Elective	9

* Course options include 76-101, 76-102, [76-106 and 76-107], [76-106 and 76-108], or [76-107 and 76-108].

\+ A student must receive a grade of A or B in the Survey of Forms class in order to be eligible to enroll in a workshop of that genre. A student who receives a grade of C in a Survey of Forms course may enroll in a related workshop only with the permission of his or her workshop professor. A student who receives a D or R in Survey of Forms may not take a workshop in that genre.

Humanities Analytics Minor

The human experience that is traditionally at the core of a humanities education is being dramatically transformed by the emergence of big data, digital platforms, computational thinking, and digital connectivity. Spurred by such developments, the minor in Humanities Analytics (HumAn), offered by the Department of English, will train students in the processes involved in analyzing, digitizing, quantifying, and visualizing different types of humanities and cultural phenomena, including printed books, manuscripts, historical records, art, music, and film. The HumAn minor trains students to work with cultural objects (like texts, film, historical records, etc.) but also to turn words and images into data; to move from one cultural object (like a Victorian novel, for instance) to a corpus consisting of tens of thousands of other novels published in the same period, and to combine close reading with distant reading (aggregating and analyzing massive amounts of data) for maximum insight and accuracy.

Students will develop a broad technical understanding of state-of-the-art computer-assisted methods for humanistic study, such as: social network analysis, text analysis and data mining, topic modeling, classification techniques, and visualization. Students will also investigate the histories and historical contexts of such methods, learning to consider their applicability in specific domains. Finally, students will learn to turn a critical eye on the corpora and infrastructures that increasingly underpin humanistic research.

The minor is open to students across multiple colleges and degree programs, and will enrich their education in distinct ways and complement their primary majors. For example, students with a primary major in a humanities or social science department will learn the foundational methods used in the computational analysis of text. Students with a primary major in a non-humanities field will use technology as a lens into cultural history and will develop skills for making humanities knowledge visible and appealing. The minor will bridge divides not only between the "digital/technological" and the "humanistic," but also between the qualitative and quantitative, between theory and applications, critiquing and making.

Specific career paths available to a student graduating with a HumAn minor might include:

- the publishing industry
- the entertainment industry
- the GLAM sector (digital curating for **g**alleries, **l**ibraries, **a**rchives, and **m**useums)
- data journalism
- digital approaches to cultural heritage
- LODLAM (**L**inked **O**pen **D**ata for **L**ibraries, **A**rchives, and **M**useums)

Curriculum

Required Courses — 6 courses, 54 units

Required Courses		Units
76-275	Critical Writing Workshop	9
76-380	Methods in Humanities Analytics	9

Two core courses from the following list:		Units
76-314	Data Stories	9
76-361	Corpus Rhetorical Analysis	9
76-388	Coding for Humanists	9
76-419	Media in a Digital Age	9
76-425	Science in the Public Sphere	9
76-429	Digital Humanities: Politics and Early Modern Drama	9
76-483	Corpus Analysis in Rhetoric	9
88-275	Bubbles: Data Science for Human Minds	9
88-300	Programming and Data Analysis for Social Scientists	9

Electives — 2 courses, 15-24 units

Note: Additional courses not on List A or List B may also be approved as electives; please speak with the English Department academic advisor.

List A: For Humanities (English, History, Modern Languages, Philosophy) majors

Two elective courses relevant to digital and analytics methods (at least 18 units)		Units
05-391	Designing Human Centered Software	12
05-434/11-344	Machine Learning in Practice	12
11-441/741	Machine Learning for Text Mining [1]	9

15-104	Introduction to Computing for Creative Practice	10
15-110	Principles of Computing	10
16-223	IDeATe Portal: Creative Kinetic Systems	10
18-090	Twisted Signals: Multimedia Processing for the Arts	10
19-713	Policies of Wireless Systems	12
36-201	Statistical Reasoning and Practice	9
36-202	Statistics & Data Science Methods	9
36-315	Statistical Graphics and Visualization [3]	9
36-350	Statistical Computing [3]	9
48-095	Spatial Concepts for Non-Majors	Var.
48-120	Digital Media I	6
51-229	Digital Photographic Imaging	9
53-451	Research Issues in Game Development: Designing for XR	12
60/62-142	Digital Photography I	10
62-150	IDeATe Portal: Introduction to Media Synthesis and Analysis	10

1 Course is very mathematical, and is therefore appropriate only to students with such a preparation.
2 Non-architecture majors require instructor permission to enroll.
3 This course has prerequisites.

List B: For Non-Humanities majors

Two elective courses relevant to broad Humanities expertise (at least 18 units)		Units
76-325	Intertextuality	9
76-373	Argument	9
76-385	Introduction to Discourse Analysis	9
76-394	Research in English	9
76-444	History of Books and Reading	9
76-472	Topics in Journalism: Storytelling in a Digital Age	9
76-476	Rhetoric of Science	9
76-491	Rhetorical Analysis	9
76-786	Language and Culture	Var.
79-200	Introduction to Historical Research & Writing	9
79-305	Moneyball Nation: Data in American Life	9
80-180	Nature of Language	9
80-280	Linguistic Analysis	9
80-381	Meaning in Language	9
80-383	Language in Use	9
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9
82-383	Second Language Acquisition: Theories and Research	9
82-480	Social and Cognitive Aspects of Bilingualism	9

Literature & Culture Minor

Complete 6 courses and a minimum of 54 units, including First-Year Writing as a prerequisite.

Curriculum

Required Courses — 6 courses, 54 units

Two Introductory Courses		Units
76-275	Critical Writing Workshop	9
76-26x	Survey of Forms (Fiction, Creative Nonfiction, Poetry, Screenwriting)	
		9

200-Level Literature & Culture Courses (2 courses, 18 units)

Course options include but are not limited to the following:

Courses include but are not limited to:		Units
76-203	Pirates and Prostitutes in the 18th Century	9
76-205	Jane Austen	9
76-210	Banned Books	9
76-217	Contempory American Literary & Cultural Studies	9
76-218	Special Topics in Literature: Medieval Romance & Arthurian Legends	9
76-221	Books You Should Have Read by Now: 16th & 17th C. Pop Culture	9
76-230	Literature & Culture in the 19th Century: Environmentalisms	9
76-232	Introduction to Black Literature	9
76-233	Literature and Culture in the Renaissance	9
76-238	What Was the Hip-Hop Generation?	9
76-245	Shakespeare: Tragedies and Histories	9
76-247	Shakespeare: Comedies and Romances	9
76-281	Modern American Drama	9

300- or 400-Level Literature & culture or theory Courses (2 Courses, 18 units)

Course options include but are not limited to the following:

Courses include but are not limited to:		Units
76-310	Advanced Studies in Film and Media	9
76-313	19th Century British: Victorian Sensations	9
76-314	Data Stories	9
76-321	History of the British Novel	9
76-323	God: A Literary and Cultural History	9
76-329	Unruly Women in Early Modern Drama	9
76-333	Race and Controversy in the Arts	9
76-334	Literature of Wall Street	9
76-337	Representations of Islam in Early Modern England	9
76-341	Gender and Sexuality in Performance	9
76-343	Rise of the American Novel	9
76-350	Theory from Classics to Contemporary	9
76-344	Censored Texts	9
76-353	Transnational Feminisms: Fiction and Film	9
76-361	Corpus Rhetorical Analysis	9
76-367	Fact Into Film: Translating History into Cinema	9
76-377	Shakespeare and Film	9
76-381	Mad-Men, Television, and the History of Advertising	9
76-410	The Long Eighteenth Century	Var.
76-412	Performance and 18th Century Theatrical Culture	9
76-414	Politics, Media, and Romantic Literature 1789-1830	9
76-419	Media in a Digital Age	9
76-429	Digital Humanities: Politics and Early Modern Drama	9
76-435	Politics and Popular Culture	9
76-439	Seminar in Film and Media Studies: Class, Race, & Gender in Film	9
76-440	Postcolonial Theory: Diaspora and Transnationalism	9
76-443	Shakespeare and Theory	9
76-444	History of Books and Reading	9
76-448	Shakespeare on Film	9

Professional Writing Minor

Complete 6 courses and a minimum of 54 units, including First-Year Writing as a prerequisite.

Course		Units
First-Year Writing *		9
76-270	Writing for the Professions	9
or 76-271	Introduction to Professional and Technical Writing	
76-xxx	Two 200/300 level Core Writing Course **	18
76-xxx	Two 300/400 level Advanced Writing/Rhetoric Courses **	18
76-xxx	One 200-level or above English Elective	9

* Course options include 76-101, 76-102, [76-106 and 76-107], [76-106 and 76-108], or [76-107 and 76-108].

** Courses for PW minors in these areas are advertised by the English Department each semester.

Technical Writing Minor

Complete 6 courses and a minimum of 54 units, including First-Year Writing as a prerequisite.

Course		Units
First-Year Writing *		
76-270	Writing for the Professions	9
or 76-271	Introduction to Professional and Technical Writing	
76-xxx	Two 300-level Core Writing Courses **	18
76-xxx	Two 300/400 level Recommended Theory/ Specialization Courses **	18
76-xxx	One 300/400 level Technical Communication Elective +	9

* Course options include 76-101, 76-102, [76-106 and 76-107], [76-106 and 76-108], or [76-107 and 76-108].

** Courses for TW minors in these areas are advertised by the English Department each semester.

+ To fulfill this requirement, courses can come from the “additional” OR “recommended” options list of theory/specialization courses listed for Technical Writing majors in the English Department’s “What Counts for What?” document.

Senior Honors Thesis

Seniors in all five majors in the English Department who meet the necessary requirements are invited by the College of Humanities and Social Sciences (Dietrich College) to propose and complete a Senior Honors Thesis during their final year of study. The thesis may focus on research and/or original production in any of the areas offered as a major within the Department. To qualify for the Dietrich College Honors Program, students must have a cumulative Quality Point Average of at least 3.50 in their major and 3.25 overall at the end of their junior year and be invited by Dietrich College to participate. Students then choose a thesis advisor within the Department and propose and get approval from Dietrich College for a Senior Honors Thesis. The Honors Thesis is completed over the two semesters of the senior year (9 units each semester) under the direction of the chosen advisor. By successfully completing the thesis, students earn 18 units of credit and qualify for graduation with “College Honors.”

Creative Writing majors participating in the Senior Honors Thesis program may petition to have one semester of their thesis work count as one of their Workshop course requirements. Students interested in this option should contact the Director of Undergraduate Studies.

Internship Program

Qualified students in all four of the Department’s degree programs have the option of doing a professional internships for academic credit during their junior or senior years. These opportunities help students explore possible writing-related careers as well as gain workplace experience. Each internship is arranged, approved, and overseen by the Department’s Internship Coordinator. Particular attention is given to matching students to internship sites of specific interest to them. Students have interned in a wide variety of communications-related positions including placements at local radio, television, and print publications; museums, theaters, and cultural organizations; non-profit and public service organizations; public relations, advertising, and marketing firms; software and technology companies; new media organizations; and hospitals and healthcare communication organizations.

To be eligible for an internship, students must have a Quality Point Average of 3.0 or better and credit for at least one writing course (including Survey of Forms) beyond First-Year Writing. Internships generally carry 3-12 units of credit. A 9-unit internship is the standard and requires a minimum of 120-140 hours (8-10 hours per week over a 15-week term) of work at the internship site during the term. In addition, interns complete a reflective journal and a series of short research and writing assignments relevant to the specific internship. Students doing an internship for credit must be registered for the internship during the term (including summer) when they are working at the internship site. Majors in the Department may count one 9-12 unit internship for one of their degree requirements, generally an English elective.

The Accelerated MA in Professional Writing: MAPW 4+1

The MAPW 4+1 is a special program under which Carnegie Mellon students (usually majors or minors in the English department or BHA or BHS students with relevant coursework) can qualify to complete the MA in Professional Writing in 2 semesters instead of the usual 3. Students apply for admissions during their junior or senior year and, following admission and evaluation of their transcripts, may receive credit for up to four courses, or one full semester of work toward the MA requirements. The degree has a professional focus, combines intensive work in both writing and visual design, and prepares students for a range of communications careers. The coursework and career options most commonly pursued by students in the degree include

- Writing for Digital Media, including web design and information design
- Writing for Print Media, including Journalism
- Editing & Publishing
- Technical writing, including instructional design
- Science, Technology, and Healthcare Writing
- Public & Media Relations / Corporate Communications / Nonprofit Communication

Students interested in applying to the 4+1 program should consult the Director of the MAPW program early in their junior year for further details and advice on shaping undergraduate coursework to qualify for this option.

Faculty

MARIAN AGUIAR, Associate Professor of English – Ph.D., University of Massachusetts;

JANE BERNSTEIN, Professor of English – M.F.A., Columbia University;

DAVID BROWN, Associate Teaching Professor of English – Ph.D., Lancaster University;

GERALD P. COSTANZO, Professor of English – M.A., M.A.T., Johns Hopkins University;

DOUG COULSON, Assistant Professor of English – Ph.D., The University of Texas at Austin;

JAMES WYNN, Associate Professor of English – Ph.D., University of Maryland;

Department of English Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

76-100 Reading and Writing in an Academic Context
Fall and Spring: 9 units
76-100 is an academic reading and writing course for multilingual students, especially those who are not native speakers of English or who consider English to be their weaker language. The course emphasizes reading comprehension strategies for reading a variety of text types in English (e.g., journalism, textbook selections, popular press arguments, and academic journal articles). Throughout the semester, students use these sources to write summaries and short position papers. The course introduces students to readers' expectations for North American rhetorical style at the sentence, paragraph, and whole text or genre levels. Within the course we discuss explicit genre and linguistic norms for writing in academic English so that writers can connect with their readers. Students who take this course qualify through an online placement test that is administered through the university prior to the fall semester. (All sections are offered MWF). Each 76-100 course is structured by the reading and writing objectives of the course as well as a vocabulary for writing in English, but some courses present different themes (or content) in their readings.

Course Website: http://www.cmu.edu/hss/english/first_year/index.html

76-101 Interpretation and Argument
Fall and Spring: 9 units
See full course descriptions at this URL: http://www.cmu.edu/hss/english/first_year/index.html
Course Website: http://www.cmu.edu/hss/english/first_year/index.html

76-102 Advanced First Year Writing: Special Topics
All Semesters: 9 units
76-102, Advanced First-Year Writing courses are designed for students who have demonstrated an understanding of academic writing that most incoming freshmen have not. Because of the students' level of preparedness, the First-Year Writing Program provides intensive, advanced courses for students to work closely with senior faculty within the English department. Advanced courses assume that students have established strong reading and synthesizing skills, as well as a demonstrated interest in writing and communication, prior to entering Carnegie Mellon. The course topics shift each semester. Students enroll through special invitation. Class size for 76102 is capped at 19 and there are no prerequisites for the course. Advisors will be notified if their students qualify for the advanced writing courses.

Course Website: http://www.cmu.edu/dietrich/english/first_year/index.html

76-106 Writing about Literature, Art and Culture
Fall and Spring: 4.5 units
This mini course (one of two minis students can choose to fulfill their FYW requirement) uses artistic, literary, and cultural texts (e.g., poetry, short story, lyrics, video clips) to introduce students to a variety of academic reading and writing practices that enable students to engage with texts and write about them with complexity and nuance. Within the course, we will discuss texts and evidence from multiple perspectives. We will examine how literary and cultural scholars write about texts (defined broadly), how they make claims, provide reasoning, and use textual support to argue for particular ways of seeing cultural objects. Throughout the semester, students will draw upon prior strategies and develop new ones for close reading and for critical analysis in order to produce their own thesis-driven arguments about why texts matter. We will consider and write about the extent to which these reading strategies are relevant for other kinds of reading and analysis by comparing texts from a variety of different disciplinary contexts.

Course Website: https://www.cmu.edu/dietrich/english/first_year/index.html

76-107 Writing about Data
Fall and Spring: 4.5 units
Our lives are increasingly shaped by writing that involves numbers: newspapers routinely report the latest medical fads; politicians support their political agendas with both dubious and credible statistics; parents use data to decide where to buy a house and where to send their kids to school. This course (one of two minis students can choose to fulfill their FYW requirement) focuses upon interpreting and making arguments using mainly numerical data but also qualitative data. We will look at research in a range of disciplinesincluding psychology, education, medicine, engineering, and the sciencesand note how writers select and analyze the data they collect. We will also examine what happens to this research when it is picked up by the popular media. Students will also practice collecting and analyzing their own data and reporting it to suit the needs of various stakeholders. There are two primary audiences for this section. Students in data-driven majors will find the section useful preparation for communicating in their disciplines. Students in other fields will learn how to critique and respond to the many ways that numbers shape our lives. This section presumes a basic ability to calculate averages, percentages, and ratios, but no advanced mathematical or statistical preparation. Instead, this section provides a fascinating look at how numbers and words intersect to create persuasive arguments in academic, professional, and popular contexts. Students will compare and analyze texts that make arguments with data, practice rhetorical strategies for synthesizing and representing data so that by the end of the class, students will apply these strategies to write an original data-driven research proposal.

Course Website: https://www.cmu.edu/dietrich/english/first_year/index.html

76-108 Writing about Public Problems
Fall and Spring: 4.5 units
If all problems required a simple fix, we could don our Avenger costumes, pick up Thors hammer, and right the worlds wrongs. But most problems arent so simple. Most of the problems we encounter require careful investigation and research so that we might propose solutions that connect with others to make change. In this 76101 class (one of two minis students can choose to fulfill their FYW requirement), we will learn how public problems are defined and argued across a range of texts, including proposals, op-ed genres, and white papers. By analyzing a range of proposal texts, we will identify the different kinds of legwork necessary to write a successful proposal, arguably one of the most challenging aspects of writing a persuasive recommendation for change. We will examine how writers unpack problems rhetorically and use evidence to argue solutions for different stakeholders who may not share common values. We will learn strategies for evaluating and synthesizing data from existing research to use in a proposal argument. By the end of the course, students will write their own proposal that recommends a solution and a feasible plan for solving a real problem.

Course Website: https://www.cmu.edu/dietrich/english/first_year/index.html

76-120 First-Year Seminar: CSI Underground Books & Printing
Intermittent: 9 units
This is a course devoted to solving unsolved crimes (for realz!). We'll take on puzzling cases of illegal printing that have stymied investigators for hundreds of years. In working together to determine who may have been responsible for scandalous and illicit books, we'll learn about the history of censorship, the history of printing and typography, copyright and its discontents, crime syndicates, piracy, document forensics, and more. We'll get our hands dirty with rare books from the 16th and 17th centuries and also see what we can discover using modern technology and data analysis. This is a course for students who'll enjoy the thrills of creatively aggregating and assessing evidence and the challenges of real-world humanities problems that span history, literature, and technology. Students should expect to work in teams and also to expect the unexpected. Who knows what we'll find? With any luck, we'll be able to crack a few cases!

76-203 Pirates and Prostitutes in the 18th Century
Fall: 9 units
In this course, we discuss how sailors, pirates, and prostitutes changed the modern world. Blackbeard, Captain Kidd, "Black Sam" Bellamy, Calico Jack Rackham: these are just a few of the pirates who gained notoriety by terrorizing the seas in the 18th century. We explore this Golden Age of Piracy, investigating how these privateers created their own counter-culture. Equally important were the "ladies of the night" who eagerly anticipated the ships' return to port. Our course discusses how some of these women were able to amass fortunes off the pirates' plunder, and even became pirates themselves. We will examine various texts depicting sailors, pirates and their wenches, including paintings, cartoons, novels, songs about sailing, and plays. In doing so, students will be able to see how people dealt with various problems associated with privateers: sailors kidnapping loved ones, drunkenly tearing up the ports and spreading venereal disease, and enacting revenge against the Royal Navy's barbarity.

76-205 Jane Austen
Intermittent: 9 units
It is a truth universally acknowledged that Jane Austen is one of the most popular writers of the past two hundred years. In this course, students will have the opportunity to indulge in the work of this beloved author and answer: What can an exploration of Austen's time tell us about her novels and about ourselves as readers? In this course, we will read Austen's six published novels (Northanger Abbey, Pride and Prejudice, Sense and Sensibility, Emma, Mansfield Park, and Persuasion) as we consider: In what ways can we describe Austen's novels as "romantic," and how does her work fit within the parameters of the Romantic canon? With increases in literacy rates and the emergence of lending libraries, what can Austen's novels tell us about readership and popular fiction in the early nineteenth century? How do these vibrant texts engage with important issues of their (and our) time, like revolution, women's rights, race, sexuality, nationality and religion? Additionally, we will encounter excerpts from Austen's contemporaries and explore other cultural materials - like diaries, letters, periodicals, maps, music, fashion, and the visual arts - to paint a rich historical context around our reading. Finally, we will consider how cinematic adaptations of Austen's works can contribute to our interpretations of her novels.

76-208 Grammar for Everyone
Intermittent: 4.5 units
This is a mini-course in fundamental grammatical structures of English and how these structures fit into the writer's toolkit. This means you will learn a lot about English-language grammar in this course en route to understanding a lot about English language writing. This course is designed for students with no grammar background, for students with lots of grammar background, for students with no writing background, and for students with lots of writing background. The novel focus of this mini is on how grammatical knowledge can support and systematize your writing knowledge and practice.

76-210 Banned Books
Intermittent: 9 units
Freedom of expression enjoys an almost sacrosanct position in American politics, and yet there have been repeated attempts in the past century to ban, burn, censor, and suppress a number of controversial books. Students in this course will learn about the historic, institutional, and social contexts in which these censorship controversies arise, as well as the ways in which artists have responded to censorship attempts. We will ask which kinds of work are typically challenged and how attempts at censorship affect our understanding of a banned text and its significance. Readings for this class will include novels such as Toni Morrison's The Bluest Eye, Kurt Vonnegut's Slaughterhouse Five, Judy Blume's Are You There God? It's Me, Margaret, Stephen Chobsky's The Perks of Being a Wallflower, Sherman Alexie's The Absolutely True Diary of a Part-Time Indian, and Alison Bechdel's Fun Home: A Family Tragicomedy. In addition to literature, we will also consider the ways in which other forms of art, such as movies and music, have been challenged and censored. Students in this course will also celebrate the American Library Association's Banned Books Week, which will take place September 22-28.

76-213 19th Century British Literature
Intermittent: 9 units
Topics vary by semester. Spring 2012: Women writers played an essential role in the construction of Victorian literary culture. In this course we will read novels, poems, and periodical extracts by a diverse body of nineteenth-century female authors as a means of better understanding women's historic and aesthetic impact on Victorian culture. While some of our authors are well known, like the wildly popular poet Elizabeth Barrett Browning, we will also encounter the 'lost' author, journalist, and controversial anti-feminist Eliza Lynn Linton. The writing of Victorian women exemplifies important social debates from the nineteenth-century. Social taboos such as divorce, suffrage, Bloomerism, children out of wedlock, and women in the workforce were all topical in Victorian culture. As the conflicted and introspective heroine of George Eliot's The Mill on the Floss reminds readers, the role of marriage as a woman's sole profession was becoming increasingly untenable in the modern era. Victorians were forced to ask what other function were women fit to occupy. From the Pre-Raphaelite poetry of Christina Rossetti, to the gothic horror of Emily Bronte's Wuthering Heights, "the woman question" served as a lightening rod for a variety of nineteenth-century cultural anxieties. The woman as deviant and criminal which we will encounter in Mary Elizabeth Braddon's Lady Audley's Secret was an especially controversial aspect of the female-dominated genre of "Sensation Fiction." Margaret Oliphant records in an 1867 review from Blackwoods: "What is held up to us as the story of the feminine soul as it really exists underneath its conventional coverings is a very fleshy and unlovely record.(See Dept. for full desc.)

76-215 19th Century American Literature
Intermittent: 9 units
Topics vary by semester. Consult the course descriptions provided by the department for current offerings. Example, Spring 2010: In this class, we will be reading many of the major works of Edgar Allan Poe, Nathaniel Hawthorne, and Herman Melville. Often described as America's Dark Romantics, these three authors are frequently read as reacting to the current of optimism and idea of human perfectibility that characterized antebellum America and the Transcendentalist movement. We will begin by reading most of Poe's short fiction and novellas and a number of his poetic and journalistic works. We will also read Hawthorne's two major novels House of the Seven Gables and The Scarlet Letter, as well as a number of his shorter works from Twice-Told Tales. The class will also look at a number of Melville's major works beginning with his first novel Typee, his short story collection The Piazza Tales, and culminating with Moby Dick. In addition to reading these canonical authors for their artistic merit, we will also consider the ways in which their works interacted with some of the prevailing ideas of their historical moments.
Prerequisite: 76-101

76-217 Contempory American Literary & Cultural Studies
Intermittent: 9 units
Topics vary by semester. Consult the course descriptions provided by the department for current offerings. Example, Summer 2010. It has been said that the teenager is the most free and least happy of all living beings. Given America's current obsession with youth culture, it's hard to imagine a time when the word "teenager" did not exist. However, this word came into being largely as a result of the post World War II boom in consumerism when advertisers needed a new way to define an emerging demographic group with its own disposable income and spending power. Through a survey of twentieth century literature that focuses on the teenage experience, we'll explore the changing meanings of young adulthood over the last one hundred years. What is the relationship between the invention of the teenager and modernist aesthetics? What characteristics were considered markers of young adulthood in the 1920's? In the 1950's? In 2000? How are the experiences of angst, anomie and the unfulfilled American dream connected to modern Western life through the teenage subject? How do tropes of individualism, rebellion, freedom and resistance connect the literature of teen angst with other genres of American literature? How has teen angst been both an impediment to and the inspiration for cultural resistance and social change? To answer these questions, we will compare texts such as Philip Roth's Portnoy's Complaint, Anzia Yezierska's The Bread Givers, J.D. Salinger's Catcher in the Rye, Margaret Atwood's The Edible Woman, Dave Eggers' A Heartbreaking Work of Staggering Genius, and Banana Yoshimoto's Kitchen. See English Department for full description.
Prerequisite: 76-101

76-218 Special Topics in Literature: Medieval Romance & Arthurian Legends
Fall and Spring: 9 units
This course will explore the "greatest hits" of medieval literature from early Arthurian legend to the most popular of the Canterbury Tales. We will read famous medieval romances from Chaucer's Troilus and Crysede to Gottfried von Strassburg's Tristan, and the timeless letters of Abelard and Heloise. We will compare and contrast these texts across time, place, space, genre, and form, discussing medieval cultural values of chivalry, nobility, honor, quest, charity, and fealty. Students will be expected to write short responses, one close reading paper, and a comparative paper by the end of the term.

76-221 Books You Should Have Read by Now: 16th & 17th C. Pop Culture
Intermittent: 9 units
This course will explore the "greatest hits" of sixteenth and seventeenth-century English literature from Thomas More's Utopia (1551) to the political pamphlets of the English Revolution 1640. We will look at early modern travel narratives, representations of the New World, and the "get rich quick" schemes of the long sixteenth century. We will read a range of city comedies presenting realistic and satirical representations of early modern trade, crossdressing, politics, religion, and working life in London. These representations will be compared to plays set in the countryside depicting witches, the law, and coercive the transfer of money and property. The third part of this course will explore revenge tragedies and the political pamphlets of the English Revolution, asking how the new worlds, old worlds, and utopian imaginings of sixteenth century England compare to those of a century later.

Course Website: http://www.cmu.edu/hss/english/courses/index.html

76-222 Creative Writing Matters
Intermittent: 9 units
This course will explore at least two of the meanings of the word "matters"¿as in "is of importance," and as in "things, concerns." Through reading and writing in various genres, students will discover and discuss how creative writing engages with the world around us while also learning some of the important techniques of writing creatively in various genres, including scriptwriting, fiction, nonfiction, and poetry. The class will read a wide variety of books, and students will have the opportunity to interact with the authors through public readings, classroom visits, and attending a play. In addition, the class will take advantage of other literary events happening around Pittsburgh in order to further examine places where writing comes off the page and engages with the world. Revision will be required and emphasized.

76-223 Contemporary Black Literature
Spring: 9 units
This course will take a transatlantic approach to what constitutes blackness as well as black literature and expression from the turn of the 20th century until the present. We will investigate the relationship between poetic forms and expressions of social and self-representation. However, this class will primarily focus on prose works (novels, memoirs and non-fiction essays) that span a multitude of genres from mystery to literary and science fiction. Authors include: W.E.B. Dubois, Zora Neale Hurston, James Baldwin, Zadie Smith, Claude McKay, Amiri Baraka, Franz Fanon, Marlon James, Edouard Glissant, Nnedi Okorafor, Merle Collins and Jamaica Kincaid to name a few.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-225 Topics in Rhetoric: Words and Numbers
Intermittent: 9 units
Topics vary by semester. Spring 2014: For decades, communication researchers relying on stimulus-response theories associated a text with a single dominant stimulus evoking a single dominant response. This thinking widely influenced rhetorical understandings of language for decades as well. Today, rhetorical theories of language have discredited these behaviorist theories in favor of theories that see language as the constructors of situations rather than the effects of them. When speakers and writers use language, they resuscitate, enact, and perform worlds of experience from words. They create not only meanings but histories, identities, and social bids to initiate social change. This course introduces students to a theory and ontology of language study that is in keeping with language as a constructive activity. Students will learn to use software designed to analyze texts qualitatively and numerically from a constructive point of view. The software works as a microscope to help you see patterns of language use that escape the limited attention span of even the most painstaking of close readers. After learning how the software works, we will do exercises with small textual samples so that students can sharpen their powers of observing language across families of patterns. Students are encouraged to analyze the texts they love most — from literature, politics, journalism, to their favorite blog posts, tweets, and Facebook posts. (Full course description available on English department website).

76-227 Comedy
Intermittent: 9 units
We can't, of course, expect to come up with an absolutely complete definition of the comic, but for our purposes we can consider it as an embodiment of the opposite of "gravity." Comedy is characterized by its levity. This does not mean, of course, that it is any less "serious" than tragedy, even if-or especially-because it tends to favor the superficial over the profound. Indeed, if tragedy is adolescent, then the mature, adult mode is the comic, being more social and rational. A key characteristic of comedy is wit-or simply intelligence. Comedy involves a lot of pure play of the mind. It turns out that there have been a few notable attempts to help us understand just why comedy is the "social" genre beyond all others, why the comic attitude is the civilized, urbane, mature view of life. And we'll consider some of those theories while trying to understand why some things are comic and some are not. We'll consider several classical works of comic literature, beginning with Aristophanes, Shakespeare, and moving on to more recent examples, including some films.

76-230 Literature & Culture in the 19th Century: Environmentalisms
Intermittent: 9 units
In this class we'll go back in time to the Walden Pond of Thoreau's time, with a focus on the "Green Nineteen"—-writers and thinkers who considered the relationship between human civilization and the wilderness (Mary Shelley's Frankenstein, Thoreau's Walden Pond, and selected essays from Ralph Waldo Emerson). We will also think about the environment in relation to a famous slave narrative (Douglass, The Slave Narrative of Frederick Douglass) and in relation to one of the great feminist novels of the time, The Awakening. Finally we will consider the environmental consciousness of the two most important poets of the 19th century, Walt Whitman and Emily Dickinson. As for coursework, we will use the class to practice meditation, nature walks, and one project in which you will design your own environmentally conscious Utopian community.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-232 Introduction to Black Literature
Intermittent: 9 units
This course will take a transatlantic approach to what constitutes blackness as well as black literature and expression from the turn of the 20th century until the present. We will investigate the way authors and artists use literature and other mediums of expression for social and self-representation. Our primary focus will be on prose works (novels, memoirs and non-fiction essays) that span a multitude of genres from mystery to literary and science fiction. There will also be sections of the course that focus other mediums such as visual art, comics, music, film and television. We will cover figures such as: Fredrick Douglass, W.E.B. Dubois, Zora Neale Hurston, Langston Hughes, Claude McKay, Amiri Baraka, Franz Fanon, Toni Morrison, Merle Collins, Kyle Baker, Kara Walker and Beyonce to name a few.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-233 Literature and Culture in the Renaissance
Intermittent: 9 units
This course is designed to introduce students to the period of the Renaissance and its extraordinary cultural, literary, and artistic developments all across Europe. Spreading from the fifteenth to the seventeenth century, the Renaissance saw Europe transition from the medieval age to early modernity. That transition was characterized by watershed events such as the Reformation and the wars of religion, the dissemination of print, the rediscovery of classics within the humanist movement, the invention of perspective in visual culture, major scientific discoveries (Galileo, Copernicus, Descartes), the development of proto-capitalism, and the beginning of colonial enterprises with lethal implications in an age often dubbed "the Age of Discovery." In this course, we will read, interpret, and write about the literature that flourished in that rich and complex cultural context. Readings will include Thomas More's Utopia, Christopher Marlowe's Doctor Faustus, Spenser's The Faerie Queene, a selection of English poetry, as well as Machiavelli's The Prince, Erasmus's Praise of Folly, Rabelais's Pantagruel, and Cervantes's Don Quixote.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

76-235 20th Century American Literary and Cultural Studies
Intermittent: 9 units
Topics vary by semester. Example, Fall 2010: 20th Century American Bestsellers: In this course we will work to construct a story about the United States and its literary tastes in the twentieth century by reading a selection of bestselling American fiction from the last 100 years. The class will introduce students to concepts central to the cultural study of popular texts, as well as a number of more and less familiar authors and novels. Readings will include only novels that appeared on yearly Publisher's Weekly top-ten bestsellers lists from 1900 to 1975. Winston Churchill's A Far Country, Edith Wharton's The Age of Innocence, Margaret Mitchell's Gone with the Wind, Sloan Wilson's The Man in the Gray Flannel Suit, J. D. Salinger's Franny and Zooey, and E. L. Doctorow's Ragtime are just a few of the novels that have shown up on this list. To complete our sketch of popular contemporary fiction, students will present on a bestseller from the last three decades and its reception. Moving through the wide range of texts that became bestsellers, from Wharton to Dan Brown or Stephen King, will allow us to consider whether Daniel J. Boorstin really got the whole picture when he said, "A best-seller was a book which somehow sold well because it was selling well." Course requirements will include a midterm exam, a presentation, and a final paper based on the presentation, as well as intensive reading.
Prerequisite: 76-101

76-237 Post Colonial Literature
Intermittent: 9 units
Topics will vary by semester. Consult the course descriptions provided by the department for current offerings.

76-238 What Was the Hip-Hop Generation?
Intermittent: 9 units
This course will attempt to answer a simply stated but not so simply answered question: What is (or was) the "hip-hop" generation? Bakari Kitwana gives us a very broad but useful rubric to understand whom that generation was in his 2002 book, The Hip-Hop Generation: Young Blacks and the Crisis of African-American Culture. For Kitwana it defines the first generation of African-American youth that grew up in post-segregation America. While useful, Kitwanas definition is also quite provocative since many of the earliest practitioners (and consumers) of what would eventually be called "hip-hop" were not all African-Americans but Greeks, Puerto Ricans, Jews, Jamaicans, Germans, Trinidadians, Mexicans, etc..., many of whom lived in America but also encountered hip-hop elsewhere on the planet. In our class we will take a broad, global perspective on the question of "what is/was the hip-hop generation" through scholarly and popular works by Kitwana. Jeff Chang, Tricia Rose and many others. Given the significant media studies components of this course our class will lean heavily on musical, cinematic and televisual sources. Not only will you watch early fictional films about hip-hop like Wildstyle and Krush Groove but others like Matthieu Kassovitzs La Haine and Rick Famuyimas Brown Sugar which are influenced by hip-hop culture. We will also watch music videos as well as listen to singles and select albums like Queen Latifahs All Hail the Queen, Kendrik Lamars To Pimp A Butterfly, Die Antwoords Tension as well as read memoirs such as Jay-Zs Decoded.
Prerequisite: 76-101

76-239 Introduction to Film Studies
Fall and Spring: 9 units
This course is an introduction to the history, technology, aesthetics and ideology of film. The main focus will be on the narrative fiction film, but we will also discuss documentaries, avant-garde work and animation. At the same time, we will be attentive to the ways in which our conceptual understanding of film has impacted the development of successive waves of visual media. The central organizing principle is historical, but there are a number of recurring thematic concerns. These include an examination of the basic principles and terminology of filmmaking, the development of film technology, the definition of film as both art and business, the history of film as an object of critical and cultural study, and the importance of film as the precursor of newer formats. The course has four key goals. First, to provide students with a solid grounding in the key issues and concepts of film studies. Second, to expand their ability to knowledgeably critique individual cinematic works and the relationship of those works to the larger culture. Third to provide students with experience in expressing those critiques in verbal, written and visual forms. Lastly, to provide them with an understanding of the central role of film history and film studies in the development of newer media.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-241 Introduction to Gender Studies
Fall and Spring: 9 units
Biological sex vs. gender roles. Intersectional feminism. LGBTQIA+ rights. Consent. Masculinity and gender roles. #metoo and gender-based violence. Economic inequity. Sexual politics. This course offers students a scholarly introduction to these social and political issues. Organized thematically, with interdisciplinary readings both foundational and contemporary, the class will combine theory, literature, and film with texts like law, public policy, and media representations. We will read critically and discuss openly. Readings will include work by Virginia Woolf, Simone de Beauvoir, Judith Butler, Kimberlé Crenshaw, bell hooks, Michael Kimmel, Raewyn Connell, Chimamanda Ngozi Adichie, Roxanne Gay, James Baldwin and Margaret Atwood.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-245 Shakespeare: Tragedies and Histories
Spring: 9 units
Few authors have captured the human condition as poignantly as Shakespeare. This course uses Shakespeare's best-known tragedies and history plays to introduce students to the Bard's drama, time, and culture. Together we will read some of the most powerful plays that Shakespeare wrote throughout his career. Those gorgeous works explore with unmatched depth, craft, and lucidity the themes of power, love, loss, ambition, madness, identity, and finitude, while relentlessly asking the same question: what does it mean to be human? We will read, analyze, and discuss Titus Andronicus, Richard III, Richard II, Romeo and Juliet, Julius Caesar, Hamlet, Othello, King Lear, Macbeth, and Antony and Cleopatra. What did those plays mean in their original context? What cultural work did they perform in early modern England? What cultural work do they perform today, and, ultimately, why do we need Shakespeare now more than ever?

76-247 Shakespeare: Comedies and Romances
Fall: 9 units
In the theatrical culture of Elizabethan England, comedy was serious business. This course uses Shakespeare's best-known comedies and romances to introduce students to the Bard's drama, time, and culture. Together, we will read some of Shakespeare's queerest and most delightful comedies such as Midsummer Night's Dream and Twelfth Night in conversation with darker troubling plays that revolve around sexual violence (The Taming of the Shrew, Measure for Measure), racism (The Merchant of Venice), and colonization (The Tempest, Cymbeline). We will also wonder: what does Shakespeare's late romance plays such as The Winter's Tale, or Pericles, often described as "tragicomedies" or as "problem plays," tell us about the strengths and limits of comedy as a genre? In short, valuing those classics of the English literary canon simultaneously for the timeless craft and for the historically located cultural horizon that they evidence, we will explore what it means, as readers of Shakespeare, to take comedy seriously.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-259 Introduction to Film History
Fall and Spring: 9 units
tbd
Prerequisite: 76-239

76-260 Survey of Forms: Fiction
Fall and Spring: 9 units
Sections A & B: This course serves as an introduction to the craft of fiction. We will read a wide array of short stories, a novella, and a novel, and study the techniques and elements of literary fiction as they are displayed in the works of established writers. I will expect you to read the assigned works carefully, giving ample time and consideration to these readings, and to come to class prepared to discuss them. You will also be expected to spend a good deal of time on your own writing, to improve upon that work throughout the term, and to provide thoughtful criticism on your classmates' work. By the end of the semester, you should have a solid understanding of the elements of successful literary fiction, be able to write meaningful critiques of such writing, and be able to write and revise a complete short story. At times, the class will be fun, but it will also entail a good deal of effort and time on your part. Overall, you should see this class as an opportunity to develop and share your creative work, and to learn skills and new ways of thinking about writing. Section C: This is an introduction to the reading and writing of fiction designed as the first in a sequence of courses for creative writing majors and also as a general course for students wanting some experience in creative writing. Writing exercises will be devoted to such aspects of fiction as description, characterization, and narration, and to the writing of scenes and stories. In the second half of the course, students write a full short story of around 10-12 pages due two weeks before the end of the term. These are distributed to the class, discussed, and revised.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-261 Survey of Forms: Creative Nonfiction
Intermittent: 9 units
The National Endowment for the Arts defines "creative nonfiction" as "factual prose that is also literary." In this survey course, students will read a wide range of work that falls into this lively genre, including memoir, travel writing, the personal essay, and nature writing. Weekly writing assignments will give students the chance to work on short pieces of their own creative nonfiction.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-262 Survey of Forms: Nonfiction
Intermittent: 9 units
According to The National Endowment for the Arts, creative nonfiction is "factual prose that is also literary." Memoir, the essay, and literary journalism are just three kinds of writing that fit into this very broad, very vital genre. While creative nonfiction often borrows techniques from fiction, such as narrative, scene, dialogue, and point of view, creative nonfiction is based on actual events, characters and places. What distinguishes creative nonfiction from journalism is that it conveys more than bare-bones facts and that language, analysis and narrative voice are integral parts of each piece. In this course, students will have the chance to read widely within the genre. Exercises and writing assignments will give students the chance to write their own pieces, so that by the end of the semester, everyone will have written four different kinds of creative nonfiction.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-263 Survey of Forms: Playwriting
Intermittent: 9 units
This course is an introduction to the craft of playwriting. Beginning with an understanding of the basic elements of dramatic action such as: character, conflict, plot, setting and dialogue, students will be given weekly writing prompts both in class and as homework assignments in order to explore each of these elements in their own writing, along with reading and analyzing examples of contemporary dramatic literature. There will be opportunities to attend local and university productions in order to appreciate how a text is transformed when staged. Student writing will be workshopped in class with the goal of learning how to give and take feedback as well as completing a short play by the end of the semester.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-265 Survey of Forms: Poetry
Fall and Spring: 9 units
Section A: This course combines the writing of poetry with the study of the techniques of poetry. It consists of three primary units focusing on Diction and Tone, Rhythm and Meter, and Imagery. Students are expected to demonstrate their knowledge through writing poems in specific poetic forms and through analyzing poems in relation to the specific techniques introduced in each unit. Section B:
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/hss/english/courses/courseshtml

76-267 The Short Story
Intermittent: 9 units
Poe defined the short story as something that could be read at one sitting. While simple enough, the definition in fact suggests a concern with concentrated form and unified artistic effect. In a sense, the short story has been around as long as people have been telling each other tales, but as a literary form it came into its own in modern times, during the 19th century, and it continues to be produced in considerable numbers. For many readers one of the great features is the one Poe pointed to, it is short. People who have never finished a novel by Henry James must be legion. So, with the short story, we can experience something with genuine literary merit, in an accessible form. Concentration, of course, can bring issues of comprehension and often short stories can seem puzzling, or incomplete to the average reader. This class will attempt to develop our abilities to read with care and attention—and feeling—in order to make us better readers of any artistic text. The challenges of the short form turn out to be excellent opportunities for learning a lot, in a little space. We?ll make use of several inexpensive anthologies, and look at one or two central writers (Hemingway and Borges) in more depth. The class will require the writing of a few short papers, engaging in online discussions on Blackboard, and three in class tests. Students can expect to develop their historical understanding of current experience and to gain an understanding of how to interpret and comment on significant pieces of fiction. They will become familiar with some key ideas about the nature of short stories in general and the interpretation of texts., and will engage in an attempt to develop a theory of the aesthetic nature of short fiction.
Prerequisite: 76-101

76-269 Survey of Forms: Screenwriting
Fall and Spring: 9 units
This is a course in screenplay narrative. The screenplay has a certain format observed by every screenwriter. It is not so difficult to learn the format. The difficulty is in developing a screen story populated by believable characters, creating an expressive and logical relationship between the scenes by manipulating screen space and screen time, knowing what to omit from the story and what to emphasize, and finally writing dialogue that sounds real, but that does not simply copy everyday speech. The class will be structured into weekly writing exercises, discussion of the narratives under consideration, presentation and discussion of student work, and a final writing project.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-270 Writing for the Professions
Fall and Spring: 9 units
Strong writing and communication skills are expected across the professions, from computer science to data science, from healthcare to engineering. This course is designed to help students in these and other professions build skills and confidence in written, oral, and team communication. Our guiding, research-based premise for the course is that readers in professional contexts are busy, actively look for the information they need, and deserve to get that information in a clear and accessible way. In this course, you will strengthen your writing and communication skills through a series of projects that put real readers and users of documents at the center your writing process. Through genres like job application packages, proposals, presentations of complex information for non-experts, and team-based technical documentation, you will practice the skills you will need as you move from student writer to professional. The course is writing intensive, and requires regular participation and attendance. This course is designed for all undergraduates pursuing majors and minors outside English, and has no pre-requisites beyond First Year Writing.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-271 Introduction to Professional and Technical Writing
Fall and Spring: 9 units
Professional and technical communicators use words and images to connect people with information. With a strong foundation in rhetoric, this course will sharpen your abilities to communicate information clearly, effectively, and responsibly to real readers, stakeholders, and decision makers. Our assignments and conversations will include a wide range of genres and rhetorical situations you can expect to encounter as a professional and technical communicator, including job application genres, narrative genres like feature articles that blend subject matter interviews with keen observation, research genres like proposals, and team writing genres like technical documentation. A high level goal for the course is to combine theory, methods, and best practices for putting real readers and users of information at the center of our communication strategies. By the end of the course, you will have a portfolio of polished work that you can use to narrate your professional strengths and interests. This course is designed for undergraduates pursuing majors and minors in a writing and communication field, and who want to explore professional and technical communication as a discipline and career area.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-272 Language in Design
Fall: 9 units
Language in design is a professional communications course for designers. During your career as a designer, you will be expected to produce written documents to supplement and accompany your design processes and solutions. In this course, you will learn the conventions associated with the types of writing that designers most often have to produce on the job, such as proposals, memos, and reports. Additionally, you will prepare a job packet (including a resume, a cover letter, and a portfolio) that you can use as you begin your job search. You will also refine your ability to talk about your projects to both expert and non-expert audiences. Ultimately, this course aims to prepare you for the professional communications situations that you will encounter in your design career.

76-273 Presenting a Public Self
Fall: 9 units
Presenting your work and ambitions in public forums is a skill that you will be expected to demonstrate as you emerge from undergraduate studies and prepare to enter the commercial sector, graduate-level academic work or professional education in business, medicine or law. While such expectations exist, practice in this genre of writing, particularly in the personal statement, is not always readily available in existing coursework. "Presenting a Public Self" will introduce methods for developing and practicing your ability to communicate individual proficiencies and aspirations in written form, while bringing you in contact with a body of published work by public intellectual figures from the U.S. and other territories whose writing demonstrates an intertwining of personal narrative and public, professional identity, to engage readers of all stripes. Throughout the term you will practice writing in the public yet personal vein through assignments like: self-portrait essay, to cultivate a first-person voice, an op-ed essay, to practice balance in argument from the position of a burgeoning expert in your disciplinary area, and a personal statement, where you will learn to combine articulation of a personal narrative and professional competency to argue why you are a strong candidate for a particular opportunity. Reading selections for the semester will include work produced by your peers, as well as published writers whose work combines personal and professional spheres, ranging from texts like Paul John Eakin's Living Autobiographically to Mary Catherine Bateson's Composing a Life to Spencer Nadler's The Language of Cells: A Doctor and his Patients, amongst others.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

76-275 Critical Writing Workshop
Fall: 9 units
This course will introduce you to ways of critical thinking and writing about literary and media genres: poetry, drama, fiction and film. Authors may include William Blake, Percy Shelley, Jane Austen, Herman Melville, Emily Dickinson, H. G. Wells, Charlotte Perkins Gilman, T. S. Eliot, Toni Morrison, Tom Stoppard, or Don Delillo. Film directors may include Sergei Eisenstein, Orson Welles, Alfred Hitchcock, Jean-Luc Godard, or others. Students will learn how to interpret print and visual media and how to communicate their interpretations with clarity and self-awareness. To that end, students will write four short to mid-length interpretive papers to workshop in class.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-276 Genre Studies
Intermittent: 9 units
Topics vary by semester. Consult the course descriptions provided by the department for current offerings. Fall 2012: Poe defined the short story as something that could be read at one sitting. While simple enough, the definition suggests a concern with concentrated form and unified artistic effect. in a sense, the short story has been around as long as people have been telling each other tales, to be sure, but as a literary form it came into its own in modern times, during the 19th century and it continues to be produced in considerable numbers. For many readers one of the great features is the one Poe pointed to: it is short. People who have never finished a novel by Henry James must be legion. So we can experience something with genuine literary merit, in an accessible form. Concentration, of course, can bring issues of comprehension and often short stories can seem puzzling or incomplete to the average reader. This class will attempt to develop our abilities to read with care and attention—and feeling—in order to make us better readers of any artistic text. The challenges of the short form turn out to be excellent opportunities for learning a lot, in a little space. We'll make use of several inexpensive anthologies, and look at one or two central writers (Hemingway, for example) in more depth. The class will require the writing of a few short papers, engaging in online discussions on Blackboard, and three in class tests.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-281 Modern American Drama
Intermittent: 9 units
This course will focus on major American playwrights of the 20th century, likely including S. Glaspell, ONeill, Hellman, Wilder, Hansberry, Guare, Williams, Wilson, Mamet, Miller, Albee, Shepard, Wasserstein, Kushner, and Myers. Some plays will be viewed on video or in film adaptations.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-285 Team Communication
Intermittent: 6 units
This mini will introduce you to research and theory on how to create effective teams. In it, you will learn: - leadership strategies for managing projects and getting everyone to contribute to their best capacity
- interpersonal skills for negotiating team conflict - communication strategies for working with individuals from very different professional and cultural backgrounds. - techniques for fostering trust and inspiring team innovation and creativity - how to use technology to manage teams that are geographically separated Professor Joanna Wolfe has been studying student and professional technical teams for fifteen years and is the author of multiple books and award-winning articles on team communication. This course will be hands-on with assigned readings and video cases that are discussed in class with plenty of opportunities to role-play different communication strategies and techniques.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-286 Oral Communication
Intermittent: 6 units
Oral presentations are essential to professional success. Yet many people find themselves growing weak in the knees at the thought of presenting in front of a group. They read off of notes, speak too fast, or pepper their speech with nervous filler words such as "um" or "you know." 76-286 Oral Presentations is a mini intended for students who want to boost their confidence in presenting in front of others. You will learn strategies for structuring the content of a presentation, designing effective presentation slides, and controlling your voice and body language to produce a smooth, confident-sounding oral delivery. We will begin with giving short informal presentations and gradually increase the stakes as your confidence improves. You will have weekly opportunities to practice and improve your skills. We will also find opportunities to practice in a variety of physical settings so you can envision yourself as a calm, confident speaker no matter your surroundings. Grades in the course will be based on improvement and effort to encourage students to focus on their development rather than on final outcomes.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-292 Film Production
All Semesters: 9 units
Experiencing the process of filmmaking from the script to the set and to the editing room, students will develop a personal filmic language to create a short final film, exploring audio and visual forms that will serve the content they developed in their scripts. The focus will be on understanding the various aspect of the film grammar with an emphasis on the basic visual components - using space, tone, line, shape, color, movement and rhythm- and how they are used to visually tell the story. These components are used to define characters, communicate moods, emotions, thoughts and ideas.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-294 Interpretive Practices: Introduction to Critical Reading
Fall: 9 units
This course will introduce you to foundational theories and methods that form the practice of interpreting literary, poetic, cinematic, and other artistic modes of expression. We will start with an introduction to poetics through the works of Aristotle then move our way up through specific terms and theories of language, image and narrative as a system of communication and imaginative expression from Ferdinand Saussure to Roland Barthes and Hortense Spillers. I have organized our course around specific art works that I have paired with an interpretive reading practice and/or term. We will read, watch or listen to the works of: T.S. Eliot, Beyoncé, Sergei Eisenstein, Kara Walker, Mary Shelley and Percival Everett to name a few.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-295 Topics in Russian Language & Culture: 20th Century Russian Masterpieces
Fall: 9 units
The October Revolution of 1917 had profound effects not only for Russian society, but also for literature and culture. Even before the Revolution, Vladimir Lenin stressed the importance of literature on the hearts and minds of people. After the Revolution, the new Soviet state demanded writers to become, in Stalin's words, "engineers of human souls," and proclaimed "socialist realism" as the only permissible method of creative work in literature. This course focuses on masterpieces of Russian prose and poetry of the 20th century. Readings will include the "proletarian" writings of Maxim Gorky, the "symbolism" of Alexander Blok, the "futurism" and "modernism" of Vladimir Mayakovsky, as well as works by many other authors. We will discuss such important issues for Russian cultural history as the role of the intelligentsia in the Russian Revolution; the content and method of Russian decadence; symbolism and modernism; and the experience of imprisonment, liberation, and exile that became so important for many writers and poets.

76-300 Professional Seminar
Fall: 3 units
This weekly, 3-unit seminar is designed to give professional writing majors an overview of possible career and internship options and ways to pursue their professional interests. Each session will feature guest presenters who are professionals working in diverse communications-related fields such as web design, journalism, public relations, corporate and media relations, technical writing, medical communications, and working for non-profits. The visiting professionals talk about their own and related careers, show samples of their work, and answer student questions. The course is required for first-year MAPW students and is open to all English undergraduates, who are urged to participate in their sophomore or junior years to explore options for internships and careers.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-301 Internship
Fall and Spring
This course is designed to help you explore possible writing-related careers as you gain workplace experience and earn academic credit. You'll work on- or off-campus as an entry-level professional writer for 8-10 hours per week in a field of interest to you (public relations, journalism, advertising, magazine writing, non-profit, healthcare, etc.). You are responsible for finding an internship. Most of your class time for the course will be completed at your internship site - a minimum of 120 hours (8-10 per week) over the semester for 9 units of credit. As the academic component of the course, you'll keep a reflective journal and meet periodically with the internship coordinator to discuss your internship and related professional issues. You must register for the course before the add/drop deadline of the semester in which you want to do your internship. Before you can register, you must contact the internship instructor listed above to express your interest in the course and to be cleared for registration. Credit for the internship course cannot be retroactively awarded for past internships.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-302 Global Communication Center Practicum
Fall: 6 units
This practicum is restricted to students who have applied and accepted a position as a Global Communication Center tutor. For more information on applying, contact the course instructor. Students in this six-unit mini will learn about best practices in tutoring, gain experience analyzing and responding to a wide range of academic and professional genres, and learn to adapt their tutoring style for different kinds of students. In addition, we will learn to support oral, visual, and collaborative modes of communication alongside more traditional written genres. Assessments include regular hands-on activities, reading responses, and participation in class discussions. Please note that in terms of time commitment, a 6 unit mini is equivalent in weekly workload to a 12 unit full semester course. The mini is half the credits because it requires the same workload but only for half the semester.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: https://www.cmu.edu/gcc/faqs/index.html

76-306 Editing and Publishing
Fall and Spring
Note: Registration in this course is by permission only. Students must contact Prof. Costanzo directly. In this course students will work closely with the editors of Carnegie Mellon University Press to learn many of the facets of producing books. These range from business management and marketing to the elements of editing, book design, and production.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-307 Advanced Editing and Publishing
Fall and Spring
Note: Registration in this course is by permission only. Students must contact Prof. Costanzo directly. In this course students will work closely with the editors of Carnegie Mellon University Press to learn many of the facets of producing books. These range from business management and marketing to the elements of editing, book design, and production.

76-310 Advanced Studies in Film and Media
All Semesters: 9 units
This course will focus on several key technical components of filmmaking and the ways they function within the film text, as well as the ways they can be read as an indication of the underlying ideology of a work. Individual units of the course will concentrate on performance, production design, photography, editing and music. Films will be drawn from a variety of national cinemas from around the world. A primary goal of the course will be the development of skills useful for filmmaking, film analysis and scholarship. Students will engage in focused projects designed to facilitate the pedagogical goals of each unit.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-311 Acting Out in the London Theatre
Intermittent: 9 units
More Londoners went to the theater between 1660 and 1800 than read novels or even newspapers. The theater was THE social media of this formative period in the history of an English-speaking, urban public, and this course explores the power of the theater as a means of both social control and political resistance. What audiences did and said in the theater could matter as much as the plays in the formation of public opinion. A growing print media carried public consensus or dispute from the theater into coffee shops, taverns, and private libraries. Instead of taking a traditional "survey" approach to this period in the English theater, we will study a succession of "nights at the theater," specific performances of plays that happened on particularly eventful evenings when the playwhile significantwas not the only important performance. The introduction of an actress to a king who would make her his royal mistress, the final performance of a beloved actor, and the violent riots that were frequent occurrences in theaters are examples of cultural performances that shaped public opinion. We will read plays, of course, but also print and visual documents that speak to the moment of the play; we will listen to music, and generally immerse ourselves in the social and political struggles over public opinion in a world that very much prefigures our current world of celebrity and fake news.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-312 Crime and Justice in American Film
Intermittent: 9 units
Films dealing with criminal activities and criminal justice have always been popular at the box office. From the gangsters of the Thirties and the film noir of the Fifties to the more recent vigilante avenger films of Liam Neeson, the film industry has profited from films about crime and its consequences. How those subjects are portrayed, however, tells us a great deal about larger trends in American history and society. Every imaginable type of criminal activity has been depicted on screen, as have the legal ramifications of those acts. But these films raise profound questions. What is the nature of crime? What makes a criminal? Are there circumstances in which crime is justified? How do socioeconomic conditions affect the consequences? How fair and impartial is our justice system? Perhaps most importantly, how do depictions of crime and justice in popular media influence our answers to these questions? This class will utilize a variety of films to discuss the ways in which popular media portrays the sources of crime, the nature of criminals, the court and prison systems, and particular kinds of criminal acts. Films to be screened may include such titles as The Ox-Bow Incident, Out of the Past, 12 Angry Men, Young Mr. Lincoln, Brute Force, The Equalizer, Jack Reacher and Minority Report. By thoroughly discussing these films and related readings we will be able to trace the various changes in attitude towards crime and justice in America over the last century.

76-313 19th Century British: Victorian Sensations
Intermittent: 9 units
Today if something causes a "sensation," it gives us a rush of excitement, a public uproar, a scandalous controversy, a terrifying threat, all magnified to us by electronic and global media. How should we think about, as opposed to merely reacting to, such sensations that preoccupy both public media and personal fears and fantasies? This course will show that "sensation culture" began in the 19th century and has been ever since a key part of mass culture up to the sensations of the present. At the center of very different public "sensations" there could be serial killers, astonishing scientific discoveries, daring visions of revolutionary transformation, revelations of devastating poverty and over-the-top luxury and wealth. Sensations powerfully affect the feelings, body, and imagination whether they are exploitative media concoctions or staggering revelations of the most serious social and natural secrets. We will read across this range of Victorian sensations—from Dickens? Oliver Twist and the 1% vs. the 99%, to the jolt produced by new theories of evolution (Darwin and Chambers), to alarming visions of revolution (Marx and Engels), to terrifying domestic secrets revealed in "sensation novels," to the advent of the serial killer (Jack the Ripper and Mr. Hyde), to anthropologies of disease and death. We will see all of these in relation to the new Victorian mass print media that constructed these and other "sensations" to contemporary readers. Readings in recent theory will help us raise conceptual issues about what makes a sensation and why some current cases (think epidemic, terror, climate change, vast inequality) help us grasp the history of producing and responding to painfully serious or pleasurably spectacular "sensations."
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-314 Data Stories
Intermittent: 9 units
Every dataset has a story. In the age of big data, it is vital to understand the unlikely casts of algorithms, data miners, researchers, data janitors, pirates, data brokers, financiers, etc. whose activities shape culture. This course will feature a range of "farm to table" data stories, some going back hundreds of years, and introduce students to resources and strategies for contextual research. It will explore cases such as the London cholera epidemic, Google Books, Netflix, the Oxford English Dictionary, the Strava map, and the Queen Nefertiti scan alongside several pieces of art and fiction that capture aspects of data stories typically obscured elsewhere. Research methods introduced will include book history, media archeology, history of information, infrastructure studies, ethnography, narratology, and digital forensics. Students will read scholarly articles, novels, journalism, and popular non-fiction, and they will develop and individualized long-form research and writing projects informed by contemporary developments in data studies, journalism, and art.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-315 19th Century American Literature
Summer: 9 units
These days, it's pretty easy to get to Walden Pond. It's right off route 126 South (not too far from Concord) and there is a nice little farm stand there called the Farm at Walden Woods, where you can get corn and raspberries and freshly baked bread. In this class we'll go back in time to the Walden Pond of Thoreau's time, with a focus on the Green Nineteen—-writers and thinkers who considered the relationship between human civilization and the American wilderness (Thoreau, Emerson and Hawthorne). We will think about the interrelationship between the environment and nascent capitalist industries by reading the poetry and prose by young women who worked in the Lowell Mill (The Lowell Mill Offerings). We will also think about the environment in relation to two slave narratives (Douglass, The Slave Narrative of Frederick Douglass and Harriet A. Jacobs, Incidents in the Life of a Slave Girl. Finally we will consider the environmental consciousness of the two most important poets of the 19th century, Walt Whitman and Emily Dickinson. As for coursework, we will use the class to practice meditation, natures walks, and one group project in which you will design your own environmentally conscious Utopian community.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-317 Contemporary American Fiction
Intermittent: 9 units
No one seems to know quite how to define contemporary American fiction. It's clear that fiction has changed since the 1960s and 70s, the heyday of postmodernism, but it's not clear what exactly characterizes the work that has come since. In this course, we will read a selection of American fiction from the 1980s to the present and try to get a sense of its main lines. In particular we'll look at the turn to "genre," the expansion to multicultural authors, and the return to realism. Also, we will consider how it relates to American society. Authors might include Chimamanda Ngozi Adichie, Junot Diaz, Jennifer Egan, Bret Easton Ellis, Jonathan Franzen, Chang-Rae Lee, Emily St. John Mandel, Gary Shteyngart, and Colson Whitehead.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

76-318 Communicating in the Global Marketplace
Intermittent: 9 units
We live in a global world, whether we like it or not. Globalization is a political, economic, and cultural phenomenon that deeply impacts how well we can communicate with others in both professional and interpersonal settings. Regardless of the language people speak and the cultures that may have shaped our beliefs and values, we are bound together by professional interests and political agendas in a community that has no choice but to function well. In the current international environment, some of the most important and rewarding employment opportunities are with multinational and international corporations. But are we prepared for the challenge of working with professionals from all over the world? Even as more people around the globe learn English, specific cultural values, beliefs, and assumptions continue to influence the way in which they communicate. More often than not there is a whole different worldview behind a foreign accent. Globalization brings along several pressing questions: How can professional communicators avoid the potential for misunderstanding and conflict that comes with cultural difference? How can professional communicators contribute to shaping a workplace discourse that can reach a wide, diverse, global audience? How can professional global communication be effectively planned, measured, and improved? This courses prepares you to address these questions by explaining the specific ways in which national culture influences professional and technical communication, the impact of globalization on business environments and communication, and the ways in which you can rely on general concepts and principles in order to communicate effectively in specific international settings and situations.
Prerequisites: 76-272 or 76-271 or 76-270

76-319 Environmental Rhetoric
Fall: 9 units
Environmental rhetoric is a place of commitment and contention in which competing discourses celebrate our relationship with the natural world, frame environmental problems, and argue for public action. As we compare the environmental rhetoric of naturalists, scientists, policy makers, and activists, we will trace an American history that has managed to combine mystical celebration with militant critique, and scientific research with public debate. Equally important, this course will prepare you to act as a rhetorical consultant and writer, learning how writers communicate the three "Rs" of environmental rhetoric: relationship with nature, the presence of risk, and the need for response.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-320 Leadership & Organizational Communication
Intermittent: 9 units
Please note: In order to register for this course, students must have had an internship with an organization prior to registration. Even as most organizations continue to change, one constant is the importance of effective communication. Upward, downward, and lateral communications are the lifeblood of organizations. If you are in a leadership position, communication become your key tool for managing teams, improving performance, and creating change. In any position, you can spearhead progress by designing effective documents and improving existing communication practices. Proficiency in written and oral communications tends to be recognized and rewarded in organizations. Combined with the ability to leverage formal organizational structures and social networks, it helps one excel, and thrive, in organizations. This course is designed as an overview to the field of organizational communication with an emphasis on leadership roles and behaviors. The content will blend the conceptual with the practical. It will focus on problems that are likely to arise in the workplace and ways to solve them through communication. The students will build a portfolio of "solutions" that will demonstrate their evolving skills of applying rhetoric in organizational contexts. Specific topics will include the attributes of great communicators (including leaders and managers as communicators), the challenges of communicating in organizations as we play particular roles (e.g., individual contributor, manager or team member), ways to build credibility and enhance internal resumes, and techniques to master communication requirements related to performance management processes, conflict situations, and changing organizational culture and design. We will also explore a myriad of organizational issues such as communicating across generations and cultures, communicating externally, and communicating through technology.

76-321 History of the British Novel
Intermittent: 9 units
Topics vary by semester. Consult the course descriptions provided by the department for current offerings. Example, Fall 2011: Poe defined the short story as something that could be read at one sitting. While simple enough, the definition suggests a concern with concentrated form and unified artistic effect. in a sense, the short story has been around as long as people have been telling each other tales, to be sure, but as a literary form it came into its own in modern times, during the 19th century and it continues to be produced in considerable numbers. For many readers one of the great features is the one Poe pointed to: it is short. People who have never finished a novel by Henry James must be legion. So we can experience something with genuine literary merit, in an accessible form. Concentration, of course, can bring issues of comprehension and often short stories can seem puzzling or incomplete to the average reader. This class will attempt to develop our abilities to read with care and attention—and feeling—in order to make us better readers of any artistic text. The challenges of the short form turn out to be excellent opportunities for learning a lot, in a little space. We'll make use of several inexpensive anthologies, and look at one or two central writers (Hemingway, for example) in more depth. The class will require the writing of a few short papers, engaging in online discussions on Blackboard, and three in class tests.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-322 Gender and Sexuality in Performance
Intermittent: 4.5 units
"Performance" describes a wide range of practices, from the everyday to the artistic. Gender and sexuality are key elements in everyday, political, and artistic performances, from the very personalhow you order a latte at Tassa D'Oro, tell a lover goodbye at the airport or comfort a crying childto the very publicperforming a Bach cello suite or an iconic King Lear, staging a demonstration against police violence or marketing a new app. This course will be co-taught by a specialist in gender and queer theory and a practitioner of performance art. We plan to bring performance art and theory into a practical partnership in the creation and critique of social and individual narratives about gender and sexuality. How does everyday performance define gender and sexual identity? How do gender and sexuality define everyday performance? How does aesthetic performanceart, theater, film, digital media, poetryintervene in the ways in which gender and sexuality are performed? Readings in theory at the intersection between gender studies and performance studies will help us explore these questions. We will also consider a variety of cultural and artistic practices. The addition of simple performance prompts and exercises for students to incorporate into their research will blur theory and studio practices. Students will be encouraged to practice their theories surrounding performance within the classroom and in public space.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-323 God: A Literary and Cultural History
Intermittent: 9 units
This course will investigate ideas about God, primarily from the Western intellectual tradition. Our readings will include selections from Hebrew and Christian scripture, Dantes Inferno, Augustines Confessions, Benedict Spinozas Theological-Political Treatise, and Carl Schmitts Political Theology, as well as more recent investigations by Pope Francis, Marilynne Robinson, and Talal Asad. Students will be responsible for a presentation and two interpretive papers.

76-324 Topics in Rhetoric: Language and Place
Intermittent: 9 units
TBD
Prerequisite: 76-101

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-325 Intertextuality
Spring: 9 units
What do we mean when we say that someone has "twisted" our words, or that our words have been "taken out of context"? Why is Martin Luther King Jr. best remembered for saying, "I have a dream," and not for saying, "War is the greatest plague that can affect humanity"? What are political "talking points" and how are they perpetuated? How does a claim (unfounded or not) become a fact? How does a fact become a myth? These are just some of the questions that we will consider. More specifically, this is a course in how meaning changes as texts created in one context and for specific purposes are repeated, cited, and used in other contexts and for other purposes, sometimes related and relevant, sometimes not. More technically, we'll be focusing on the rhetorical nature of intertextual discourse. Our goal will be to examine the ways that people of all kinds¿including politicians, journalists, and scientists¿strategically draw upon and transform the statements, arguments, and evidence of other people to promote their own viewpoints or purposes. We will begin by investigating scholarship that views language as an extended conversation in which people struggle to have their own voices heard, and other voices countered or even suppressed. Later, we will survey a number of studies that suggest how individuals and organizations recontextualize and reinterpret prior discourse for persuasive ends. More specifically, we will analyze how the micro-features of the language (for example, qualifications, evaluations, and attributions) are used to persuade audiences that certain assertions are (not) factual, that certain speakers are (not) authoritative, and that certain proposed actions are (un)desirable. Ultimately, you can conduct your own research on intertextual rhetoric on a topic of specific interest to your academic or professional goals.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-327 Influential Women Writers
Intermittent: 9 units
Since long before the first autobiographical text in the English language? Margery Kempe?s?women writers have opened new territory for prose narrative. This course will deal with some historical examples of this phenomenon: Marie de France?s short fiction, Aphra Behn?s Orinoco, and, of course, Jane Austen? novels. We will then focus on some twentieth-century writers with various kinds of influence. Virginia Woolf is known for technical experimentation, and Ursula Le Guin excelled in the male-dominated arena of science fiction. The innovative use of known forms is represented by Hilary Mantel?s historical fiction and A. S. Byatt?s remarkable Possession.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-328 Visual Verbal Communication
Spring: 9 units
People create a wide range of communicative artifacts that integrates visual and verbal elements-newsletters, product brochures, web pages, graphical novels, journal articles, resumes, software references, yellow stickies, etc. Yet, such visual-verbal discourse has only recently attracted the serious attention of research communities. Some of the relevant research questions include: Why do visual variations exist across different contexts? (e.g., Popular science looks different from Discover.) Why and how do visual styles change over time? (e.g., Magazines from the 1950s don't look like present day magazines.) Do visual elements have persuasive power? If so, what roles do they play in shaping an argument? How do people learn to communicate using visual-verbal artifacts? In this seminar, we will address these and other questions through readings and discussions on various threads of studies around the analysis of communicative artifacts that integrate visual and verbal expressions. We will review key research publications concerning visual-verbal communication from relevant disciplines, including professional & technical communication, rhetoric, argumentation, and literacy. Particular attention will be paid to descriptive methods (e.g., social-semiotic analysis, visual argument, and rhetorical structure theory) and the types of questions these methods can help us answer. Throughout the semester, students will be encouraged to explore the visual-verbal communication artifacts found around them and use those to connect class discussions to the practice of design. Required assignments include a brief bi-weekly response to the readings, several short analysis papers, and a longer term paper with a topic chosen by students based on their professional or research interests.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-329 Unruly Women in Early Modern Drama
Intermittent: 9 units
"Unsex me here" Lady MacBeth famously exclaims on her path to murder, power, and psychological collapse. The connections between sex, gender, and agency that she articulates are connections that early modern theater-makers, from Shakespeare to Aphra Behn, obsessively revisited as they created some of the most haunting characters of the canon, both tragic and comic. In this course, we will look at shrews, witches, she-devils, ranting widows, aspiring divorcees, sex workers, roaring girls, evil queens, and all sorts of nasty women that would tread the boards in early modern London. At the heart of those theatrical depictions lie strong cultural anxieties surrounding the desire and possibility to fashion, control, and discipline¿in other words, to regulate and rule over¿femininity in a time period that witnessed the invention of the "two-sex model" (Thomas Laqueur) and "the cultural production of domestic heterosexuality" (Valerie Traub). How did theatre participate in the invention of early modern femininity? How did performance relate and/or resist the discourses about women deployed in the domains of law, religion, medicine, economy, and politics? How did women of color specifically fare in early modern dramaturgy? And what changed when women were allowed to act and actresses replaced boy actors under the Restoration? To study unruly women in early modern drama, we will read plays by Shakespeare, Elizabeth Cary, Ben Jonson, John Webster, Thomas Middleton, Thomas Heywood, Thomas Dekker, John Fletcher, Aphra Behn, and others in conversation with contextual materials and theoretical texts from the field of Women's, Gender, and Sexuality studies.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-331 Dissenters and Believers: Romanticism, Revolution, and Religions
Intermittent: 9 units
We usually think of the American and French revolutions as primarily political, but they also confronted dominant religious beliefs and generated alternatives ranging from enthusiasm and pantheism to atheism. We will explore the literary and political meanings of religious belief and dissent in major writers like Samuel Coleridge, Thomas Paine, Edmund Burke, William Wordsworth, Matthew Lewis and others who grappled with Protestantism, Catholicism, Dissent, and such interesting extreme alternatives as evangelicalism, enthusiasm, pantheism, and atheism. Two interpretive papers and in-class presentations will be required.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-107) or (76-108 and 76-106)

76-332 African American Literature: The African American Crime Novel
Intermittent: 9 units
Topics will vary by semester. Spring 2014: The hard-boiled crime novel, developed in the 1920s, 30s, and 40s, depicts a world full of corruption and exploitation, where law does not necessarily equal justice. But while early hard-boiled crime fiction was typically written by white authors and focused on white protagonists, African Americans soon found the genre particularly appropriate to depict their long experience with systemic racism and economic exploitation in the U.S. In this class, we will explore how African-American authors like Richard Wright, Chester Himes, Walter Mosely, and Paula Woods appropriated the hard-boiled crime novel over the 20th Century to represent the effects of racism and economic inequality on the black community and American society and, in doing so, developed the genre into a unique expression of African-American history and identity. We will also examine how the African-American crime novel is taken up by other cultural mediums like film and, more recently, the graphic novel to create new ways of expressing the genre.
Prerequisite: 76-101

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-333 Race and Controversy in the Arts
Intermittent: 9 units
In the last three years, social media platforms have given artists and consumers of art an unprecedented platform to engage with the commercial art world as both activists and critics. 2017's trending hashtag #oscarssowhite remarked on long-standing issues of inclusion within commercial filmmaking in the United States. Twitter also spread news from art worlds that were not always in the limelight; like Dana Schultz's painting "Open Casket" at the Whitney Biennial or Kenneth Goldsmith found poem "The Body of Michael Brown", read at an obscure conference at Brown University. Our course will put these and other controversies surrounding the politics of representation in the arts into broader historical and artistic contexts. We will approach the topic through particular case studies - from The Merchant of Venice to 2 Live Crew's obscenity trial - that highlight the confluence of social, political and artistic forces that frame these controversial works.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-106 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-334 Literature of Wall Street
Intermittent: 9 units
It started with a financial panic that closed the New York Stock Exchange for ten days. One quarter of the nation's transportation companies went bankrupt, as did nearly 20,000 businesses. Unemployment reached 14%. Four years later it was officially declared a "depression." When did all of this happen? Was it 2009? Or the 1930s? No, it was the depression triggered by the financial panic of 1873. Out of this period, also known as the "Gilded Age," came a unique strain of American literature. Frank Norris's grisly tale of an overbearing dentist and his miserly wife, McTeague, Andrew Carnegie's autobiography, Upton Sinclair's iconic The Jungle, Edith Wharton's tragic love story House of Mirth, Charlotte Perkins Gilman's feminist utopian novel, Herland, William Dean Howell's capitalist satire, The Rise of Silas Lapham, Theodor Drieser's mournful Sister Carrie-all of these writings react to, and try to shape, the economy of a century ago. These novels, which were often critical of corporate capitalism, give us a rich and detailed picture of the last time in the US that Americans suffered under the kind of gap we have today between rich and poor. In the US today the top 1% controls 42% of the country's wealth, while the bottom 80% controls a mere 7% of the country's wealth. What can we learn about the present by reading the fictions of financial crisis and inequality in the past?
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-335 20th and 21st Century American Fiction
Intermittent: 9 units
This course will examine American fiction from 1900 to the present. It will cover the movement from modernism, through midcentury realism and postmodernism, to the contemporary. We will look at scholarly definitions of those modes, as well as some of the cultural context that has informed American literature. Some of the authors will include modernists like Stein and Faulkner; midcentury writers and postmodernists like Ellison, McCarthy, and Pynchon; and contemporary writers like Diaz, Lahiri, and Franzen.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-337 Representations of Islam in Early Modern England
Intermittent: 9 units
This seminar explores the representation of Islam and Islamic cultures in early modern English literature, from the late Middle Ages to the beginning of the eighteenth century. In the early modern period, England had a complex multifaceted relation to the Islamic world. Since the Crusades, England had thought of the Islamic world as a deadly religious enemy to annihilate, but at the end of the sixteenth century, the Islamic world was also a key diplomatic ally against the Spanish archenemy, a fabulously rich trading partner in the world emporium of the Mediterranean sea, and an efficient model of empire to emulate in the Atlantic world. As a result, the Islamic world came to occupy a central place in English national imagination and maintained that place throughout the seventeenth century. What fantasies about the Islamic world does early modern English literature reveal? How do religion, race, gender, and sexuality intersect in the formation of those cultural fantasies? Do authors reinforce those fantasies or pressure them? How do specifically English social, political, and cultural issues inform literary representations of Islam? What image of England emerges when English authors use Islam as a mirror for the nation? In other words, what do texts about Islam tell us about early modern England? To answer those questions, we will read across genres, comparing romances, epic poems, plays, travel writing, pamphlets, and essays, and we will set canonical authors such as Chaucer, Spenser, Marlowe, Shakespeare, and Milton in conversation with other illuminating early modern writers such as Richard Knolles, George Sandys, Robert Daborne, Henry Stubbe, and Mary Pix.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-338 The American Cinema
Intermittent: 9 units
This course will look at major works and major directors of sound-era American Cinema in the context of the history of the film industry and the larger society. It will do so through lens of Hollywood 50 years ago, 1967, which has been called the annus mirabilis (miracle year) of American cinema. Most weeks we will watch a film from 1967 paired with one made before or since. The focus will on major stylistic and thematic continuities and developments. We will look at the work of major directors, such as Hawks, Hitchcock, Coppola, and Polanski, major genres, such as screwball comedy, crime dramas, and Westerns, and major styles, such as film noir.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-339 Topics in Film and Media: Hollywood vs. the World
Fall and Spring: 9 units
For almost a century the American film industry has dominated popular media worldwide. Anywhere in the world, American stars, American films, and American modes of storytelling are never far away. Why and how was that dominance achieved, and how have other cultures and industries challenged it? Film and television account for billions of dollars of U.S. exports and provide one of the key sources of global "soft power" and cultural influence. Understanding how that dominance works is therefore crucial to the question of America's economic, political and cultural place in the world. This course will examine ways in which other national cinemas have fought, or are currently fighting, against the hegemony of American popular film culture. We will discuss a variety of national cinemas including those of France, Mexico, India and China (among others). Students will be expected to watch at least two films a week outside of class, in addition to readings and written assignments.
Prerequisites: 76-101 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-340 American English
Spring: 9 units
Ever since the development of radio in the early 20th century, Americans have expected that we would soon all talk alike. The conviction that the media would make us all sound the same revived with the widespread adoption of television, starting in the 1940s, and the development of the internet in the 1990s led to worry about how soon we'd all be writing the same. But fears of the homogenizing effects of the mass media on American English have proven to be exaggerated: Americans still talk and write in many different ways. In this course we explore why this should be. Why don't we all speak alike? Why do we need variation in language? We will explore how regional and social dialects and varieties come to be and what their functions are, and you will learn how to hear, see, and describe varieties of language. We will also touch on American languages other than English. Documentary films and online materials about language will be the basis for another strand of the course, as we work together to explore how linguistic variety can best be represented and explained in non-technical ways, and in a variety of media, for the general public. Reading will be mainly in two books: American English, by Walt Wolfram and Natalie Schilling-Estes (2nd. edition), and Language in the USA: Themes for the Twenty-First Century, edited by Edward Finegan and John R. Rickford. There will be regular homework assignments, a midterm exam, and a final project.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-341 Gender and Sexuality in Performance
Intermittent: 9 units
"Performance" describes a wide range of practices, from the everyday to the artistic. Gender and sexuality are key elements in everyday, political, and artistic performances, from the very personalhow you order a latte at Tassa D'Oro, tell a lover goodbye at the airport or comfort a crying childto the very publicperforming a Bach cello suite or an iconic King Lear, staging a demonstration against police violence or marketing a new app. How does everyday performance define gender and sexual identity? How do gender and sexuality define everyday performance? How does aesthetic performanceart, theater, film, digital media, poetryintervene in the ways in which gender and sexuality are performed? Readings in theory at the intersection between gender studies and performance studies will help us explore these questions. We will read Judith Butler's work on gender as performative, Joseph Roach's work on the history of celebrity, Marvin Carlson's work on theater, and important essays in queer and transgender theory. We will also read and view a wide variety of cultural and artistic practices, from the British 17th century up to the recent work of feminist and queer performance artists. Your written and spoken contributions to the class will, besides regular postings on the course materials and participation in class discussions, entail the investigation of an everyday, cultural, or aesthetic performance of your choosing.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-343 Rise of the American Novel
Intermittent: 9 units
This course will survey American fiction from the beginning of the nation through the first half of the twentieth century. We will look at early fiction, like Washington Irving's "Rip Van Winkle" and mid-1800s classics like Hawthorne's Scarlet Letter, up to twentieth-century works like The Great Gatsby and perhaps some contemporary novels. Through the term, we will ask how the fiction represents the special character of American experience. Alongside readings, you will write several short papers and present some of your research to the class.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-344 Censored Texts
Intermittent: 9 units
Censorship? Banned books? Book burnings? Could it happen here? Over the last century some of the most important films and books have book banned, censored, protested and withdrawn from high schools and in rare cases, college courses or public libraries. But artists don't like to be silenced, and many of them have found ways to tell their stories, regardless of the consequences. In this course we will read a handful of books that have all been challenged by parents, school boards, and/or library patrons. This year is a special Sci-Fi/Fantasy version of the course! We will read texts including Shirley Jackson's The Lottery and Other Stories, J.D. Madeleine L'Engle A Wrinkle in Time, J.K Rowling, Harry Potter and the Sorcerer's Stone, Salman Rushdie's Satanic Verses, Margaret Atwood's The Handmaiden's Tale, Octavia Butler's Kindred, and Chuck Palahniuk's, Fight Club. We will also celebrate the American Library Association's banned book week, which is September 25th to October 1.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-345 Parchment to Pixels: History of Books
Intermittent: 4.5 units
This course surveys the evolution of the physical book through the history of writing materials, manuscript production, printing presses, type design, illustration, bookbinding, and book formats from the earliest times to the present. The best part: examining and experiencing real books from the 14th through 21st centuries in the Fine & Rare Book Room of Hunt Library. The course objective is to enable you to analyze and appreciate the purposes and attributes of books and related technologies. Some themes that help organize the 3,000 years of history of the book: types of content; information and communication; organization, storage, retrieval and transmission of knowledge; economic aspects; readers and community; parts of the book; effect of societal changes on the book; future of the book. Keep asking who or what enabled the next development. To flourish in the course, you will need to be curious, finding patterns and inter-relationships. Your evaluation will be based on class discussion, a journal, two quizzes, two short papers, and a take-home final exam to synthesize ideas.The class includes in-class, non-graded exercises on calligraphy, illuminating, binding, & 3-D printing.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-346 Angels and Diplomats -- Renaissance Poetry from Wyatt to Milton
Intermittent: 9 units
The starting point for this course is a question at the nexus of theology, politics, and art that no less central to the age of Shakespeare and Milton than it is today: how should power be represented? Biographically, many canonical poets of the sixteenth and seventeenth centuries worked as ambassadors, representing power abroad (Wyatt, Sidney, Donne, Marvell). Many more poets including Shakespeare and Milton thematized diplomacy, in both its divine and more worldly forms. What, then, can structures of mediation like diplomacy and angelic intervention tell us about works like Sidney's sonnet sequence Astrophil and Stella, Shakespeare's Hamlet, or Milton's Paradise Lost? And what can Renaissance poetry tell us about topics such as sovereignty, immunity, license, fidelity, automation, and accommodation? The course will include introductory and contextual readings from Genesis, Pseudo-Dionysius, John Calvin, Thomas Hobbes, Alberico Gentili, and George Puttenham. Assignments and class discussions will be occasions to practice historically-informed criticism; to compare conceptual structures within seemingly distinct domains of history and thought; and to articulate major fissures and changes in Renaissance angelology, diplomatic practice, and literary craft.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-347 Recent American Fiction
Intermittent: 9 units
We will read very recent American fiction, from about 1990 to the present. Authors might include Chimamanda Adichie, Michael Chabon, Junot Diaz, Jennifer Egan, Bret Easton Ellis, Jonathan Lethem, and Colson Whitehead. We will try to gather trends or tendencies that distinguish it from previous fiction. Does it suggest a different moment in fiction from postmodernism? And does it have a comment about American culture and its relation to the contemporary world?
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-106 and 76-108)

76-349 20th Century American: The Lost Generation
Intermittent: 9 units
Before the Beat Generation there was the Lost Generation. Both moments of literary history have an important relevance for our time, and both produced many major literary works. The 20s, like the 50s and 60s, were marked by the effects of World War. Gertrude Stein seems to have started the whole generation naming fad with her comment to Hemingway, "You are the lost generation." Paul Fussell identifies the cultural effect of WWI as the production of 'irony' as the central quality of modern identity (Some Beat writers make a similar claim for the effects of WWII). This class is neither a prequel nor a sequel to the Beat writers class; it is related in theme but focused on different writers and texts. Students might consider taking this class as a point of entry to 'The Beat,' or might consider this class as a follow-on to 'The Beat' in order to understand more fully some of the central literary and historical issues of our time. In both cases we focus on the intersection between cultural change and major war. The Lost Generation class might include, for example, work by Stein, Hemingway, W.B. Yeats, Ezra Pound, T.S. Eliot, the major War Poets, F. Scott Fitzgerald, Robert Graves, Vera Brittain, and Evelyn Waugh.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-350 Theory from Classics to Contemporary
Fall: 9 units
In this class, we will survey classic literary theories from Plato's exiling the poets from his ideal republic, through the philosopher Immanuel Kant's reflections on beauty, up to contemporary theories of deconstruction, Marxism, feminism, sexuality, and labor. (Our primary text will be The Norton Anthology of Theory and Criticism.) The class will give you a sense of the concepts and concerns critics have used to talk not only about literature but about culture and society.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-351 Rhetorical Invention
Intermittent: 9 units
Rhetorical invention refers to the discursive process of inquiry, discovery, and problem solving, or how we decide what to say, what arguments to advance, and what means of persuasion to use. Although invention is centrally important to rhetoric-without which it becomes a superficial and marginalized study of clarity, style, and arrangement-from the Scientific Revolution and Enlightenment through the mid-twentieth century invention all but disappeared as a topic of rhetorical study under the pressure of the view that invention should be exclusively directed by deductive logic and the empirical method rather than rhetorical considerations such as audience or language. This view of invention fundamentally shaped modern thought and continues to influence the ways we think and communicate today. In this course, we'll begin by examining the repudiation of rhetorical invention in the development of modern thought before focusing on efforts to recover a rhetorical understanding of invention from the mid-twentieth century forward, surveying a variety of contemporary theories of rhetorical invention including those promoted by postmodern, posthuman, and digital rhetorics. The course is designed to explore the central importance of invention to contemporary rhetorical theory through a pairing of historical and contemporary readings.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-353 Transnational Feminisms: Fiction and Film
Intermittent: 9 units
How do controversial practices related to women become touchstones that draw women together across cultures or, conversely, push them into separate cultural and political spheres? This introductory-level course familiarizes students with the challenges transnational feminism has posed to Western notions of feminism. To explore these contestations, we will look at a series of controversies. We will read these controversies through novels, drama, short stories and films, with some secondary theoretical readings. This course will take six case studies concerning cultural practices that have generated global debates about the status of women and issues like consent, freedom, and equality. Beginning with several works about regional/Islamic practices of veiling, we will look specifically at the close connections made between womens practices and elements of tradition, including religion. With an eye toward historicizing feminist interventions, we will look at 19th century debates on sati, commonly called widow burning, in India, to see how certain issues became loci for global intervention during colonial periods and, later, for global feminist movements. Within the contemporary period, we will turn to cultural, economic and political practices like female genital cutting, transnational domestic labor, global sex trade, and transnational forced marriage.
For each of these controversies, we will be reading a range of positions represented in different types of writing across genre, with a focus on literary and filmic depictions.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-107) or (76-108 and 76-106)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-354 South Asian Literature
Intermittent: 9 units
Topics vary by semester. Spring 2014: This course focuses on twentieth-century literature written in English from India, Pakistan and other parts of South Asia, as well as by people of South Asian origin. The course will begin by looking at literary representations that portray the struggle for decolonization and the trauma of partition. As we move forward to the contemporary period, we will examine the competing aesthetics of social and magical realism. We will then look back at India from the perspective of the diaspora, considering themes of identity, immigration and globalization from the perspective of South Asians writing in Britain and the United States. Texts might include works by Mulk Raj Anand, Bapsi Sidhwa, Amitav Ghosh, Salman Rushdie, Romesh Gunesekera, Arundhati Roy, Aravind Adiga, and Jhumpa Lahiri.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-355 Leadership, Dialogue, and Change
Fall: 9 units
This is a course about the tradition and strategies of leadership based on dialogue and how this powerful counter-rhetoric organizes people to work together on complex problems through problem-posing, pragmatic inquiry, and the inclusion of marginalized perspectives. By studying contemporary leadership theory and the American tradition of prophetic pragmatism, we explore ways everyday people can act on commitments and create change. Students will work as rhetorical consultants, learning methods for intercultural rhetorical research and developing a Community Think Tank on a current issue.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-107) or (76-106 and 76-108)

76-357 Linguistic & Social Aspects of Immigration
Intermittent: 9 units
This course introduces students to the linguistic and social aspects of immigration in today's global society. Immigration will be studied as a socio-political construct with an emphasis on the linguistic, socio-cultural, and political challenges and opportunities that migration creates for the individual and society. Throughout the course we will explore one key question: What challenges and opportunities do different aspects of migration posses for multilingual societies and individuals? A great deal of the course focuses on the linguistic challenges that migration creates for the individual and society, with a special emphasis on the development of bilingualism and the education of immigrant children. From a larger socio-political perspective, the course focuses on various case studies of immigrant populations throughout the world in order to obtain a better understanding of the characteristics, opportunities, and challenges faced by immigrant populations internationally.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-359 User Experience Methods for Documents
Intermittent: 9 units
This course will be useful for any student who is interested in learning more about user experience methods that are widely used in professions such as designing/writing for new media, technical writing, science and healthcare communication, public media relations, policy and non-profit communication. You will deepen your mastery of the following research skills associated with planning and testing documents: interviewing in context, retrospective interviewing, focus groups, surveys, and think-aloud usability testing of documents. In addition to specific research methods and skills, we will cover issues that pertain to all research methods: How many people do I need to include in my study? How should I select them? Are my results valid? Is what I think I'm finding out reliable? What are the ethical issues in my study? We will use a combination of lecture, discussion, exercises and projects to achieve these objectives.
Prerequisites: 76-270 or 76-271 or 76-272 or 76-390

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-360 Literary Journalism Workshop
Spring: 9 units
The class will help you tell true stories about the world you inhabit. Literary Journalism is a genre that reports on the world through stories that have been put through the lens of an individual writer's sympathetic imagination. Literary Journalism is always about the revelation of people and events, as influenced by social structures and ideas in a particular time and place. And again, unlike traditional journalism, the point of view of the writer is not supposedly "neutral". What makes this kind of non-fiction engaging often comes down to point of view. A writer is telling us a story they know well, either through observation or personal experience. Writers telling stories in this genre are opinionated, and often full of personality and voice. The obligation of the writer is to connect what might be merely "personal" to a wide audience, and usually, to connect what's personal to broader context, situating stories in the historical and political moment.
Prerequisites: 76-265 or 76-262 or 76-472 or 76-372 or 76-271 or 76-270 or 76-260 or 76-261

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-361 Corpus Rhetorical Analysis
Intermittent: 9 units
The Digital Humanities is a huge and growing field spanning many disciplines and skill sets. The focus of this course is on tools and methods that allow students to analyze textual corpora as purveyors of stories, information, and arguments that seek to influence cultural thinking, reveal existing cultural mindsets, and often both in tandem, either synchronically or diachronically. This is the point of view often taken by analysts who work for universities, think tanks and intelligence agencies who seek to understand cultural trends and mindsets from volumes of digital texts. For such analysts, close reading is an indispensable part of their work and computing tools help focus their reading while reading helps refine their understanding of the computer output. The course will give students intensive practice with methods and tools for analyzing corpora of text at the word, phrase, and sentence level, and with working with large scalable dictionaries and multivariate statistics.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-362 Reading in Forms: Fiction
Intermittent: 9 units
This course will give students a general introduction to the Gothic tradition in literature. The course aims to encourage creative writing students to engage critically and creatively with the tradition of Gothic fiction, and in particular with the trope of the house in the Gothic tradition. We will read six short novels in the genre, and we will also look briefly at some core theorizations. Students will use this critical understanding to develop further, and reflect upon, their own creative practice.
Prerequisite: 76-101

76-363 Reading in Forms: Poetry: Intro to Literary Translation
Intermittent: 9 units
This course will serve as an introduction to the theory and practice of literary translation. We will examine the concepts of fidelity to the original, authorial intention, the nuance of tone and style, and the politics of translation. Texts will include essays on theory and a variety of literary works (primarily fiction and poetry) in translation. We will look at multiple translations of the same work, and there will be the option for students to pursue their own project in literary translation. Working knowledge of a language other than English is helpful but is not required for this course.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-364 Reading in Forms: Fiction
Fall and Spring: 9 units
In this class we'll explore fiction about urban life and sub-culture primarily through critically acclaimed HBO series The Wire, supplemented by novels set in urban environments that subvert stereotype and tackle the complicated relationships between individuals, institutions, social conditions, and constricted opportunities. How can an author write about ordinary people making sense of their world while defying simplistic moral distinctions? How can an author successfully weave together the broad range of forces that shape the lives of those who are consigned to cyclical existences marked more my limitations than opportunity? How do you capture an authentic voice in such an environment? How do you avoid cliche? Whose story is it to tell?
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-365 Beginning Poetry Workshop
Fall and Spring: 9 units
This course is designed first and foremost as a workshop, meaning that a large percentage of class time will be devoted to critiquing your and your classmates' creative work. I will expect you to become strong editors and contributors to class discussion, and to accept and learn from criticism. You will be composing individual poems as well as working on a series or longer work. I will also assign a fair amount of reading, mainly contemporary poetry (individual poems and collections) published in the last few years. You will finish the semester by compiling a portfolio of creative work.
Prerequisites: (76-102 or 76-101 or 76-108 or 76-107 or 76-106) and (76-265 Min. grade B or 76-222 Min. grade B)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-366 Essay Writing Workshop
Intermittent: 9 units
In this course we will analyze the different types of narrative structure, narrative suspense, voice, metaphor, and point of view that make for effective non-fiction writing. We will also examine the difference between good writers and good work, the functions of objective distance from and intimate investment in a subject, as well as the philosophical questions spurred by non-fiction writing. What is the non-fiction writer's role, and how does it differ from that of the fiction writer? Where do the two genres overlap? What gives non-fiction writing integrity? What does the term creative non-fiction mean? How have the form and aims of non-fiction writing - from memoir to essays to long-form journalism - evolved for better and for worse? We will scrutinize the writing of Eula Bliss, Kate Fagan, Joan Didion, James Baldwin, Jo An Bear, Gary Younge, David Foster Wallace, Umberto Eco, and many others. In addition to critical writing assignments, students will have several opportunities to write their own non-fiction pieces.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-367 Fact Into Film: Translating History into Cinema
Intermittent: 9 units
From the very beginning, film has provided a window into the past. But how useful are the images we see through that window? For every person who reads a work of history, thousands will see a film on the same subject. But who will learn more? Can written history and filmed history perform the same tasks? Should we expect them to do so? How are these two historical forms related? How can they complement each other? This course will draw examples from across the history of film in order to examine how the medium of film impacts our understanding of facts and events, the ways that film transfers those facts to the screen, and how that process affects the creation of historical discourse. Films may include such titles as The Fall of the Roman Empire, The Gunfight at the O.K. Corral, Saving Private Ryan, World Trade Center, Enemy at the Gates, Lagaan and Hero.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-368 Role Playing Game Writing Workshop
Fall: 12 units
Role-playing games (RPGs) are a vibrant and viable popular medium for interactive storytelling. A generation of novelists, screenwriters, playwrights and TV writers came of age playing RPGs. They learned how to tell stories with their friends. Later on, they developed those skills and have won Pulitzers, Emmys, Tonys and Oscars. This workshop builds upon a thesis that interactive games share a large portion of dramatic theory DNA with plays, TV, and film. Play is performance. The skills developed when creating any time-bound media transfer well to games but must be seen through a different lens - the lens of the player. To do so, we first examine and dissect both RPG story and game design (using pencil and paper examples) seeking an understanding of both system as well as narrative best practices. Once we lay the groundwork, students are divided into three-to-five-person writing teams. Teams use an existing pen-and-paper RPG system to create a set of a campaign-style story for that system and that story world. The final product is a hard copy story bible of portfolio-quality. I emphasized this is a writing course, not an RPG design course. Any level of writing experience is welcome, as I provide support and instruction to scaffold in experienced students. More advanced students often find the unique authorial POV of games to be a very different challenge. Experience with and passion for RPGs is a must in this class.
Prerequisites: 76-269 Min. grade C or 76-260 Min. grade C

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-371 Innovation in Teamwork
Intermittent: 9 units
Academic teams, campus organizations, workplaces are all dynamic activity systems, organized and driven by institutional habits and rules, by roles, status and power, and by the material and conceptual tools we draw on. Yet as we have all observed, these Rules, Roles and Tools often operate in contradictory ways, even in conflict with one another. Effective team leaders are able to recognize these contradictions and draw a writing group, a project team, a social organization or a workplace into what is called an "expansive transformation." That is, to innovate new ways of working together. In this course, you will learn how to become more effective not only as a team member, but also a project leader, and even group consultant in your college work and workplace. Looking at films, case studies, research, and your own experience, we will learn how to analyze how teams of all sorts are working, to communicate more effectively across different expectations and values, and to collaboratively innovate new ways of working together. Your final project will let you document your ability to be a knowledgeable team leader and effective collaborator.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108)

76-372 News Writing
Fall: 9 units
In this course, we will study and learn the fundamental skills of journalistic writing. We will start with the basics - the importance of accuracy, clarity and fairness, writing for audience, striving for objectivity, judging newsworthiness, meeting deadlines. But the key to learning how to write in a journalistic style is to practice those skills so the core class work (and most of your grade) will be based on seven writing assignments due approximately every two weeks throughout the semester. Expect to do some writing each class period. We will learn how to write a story lede (yes, that's how journalists spell it), how to structure a story and how to write different kinds of news stories, from crime news to features to editorials and commentary. We also will learn how to research a news story, conduct an interview and sort through mountains of information to discern what's important so we can write about it in a clear, concise manner.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-373 Argument
Fall and Spring: 9 units
The purpose of this course is to give you extensive practice in analyzing and producing effective arguments. For us, an "argument" will involve the conveying of a reasoned position on an issue of controversy, and this conveying may take a variety of generic forms (op-ed pieces, political ads, websites, blogs, essays, grant proposals, prose fiction, films, images, and even everyday conversation). The course will introduce you to the fundamentals of argumentation theory and consider a variety of principles that concern the production, analysis and evaluation of verbal (and to a lesser extent, visual) arguments. You will apply the principles through discussion in class to various cases, through a series of written responses to readings, and by producing several written arguments.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-374 IDeATe - Dietrich College Cuban Interactive Documentary Project
Intermittent: 9 units
As diplomatic US-Cuban relations evolve, the possibilities of an enriching dialogue involving cultural, artistic, technical and economic areas of collaboration, between both nations, has become crucial. In this context, the idea of an academic course involving Carnegie Mellon University students and faculty visiting the city of Camagüey, Cuba under the umbrella of a holistic cultural experience of knowledge and discovery has been an inspiring learning option where participants can explore and research diverse areas of study within a socio-cultural environment known for the resourcefulness and creativity of its people, the diversity of its culture and a unique historical-geopolitical situation. The Carnegie Mellon University Cuban Media Production Class was created as an educational experience that considers the production of individual, multidisciplinary, media projects in, about, and inspired by contemporary Cuba. The concentration of this media class is open to the creative areas of video production, sound, photography, interactive media, writing, data visualization, media performance, etc. The main media production aspect of this class will take place during the Spring Break of 2019 (March 10-17). The individual projects will be done under the guidance of faculty, artists, filmmakers and media professionals from educational and cultural institutions in both countries. Student registration for this class is open and requires a letter of presentation + intention with the designated faculty in charge.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

76-375 Magazine Writing
Fall: 9 units
In this course we'll be reading lots of great nonfiction, some of which has appeared in magazines during the past few years. We'll look at how excellent nonfiction for magazines has to employ a strong narrative voice, and the techniques of storytelling. Students will be asked to research and write their own articles, based on a variety of assignments. The class will be conducted as a discussion, and demands participation from each class member.
Prerequisites: 76-372 or 76-272 or 76-260 or 76-262 or 76-271 or 76-270

Course Website: http://www.cmu.edu/hss/english/

76-377 Shakespeare and Film
Intermittent: 9 units
The dramatic works of William Shakespeare have inspired an extraordinarily rich and varied cinematic legacy that began in the era of silent films and now boasts masterpieces by directors such as Akira Kurosawa, Roman Polanski, Peter Greenaway, and Orson Welles, not to mention history-making performances by icons including Marlon Brando, Elizabeth Taylor, Laurence Olivier, Al Pacino, Leonardo DiCaprio, and Ian McKellen (among many others). This course will consider a selection of key Shakespeare films alongside critical readings centered on questions of adaptation and performance. As we watch and read together, we will work toward a broader understanding of what Shakespearean drama means in a 21st century context, and how film has helped to shape the author's massive cultural impact.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-378 Literacy: Educational Theory and Community Practice
Spring: 9 units
Literacy has been called the engine of economic development, the road to social advancement, and the prerequisite for critical abstract thought. But is it? And what should count as literacy: using the discourse of an educated elite or laying down a rap? This course combines theory, debate, and hands-on community engagement. Competing theories of what counts as "literacy"¿and how to teach it¿shape educational policy and workplace training. However, they may ignore some remarkable ways literacy is also used by people in non-elite communities to speak and act for themselves. In this introduction to the interdisciplinary study of literacy¿its history, theory, and problems¿we will first explore competing theories of what literacy allows you to do, how people learn to carry off different literate practices, and what schools should teach. Then we will turn ideas into action in a hands-on, community literacy project, helping urban students use writing to take literate action for themselves. As mentors, we meet on campus for 8 weeks with teenagers from Pittsburgh's inner city neighborhoods who are working on the challenging transition from school to work. They earn the opportunity to come to CMU as part of Start On Success (SOS), an innovative internship that helps urban teenagers with hidden learning disabilities negotiate the new demands of work or college. We mentor them through Decision Makers (a CMU computer-supported learning project that uses writing as a tool for reflective decision making.) As your SOS Scholar creates a personal Decision Maker's Journey Book and learns new strategies for writing, planning and decision making, you will support literacy in action and develop your own skills in intercultural collaboration and inquiry.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-107) or (76-106 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-380 Methods in Humanities Analytics
Intermittent: 9 units
The computer-aided analysis of text has become increasingly important to a variety of fields and the humanities is no exception, whether in the form of corpus linguistics, stylometrics, "distant reading," or the digital humanities. In this course, we will build a methodological toolkit for computer-aided textual analysis. That toolkit will include methods for the collection data, its processing via off-the-shelf software and some simple code, as well as its analysis using a variety of statistical techniques. In doing so, the class offers students in the humanities the opportunity to put their expertise in qualitative analysis into conversation with more quantitative approaches, and those from more technically-oriented fields the opportunity to gain experience with the possibilities and pitfalls of working with language. The first part of the term will be devoted to introducing fundamental concepts and taking a bird's eye view of their potential application in domains like academic writing, technical communication, and social media. From there, students will initiate projects of their own choosing and develop them over the course of the semester. The goal is to acquaint students with the strengths and limitations of computer-aided textual analysis and to provide them with the necessary foundational skills to design projects, to apply appropriate quantitative methods, and to report their results clearly and ethically to a variety of audiences. This class requires neither an advanced knowledge of statistics nor any previous coding experience, just a curiosity about language and the ways in which identifying patterns in language can help us solve problems and understand our world.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-381 Mad-Men, Television, and the History of Advertising
Intermittent: 9 units
Don Draper, cigarette in one hand, drink in the other, on the prowl for his next conquest - be it client or lover - may be one of the coolest characters ever created for American television. But is it just the suave style of Mad Men that has made it so popular? What is the secret to the show's success? In this class we will explore the rise and fall of the 20th century advertising model of mass culture by watching episodes from seven seasons of Mad Men, analyzing the show, and reading about the history of advertising as well as analyses of the show itself. Texts for the course will include Richard Ohmann's essay "Where did Mass Culture Come From?", Michael Schudson's Advertising: The Uneasy Persuasion, Archie Boston's Fly In The Buttermilk: Memoirs of an African American in Advertising, Design & Design Education, Susan Faludi: Backlash: The Undeclared War Against American Women, Scott F. Stoddart, editor, Analyzing Mad Men: Critical Essays on the Television Series and Lilly J. Goren and Linda Beail, editors, Mad Men and Politics: Nostalgia and the Remaking of Modern America.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-384 Race, Nation, and the Enemy
Intermittent: 9 units
Conflicts over racial and national identity continue to dominate headlines in the United States as they often have during the nation's history, from debates regarding the immigration, naturalization, and birthright citizenship of racial minorities to debates regarding racial disparities in access to civil rights. This course explores the discursive practices through which racial and national identities are formed and the frequent conflicts between them, particularly by focusing on the role of enemies, threats to the nation, and sacrifices made on behalf of the nation in American public discourse. Alongside primary sources of public discourse regarding wars, the immigration and citizenship of racial minorities, racial segregation and civil rights, and the criminal prosecutions of dissidents during periods of crisis, we will read secondary sources offering multiple theoretical and disciplinary approaches to the study of racial and national identity formation. Along with regular brief responses to readings, assignments will include a short rhetorical analysis paper and a longer research paper.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-106 and 76-108)

76-385 Introduction to Discourse Analysis
Intermittent: 9 units
"Discourse" is language: people talking or signing or writing. Discourse analysts ask and answer a variety of questions about how and why people do the things they do with language. We study the structure of written texts ¿ the semi-conscious rules people use to organize paragraphs, for example ¿ as well as the unconscious rules that organize oral discourse such as spontaneous stories and arguments. We study how people signal their intended audience-interpretations of what they say as foreground or background information, a casual remark or solemn promise, more of the same or change of topic. We look at how grammar is influenced by what people need to do with language, and how discourse affects grammar over time. We ask how children and other language learners learn how to make things happen with talk and writing. We ask how people learn what language is for, from exchanging information to writing poetry to perpetuating systems of belief. We analyze the choices speakers and writers make that show how they see themselves and how they relate to others. (Choices about how to address other people, for example, both create and reflect relationships of power and solidarity). We study how people define social processes like disease, aging, and disability as they talk about them, and how language is used to mirror and establish social relations in institutional settings like law courts and schools as well as in families and among friends. This course touches on a selection of these topics and gives students practice in analyzing the complex nuances of language. The course is meant for anyone whose future work is likely to involve critical and/or productive work with language: writers and other communication designers, critics who work with written or spoken texts, historians, actors, sociologists, and so on.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

76-386 Language & Culture
Intermittent: 9 units
This course is an introduction into the scholarship surrounding the nature of language and the question of how language shapes and is shaped by social, cultural and political contexts. We will begin by studying important literature in linguistics and language theory, both to introduce us to how scholars think about language and to give us a shared vocabulary to use for the rest of the semester. We will then move into case studies and theoretical works exploring the intersections of language use, individual and group identities, and the exercise of power, in its many forms. In particular, we will focus on the relationship between language and culture by asking, in what ways does language influence and constitute social change? How is social change reflected by changes in the way we use language? Over the course of the semester, you will work on applying the knowledge and theoretical tools you gain to your own analysis of a linguistic artifact that you choose.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-387 Writing in the Disciplines
Intermittent: 6 units
This mini will introduce you to the theory and practice of writing instruction in contexts outside of English studies. We will learn about the distinction between Writing across the Curriculum and Writing in the Disciplines and challenges to providing integrated, high quality writing instruction across the university. We will explore the implications of the wide variety of forms of academic writing for instruction in English classrooms, including high school and first-year writing classrooms. Assessments will include reading responses and a final paper reviewing research on writing in a specific writing context of your choosing. Students enrolled in the course for six units will be expected to do additional readings and give an oral presentation. Please note that in terms of time commitment, a 3-unit mini will require approximately six hours per week (three hours homework and three hours class meetings) and a 6-unit mini will require twelve hours per week.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

76-388 Coding for Humanists
Intermittent: 9 units
This introductory course provides humanities students with the foundational knowledge and skills to develop computer-aided research tools for text analysis. Through a series of hands-on coding exercises, students will explore computation as a means to engage in new questions and expand their thinking about textual artifacts. This course is designed for students with no (or very little) coding experience. During the early part of the semester, students will learn basic programming using Python through examples and problem sets that are relevant to text analysis. Then, students will be introduced to a limited set of commonly used Python packages for text analysis, such as natural language processing, statistical analysis, visualization, web scraping, and social media text mining. Students are expected to complete a small final project that examines how evidence-based data-driven insights derived from text analysis would support humanistic research in their area of interest, including (but not limited to) genre studies, rhetorical criticism, authorship attribution, discourse analysis, cultural analysis, social network analysis, spatial/temporal text analysis, and writing assessment. Doctoral students in the Department of English must register for 12 units, and are expected to write a publishable quality paper. Students who are interested in digital humanities scholarship in literary and cultural studies may also consider Professor Warren's seminar: 'Introduction to Digital Humanities.'
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-389 Rhetorical Grammar
Fall and Spring: 9 units
This course covers the anatomy of the single and multi-clause English written sentence and is useful for Master's students of professional writing (MAPWs) and English majors who wish to write with greater awareness and control of the English sentences they write and the awesome variety of sentences available to write. The course overviews the major grammatical forms and functions of the written English sentence. Students will learn to identify the major grammatical forms (Noun, Verb, Adjective), how these forms map on to grammatical functions (subject, verb, and direct object) and how forms and functions combine to create major constituents of the English sentence. Home-grown software, DiaGrammar, will allow students to diagram all the sentence varieties covered in the course. Students will leave this course with a systematic understanding of English sentence grammar as a resource for their continuing development as writers.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-390 Style
Fall and Spring: 9 units
Some people think of style as individual panache¿a graceful facility with language that is as distinctive to a given writer as his or her fingerprint. According to this theory, style is a possession¿a genetic talent that can be cultivated by one but never duplicated by another. Those who lack this innate stylistic flair often look for ways to compensate. Unable to achieve aesthetic beauty, they strive to be grammatically correct¿to follow the rules of writing. In this class, we will not treat style as an innate gift that writers possess and carry with them from situation to situation. Nor will we treat style as a set of rules that one can "live by." Instead, we will think of style as a set of strategic choices that one considers and selects from depending on the writing context. Certain stylistic choices appropriate to one context may not be appropriate to another. We cannot¿and will not¿look at all possible writing contexts in this class. Instead, we will focus our attention on professional writing contexts in which the goal (presumably) is to communicate clearly and coherently in texts composed of sentences and paragraphs.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-107) or (76-108 and 76-106)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-391 Document & Information Design
Fall: 12 units
This course provides students who have already learned the foundation of written communication with an opportunity to develop the ability to analyze and create visual-verbal synergy in printed documents. Students will be introduced to the basic concepts and vocabulary, as well as the practical issues of visual communication design through a series of hands-on projects in various rhetorical situations. Assigned readings will complement the projects in exploring document design from historical, theoretical, and technological perspectives. Class discussions and critiquing are an essential part of this course. Adobe InDesign, Photoshop, and Illustrator will be taught in class, and used to create the assigned projects.
Prerequisites: 76-270 or 76-271

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-393 Corpus Rhetorical Analysis
Intermittent: 9 units
As more of the world's texts become digital and systematically classified, scholars and analysts are increasingly able to analyze not only individual texts but also vast collections of texts, or textual corpora. The analysis of corpora becomes especially important when your focus of analysis is the genus rather than the individual and it has hundreds of applications. It is useful when instead of a single Aesop fable, you want to characterize Aesop's fables as a group and you want to compare them, as a group, with, say, the writings of a contemporary poet or the lyrics of contemporary musical artists. Corpus rhetorical analysis is also useful when you want to compare the styles of two columnists or critics based on a large sample of their writings. It is useful when you want to understand the ?nuts and bolts? rhetorical choices that make software documentation a different professional genre from sports journalism or science writing. This is a hands-on course where students get practice conducting corpus analyses using corpus software and statistical methods. The course is divided into three parts. In the first part, student will learn a theory of textual segmentation that is behind preparing a collection of texts for corpus study. In the second part, students will analyze corpora provided by the instructor and learn how to write a corpus report. In the third part, students will compile a corpus of their own choosing with a research question and then conduct a corpus study and submit a report that seeks to answer that question.

76-394 Research in English
Spring: 9 units
This course explores methods of researching, writing, and presenting original scholarly work in the broad interdisciplinary field of English Studies. The course allows both undergraduate and graduate students to pursue a research project on a topic of their choosing within the field of English studies to work on in the context of readings and discussions geared toward understanding the production of scholarly work in the field. We will work to understand not only traditional methods in the field such as textual analysis, but also more recent developments borrowed from other disciplines such as history and sociology, anthropology, and visual studies, among others. The course explores methods for developing topics, constructing research plans, locating, gathering, and using data and sources, along with basic principles of organizing, writing, revising, and presenting a research paper in a public presentation. Across the semester, students develop and work on an original scholarly research project culminating in a public presentation open to other students and faculty from the university.
Prerequisites: 76-275 or 76-294

76-395 Science Writing
Spring: 9 units
This course will teach students how to write clear, well-organized, compelling articles about science, technology and health topics for a general audience. Students will learn how to conduct research on scientific topics using primary and secondary sources, how to conduct interviews, and how to organize that information in a logical fashion for presentation. For writing majors, the course will increase their understanding of scientific research and how to describe it accurately and completely to a general audience. For science majors, this course will teach them how to craft fluid, powerful prose so that they can bring their disciplines to life. The course is not intended just for those who want to become science writers, but for anyone who may have the need to explain technical information to a general audience, whether it is an engineer describing a green building project at a public hearing, a doctor describing the latest research on a disease to a patient advocacy group, or a computer programmer describing new software to his firm's marketing staff. Scientists and educators today are increasingly concerned about the public's lack of understanding about scientific principles and practices, and this course is one step toward remedying that deficit.
Prerequisites: (76-108 or 76-107 or 76-106 or 76-101 or 76-102) and (76-271 or 76-270 or 76-472 or 76-375 or 76-372)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-396 Non-Profit Message Creation
Intermittent: 9 units
Non-profit organizations support a multitude of causes ranging from the arts to animals to the environment to health care to human rights to scientific research to many great causes in between. Non-profits achieve their missions by advocating on behalf of their organization's cause, raising public awareness about issues surrounding their cause, and fundraising to make their advocacy possible. In this course, students will select a local, Pittsburgh-area non-profit to examine and produce materials based on the organization's needs. Over the course of the semester students will research the organization's persona and values via interviews with chosen organization's staff and analysis of existing communication channels and different forms of content currently used by the organization. Students will use this research and analyses to inform and shape a final project that should meet the specified, needed deliverables from the selected non-profit. Previous example projects include: Revising a newsletter and specifying future best practices for an organization; developing new format and copy for an organization's website; developing a social media campaign for an upcoming event; developing a grant proposal for an organization's project; among many others. Students will have a wide selection of organizations to choose from and know projects associated with the organization at the beginning of the semester, as these will be organized by the professor. At the end of the course, students will have a portfolio ready material and an increased understanding as to how non-profit organizations advance their causes.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-397 Instructional Text Design
Intermittent: 9 units
This course focuses on the planning, writing, and evaluating of instruction of various kinds, especially instructional texts. It is particularly appropriate for professional and technical writers, but also a good option for anyone interested in fields that involve substantial instruction, such as teaching or employee training. In the first part of the course, we'll examine the recent history of instructional design and the major current theories. Then we'll take a step back and study the concepts of learning upon which these theories are based, with particular attention to their implications for how instruction is structured. You'll find that different learners (e.g., children, older adults) and goals (e.g., learning concepts and principles, learning to apply principles to solve novel problems, learning a complex skill, learning to change one's behavior, etc.) require different types of instruction. In the second part of the course, we'll look in detail at models of how people learn from texts and what features (e.g., advanced organizers, examples, metaphors, illustrations, multimedia) enhance learning under what circumstances. We will study and analyze particular types of texts. Some possible examples include an introduction to the concept of gravity; a tutorial for computer software; a self-paced unit in French; adult educational materials in health care; a workshop on sexual harassment in the workplace; or a unit to train someone how to moderate a discussion. We will also look at various methods (concept mapping, think-aloud, comprehension tests, etc.) that are used to plan and evaluate instructional text. You will do a project, either individually or in a small group (2-3), in which you design, write and evaluate instruction.
Prerequisites: 76-101 or 76-102 or 76-270 or 76-271 or 76-271 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-398 Museum of Broken Relationships
Intermittent: 9 units
The Museum of Broken Relationships in Zagreb, Croatia is a museum dedicated to "failed love relationships." Its exhibits are made up of objects and stories that have been donated after relationships have failed. In the short time since the museum was established, 37 exhibitions have been mounted in cities all over the world. In November 2016, Pittsburgh will host an exhibition. Students who enroll in this course will have the chance to see photos and read stories from other exhibits. They will learn how to conduct the collection process, and then go into the community to collect stories and objects. They will also collaborate with Masters students from Entertainment Technology's Location-Based Entertainment track, who specialize in designing and implementing exhibits. Together, these groups will then curate a show with stories and objects that reflect the culture and history of Pittsburgh. This course is designed for students who love stories and have the curiosity and motivation to travel throughout Pittsburgh to find them.
Prerequisites: 76-360 Min. grade C or 76-460 Min. grade C or 76-366 Min. grade C or 76-365 Min. grade C

76-403 The Crucible of Modernity:Vienna 1900
Intermittent: 9 units
Vienna at the turn of the century (that is, at the turn of the last century, 1900) was many things: the political center of the Habsburg dynasty of the Austro-Hungarian Empire; the meeting place of Czechs, Slovaks, Hungarians, Romanians, Slavs, Poles, Italians, Serbs, Bulgarians, and Germans; the center of German-language music and theater; the birthplace of Zionism and of psychoanalysis; the battleground for liberalism and anti-Semitism; a haven for socialism; the home of café-culture and the waltz; the garrison for an outdated army; the city of baroque urban palaces and squalid backyard tenements; the center for Enlightenment public policy and reactionary bureaucracy; and the showcase for historicism. And while the story of Viennas cultural and political turmoil is interesting, it probably would not command our attention today were it not for its role as the birthplace of Modernism. In an effort to understand todays intellectual environment, therefore, we will examine Vienna before the collapse of the Austro-Hungarian Empire in 1918. We will be looking at a huge and at times confusing canvas which by necessity includes almost every aspect of culture. We will start with politics and history and move on through art, architecture, crafts, psychoanalysis, literature, music, and philosophy. We will be looking at art nouveau buildings and furniture, reading literature, viewing films, and listening to recordings - and we will build 3D models on a digital map which will help us understand how the different arts were all connected and influenced each other. Language of instruction: English

76-404 Critical Race & Ethnicity Studies
Spring: 4.5 units
Terms commonly associated with the academic study of race and ethnicity have gained or regained prominence within our always volatile political discourse: intersectionality, identity politics, white supremacy and blackness. But what is critical race and ethnic studies? What are the "theories" about race, ethnicity, art, subjectivity, power, knowledge and the human that have driven the scholarship and intellectual work for scholars committed to an interdisciplinary exploration of race and ethnicity? This course will introduce students to some of the key figures, terms, debates that have emerged out of critical race and ethnicity studies with a particular focus on how the "structuralist controversy", which foregrounded critiques of the "subject" have changed the way scholars talk about race, ethnicity and identity since the middle of the twentieth-century. Given the wide ranging and interdisciplinary nature of critical race and ethnicity studies our readings will inherently cover disciples such as literary criticism and theory, legal studies, anthropology, linguistics, science and technology studies and film studies to name a few. Readings may include: W.E.B. Du Bois, Kimberly Crenshaw, bell hooks, Richard Dyer, Edward Said, Stuart Hall, Michel Foucault, Jacques Derrida, Henry Louis Gates Jr., Claudia Sharpe, Denise D' Silva, Gayatri Spivak, Eduardo Bonilla Silva and Achille Mbembe. There will be two short papers.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-405 Institutional Studies: English as a Discipline
All Semesters: 4.5 units
The institution on which this course will focus is the academic discipline, the specific historical form that the production of knowledge in the modern research university has assumed. This course will examine the historical development of the discourses, practices, organs, and associations that have defined English as a discipline. While we will of necessity also look at the theories and values that the discipline has proclaimed at different times, this will not mainly be a course in the history of criticism. Criticism will be considered as one practice among others including philology, literary history, literary theory, rhetoric, and composition. In order to understand the broader context, we will read work by Foucault and others on disciplinarity. We will also examine allied institutions, including the professions and the university.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-410 The Long Eighteenth Century
Fall
This course offers students a chance to understand how English literature became modern. We will explore the cultural and historical processes by which we get from Shakespeare to Austen by looking at the historical development of two media forms, the stage play and the novel. Since this archive includes an impossible amount of material to cover in a semester's work, we will focus on some points of connection and synergy between these forms. For example, we will read a novel and a play by Aphra Behn, a poet, playwright, spy and one of the inventors of the modern novel. Eliza Haywood was both an actress and a prolific and successful novelist of the early 18th century. One of the "fathers" of the modern novel, Henry Fielding, cut his literary teeth writing plays for the Haymarket Theatre, which he also managed (and Haywood acted in). Frances Burney wrote a wildly successful novel, Evelina or a Young Lady's Entrance into the World, but she also wrote plays and was part of London literary circles that included famous actors, musicians, and other performers for the stage. We will end with Austen's novel, Mansfield Park, which stages on its pages an amateur production of a play in order to reflect the pleasures and dangers of theatricality. We will look at the interplay between theater and print fiction and how they mutually inform and help to define each other. We will ask how public theatrical institutions and performances and the technology of print contributed to the modern world of proliferating media forms.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-412 Performance and 18th Century Theatrical Culture
Intermittent: 9 units
This course has the dual purpose of introducing students to performance and celebrity studies and giving them experience in using these analytic frameworks to study 18th-century literature and culture. Celebrity is a very modern phenomenon that first became a visible part of political, religious, and artistic culture over the course of the long 18th century, between 1660 and 1800. We will investigate the genealogies of modern celebrity, considering such questions as, what do the Kardashians have to do with dead English kings? What can cross-dressing actresses teach us about 21st-century drag performances? (Full disclosure: Dead English kings and cross-dressing actresses will get far more of our attention than the Kardashians or modern drag artists.) We will study some of the most powerful recent theories of performance and celebrity; we will read plays and other performance genres that took up time and space on the 18th-century stage. In addition, we will explore beyond the London theaters to consider the nature of performance in its many cultural forms: What are the connections between theater and the quieter performances of political pamphlets, newspapers, and novels as they occupy physical and mental space in coffee houses and libraries? Can a print text be performative? Finally, we will examine various relationships between performance and culture. How does performance in the early modern period shape gender and sexuality as well as class and race relations? This course will count as an upper-level course for the Gender Studies Minor, as well as a pre-1900 period course for the EBA.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-413 19th Century British Literay and Cultural Studies
Intermittent: 9 units
Topics vary by semester. Consult the course descriptions provided by the department for current offerings. Example, Fall 2010: In the early decades of the twentieth century, Irish and British writers transformed literary representation, abandoning the certainty of Realism to delve into representations of the human subconscious resulting in fractured narratives in keeping with the uncertainty of that historically pivotal time. As conceptions of national identity were called into question with traumas associated with the First World War, Modernist writers attended to the tensions between wholeness and disintegration in the individual and in collective bodies. In Irish and British Modernism we will explore the tensions between illusions of a whole associated with political movements like nationalism and fascism and the disorienting though sometimes liberating forces of disintegration that surfaced in the essays, poetry, plays, novels and short stories of four Modernist writers: James Joyce, Virginia Woolf, William Butler Yeats and T.S. Eliot. American Modernism will be offered in the spring, which will build off elements of this initial introduction to Irish and British Modernism. Requirements for this course will include active participation in class conversations, bi-weekly response papers and a fifteen to twenty page research paper.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-414 Politics, Media, and Romantic Literature 1789-1830
Intermittent: 9 units
The Romantic period in Britain was a volatile era of political and literary revolutions - but also of print-media revolutions that transformed reading, writing, and publishing. This course focuses the question of books, periodicals, and reading audiences through case studies of several Romantic writers: Mary Robinson, William Blake, Samuel Taylor Coleridge, John Keats, William Hazlitt, and William Wordsworth. Reading a selection of their poems, essays, and critical theory in the context of contemporary debates, we will aim to understand the relation between print as a set of material forms, and political as well as literary ideas and discourses that contended for attention in the period's innovative print media We will also try to grasp some wider cultural processes at work in the late eighteenth and early nineteenth century. These included disintegration of the early modern Republic of Letters and the reconfiguration of its knowledges in the nineteenth-century cultural fields; the forming and division of new reading publics and their ways of reading print; important changes in book production, typography, printing methods (hand-press to steam press), and bookselling; and the crucially important relation between the aesthetic powers of the ?text? and the material pleasures of the "book." Research papers using rare-book materials at the Hunt or Hillman library Special Collections will be especially encouraged; and the course will sometimes meet in the archive to examine "rare and curious" modes of print. One short paper and one research paper will be required.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-107) or (76-108 and 76-106)

76-415 Mediated Power and Propaganda
Intermittent: 9 units
For most of us, the word "propaganda" triggers a familiar script. We tend to think of totalitarian regimes where the State controls information and prohibits the expression of dissenting views. We also tend to associate propaganda with certain rhetorical techniques - highly emotional words, deceptive representations, and glittering generalities that inhibit rational thought and manipulate public opinion. According to such popular views, propaganda is linked to the dissemination of false information and is antithetical to the norms of democratic society. Our class will challenge these assumptions. First, instead of confining propaganda to authoritarian governments, we will examine how propaganda functions within democratic society. Indeed, we will focus on domestic propaganda in America, especially political propaganda but also propaganda in advertising and public relations. Next, instead of focusing exclusively on deceptive rhetorical techniques, we will ask a more elemental question: What enables propaganda to circulate? Answering this question will force us to consider the routines and values of corporate media as well as the power relations that give some people special access to channels of mass communication. Certainly, we will also examine propaganda messages themselves, attending to manipulative tactics as well as rhetorical strategies used to induce uptake in the mainstream press. We begin our seminar by studying key theories of propaganda, looking at primary texts for various definitions and criticisms of the concept. We will then examine how powerful institutions, especially media organizations, manage the dissemination of propaganda in democracies. Finally, we will consider how to analyze propaganda, generating methodological prerequisites for scholarly study. Ultimately, students will have the opportunity to conduct their own research on propaganda as it relates to their academic and professional goals.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-418 Rhetoric and the Body
Intermittent: 9 units
This course offers an introduction to rhetorical studies of the body and is centered on the following three questions: What is the role of the body in rhetorical theory? What role does rhetoric play in constructing the body as a raced, gendered, dis/abled, cultural, fleshy, and political entity? And, how might moving, feeling bodies challenge, regulate, or disrupt these rhetorical constructions and furthermore, our theories of rhetoric? Our readings will explore the role of embodiment in rhetorical theory, examining a number of contemporary and historical theories of the body. In the process, we will explore how to put rhetoric and the body into conversation with one another and what methodological implications this conversation has for rhetorical studies more broadly. The goal of this course is to provide breadth rather than depth, with the assumption that most students, even those relatively familiar with body and/or rhetorical theory, will approach rhetorical studies of the body as novices. Students will conduct their own research on a topic related to rhetorical studies of the body that also aligns with their professional and academic goals. Graduate students interested in research will benefit from this course's focus on theory and the professional genres central to rhetorical studies. Undergraduates students (both majors and non-majors) will have the opportunity to examine how the body intersects with communication and writing contexts in their everyday public and professional lives. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-419 Media in a Digital Age
Intermittent: 9 units
How are media in a digital age changing? And how are they changing us? What does it mean to be living in today's communication technology "revolution"? In a time when many forms of communication are digitally based, traveling as bits at e-speeds on global computer networks? To begin answering these questions, we will take as case studies several new discursive digital media formations, such as digital books, on-line newspapers, blogs, wikis, and so forth, along with related social formations, such as social media networksand distributed non-profit activist organizations. The readings will provide a range of lens by which to understand these developments, including cognitive, social, political, economic and technological aspects. We will briefly put the development of communication technologies in their historical context: How were new forms of communication received in the past? How were they used? How did they affect communication? How did they influence political and social institutions? We will focus, however, on using knowledge of historical developments to inform our understandings of current digital communication developments. Along the way we will ask questions, such as " What are some of the challenges that new digital formations present to traditional communication theories (e.g., How is trust established when speakers are anonymous and globally distributed? How is the "public sphere" constituted when Internet search engines dynamically construct it?). Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-420 The Cognition of Reading and Writing: Introduction to a Social/Cognitive Process
Spring: 9 units
Understanding reading and writing as a social/cognitive process (i.e., a socially situated thinking, feeling, problem-solving process) reveals some of the conscious and unconscious work behind the ways readers comprehend and interpret texts, and the ways writers construct and communicate meanings through them. To gain insight into the why behind the surprising things readers do with a text, we will draw on the psychology of reading, where socially constructed memory networks, cognitive schemas, and meta-knowledge actively shape interpretation. User-testing to discover the representations readers are in fact creating can be critical for many kinds of writing, from informative websites, to persuasive arguments, or engaging accounts. Turning then to writers, we will examine the key processes, from interpreting the task, to planning, revision and metacognitive awareness on which expert and novice writers differ. You will also learn a set of process-tracing methods for tracking these problem-solving strategies as you do two case studies. One will uncover the (sometimes radical) differences in how a set of readers actually interpret (construct the meaning of) a text you choose. The second will be an extended case study of your own thinking process on a real task you are doing outside this class. Here you are likely to uncover old unconscious habits and problems you had to solve, as well as successful strategies, which will give you new reflective insight into your own thinking as a writer. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-421 Why Stories Matter
Intermittent: 9 units
Storytelling is a key aspect of our experience as human beings; without it we are reduced to, as one scholar put it, "the most primitive mode of existence - a life without imaginary alternatives." In this course we will study some key fictions that have provided such imaginary alternatives, alongside various theories for interpreting them. These narratives deal with some of the most important aspects of the human condition: time, justice, empathy, point of view, and reality. The authors we will cover are among the most enduring in the Western tradition, from Sophocles and Chaucer to Melville, Proust, Virginia Woolf, and Ian McEwan. Students will be required to contribute to all class meetings, write brief responses on Blackboard, and produce two substantial essays (longer for grads than undergrads).
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-422 Gender and Sexuality Studies
Intermittent: 4.5 units
We will anchor our introduction to this broad and diverse field of theory in the admittedly very limited historical period of feminist, queer, and transgender political activism, circa 1970 to the present day. Instead of attempting "coverage" (an impossible task), we will shuttle between recent work in queer, transgender, and feminist theory and a few key texts that are foundational to the development of academic theory as a reaction to and extension from the political activism of these social movements. Our goals are to strengthen our understanding of the continuities and breaks in politically informed thinking about gender and sexuality, and to deepen our knowledge of the theoretical frameworks available to us from these areas of study. Students will write short response papers to course readings that will help us focus our discussions on their particular interests in literary and cultural studies.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-425 Science in the Public Sphere
Intermittent: 9 units
Topics will vary by semester. Spring 2013: Ever since the dawn of the Industrial Revolution and the rise of the technological exhibition in the nineteenth century, there has been a growing presence for science and technology in the lives of everyday citizens. In some cases, these phenomena have sparked the public's imagination and their promise has stirred their confidence in a better future. In other cases, they have kindled fears and generated protests over the risks of new technologies and the threats of novel scientific ideas to prevailing social, cultural, economic, and political orders. This course examines the complex dynamics in the relationships between science, technology, and society. Towards this end it engages with questions such as: How do we decide who an expert is? To what extent do scientists have an obligation to consider the social and ethical consequences of their work? Is public education about science and technology sufficient for addressing social concerns about risk and controversial scientific ideas? We will grapple with these and other questions by exploring modern public debates in which science, technology, and society play a primary role such as the AIDS crisis, global warming, and the autism vaccine debate. With the help of analytical theories from sociology, rhetoric, and public policy, we will develop a general framework for thinking about argument and the dynamics of the relationship between science, technology and the public. In addition, we will look to these fields for tools to assess specific instances of public debate and to complicate and/or affirm the prevailing theories about their relationship. (See Department for full description.)
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-428 Visual Verbal Communication
Fall: 9 units
People create a wide range of communicative artifacts that integrates visual and verbal elements-newsletters, product brochures, web pages, graphical novels, journal articles, resumes, software references, yellow stickies, etc. Yet, such visual-verbal discourse has only recently attracted the serious attention of research communities. Some of the relevant research questions include: Why do visual variations exist across different contexts? (e.g., Popular science looks different from Discover.) Why and how do visual styles change over time? (e.g., Magazines from the 1950s don't look like present day magazines.) Do visual elements have persuasive power? If so, what roles do they play in shaping an argument? How do people learn to communicate using visual-verbal artifacts? In this seminar, we will address these and other questions through readings and discussions on various threads of studies around the analysis of communicative artifacts that integrate visual and verbal expressions. We will review key research publications concerning visual-verbal communication from relevant disciplines, including professional & technical communication, rhetoric, argumentation, and literacy. Particular attention will be paid to descriptive methods (e.g., social-semiotic analysis, visual argument, and rhetorical structure theory) and the types of questions these methods can help us answer. Throughout the semester, students will be encouraged to explore the visual-verbal communication artifacts found around them and use those to connect class discussions to the practice of design. Required assignments include a brief bi-weekly response to the readings, several short analysis papers, and a longer term paper with a topic chosen by students based on their professional or research interests. Please see English Dept. for full course description.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-429 Digital Humanities: Politics and Early Modern Drama
Intermittent: 9 units
This course will explore a range of questions related to the manifestation of political thinking on the early modern English stage, a key medium for the dissemination and cultivation of information and ideas. Our central curriculum will include plays by William Shakespeare, Thomas Middleton, Christopher Marlowe, and others alongside a selection of critical essays and related literature from the period. To complement this collective investigation, students will also complete a hands-on, entry-level assignment that introduces digital methodologies for visualizing and analyzing early modern texts. No previous experience with the digital humanities is necessary to participate. Technological neophytes, seasoned programmers, and persons at all skill levels in-between are all very welcome to participate.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-430 Greatest Hits from the Medieval World
Fall: 9 units
Some stories never go out of style. Much of what we will read in this course was popular throughout Europe, and all of it is still widely retold and enjoyed in various media: for example, Beowulf, Decameron, and Dante's Inferno in film, Tristan in opera, Malory's Morte D'Arthur in lots of formats. We will consider the medieval telling of these tales and others from the eighth to the fifteenth centuries. Anglo-Saxon, French, German, Italian, and some Middle English texts will be read in translation, but Chaucer and Malory in edited versions of their writer's idioms. A particular emphasis will be placed on personal subjectivities to counter the rumor that individual selfhood began with Shakespeare (the inventor of the human, according to Harold Bloom). Some of our texts are reflective, some are outrageous, some are charming, some are funny; all are populated by human beings we can recognize in spite of the unfamiliar styles in which they are presented. Learning outcomes include a sense of both the historical conditions for storytelling and the ways tales can take on new meanings over time. Graduate students will be responsible for reading additional historical and critical materials and writing longer papers than undergrads.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-431 Chaucer
Intermittent: 9 units
We will read most of Chaucer's Canterbury Tales and his narrative poem Troilus and Criseyde (considered by some the first English novel). Our texts are in Middle English-Chaucer's language is odd-looking, but easily mastered. We will also read some brief accounts of 14th-century institutions and traditions (chivalry, religious life, marriage, etc.). Most class meetings will consist of discussions that examine these fictions in relation to the social conditions they imply and the tellers' stakes in the telling. While we are discussing the General Prologue, I will ask each of you to identify the pilgrim through whose eyes you will try to read each of the tales (in addition, of course, to seeing from your own vantage point). As the course goes on, you will become an expert on one of the social roles portrayed in Chaucer's fictional universe. Required are near-perfect attendance, steady participation, and three papers. Graduate students will meet for an extra hour a week, read additional materials, and write longer papers.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-107 and 76-108) or (76-106 and 76-108)

76-432 Advanced Seminar in African American Studies
Intermittent: 9 units
Topics will vary by semester. Consult the course descriptions provided by the department for current offerings. Example, Fall 2011: This course will be an in-depth study of James Baldwin's works as well as the writers and thinkers that influenced him. Baldwin's rumination on American life during and after the epoch defining events of Civil Rights Era reflects the great political and cultural transformations the country struggled through. In this course students will read canonical works such as Notes of A Native Son and Giovanni's Room as well as lesser know works like One Day When I Was Lost, Baldwin's screenplay for a never-to-be-produced film project on Malcolm X and Little Man, Little Man: A Story of Childhood, a children's novel he published in 1976. Besides Baldwin's works we will read and connect Baldwin's thoughts on literature, race, sexuality and politics to some of his immediate contemporaries like Richard Wright, William Faulkner, Flannery O'Connor and others who had an influence on Baldwin's imagination and craft.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-107) or (76-106 and 76-108)

76-435 Politics and Popular Culture
Intermittent: 9 units
Over the course of the last one hundred years what has been the influence of left-wing social movements on popular culture? Michael Kazin, in his recent best seller American Dreamers argues that the left has had a more powerful effect on culture than on politics. But what about the idea that cultural influence is inherently political? In this class we will read a mix of cultural history, film studies, music studies, literary studies, art history, television studies, and cultural theory. We will look at the intersection of radical movement politics and high modernism in the 1930s and 1940s. We will look at how left culture survived under the cloud of the blacklist. We will look at the Civil Rights culture and Feminist culture that emerged out of the 1950s and 1960s. Finally, we will look at how the left/right debates and struggles over the thirties, fifties and sixties have persisted into our current political/cultural narrative forms. Key texts for the course include Michael Kazin, American Dreamers: How the Left Changed the Nation, Paul Buhle, Hide in Plain Sight, the Hollywood Blacklistees in Film and Television, T.V. Reed, The Art of Protest, Susan Douglas, Where the Girls Are: Growing Up Female with Mass Media, Sasha Torres, Black, White and In Color: Television and Black Civil Rights, and Judith Halberstam, The Queer Art of Failure.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-106 and 76-108)

76-438 The Wire: Crime, Realism, and Long-Form TV
Intermittent: 9 units
The HBO series The Wire (2002-2008) has been called the greatest TV show ever. Part of the first wave of "quality television" series by which HBO changed the way people conceived of the artistic possibilities of the medium, the Wire differed from its contemporaries like The Sopranos and Six Feet Under in its realism and its smaller audience. Unlike most other shows on television, The Wire addressed the racism, poverty, the failures of the criminal justice system, and other social problems head on. It was able to do this in part because it had enough time to develop complex story threads. This moment of TV history produced what I am calling "long-form" TV, in which narrative continuity was stretched over multiple seasons. TV in this form resembles 19th century novels that were first released serially in magazines and newspapers. In both cases, audiences waited expectantly for new episodes, since they could not be "binge-watched." The Wire was rooted in producer/writers David Simon and Ed Burns' experiences in Baltimore, where the former had been a crime reporter and the latter a police detective. Simon has said that he made the series in order to tell truths about the city he could not tell in the newspapers. This course will consider the wire in the context of realist fiction of the 19th century, twentieth-century crime fiction, earlier TV crime series, and other long-form TV, including Mad Men. We will try to explore The Wire's realism, its continuing appeal, and its impact. We will probably watch 3 seasons of The Wire.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

76-439 Seminar in Film and Media Studies: Class, Race, & Gender in Film
Fall: 9 units
We usually think of movies as misrepresenting the realities of class, race, and gender. Certainly Hollywood, known as the "dream factory," usually ignored these realities or systematically distorted them. In this class, we will focus on fiction films which were intended to represent the truth about these social hierarchies. While we will watch a few examples of standard Hollywood product, most of course will concern the realist tradition in cinema. Beginning with Italian neorealism of the 1940s and early 1950s and continuing to the present day, films in this tradition have rejected glamour and glitz, and replaced them with actuality and grit. While these films have been especially interested in exploring class relations and the lives the working class, some of them also have also have focused on issues of race and gender. Among the directors whose films we will watch are Roberto Rossellini, Vittorio De Sica, Frederico Fellini, Agnes Varda, Ken Loach, Jean-Pierre Dardenne, Laurent Cantet, John Sayles, and Denzel Washington.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-440 Postcolonial Theory: Diaspora and Transnationalism
Intermittent: 9 units
Arjun Appadurai argues that one of the primary transformations in this period of globalization has been in the capacity for people to imagine themselves or their children will live and work in places other than where they were born. Although the novel has long been considered a national form, contemporary novels frequently represent transnational mobility, both in their plots and as global commodities. A significant body of contemporary fiction focuses on imaginative and physical movement across national borders. This global literature course combines literary and theoretical readings to examine the experiences of transnationalism and diaspora. Theories of transnationalism look at the interconnections that cut across nations. The concept of diaspora, a term first used to reference the movement of a people out of a homeland, has become a way to think about the identities of immigrants, migrant workers, and refugees. Readings for the course will be drawn from a diverse group of writers from around the globe. Literary readings might include works by Caryl Phillips, Jamaica Kincaid, Christina Garcia, Nadeem Aslam and Jhumpa Lahiri; theoretical readings might include works by Salman Rushdie, Paul Gilroy, Gloria Anzaldúa, Arjun Appadurai, Inderpal Grewal and Avtar Brah.

76-441 Theorizing Sexuality
Intermittent: 9 units
This course offers a foundation in the history of theorizing sexuality that brings us from the Greek classical concept of man/boy love, through medieval concepts of the "one-sex body," and up to contemporary transgender theory. We will read canonical theories of sexuality in the modern period, such as Freud's psychoanalytic Three Essays on Sexuality and Michel Foucault's revisionist History of Sexuality. To ground our theoretical investigations in social and historical context, we will focus on three discursive sites: the feminist "sex wars" of the 1980s, the theory and practice of "trans" both gender and sexuality from modern and contemporary periods, and late 20th and 21st century queer concepts of sexuality.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-443 Shakespeare and Theory
Intermittent: 9 units
Shakespeare's plays have been produced and read under all sorts of conditions for more than 400 years. It seems that each generation has a different take on their meanings and implications. Early criticism weighed their "beauties" and "flaws," and more recently their place in intellectual and social life has been analyzed by deconstructive, historical, psychoanalytic, marxist, and feminist commentary. In the seminar, we will read six plays (one comedy, one history, one "problem play," one romance, and two tragedies) each accompanied by an essay proposing a particular theoretical position and some related criticism. Students will be honing their skills as readers of some of the most complex and challenging texts in the English language and simultaneously learning to write criticism of their own. This seminar is not an introduction to Shakespeare; it is designed for students who have thought seriously about some of the plays (studied at the college level, acted in or directed productions, or the like) and wish to broaden and deepen their understanding. It is not limited to English and Drama majors. Regular attendance and participation (including occasional in-class writing) are required. Everyone will present a "position statement" to the seminar and submit two prepared papers. Grads and undergrads will work together every week for three hours; grad students will meet for an extra hour each week to discuss additional readings and prepare conference-ready seminar papers.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

76-444 History of Books and Reading
Intermittent: 9 units
Rather than putting an end to the book, digital media have had the oddly exhilarating effect of making us look at all kinds of print, past and present, through newly focused lenses. This course will introduce you to the history of books and reading, a cross-fertilizing field of study that is having an impact on many disciplines, from the history of science to literary history, cultural studies, and the arts. Scholarship in this still-emerging field will include work by Roger Chartier, Michel Foucault, Elizabeth Eisenstein, Pierre Bourdieu, Michel de Certeau, , and the current scholars who appear in one of our key books, "Interacting with Print: A Multigraph." We'll also read primary texts by Joseph Addison, Jane Austen, Samuel Coleridge, and Wilkie Collins to see how differing modes of print and reading became highly contested cultural and political matters in the eighteenth and nineteenth centuries. Other topics include the division between new reading publics and their ways of reading books; important changes in book production, typography, printing methods (hand-press to steam press). Such knowledge of the history of print has become especially crucial in an era of emerging "new media" and the field of digital humanities in the university. Two papers will be requiredone shorter paper (5-7 pp.) and a longer research paper on the uses of books and print by producers and readers. Though the course meets in Baker Hall, you will have hands-on experience with early books and other forms of print as we also meet periodically in the Rare Book Room at Hunt Library.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-445 Race in Early Modern Drama
Intermittent: 9 units
This seminar explores the representation and fashioning of race in sixteenth and seventeenth century drama from England, Spain, and France. In early sixteenth century Europe, race was a complex system of power distribution that relied primarily on religious or rank-based difference. With the development of colonization and color-based slavery in the Atlantic world, the early modern racial matrix produced a new paradigm: Europeans started thinking about physiological difference - for which skin color was a shorthand - in racial terms too. How were those various racial paradigms (religion, rank, skin color) represented in one of the most important mass media of the time - theatre? How did those paradigms interact in one given play or one given national culture? Did they reinforce or work against one another? Which features were specific to nationally defined racial epistemes? Which features circulated across national borders? How did the translation and mistranslation of racial notions from one culture into another shape a sense of shared whiteness in early modern Europe? Which performance techniques did actors use to impersonate racial others, and what effect did those techniques have on spectators? In short, how did early modern theatre participate in the making of race? To answer those questions, we will focus on a rich corpus of plays staging Jews, Moors and Blackamoors, New World Indians, Gypsies, and Turks. We will read plays by Shakespeare, Ben Jonson, Cervantes, Lope de Vega, and Molière (among others) in conversation with secondary readings drawn from the field of Critical Race Studies. French and Spanish plays will be available in translation.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-446 Revenge Tragedy
Intermittent: 9 units
Attendants to the early modern English theater seem to have had an almost insatiable appetite for revenge tragedy: a lurid, blood-soaked genre distinguished by plots involving insanity, skulls, ghosts, poisonings, stabbings, suicide, and other forms of unnatural death. This course will cover key examples of the genre, putting particular emphasis on the depiction and interrogation of justice, analyses of death, and playful engagement with theatricality. Our central curriculum will include plays by Seneca, William Shakespeare, Thomas Middleton, Christopher Marlowe, and Thomas Kyd, alongside a selection of critical essays and related literature from the period. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-108 and 76-106)

76-448 Shakespeare on Film
Intermittent: 9 units
The dramatic works of William Shakespeare have inspired an extraordinarily rich and varied cinematic legacy that began in the era of silent films and now boasts masterpieces by directors such as Akira Kurosawa, Roman Polanski, Peter Greenaway, and Orson Welles, not to mention history-making performances by icons including Marlon Brando, Elizabeth Taylor, Laurence Olivier, Al Pacino, Leonardo DiCaprio, and Ian McKellen (among many others). This course will consider a selection of key Shakespeare films alongside critical readings centered on questions of adaptation and performance. As we watch and read together, we will work toward a broader understanding of what Shakespearean drama means in a 21st century context, and how film has helped to shape the author's massive cultural impact.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-108 and 76-107)

76-449 Race and Media
Intermittent: 9 units
This course will introduce students to useful methodological approaches, ranging from film studies, media archeology and book history to Black studies, Transnationalism and Post-Marxism, to analyze race and representation within a variety of media formats. Media in this course is understood broadly: technologies used to store and deliver information. With this rather broad understanding in mind our course will look at how artists and intellectuals use discrete formats (print, film/video, electronic, and other recording mediums) to imagine, remediate and study the circulation of racialized bodies and identities within global capitalism.
We will also think about the concept of race itself as another, particularly problematic "media" format used to store and deliver information about the human for political, economic, ideological and juridical purposes. The class will be organized around specific material and "immaterial" media objects that will allow us to explore the processes of (re)mediation that characterize racialized bodies and formats. We will look at a range of works that might include D.W. Griffith, Nella Larson, Iceberg Slim, Raul Peck, Christina Choy, Renee Tajima, Janelle Monae, Ramiro Gomez, Dana Shultz, and 50-Cent. We will also read the theoretical works of Stuart Hall, Christina Sharpe, Carol Vernallis, Lisa Lowe, Teju Cole, Lisa Gitelman and Michael Gillespie, Simone Browne, Martin Heidegger, Theodore Adorno and others. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

76-450 Law, Culture, and the Humanities
Intermittent: 9 units
"I'm not a lawyer, but..." How many times have you heard this disclaimer, closely followed by a lay analysis of law? This course, an introduction to the cultural study of law for graduate students and advanced undergraduate students, can be seen as an introduction to what goes into the making of such a statement. Where do we get our ideas about law? What do we mean when we say "law"? What counts as law? How does culture influence law, and law, culture? And to what degree should historical context condition any answers we might be tempted to give? Students in the course will study works in a range of genres (novels, plays, poems, judicial opinions, pamphlets) and develop methods for investigating ways that law and culture have been made by one another from the 16th-century to the present. Readings will include influential theoretical accounts of law (Aristotle, Hobbes, Cover, Habermas, Bordieu, MacKinnon), canonical texts in Law and Literature (Shakespeare's Measure for Measure, Melville's Billy Budd, Kafka's The Trial) and some "weird fiction" by the novelist/legal theorist China Miéville. As a counterpoint to the fiercely anti-historical "law and economics" movement, however, the course will put special emphasis on rooting intersections of law and culture in rich historical context, considering both local and international legal contexts (sometimes in fairly technical detail) alongside so-called "ephemera" of culture. Students will tackle the especially fruitful "case" of Renaissance Britain before developing final research projects, whether on the Renaissance or another period of their choosing.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-451 Language and Globalization
Intermittent: 9 units
It is a paradox of globalization that the same factors that cause people to become more alike also make people become aware of difference. In this course we explore this process with respect to language. We look at the history of language standardization and its relationship with political and economic history, exploring when and why different ways of speaking and writing become more alike, both as an automatic result of social interaction and as a planned result of policy. We look at the language ideology that gives rise to and undergirds standardization and the rhetoric that gets used to forward it. Then we explore reasons for and mechanisms of localization in language. What ideas about language, communication, and identity underlie attempts to push back against standardization, and what rhetorical strategies forward these ideas? We then turn to three case studies: arguments about Global English versus local Englishes and ways of using English, ongoing struggles over the standardization of the Putonghua variety of Chinese in China and the development of regional and national standards in Taiwan and elsewhere, and the history of Catalan, a regional dialect that has become a quasi-national standard in the Catalunia region of Spain. In addition to presenting and leading discussion on two of the readings, students will be expected to complete two 500-word writing assignments and undertake a substantial original research project that expands on one or more of the themes of the course. This project will be presented orally and in a 20-25 page paper.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-452 Generations and Culture
Intermittent: 9 units
We hear about generations all the time—the Millennials rising, Gen X and their minivans, and the Baby Boomers retiring. Yet, generations have usually been ignored in cultural studies as an amorphous, popular concept. While we discuss factors that shape identity such as race, class, gender, sexuality, there is little work on generations. In addition to those factors, contemporary researchers have determined that generations in fact often have significant impact on opinions, consumer choices, and political views. This course will study the theory of generations, from sociology, history, marketing, and other fields. It will also look at how the concept might apply to cultural products, such as literature or theory itself. In addition, in the course you will develop a project to study one generation and its culture.

76-453 Literature of Empire
Fall: 9 units
Nineteenth and early twentieth-century British literature was shaped by events taking place outside as well as inside of national borders. Even in the eighteenth and nineteenth centuries, with international trade and slavery supporting the manor house and plantations abroad providing the cotton for British looms, the "England" of English literature spanned the globe. By the first half of the twentieth century, this empire had begun to collapse in upon itself, a process witnessed by writers inside Britain and its colonies. This course will investigate British literature within the international context of global imperialism. A section on gothic stories takes us into the realm of popular culture with Mary Shelley's Frankenstein and Arthur Conan Doyle's short stories. We take to the seas with Joseph Conrad's Lord Jim, before we consider W. Somerset Maugham's exploration of sexuality in the tropics in The Painted Veil. Finally, we return to England to outline the links between colonial empire and international war rendered in Virginia Woolf's Mrs. Dalloway. These literary works will be read alongside some of the most important works of postcolonial theory. While course readings focus on 19th and early 20th century, student's will undertake a research project over the semester in their own period of interest in British literature in connection with empire studies.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-107 and 76-108) or (76-106 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-456 Independent Study in Film & Media Studies
All Semesters
TBA
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-108 and 76-106) or (76-107 and 76-108)

76-457 Rhetorical Invention
Fall: 9 units
Rhetorical invention refers to the discursive process of inquiry, discovery, and problem solving, or how we decide what to say, what arguments to advance, and what means of persuasion to use in any situation. Although invention is centrally important to rhetoricwithout which it becomes a superficial and marginalized study of clarity, style, and arrangementfrom the Scientific Revolution and Enlightenment through the mid-twentieth century invention all but disappeared as a topic of rhetorical study under the pressure of the view that invention should be exclusively governed by deductive logic and the scientific method rather than rhetorical considerations such as audience or the figurality of language. This repudiation of rhetorical invention fundamentally shaped modern thought and continues to influence the ways we think and communicate today. In this course, we begin by examining the status of rhetorical invention in the development of modern thought before focusing on various scholarly efforts to revive a rhetorical understanding of invention from the mid-twentieth century forward, surveying a variety of contemporary theories of rhetorical invention including those promoted by postmodern, posthuman, and digital rhetorics. The course is designed to explore the central importance of invention to contemporary rhetorical theory through a pairing of historical and contemporary readings.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-460 Beginning Fiction Workshop
Fall and Spring: 9 units
In this course you'll continue to learn the craft of fiction writing through conducted discussions about various elements of craft: point of view, structure, use of imagery, scene, dialogue, and most importantly, characterization. We'll also be talking about the thematic concerns these writers raise, and how these stories fit into a conversation about the wider culture.
Prerequisite: 76-260 Min. grade B

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-462 Advanced Fiction Workshop
Fall and Spring: 9 units
In this writing-intensive workshop students will be laser-focused on producing and polishing their own fiction. We'll complement our workshops with readings from masters of short fiction and novels, with an eye on sharpening our own facility with dialogue, structure, and voice. Each student must be prepared to constructively critique and deconstruct her/his peers' work, as well as actively contribute to class discussions about the elements of craft that undergird successful works of fiction. Each student will be expected to produce a significant portfolio of original writing by the end of the semester as well as shorter exercises originating from thematic prompts.
Prerequisite: 76-460 Min. grade B

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-464 Creative Nonfiction Workshop: Magazines and Journals
Intermittent: 9 units
Creative Non-fiction Workshop is a good class to take if you like to tell (write) stories about your own life and the lives of other people, all situated in the world we inhabit, the world that is ours to investigate and celebrate and question. The class will teach you how to write a good story, by focusing on aspects of craft. Class is almost always run as a discussion. We'll read books by authors of creative non-fiction, and learn from them how to work with a variety of forms. Every student will create a portfolio of roughly 25 pages of non-fiction by term's end.
Prerequisites: 76-365 Min. grade B or 76-460 Min. grade B or 76-265 Min. grade B or 76-262 Min. grade B or 76-260 Min. grade B

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-465 Advanced Poetry Workshop
Fall and Spring: 9 units
In this course, you will be expected to take your knowledge of the principles and techniques of poetry and utilize them in workshop discussions, written analysis, and the composition of your own poems. In addition, readings of books by visiting poets will be required, Participation in a book-making project, cross-genre writing, and/or a mentoring project with high school students will also be included.
Prerequisite: 76-365

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-468 Space and Mobilities
Intermittent: 9 units
This course will investigate space and movement as social constructions. Space appears as something that exists around us: our houses, our neighborhoods, our cities might seem like they are simply there to be moved through. In the same way mobility, from our means of transport to an evening walk, can appear as just movement from A to B. In the late 20th century, an interdisciplinary group that included geographers, urban studies scholars, architects, sociologists, anthropologists, and literary theorists began to theorize the social construction of space. They argued that space is something dynamically created that may be interpreted for the ways it creates meaning. Following this spatial turn, mobilities studies scholars looked to understand movement as something that reproduces and constitutes power and institutions. This interdisciplinary course considers theories of space and movement as a field of study and in reference to literary and film texts. The course will be organized topically, and include such units as the regulation of freedom of movement over borders through the construction of boundaries; the heterotopia of the boat or train carriage; the poetics of space; the dynamic mapping of the city by a wanderer; neoliberal recalibrations of global space, and the spatialization of performance. Readings might include Henri Lefebvre, Doreen Massey, Edward Soja, Gaston Bachelard, Wendy Brown, John Urry, Tim Cresswell, Marian Aguiar; literary texts might include Brian Friels Translations, Christina Garcia's Dreaming in Cuban, W.G. Seabald's Austerlitz and Teju Cole's Open City. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-108 and 76-107)

76-469 Screenwriting Workshop: Screenwriting/Television Writing
Spring: 9 units
This is an advanced screenwriting workshop that builds on the fundamentals covered in the Survey of Forms: Screenwriting course. The objective of the course is to help students gain a greater critical and artistic sensibility as screen and television writers. We will spend the first part of the semester working on 3 different screenwriting projects; the second part of the semester will be devoted to television writing. An visiting professor who works in television will teach several classes and help the students translate one of their screenplays into television pilots. Class sessions will be rigorous and challenging consisting primarily of group readings and open critiques. Students should arrive to the first class prepared to discuss the idea and status of the screenwriting project they plan to pursue first.
Prerequisite: 76-269 Min. grade B

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-472 Topics in Journalism: Storytelling in a Digital Age
Spring: 9 units
Advanced Journalism students will learn how to plan and execute long-form news feature stories from the ground up, starting with recognizing a promising idea, organizing a solid proposal then ultimately producing a publication-ready report that is both accurate and compelling. We will focus on four types of feature stories over the course of the semester: a trend story, a profile, an explanatory report and a data-driven investigative story. Each will require strong news judgment and solid writing skills, plus the ability to adapt as some story leads unexpectedly come to a dead end while promising other angles rise to the surface. Don't be surprised if the final product is notably different than the original idea; that's often the path of the most successful reports. While each student is responsible for his or her work, class sessions will be highly collaborative as ideas and strategies are critiqued with an eye toward helping all students achieve their best work.
Prerequisite: 76-372

76-474 Software Documentation
Spring: 9 units
This course teaches theory, techniques, and best practices for creating software documentation. We will learn to plan, architect, write, and publish audience-appropriate user assistance, while applying concepts and approaches like minimalism, topic-oriented authoring, single-source publishing, content reuse, and metadata. Students will complete homework assignments and larger projects to reinforce principles and provide experience in all phases of the software documentation lifecycle. Readings and class discussion will bridge theory and practice.
Prerequisites: 76-271 or 76-270

76-475 Law, Performance, and Identity
Intermittent: 9 units
Although rhetoric and law have long been closely associated, the modern professionalization of law has often promoted the idea that legal discourse is not rhetorical but a rigorously defined technical discourse that can be applied free of social, cultural, or political considerations. This view of legal discourse is disputed by critics who point out the figurative aspects of legal language, the relevance of character, emotion, and narrative in legal communication, and the ways in which law protects social structures of power such as race, class, and gender privilege. The course broadly examines the fraught relationship between rhetoric and law by considering the ways in which a variety of legal discourses serve to construct and reinforce identities, with a particular focus on the ways in which legal systems are portrayed to reflect the ideals of democracy to suit particular foreign relations goals. We begin by studying the ways in which Cold War foreign policy goals influenced desegregation and civil rights discourse in the United States, then we turn to the ways in which the prosecutions of deposed authoritarian rulers in various regions of the globe have been orchestrated to persuade global audiences that emerging democracies observe the "rule of law" for purposes of garnering international support. Alongside primary sources of legal discourse, we will study a selection of interdisciplinary scholarship about the relationship between rhetoric and law. Students write a two-stage research paper on a topic of their choosing regarding the relationship between legal discourse and the construction of identity. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

76-476 Rhetoric of Science
Fall: 9 units
This course explores questions about scientific argument and communication that are of interest to scientists, rhetoric of science scholars, and professional/technical writing practitioners. These include questions like: How are scientific arguments structured? How is scientific information and argument transformed when it moves from research papers to publications for non-specialist audiences? How does the social, historical, and cultural context of science shape the way it is communicated and/or argued? What contributions do visuals make to scientific argument and communication? To investigate these questions, we will be examining a wide variety of real-world communications in and about science as well as texts in rhetoric, history, and philosophy of science.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-479 Public Relations & Marketing for Writers
Spring: 9 units
Effective marketing and communications are essential to the success of businesses, non-profit agencies, academic institutions, public interest groups, and other entities that have a shared purpose and identity to promote. This course explores marketing and communications in organizational settings, where professional communicators manage relationships with a wide variety of constituencies: customers, investors, news agencies, employees, members, volunteers, local communities or government agencies. To succeed, communicators must be able to identify and articulate the communication needs of the organizations they represent, develop well-informed strategies for advancing organizational objectives, think and act quickly in high-pressure situations, and write clear and persuasive prose. In this course, you will develop the written and oral communication skills needed by a professional communicator in an organization. You will learn to identify and define a coherent, integrated strategy for all of an organization's communications and to devise and apply effective marketing and public relations tactics in traditional and social media for achieving business objectives. You will gain practice in writing op-ed essays, press releases, critiques of organizational communications, and marketing and communication plans.
Prerequisites: 76-270 or 76-271

76-481 Introduction to Multimedia Design
Fall: 12 units
There is increasing demand for professional/technical writers who understand multimedia and its communicative possibilities. This class will provide students with the opportunity to develop the ability to create and analyze multimedia experiences that merge text, spoken voice, music, animation and video. Students will be introduced to the basic concepts and vocabulary of motion graphics, as well as the practical issues surrounding multimedia design and digital storytelling through a series of hands-on projects involving various contexts. Students will explore what it means to write for a dynamic medium and how to take advantage of elements of time, motion and sound to help expand their visual communicative skills. The essentials of Adobe After Effects will be taught in order to build the skills necessary to complete assignments, explore multimedia possibilities and foster each student's unique creative voice. Adobe Premiere and Audition will be employed to support specific tasks. Students will also be taught to capture their own original images, video and narration audio to craft the elements of their projects. It is helpful to have some prior basic experience with Photoshop or Illustrator. In-class discussion and critiques are an essential part of this course.
Prerequisites: (76-270 or 76-271) and (51-261 or 51-262 or 76-391)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-483 Corpus Analysis in Rhetoric
9 units
This course investigates methods for analyzing rhetoric as it mainly exists in digital environments (e.g. blogs, newsgroups, homepages, political sites, facebooks and so on). The focus will be on verbal rhetoric, but students who wish to analyze visual rhetoric interactively with verbal rhetoric will be welcome to do so. In the first part of the course, we will review various methods for analyzing digital texts descriptively (viz., concordance, collocate and keyword analysis) and inferentially, through multivariate analysis (e.g., manova, factor analysis, discriminant analysis, cluster analysis). To learn these methods, in the first half of the course, we will use simple textual data sets supplied by the instructor. In the second half of the class, students will choose their own digital environments to analyze and they will be expected to write publishable-quality rhetorical analyses of these environments. To meet this expectation, students will need to do considerable background research in the digital environments they are studying.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-106 and 76-108) or (76-108 and 76-107)

76-484 Discourse Analysis
Fall: 9 units
Discourse is a focus of study in most of the humanities and social sciences, and discourse analysis is practiced in one way or another by anthropologists, communications scholars, linguists, literary critics, and sociologists, as well as rhetoricians. Discourse analysts set out to answer a variety of questions about language, about writers and speakers, and about sociocultural processes that surround and give rise to discourse, but all approach their tasks by paying close and systematic attention to particular texts and their contexts. We are all familiar with the informal discourse analysis involved in paraphrasing the meanings of written texts and conversations, a skill we learn in writing and literature classes and in daily life. Here we ask and answer other questions about why people use language as they do, learning to move from a stretch of speech or writing or signing outward to the linguistic, cognitive, historical, social, psychological, and rhetorical reasons for its form and its function. As we look at resources for text-building we read analyses by others and practice analyses of our own, using as data texts suggested by the class as well the instructor. In the process, we discuss methodological issues involved in collecting texts and systematically describing their contexts (ethnographic participant-observation and other forms of naturalistic inquiry; transcription and "entextualization;" legal and ethical issues connected with collecting and using other people's voices) as well as methodological issues that arise in the process of interpreting texts (analytical heuristics; reflexivity; standards of evidence). The major text will be Johnstone, Barbara. 2008. An Introduction to Discourse Analysis. 2nd ed. (Malden, MA: Blackwell Publishers). Other reading will be made available as .pdf files.
Prerequisites: 76-101 or 76-102 or (76-107 and 76-106) or (76-106 and 76-108) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-485 The New Public Sphere
Intermittent: 9 units
Public deliberation is at the heart of the rhetorical tradition. But is public dialogue really a live option in a media-saturated world of sound bites addressed to plural publics? Is the process of debate, deliberation, and decision (in which the best argument wins) really the ideal model? Or can people use public spaces to develop new, more inclusive positions? Could such a process occur in a boundary-crossing public when diverse groups enter intercultural deliberation around racial, social, or economic issues? This course looks at diverse ways people use rhetoric to take literate social action within local publics. From the canonical debate around Habermas and the public sphere, we move to a feminist "rereading" of the Sophists, to contemporary studies of deliberation in workplaces, web forums, grassroots groups, new media, and community think tanks. To support your own inquiry into the meaning making process of a local public, you will learn methods for activity analysis and for tracing social/cognitive negotiation within a public of your choice. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission
Prerequisite: 76-373

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-486 Argument Theory
Intermittent: 9 units
Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: (76-101 and 76-373) or (76-102 and 76-373) or (76-106 and 76-107 and 76-373) or (76-108 and 76-373 and 76-107) or (76-106 and 76-108 and 76-373)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-487 Web Design
Fall: 12 units
The World Wide Web is a vast collection of information, far more than we can comfortably handle; even individual websites can pose so much information that they become overwhelming. In this client-facing, project-oriented class, we aim to look at ways to tackle this problem, and design content for the web that is easy to access and digest. We will look at how websites manage and present organized information, with an eye to understanding what works well. We will use methods to learn who is using a website and why, and develop our toolset to test our decisions when implementing a new design. Along the way, we will develop a familiarity with the core web technologies of HTML5 and CSS3, with discussion of graphics, sound, social media, and other tools to enrich our presence on the World Wide Web. Please note: Freshmen are prohibited from registering for this course. Sophomores must obtain instructor permission.
Prerequisites: (76-270 or 76-271 or 76-102 or 76-101 or 76-272) and (76-382 or 76-391 or 51-261 or 51-262)

76-488 Web Design Lab
Fall: 3 units
Lab exercises for Web Design include the following: basic HTML, images, tables, animation, image maps, interactive forms, Web interfaces to databases, and basic Javascripting. All students must do the lab exercises. The exercises are designed so that those students who already know particular topics (e.g., basic HTML) do not need to attend the lab session. Students who would like guided practice in doing the lab exercises must attend the lab session. Lab sessions take place in a computer cluster.
Prerequisites: (76-379 or 76-271 or 76-270) and (76-382 or 76-391 or 76-383)

76-491 Rhetorical Analysis
Intermittent: 9 units
Students in this course will learn various approaches to analyzing discourse artifacts from a rhetorical point of view. Early in the course, students will identify an artifact or artifacts they wish to analyze. From there, students will be encouraged to explore their own methods of analysis based on two required books for the course and reviews of literature. For the midterm, students will create an annotated bibliography of five specimens of criticism taken from a single journal. For the final project student will first present and then hand in a polished 15 page piece of criticism based on one or some combination of methods. The presentation and final paper count 50% of the grade, with the mid-term, class attendance, participation, and homework making up the final 25%.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-108 and 76-107)

76-492 Rhetoric of Public Policy
Intermittent: 9 units
This course explores a rhetorical approach to public policy which focuses on the interconnected role that data, values, beliefs, and argument play in the policy process. From this perspective we will examine the important public debate over the pros and cons of various forms of energy production including nuclear, natural gas, and solar. In these investigations, we will explore questions like "How do policy makers use rhetoric to shape public perspectives on energy production?" "How can rhetorical approaches to argument function as tools for policy analysis and development?" And "What role does technological expertise play in public debate?" To pursue these questions, we will be reading works in rhetorical theory and public policy and applying the concepts and methods in those works to exploring primary artifacts of public argument like records of public hearings, social media memes, handbooks designed by activists, and stories about energy production in the popular media.
Prerequisites: 76-101 or 76-102 or (76-106 and 76-107) or (76-108 and 76-106) or (76-107 and 76-108)

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-494 Healthcare Communications
Fall: 9 units
Healthcare communications is designed for students with an interest in how medical and health care information is constructed and transferred between medical experts, health care providers, educators, researchers, patients and family members who are often not experts but need a thorough understanding of the information to make important health decisions. Throughout the course, we will explore the interactions of current theory and practice in medical communication and the role of writing in the transfer and adoption of new therapies and promising medical research. We will also study how the web and social media alter the way information is constructed, distributed, and consumed. We will examine the ways medical issues can be presented in communication genres (including entertainment genres) and discuss how communication skills and perceptions about audience can influence clinical research and patient care. Additionally, we will explore clinical trials, grant writing, and press releases, and will feature guest speakers from these fields will discuss their experiences.
Prerequisites: 76-395 or 76-271 or 76-270

76-497 Culture: Interdisciplinary Approaches
Fall: 9 units
to be determined

76-511 Senior Project
Intermittent: 9 units
Seniors in all four majors within the English Department may, with faculty permission and sponsorship, design and complete an original, student-planned Senior Project. Creative Writing majors may work on a book-length manuscript in fiction or poetry. Students in all majors within the Department may also, with the permission of a faculty advisor who will supervise and sponsor the project, develop and complete senior projects that involve either traditional academic research or investigations of problems in professional or technical communication.

76-700 Professional Seminar
Fall: 3 units
This weekly, 3-unit seminar is designed to give professional writing majors an overview of possible career and internship options and ways to pursue their professional interests. Each session will feature guest presenters who are professionals working in diverse communications-related fields such as web design, journalism, public relations, corporate and media relations, technical writing, medical communications, and working for non-profits. The visiting professionals talk about their own and related careers, show samples of their work, and answer student questions. The course is required for first-year MAPW students and open to all English undergraduates, who are urged to participate in their sophomore or junior years to explore options for internships and careers.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-702 Global Communication Center Practicum
Fall: 6 units
This practicum is restricted to students who have applied and accepted a position as a Global Communication Center tutor. For more information on applying, contact the course instructor. Students in this six-unit mini will learn about best practices in tutoring, gain experience analyzing and responding to a wide range of academic and professional genres, and learn to adapt their tutoring style for different kinds of students. In addition, we will learn to support oral, visual, and collaborative modes of communication alongside more traditional written genres. Assessments include regular hands-on activities, reading responses, and participation in class discussions. Please note that in terms of time commitment, a 6 unit mini is equivalent in weekly workload to a 12 unit full semester course. The mini is half the credits because it requires the same workload but only for half the semester.

Course Website: https://www.cmu.edu/gcc/faqs/index.html

76-719 Environmental Rhetoric
Fall
Environmental rhetoric is a place of commitment and contention in which competing discourses celebrate our relationship with the natural world, frame environmental problems, and argue for public action. As we compare the environmental rhetoric of naturalists, scientists, policy makers, and activists, we will trace an American history that has managed to combine mystical celebration with militant critique, and scientific research with public debate. Equally important, this course will prepare you to act as a rhetorical consultant and writer, learning how writers communicate the three "Rs" of environmental rhetoric: relationship with nature, the presence of risk, and the need for response.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-720 Leadership & Organizational Communication
Intermittent
Please note: In order to register for this course, students must have had an internship with an organization prior to registration. Even as most organizations continue to change, one constant is the importance of effective communication. Upward, downward, and lateral communications are the lifeblood of organizations. If you are in a leadership position, communication become your key tool for managing teams, improving performance, and creating change. In any position, you can spearhead progress by designing effective documents and improving existing communication practices. Proficiency in written and oral communications tends to be recognized and rewarded in organizations. Combined with the ability to leverage formal organizational structures and social networks, it helps one excel, and thrive, in organizations. This course is designed as an overview to the field of organizational communication with an emphasis on leadership roles and behaviors. The content will blend the conceptual with the practical. It will focus on problems that are likely to arise in the workplace and ways to solve them through communication. The students will build a portfolio of "solutions" that will demonstrate their evolving skills of applying rhetoric in organizational contexts. Specific topics will include the attributes of great communicators (including leaders and managers as communicators), the challenges of communicating in organizations as we play particular roles (e.g., individual contributor, manager or team member), ways to build credibility and enhance internal resumes, and techniques to master communication requirements related to performance management processes, conflict situations, and changing organizational culture and design. We will also explore a myriad of organizational issues such as communicating across generations and cultures, communicating externally, and communicating through technology.

76-729 Unruly Women in Early Modern Drama
Intermittent
"Unsex me here" Lady MacBeth famously exclaims on her path to murder, power, and psychological collapse. The connections between sex, gender, and agency that she articulates are connections that early modern theater-makers, from Shakespeare to Aphra Behn, obsessively revisited as they created some of the most haunting characters of the canon, both tragic and comic. In this course, we will look at shrews, witches, she-devils, ranting widows, aspiring divorcees, sex workers, roaring girls, evil queens, and all sorts of nasty women that would tread the boards in early modern London. At the heart of those theatrical depictions lie strong cultural anxieties surrounding the desire and possibility to fashion, control, and discipline¿in other words, to regulate and rule over¿femininity in a time period that witnessed the invention of the "two-sex model" (Thomas Laqueur) and "the cultural production of domestic heterosexuality" (Valerie Traub). How did theatre participate in the invention of early modern femininity? How did performance relate and/or resist the discourses about women deployed in the domains of law, religion, medicine, economy, and politics? How did women of color specifically fare in early modern dramaturgy? And what changed when women were allowed to act and actresses replaced boy actors under the Restoration? To study unruly women in early modern drama, we will read plays by Shakespeare, Elizabeth Cary, Ben Jonson, John Webster, Thomas Middleton, Thomas Heywood, Thomas Dekker, John Fletcher, Aphra Behn, and others in conversation with contextual materials and theoretical texts from the field of Women's, Gender, and Sexuality studies.

76-731 Dissenters and Believers: Romanticism, Revolution, and Religions
Intermittent
We usually think of the American and French revolutions as primarily political, but they also confronted dominant religious beliefs and generated alternatives ranging from enthusiasm and pantheism to atheism. We will explore the literary and political meanings of religious belief and dissent in major writers like Samuel Coleridge, Thomas Paine, Edmund Burke, William Wordsworth, Matthew Lewis and others who grappled with Protestantism, Catholicism, Dissent, and such interesting extreme alternatives as evangelicalism, enthusiasm, pantheism, and atheism. Two interpretive papers and in-class presentations will be required.

76-758 Rhetoric & Storytelling
Spring
What are stories and why do we tell them? What purpose do they serve? What makes a story true? What effect do stories have on those who hear them? In this course, we will ask how narratives work rhetorically to shape how we perceive and encounter events, movements, places, and experiences. Students can expect to read and discuss narrative theories and practice employing these theories to analyze story artifacts, such as written collections, political speeches, newspaper articles, curated experiences, and oral histories. We will begin the semester by exploring and analyzing the many stories surrounding September 11 but will also consider the stories that infuse recent or local subjects of interest. Students will investigate the effect these and other narratives have on contemporary contexts. Any student who is interested in developing a critical awareness of the rhetorical power of storytelling and enhancing their analytical toolkit will benefit from this course. Most class sessions will involve guided student discussions of theoretical texts as well as collaborative opportunities to analyze story artifacts. Weekly assignments will include short analyses and reflection activities. The course will culminate in a final project where students will select and analyze a collection of stories within a cultural, social, and/or historical context.

76-762 Introduction to Translation
Fall: 9 units
In "Introduction to Translation," we will survey a number of different translation theories in order to understand the various approaches that are at our disposal when translating a text. In addition, we will briefly explore several fields of translation studies, such as health care, business or literature, that require specialized terminology and expertise in the subject. All theory taught in class will be accompanied by hands-on translation projects that will give students the opportunity to try out their knowledge first-hand and evaluate the usefulness of different approaches on a personal basis.

76-763 Translation as Profession I
All Semesters: 3 units
In "Translation as a Profession," we will learn from professionals in the field of translation. Every class will feature a guest speaker from the Pittsburgh area and beyond who will present his or her own educational background, experience in the field and current relation to the translation industry. Students will meet a variety of professionals, learn about the field, and establish valuable connections for the future.

76-766 Essay Writing Workshop
Fall
In this course we will analyze the different types of narrative structure, narrative suspense, voice, metaphor, and point of view that make for effective non-fiction writing. We will also examine the difference between good writers and good work, the functions of objective distance from and intimate investment in a subject, as well as the philosophical questions spurred by non-fiction writing. What is the non-fiction writer's role, and how does it differ from that of the fiction writer? Where do the two genres overlap? What gives non-fiction writing integrity? What does the term "creative non-fiction" mean? How have the form and aims of non-fiction writing - from memoir to essays to long-form journalism - evolved for better and for worse? We will scrutinize the writing of Eula Bliss, Kate Fagan, Joan Didion, James Baldwin, Jo An Bear, Gary Younge, David Foster Wallace, Umberto Eco, and many others. In addition to critical writing assignments, students will have several opportunities to write their own non-fiction pieces.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-771 Innovation in Teamwork
Fall
Academic teams, campus organizations, workplaces are all dynamic activity systems, organized and driven by institutional habits and rules, by roles, status and power, and by the material and conceptual tools we draw on. Yet as we have all observed, these Rules, Roles and Tools often operate in contradictory ways, even in conflict with one another. Effective team leaders are able to recognize these contradictions and draw a writing group, a project team, a social organization or a workplace into what is called an "expansive transformation." That is, to innovate new ways of working together. In this course, you will learn how to become more effective not only as a team member, but also a project leader, and even group consultant in your college work and workplace. Looking at films, case studies, research, and your own experience, we will learn how to analyze how teams of all sorts are working, to communicate more effectively across different expectations and values, and to collaboratively innovate new ways of working together. Your final project will let you document your ability to be a knowledgeable team leader and effective collaborator.

76-784 Race, Nation, and the Enemy
Intermittent
Conflicts over racial and national identity continue to dominate headlines in the United States as they often have during the nation's history, from debates regarding the immigration, naturalization, and birthright citizenship of racial minorities to debates regarding racial disparities in access to civil rights. This course explores the discursive practices through which racial and national identities are formed and the frequent conflicts between them, particularly by focusing on the role of enemies, threats to the nation, and sacrifices made on behalf of the nation in American public discourse. Alongside primary sources of public discourse regarding wars, the immigration and citizenship of racial minorities, racial segregation and civil rights, and the criminal prosecutions of dissidents during periods of crisis, we will read secondary sources offering multiple theoretical and disciplinary approaches to the study of racial and national identity formation. Along with regular brief responses to readings, assignments will include a short rhetorical analysis paper and a longer research paper.

76-786 Language and Culture
Fall
This course is an introduction into the scholarship surrounding the nature of language and the question of how language shapes and is shaped by social, cultural and political contexts. We will begin by studying important literature in linguistics and language theory, both to introduce us to how scholars think about language and to give us a shared vocabulary to use for the rest of the semester. We will then move into case studies and theoretical works exploring the intersections of language use, individual and group identities, and the exercise of power, in its many forms. In particular, we will focus on the relationship between language and culture by asking, in what ways does language influence and constitute social change? How is social change reflected by changes in the way we use language? Over the course of the semester, you will work on applying the knowledge and theoretical tools you gain to your own analysis of a linguistic artifact that you choose.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-787 Writing in the Disciplines
All Semesters
This mini will introduce you to the theory and practice of writing instruction in contexts outside of English studies. We will learn about the distinction between Writing across the Curriculum and Writing in the Disciplines and challenges to providing integrated, high quality writing instruction across the university. We will explore the implications of the wide variety of forms of academic writing for instruction in English classrooms, including high school and first-year writing classrooms. Assessments will include reading responses and a final paper reviewing research on writing in a specific writing context of your choosing. Students enrolled in the course for six units will be expected to do additional readings and give an oral presentation. Please note that in terms of time commitment, a 3-unit mini will require approximately six hours per week (three hours homework and three hours class meetings) and a 6-unit mini will require twelve hours per week.

76-789 Rhetorical Grammar
Fall and Spring
This is a course in fundamental grammatical structures of English and how these structures fit into the writer's toolkit. This means you will learn a lot about English-language grammar in this course en route to understanding a lot about English language writing. This course is designed for MA students in professional writing and undergraduates who want to improve their grammar, their writing, and their depth of understanding of how improvement in grammar impacts improvement in writing.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-791 Document & Information Design
Spring: 12 units
This course provides students who have already learned the foundation of written communication with an opportunity to develop the ability to analyze and create visual-verbal synergy in printed documents. Students will be introduced to the basic concepts and vocabulary, as well as the practical issues of visual communication design through a series of hands-on projects in various rhetorical situations. Assigned readings will complement the projects in exploring document design from historical, theoretical, and technological perspectives. Class discussions and critiquing are an essential part of this course. Adobe InDesign, Photoshop, and Illustrator will be taught in class, and used to create the assigned projects
Prerequisite: 76-870

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-805 Institutional Studies: English as a Discipline
All Semesters: 6 units
The institution on which this course will focus is the academic discipline, the specific historical form that the production of knowledge in the modern research university has assumed. This course will examine the historical development of the discourses, practices, organs, and associations that have defined English as a discipline. While we will of necessity also look at the theories and values that the discipline has proclaimed at different times, this will not mainly be a course in the history of criticism. Criticism will be considered as one practice among others including philology, literary history, literary theory, rhetoric, and composition. In order to understand the broader context, we will read work by Foucault and others on disciplinarity. We will also examine allied institutions, including the professions and the university.

76-818 Rhetoric and the Body
Intermittent
This course offers an introduction to rhetorical studies of the body and is centered on the following three questions: What is the role of the body in rhetorical theory? What role does rhetoric play in constructing the body as a raced, gendered, dis/abled, cultural, fleshy, and political entity? And, how might moving, feeling bodies challenge, regulate, or disrupt these rhetorical constructions and furthermore, our theories of rhetoric? Our readings will explore the role of embodiment in rhetorical theory, examining a number of contemporary and historical theories of the body. In the process, we will explore how to put rhetoric and the body into conversation with one another and what methodological implications this conversation has for rhetorical studies more broadly. The goal of this course is to provide breadth rather than depth, with the assumption that most students, even those relatively familiar with body and/or rhetorical theory, will approach rhetorical studies of the body as novices. Students will conduct their own research on a topic related to rhetorical studies of the body that also aligns with their professional and academic goals. Graduate students interested in research will benefit from this course's focus on theory and the professional genres central to rhetorical studies. Undergraduates students (both majors and non-majors) will have the opportunity to examine how the body intersects with communication and writing contexts in their everyday public and professional lives.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-822 Gender and Sexuality Studies
Intermittent: 6 units
We will anchor our introduction to this broad and diverse field of theory in the admittedly very limited historical period of feminist, queer, and transgender political activism, circa 1970 to the present day. Instead of attempting "coverage" (an impossible task), we will shuttle between recent work in queer, transgender, and feminist theory and a few key texts that are foundational to the development of academic theory as a reaction to and extension from the political activism of these social movements. Our goals are to strengthen our understanding of the continuities and breaks in politically informed thinking about gender and sexuality, and to deepen our knowledge of the theoretical frameworks available to us from these areas of study. Students will write short response papers to course readings that will help us focus our discussions on their particular interests in literary and cultural studies.

76-829 Digital Humanities: Politics and Early Modern Drama
Intermittent
This course will explore a range of questions related to the manifestation of political thinking on the early modern English stage, a key medium for the dissemination and cultivation of information and ideas. Our central curriculum will include plays by William Shakespeare, Thomas Middleton, Christopher Marlowe, and others alongside a selection of critical essays and related literature from the period. To complement this collective investigation, students will also complete a hands-on, entry-level assignment that introduces digital methodologies for visualizing and analyzing early modern texts. No previous experience with the digital humanities is necessary to participate. Technological neophytes, seasoned programmers, and persons at all skill levels in-between are all very welcome to participate.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-844 History of Books and Reading
Fall
Rather than putting an end to the book, digital media have had the oddly exhilarating effect of making us look at all kinds of print, past and present, through newly focused lenses. This course will introduce you to the history of books and reading, a cross-fertilizing field of study that is having an impact on many disciplines, from the history of science to literary history, cultural studies, and the arts. Scholarship in this still-emerging field will include work by Roger Chartier, Michel Foucault, Elizabeth Eisenstein, Pierre Bourdieu, Michel de Certeau, , and the current scholars who appear in one of our key books, "Interacting with Print: A Multigraph." We'll also read primary texts by Joseph Addison, Jane Austen, Samuel Coleridge, and Wilkie Collins to see how differing modes of print and reading became highly contested cultural and political matters in the eighteenth and nineteenth centuries. Other topics include the division between new reading publics and their ways of reading books; important changes in book production, typography, printing methods (hand-press to steam press). Such knowledge of the history of print has become especially crucial in an era of emerging "new media" and the field of digital humanities in the university. Two papers will be requiredone shorter paper (5-7 pp.) and a longer research paper on the uses of books and print by producers and readers. Though the course meets in Baker Hall, you will have hands-on experience with early books and other forms of print as we also meet periodically in the Rare Book Room at Hunt Library.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-846 Revenge Tragedy
All Semesters
Attendants to the early modern English theater seem to have had an almost insatiable appetite for revenge tragedy: a lurid, blood-soaked genre distinguished by plots involving insanity, skulls, ghosts, poisonings, stabbings, suicide, and other forms of unnatural death. This course will cover key examples of the genre, putting particular emphasis on the depiction and interrogation of justice, analyses of death, and playful engagement with theatricality. Our central curriculum will include plays by Seneca, William Shakespeare, Thomas Middleton, Christopher Marlowe, and Thomas Kyd, alongside a selection of critical essays and related literature from the period.

76-849 Race and Media
Intermittent
This course will introduce students to useful methodological approaches, ranging from film studies, media archeology and book history to Black studies, Transnationalism and Post-Marxism, to analyze race and representation within a variety of media formats. Media in this course is understood broadly: technologies used to store and deliver information. With this rather broad understanding in mind our course will look at how artists and intellectuals use discrete formats (print, film/video, electronic, and other recording mediums) to imagine, remediate and study the circulation of racialized bodies and identities within global capitalism. We will also think about the concept of race itself as another, particularly problematic "media" format used to store and deliver information about the human for political, economic, ideological and juridical purposes. The class will be organized around specific material and "immaterial" media objects that will allow us to explore the processes of (re)mediation that characterize racialized bodies and formats. We will look at a range of works that might include D.W. Griffith, Nella Larson, Iceberg Slim, Raul Peck, Christina Choy, Renee Tajima, Janelle Monae, Ramiro Gomez, Dana Shultz, and 50-Cent. We will also read the theoretical works of Stuart Hall, Christina Sharpe, Carol Vernallis, Lisa Lowe, Teju Cole, Lisa Gitelman and Michael Gillespie, Simone Browne, Martin Heidegger, Theodore Adorno and others.

76-852 Generations and Culture
Intermittent
We hear about generations all the time—the Millennials rising, Gen X and their minivans, and the Baby Boomers retiring. Yet, generations have usually been ignored in cultural studies as an amorphous, popular concept. While we discuss factors that shape identity such as race, class, gender, sexuality, there is little work on generations. In addition to those factors, contemporary researchers have determined that generations in fact often have significant impact on opinions, consumer choices, and political views. This course will study the theory of generations, from sociology, history, marketing, and other fields. It will also look at how the concept might apply to cultural products, such as literature or theory itself. In addition, in the course you will develop a project to study one generation and its culture.

76-853 Literature of Empire
Fall
Nineteenth and early twentieth-century British literature was shaped by events taking place outside as well as inside of national borders. Even in the eighteenth and nineteenth centuries, with international trade and slavery supporting the manor house and plantations abroad providing the cotton for British looms, the "England" of English literature spanned the globe. By the first half of the twentieth century, this empire had begun to collapse in upon itself, a process witnessed by writers inside Britain and its colonies. This course will investigate British literature within the international context of global imperialism. A section on gothic stories takes us into the realm of popular culture with Mary Shelley's Frankenstein and Arthur Conan Doyle's short stories. We take to the seas with Joseph Conrad's Lord Jim, before we consider W. Somerset Maugham's exploration of sexuality in the tropics in The Painted Veil. Finally, we return to England to outline the links between colonial empire and international war rendered in Virginia Woolf's Mrs. Dalloway. These literary works will be read alongside some of the most important works of postcolonial theory. While course readings focus on 19th and early 20th century, student's will undertake a research project over the semester in their own period of interest in British literature in connection with empire studies.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-854 Introduction to Literary and Cultural Studies
Fall
Cultural Studies is an intellectual and professional movement identified with the Center for Contemporary Cultural Studies in Birmingham. This movement grew out of literary studies. It is neither identitcal with literary studies, nor opposed to literary studies. It is today one form that the study of literature or other cultural works may take. This course offers a theoretical genealogy of cultural studies, showing how and why its theories and practices emerged and developed. As a genealogy, the course does not assume that cultural studies has an essence or an origin. The texts and topics will reflect the heterogeneity of its emergence and development. The course does, however, embody what we see as several historical changes in cultural studies, from idealism to materialism, from mono to multiculturalism, and from high culture exclusiveness to democratic inclusivity. The course is not designed to teach "approaches," but to explore and interrogate the founding assumptions of the academic project that you are being trained to join. Students should, by the end of the class, have a sense of where cultural studies came from and of the problems and possibilities raised by the theories it continues to invoke.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-864 Creative Non-Fiction Workshop: Magazines and Journals
Fall
Creative Non-fiction Workshop is a good class to take if you like to tell (write) stories about your own life and the lives of other people, all situated in the world we inhabit, the world that is ours to investigate and celebrate and question. The class will teach you how to write a good story, by focusing on aspects of craft. Class is almost always run as a discussion. We'll read books by authors of creative non-fiction, and learn from them how to work with a variety of forms. Every student will create a portfolio of roughly 25 pages of non-fiction by term's end.

76-868 Space and Mobilities
Intermittent
This course will investigate space and movement as social constructions. Space appears as something that exists around us: our houses, our neighborhoods, our cities might seem like they are simply there to be moved through. In the same way mobility, from our means of transport to an evening walk, can appear as just movement from A to B. In the late 20th century, an interdisciplinary group that included geographers, urban studies scholars, architects, sociologists, anthropologists, and literary theorists began to theorize the social construction of space. They argued that space is something dynamically created that may be interpreted for the ways it creates meaning. Following this spatial turn, mobilities studies scholars looked to understand movement as something that reproduces and constitutes power and institutions. This interdisciplinary course considers theories of space and movement as a field of study and in reference to literary and film texts. The course will be organized topically, and include such units as the regulation of freedom of movement over borders through the construction of boundaries; the heterotopia of the boat or train carriage; the poetics of space; the dynamic mapping of the city by a wanderer; neoliberal recalibrations of global space, and the spatialization of performance. Readings might include Henri Lefebvre, Doreen Massey, Edward Soja, Gaston Bachelard, Wendy Brown, John Urry, Tim Cresswell, Marian Aguiar; literary texts might include Brian Friels Translations, Christina Garcia's Dreaming in Cuban, W.G. Seabald's Austerlitz and Teju Cole's Open City.

76-881 Introduction to Multimedia Design
Fall
There is increasing demand for professional/technical writers who understand multimedia and its communicative possibilities. This class will provide students with the opportunity to develop the ability to create and analyze multimedia experiences that merge text, spoken voice, music, animation and video. Students will be introduced to the basic concepts and vocabulary of motion graphics, as well as the practical issues surrounding multimedia design and digital storytelling through a series of hands-on projects involving various contexts. Students will explore what it means to write for a dynamic medium and how to take advantage of elements of time, motion and sound to help expand their visual communicative skills. The essentials of Adobe After Effects will be taught in order to build the skills necessary to complete assignments, explore multimedia possibilities and foster each student's unique creative voice. Adobe Premiere and Audition will be employed to support specific tasks. Students will also be taught to capture their own original images, video and narration audio to craft the elements of their projects. It is helpful to have some prior basic experience with Photoshop or Illustrator. In-class discussion and critiques are an essential part of this course.
Prerequisites: 76-391 or 51-262 or 76-791

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-884 Discourse Analysis
Fall
Discourse is a focus of study in most of the humanities and social sciences, and discourse analysis is practiced in one way or another by anthropologists, communications scholars, linguists, literary critics, and sociologists, as well as rhetoricians. Discourse analysts set out to answer a variety of questions about language, about writers and speakers, and about sociocultural processes that give rise to discourse and are constituted in discourse. But all approach their tasks by paying close and systematic attention to particular constellations of texts and contexts. We are all familiar with the informal discourse analysis involved in paraphrasing the meanings of written texts and conversations, a skill we learn in writing and literature classes and in daily life. Here we ask and answer other questions about why people use language as they do, learning to move from a stretch of speech or writing or signing outward to the linguistic, cognitive, historical, social, psychological, and rhetorical reasons for its form and its function. As we look at resources for text-building we read analyses by others and practice analyses of our own, using as data texts suggested by the class as well as the instructor. In the process, we discuss methodological issues involved in collecting texts and systematically describing their contexts (ethnographic participant-observation and other forms of naturalistic inquiry; transcription and "entextualization"; legal and ethical issues connected with collecting and using other people's voices) as well as methodological issues that arise in the process of interpreting texts (analytical heuristics; reflexivity; standards of evidence). We will also spend a few minutes each week reviewing key concepts in English grammar.

Course Website: http://www.cmu.edu/dietrich/english/index.html

76-885 The New Public Sphere
Fall
Public deliberation is at the heart of the rhetorical tradition. But is public dialogue really a live option in a media-saturated world of sound bites addressed to plural publics? Is the process of debate, deliberation, and decision (in which the best argument wins) really the ideal model? Or can people use public spaces to develop new, more inclusive positions? Could such a process occur in a boundary-crossing public when diverse groups enter intercultural deliberation around racial, social, or economic issues? This course looks at diverse ways people use rhetoric to take literate social action within local publics. From the canonical debate around Habermas and the public sphere, we move to a feminist "rereading" of the Sophists, to contemporary studies of deliberation in workplaces, web forums, grassroots groups, new media, and community think tanks. To support your own inquiry into the meaning making process of a local public, you will learn methods for activity analysis and for tracing social/cognitive negotiation within a public of your choice.

Course Website: http://www.cmu.edu/hss/english/courses/courses.html

76-891 Rhetorical Analysis
Fall and Spring
Students in this course will learn various approaches to analyzing discourse artifacts from a rhetorical point of view. Early in the course, students will identify an artifact or artifacts they wish to analyze. From there, students will be encouraged to explore their own methods of analysis based on two required books for the course and reviews of literature. For the midterm, students will create an annotated bibliography of five specimens of criticism taken from a single journal. For the final project student will first present and then hand in a polished 15 page piece of criticism based on one or some combination of methods. The presentation and final paper count 50% of the grade, with the mid-term, class attendance, participation, and homework making up the final 25%.

76-894 Digital Humanities
Intermittent: 6 units
Digital Humanities is an emerging discipline as well as a broad collection of scholarly activities that apply new technologies to humanities research while expanding traditional forms of scholarly communication. Some of its many facets include: book history, cartography (using maps to better understand the cultural production of texts), the preservation and sharing of collections that are otherwise difficult to access. DH can also include the fostering of new creative expression by using digital media. In this mini we'll be reading a variety of leaders in the field including Robert Binkley, Franco Moretti, Matthew Jockers, Peter deBolla, Johanna Drucker, Alan Liu, Jerome McGann, Christopher Warren, and Bethany Nowviskie, attending the CMU DH lunch workshops, and taking some field trips around the city to see some DH projects in action.

76-898 Marxisms
Intermittent: 6 units
Karl Marx just turned 200 and in many ways his ideas is more popular than ever. But what is Marxism, and how can we best use Marxism to think about culture? This mini will be a crash course in what we call Marxisms, a cluster of theories tracing their roots to the materialism of Karl Marx. On our list will be writings from: Antonio Gramsci, Rosa Luxemburg, Raymond Williams, Stuart Hall, CLR James, and Silvia Federici.

www.cmu.edu/dietrich/history

Undergraduate Degree Options in the Department of History

The B.A./B.S. in Social & Political History

The B.A. in Global Studies

The B.A./B.S. in Ethics, History, and Public Policy

The Department of History offers undergraduates a choice of three majors: Social & Political History, Global Studies, and Ethics, History, and Public Policy (administered by the Philosophy Department). Specific requirements and courses for each major are detailed below.

All three History majors are grounded firmly in the liberal arts. Each has a strong interdisciplinary bent and an equally strong commitment to using knowledge of the past to illuminate present-day social, cultural, and political affairs.

In different ways, all three majors emphasize empirical research methods and conceptual analysis, and cultivate reading, research, and writing abilities central to a variety of professions. Our students develop strong analytic and writing skills; choose among diverse U.S., global, and thematic courses; learn experientially through internships and/or study abroad; and benefit from small class sizes and easy access to faculty who are internationally known for innovative historical, anthropological, and other social science approaches to investigating the past. The study of history necessarily includes diverse societies and controversial public policy issues, usefully blending liberal education with professional development.

History is also excellent preparation for leadership positions in law, business, journalism, politics, education, and government service (e.g., U.S. Foreign Service, Health & Human Services, Federal Trade Commission). The resumes of innumerable CEOS and government statesmen show how effectively the study of history serves as a foundation for preparing leaders both at home and abroad.

Having been trained to analyze subtle and complex issues, to develop breadth of understanding, to dig out information and make sense of it, and to present their findings effectively, graduates of the History Department do extremely well in many types of for-profit, non-profit, governmental, and non-governmental organizations. Because history training combines research and writing skills with analysis of social and policy trends, it also prepares graduates for journalism and other writing careers in the modern media age.

All three History degree programs combine easily with majors in Business, Economics, English, Information Systems, Modern Languages, Philosophy, Professional Writing, Social and Decision Sciences, and Statistics.

Additional Majors

The majors in Social & Political History, Global Studies, and Ethics, History, and Public Policy may be declared as additional majors in consultation with the Academic Advisor of each program: Dr. Andrew Ramey for Social & Political History and Global Studies (aramey@andrew.cmu.edu), and Correy Dandoy for Ethics, History, and Public Policy (Philosophy Department, correy@cmu.edu).

Interdepartmental Majors

In addition to the Ethics, History, and Public Policy major, History faculty are also integral participants in three interdepartmental majors described elsewhere in this catalog: International Relations and Politics in the Institute for Politics and Strategy, Arabic Studies, and Russian Studies in the Modern Languages Department. History courses are also central to the Environmental Policy major (additional major only).

Minors

Options for pursuing a minor in Social & Political History or Anthropology are discussed below, following the sub-section on Ethics, History, and Public Policy.

Several other minors with strong History content, detailed elsewhere in the Undergraduate Catalog, can be linked with any degree. Students should contact the relevant History faculty members listed below:

- African and African American Studies: Professor Edda Fields-Black (fieldsblack@cmu.edu)
- Environmental and Sustainability Studies: Professor Abigail E. Owen (aeown@cmu.edu)
- Gender Studies: Professor Lisa M. Tetrault (tetrault@andrew.cmu.edu)
- Religious Studies: Professor Allyson F. Creasman (allysonc@andrew.cmu.edu)
- Russian Studies: Professor Wendy Goldman (goldman@andrew.cmu.edu), Professor Tatyana Gershkovich (tgershko@andrew.cmu.edu)
- Science, Technology, and Society: Professor Christopher J. Phillips (cjp1@cmu.edu)

Research and Outreach Centers

History Department faculty members lead three research and outreach centers that advance new interdisciplinary knowledge and help translate knowledge into public policies that further the pursuit of social, economic, and political justice.

1. CAUSE (Center for African American Urban Studies and the Economy), Joe W. Trotter, Director
2. The Bajaj [India] Rural Development Lab, Nico Slate, Director
3. The Center for Human Rights Science, Jay D. Aronson, Director

The Major in Social & Political History (SPH)

Professor Steven Schlossman, Director of Undergraduate Studies
sls@cmu.edu, Baker Hall 236A, 412-268-2885

Dr. Andrew Ramey, Academic Advisor
aramey@andrew.cmu.edu, Baker Hall 240, 412-268-7906

www.cmu.edu/dietrich/history/undergraduate/sph

Social & Political History (*SPH*) is a research- and writing-intensive major that emphasizes analysis of change over time and in-depth understanding of the societies, cultures, economies, political systems and conflicts that have shaped our world. History electives focus on areas of faculty expertise such as science, technology, race, culture, public health, environment, gender, labor, war, politics, sports, education, and criminal justice.

All majors take Introduction to Historical Research & Writing (79-200, 9 units) and the capstone Historical Research Seminar (79-420, 12 units), where they conduct individualized projects using archival and other primary sources. Several students have published the results of their research, and we are exploring new ways to facilitate future publication of students' research in both undergraduate and professional history journals.

The broad analytic, research, and writing skills cultivated by the SPH major prepare students for success in a wide variety of graduate and professional schools, and for exercising leadership in careers in business, law, government, education, journalism, public policy, social work, the armed services, Foreign Service, media, museums and libraries. Often, history graduates pursue post-undergraduate professional school, such as law, business administration, education, public policy, urban planning, librarianship, journalism, the ministry, and social work.

For students interested in pursuing a professional career in History, options today include not only research and teaching -- our graduates have earned Ph.D. degrees at Harvard, Northwestern, and other major universities -- but also expert positions as historians in museums, archives, historic sites, the armed services, media outlets, and other public history venues.

Students graduating with a primary major in Social & Political History may pursue a B.A. or B.S. degree. *SPH* may also be taken as an additional (i.e., second) major.

Curriculum (93 units)

Requirements for both primary and additional *SPH* majors are Global Histories (79-104), which all Dietrich College and Tepper College students must take, plus an additional 84 units, for a total of 93 units.

All students in the Social & Political History major are required to complete two research-training courses: Introduction to Historical Research & Writing (79-200, 9 units), and Historical Research Seminar (79-420, 12 units), which is regularly offered in the Fall semester of the senior year. Students must earn a final grade of “C” or better in these two courses in order to fulfill the requirements for the *SPH* major.

In addition, students must take two historical *survey courses* from a wide range of attractive options that include most major regions of the world.

Otherwise, students enjoy great flexibility: they are free to take additional survey courses or to specialize in thematic topics or regions of the world that are of special interest to them.

If you are interested in pursuing a minor in SPH, please view the section (see below) for the Minor in Social and Political History.

Social & Political History Major (*SPH*)

I. Required General Education Course (9 units)

79-104	Global Histories	9

II. Required History Department Courses (21 units)

79-200	Introduction to Historical Research & Writing	9
79-420	Historical Research Seminar	12

III. Required Survey Courses (*choose two* -- 18 units)

79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-205	20th Century Europe	9
79-206	Crime and Punishment in Early Modern Europe	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-225	West African History in Film	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-233	The United States and the Middle East since 1945	9
79-235	Caribbean Cultures	9
79-240	Development of American Culture	9
79-241	African American History: Africa to the Civil War	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-249	20th & 21st Century U.S. History	9
79-258	French History: From the Revolution to De Gaulle	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-269	Russian History: From Socialism to Capitalism	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-307	Religion and Politics in the Middle East	9
79-320	Women, Politics, and Protest	9

IV. Social & Political History Elective Courses (45 units)

Students must complete 45 elective History units (*typically 5 courses*) for the Social & Political History major. Any History Department courses not fulfilling another major requirement may be chosen as an elective.

Social & Political History majors have considerable flexibility in choosing their elective courses, but should consult with the Academic Advisor, Dr. Andrew Ramey, (Baker Hall 240), in making their selections.

For a complete list of elective course options in History, please consult the History course descriptions elsewhere in this catalog. The selections below are designed to give you a sense of the great variety of thematically centered courses (in addition to the survey courses listed earlier) that History Faculty members regularly teach:

79-257	Germany and the Second World War	9
79-268	World War I: The Twentieth Century's First Catastrophe	9
79-276	Beyond the Border	6
79-278	How (NOT) to Change the World	9
79-280	Coffee and Capitalism	9
79-299	From Newton to the Nuclear Bomb: History of Science, 1750-1950	9
79-300	Guns in American History: Culture, Violence, and Politics	9
79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
79-303	Pittsburgh and the Transformation of Modern Urban America	6
79-305	Moneyball Nation: Data in American Life	9
79-309	The Chinese Revolution Through Film (1949-2000)	9
79-314	The Politics and Culture of Memory	9
79-316	Photography, the First 100 Years, 1839-1939	9
79-317	Art, Anthropology, and Empire	9
79-318	Sustainable Social Change: History and Practice	9
79-322	Stalin and the Great Terror	9
79-323	Family, Gender, and Sexuality in European History, 500-1800	9
79-331	Body Politics: Women and Health in America	9
79-338	History of Education in America	9
79-339	Juvenile Delinquency & Film: From Soul of Youth (1920) to West Side Story (1961)	6
79-345	Roots of Rock & Roll	9
79-346	American Political Humor	9
79-350	Early Christianity	9
79-352	Christianity Divided: The Protestant and Catholic Reformations, 1450-1650	9
79-359	Truth, Lies, and Propaganda: A Historical Inquiry	9
79-363	The Rise of Modern Golf, 1860 to the Present	6
79-371	African American Urban History	9
79-372	Cities, Technology, and the Environment	6
79-377	Food, Culture, and Power: A History of Eating	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
79-385	Out of Africa: The Making of the African Diaspora	9
79-395	The Arts in Pittsburgh	9
79-396	Music and Society in 19th and 20th Century Europe and the U.S.	9

Social & Political History Major — Sample Curriculum

Required Dietrich College General Education Course: 79-104 Global Histories (need not be completed before beginning the major).

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**

Fifth Course (open)	Fifth Course (open)	Fifth Course (open)	Fifth Course (open)

The table above represents a four-year plan for completing all requirements for the Social & Political History Major. Students may declare the major and begin course requirements as early as the start of the sophomore year and in some instances in the freshman year. Students should meet with the department's Academic Advisor,Dr. Andrew Ramey, (aramey@andrew.cmu.edu), for both short- and long-term course planning.

*Some Social & Political History majors choose to apply for the senior honors thesis program. The department strongly encourages students to take advantage of this option.

V. Courses in Other Departments that Satisfy SPH Elective Requirements (*up to 27 units*)

Students may satisfy the elective requirements in SPH with *up to 27 units* of the following courses offered by other departments in Dietrich College:

73-476	American Economic History	9
76-230	Literature & Culture in the 19th Century: Environmentalisms	9
76-239	Introduction to Film Studies	9
76-295	Topics in Russian Language & Culture: 20th Century Russian Masterpieces	9
76-449	Race and Media	9
80-135	Introduction to Political Philosophy	9
80-226	Revolutions in Science	9
80-335	Social and Political Philosophy	9
82-208	Topics in European Studies	9
82-245	New Directions in Hispanic Studies	9
82-247	The Hispanic World: History, Culture and Globalization	9
82-293	Russian Cinema: From the Bolshevik Revolution to Putin's Russia	9
82-327	The Emergence of the German Speaking World	9
82-420	The Crucible of Modernity:Vienna 1900	9
82-427	Nazi and Resistance Culture	9
84-275	Comparative Politics	9
84-308	Political Economy of Latin America	9
84-322	Nonviolent Conflict and Revolution	9
84-324	The Future of Democracy	6
84-325	Contemporary American Foreign Policy	9
84-362	Diplomacy and Statecraft	9
84-364	Comparative Presidential Behavior: Leadership, Personality, and Decision Making	9
84-366	The American Presidency	9
84-380	Grand Strategy in the United States	9
84-386	The Privatization of Force	9
84-389	Terrorism and Insurgency	9
85-380	In Search of Mind: The History of Psychology	9
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9

VI. 79-505: SPH Internship (6-9 units)

The Social & Political History program strongly encourages students to locate internship opportunities in Pittsburgh or elsewhere that complement their historical interests (as, for example, in a museum or historical society) or in areas of policy research that complement their historical interests (as, for example, in a government agency or non-profit organization).The Academic Advisor will assist students with matching their interests to local organizations. SPH students can earn up to 9 units in each internship. Please note, however, that internship credits do not count toward fulfillment of course requirements for the SPH major (though the units do count toward graduation).

VII. Additional Major in Social & Political History (*SPH*)

The Social & Political History Major may be scheduled as an additional major in consultation with the Academic Advisor, Dr. Andrew Ramey, (aramey@andrew.cmu.edu).

VIII. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Academic Advisor, Dr. Andrew Ramey, (aramey@andrew.cmu.edu), to accept equivalent courses as substitutions.

21-257	Models and Methods for Optimization	9
36-202	Statistics & Data Science Methods	9
or 36-208	Regression Analysis	
or 70-208	Regression Analysis	
36-207	Probability and Statistics for Business Applications	9
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
70-257	Optimization for Business	9
80-222	Measurement and Methodology	9
80-305	Choices, Decisions, and Games	9
84-265	Political Science Research Methods	9
88-221	Analytical Foundations of Public Policy	9
88-223	Decision Analysis	12
88-251	Empirical Research Methods	9
88-300	Programming and Data Analysis for Social Scientists	9

The Major in Global Studies

Professor John Soluri, Director
jsoluri@andrew.cmu.edu, Baker Hall 363, 412-268-7122

Dr. Andrew Ramey, Academic Advisor
aramey@andrew.cmu.edu, Baker Hall 240, 412-268-7906

www.cmu.edu/hss/globalstudies

The major in Global Studies offers an interdisciplinary course of study designed for students interested in humanistic approaches to understanding past and present processes of globalization. Participating faculty in the departments of History, Modern Languages, and English conduct research in Africa, Asia, Europe, Latin America, the Middle East, and the Pacific. The rigorous yet flexible Global Studies curriculum combines anthropology, history, literary and cultural studies, and foreign language training in order to help students make sense of complex interactions among global processes, regional and local cultures, and societal structures. Global Studies majors develop a broad understanding of their prospects and responsibilities as citizens of the world confronting challenging contemporary problems.

Global Studies majors are encouraged to incorporate a study abroad experience into their course of study in order to immerse themselves in a society different from their own with unfamiliar cultural practices, language, and history. Global Studies majors may also enroll in 79-506 Global Studies Internship, a course that enables them to earn credit while gaining first-hand experience working with Pittsburgh-based organizations that work across borders.

Majors should consult regularly with the program's Academic Advisor, the Faculty Director, and participating faculty who will help students to craft a coherent course of study on specific topics and/or regions that may lead to their capstone research project (79-400 Global Studies Research Seminar) or a Dietrich College senior honors thesis.

Students graduating with a primary major in Global Studies receive a Bachelor of Arts degree. Global Studies may also be taken as an additional (e.g., second) major.

Curriculum

(102 units plus demonstration of language proficiency)

There are three required courses for the major: Global Histories (79-104), Introduction to Global Studies (79-275), and Global Studies Research Seminar (79-400). In addition to these three courses, majors must also complete 72 units of electives and demonstrate proficiency in a modern language other than English. Students may double count a maximum of two courses taken for the Global Studies major that are also being used to fulfill the requirements of other majors and programs. Students should consult with the Global Studies Academic Advisor about new courses and study abroad courses that may be approved for students pursuing the major in Global Studies.

I. Required General Education Course (9 units)

79-104	Global Histories	9

II. Global Studies Introductory Course (9 units)

Students must earn a final grade of "C" or better for the course to count toward the major.

79-275	Introduction to Global Studies	9

III. Language Requirement

Demonstrating intermediate to advanced level proficiency in a language other than English is a crucial component of the major in Global Studies. Normally this requirement can be satisfied by successfully completing a course conducted in the second language at the 300 level or above for French, German, Italian, or Spanish, or the fourth semester (Intermediate II) level or above for Arabic, Chinese, Japanese, or Russian. Comparable proficiency for other languages can be considered. Additional advanced cultural, historical, and literary study in the second language is strongly recommended. Courses in a language other than English may also be counted as Global Studies transnational, global, or regional courses or Global Studies electives as appropriate.

IV. Theoretical and Topical Core Courses (18 units)

Students must earn a final grade of "C" or better in these courses to fulfill the theoretical and topical core course requirement.

79-201	Introduction to Anthropology	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-278	How (NOT) to Change the World	9
79-280	Coffee and Capitalism	9
79-289	Animal Planet: An Environmental History of People and Animals	9
79-314	The Politics and Culture of Memory	9
79-315	Thirsty Planet: The Politics of Water in Global Perspective	9
79-317	Art, Anthropology, and Empire	9
79-318	Sustainable Social Change: History and Practice	9
79-377	Food, Culture, and Power: A History of Eating	9
79-379	Extreme Ethnography	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
79-383	The History of Capitalism	9

V. Transnational, Global, and Regional Courses (27 units)

<u>Transnational and Global Courses</u>

76-353	Transnational Feminisms: Fiction and Film	9
76-384	Race, Nation, and the Enemy	9
76-440	Postcolonial Theory: Diaspora and Transnationalism	9
79-224	Mayan America	9
79-233	The United States and the Middle East since 1945	9
79-237	Comparative Slavery	9
79-276	Beyond the Border	6
79-280	Coffee and Capitalism	9
79-282	Europe and the World Since 1800	9
79-283	Hungry World: Food and Famine in Global Perspective	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-333	Sex, Gender & Anthropology	9
79-350	Early Christianity	9
79-368	Un-natural Disasters: Societies and Environmental Hazards in Global Perspective	6
79-385	Out of Africa: The Making of the African Diaspora	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9
82-283	Language Diversity & Cultural Identity	9
82-304	The Francophone World	9
82-345	Introduction to Hispanic Literary & Cultural Studies	9
84-322	Nonviolent Conflict and Revolution	9
84-326	Theories of International Relations	9
84-370	Global Nuclear Politics	9
84-389	Terrorism and Insurgency	9

<u>Regional Courses</u>

Africa:		
79-225	West African History in Film	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-291	Globalization in East African History	6
79-386	Entrepreneurs in Africa, Past, Present and Future	9

Eastern and Southern Asia and the Pacific:		
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-264	Tibet and China: History and Propaganda	6
88-411	Rise of the Asian Economies	9

Europe:		
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-205	20th Century Europe	9
79-208	Witchcraft and Witch-Hunting	9
79-268	World War I: The Twentieth Century's First Catastrophe	9
79-270	Anti-Semitism Then and Now: Perspectives from the Middle Ages to the Present	6
79-323	Family, Gender, and Sexuality in European History, 500-1800	9
82-320	Contemporary Society in Germany, Austria and Switzerland	9
82-415	Topics in French and Francophone Studies	9
82-441	Studies in Peninsular Literature and Culture	9

The Middle East:		
79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-307	Religion and Politics in the Middle East	9
79-336	Oil & Water: Middle East Perspectives	6
79-398	Documenting the 1967 Arab-Israeli War	9
84-323	War and Peace in the Contemporary Middle East	9

The Americas:		
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-235	Caribbean Cultures	9
82-245	New Directions in Hispanic Studies	9
82-343	Latin America Language and Culture	9
82-451	Studies in Latin American Literature and Culture	9
82-455	Topics in Hispanic Studies	9

82-456	Topics in Hispanic Studies	9
84-308	Political Economy of Latin America	9

(27 units)

VI. Elective Courses

Students are required to take an additional 27 units (typically 3 courses) of electives, selected from one or both of the subcategories below. Category IV and V courses listed above that are not used to fulfill those requirements may also be counted as electives. Students may also substitute courses not found on these lists with prior approval from the Academic Advisor.

79-506 Global Studies Internship (6-9 units)

This course offers students the opportunity to gain academic credit while gaining first-hand experience interning with Pittsburgh-based organizations that work across borders. Students must consult with the Academic Advisor and Faculty Director before enrolling. The Faculty Director will assist students with matching their interests to local organizations and identifying an on-site supervisor available to collaborate in the ongoing and final evaluation of the student's work.

Thematic Elective Courses

57-306	World Music	9
70-365	International Trade and International Law	9
76-241	Introduction to Gender Studies	9
76-386	Language & Culture	9
76-449	Race and Media	9
76-450	Law, Culture, and the Humanities	9
76-468	Space and Mobilities	9
79-228	The Civil Rights Movement and the World	9
79-281	Introduction to Religion	9
79-286	Archaeology: Understanding the Ancient World	6
79-313	"Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration	6
79-316	Photography, the First 100 Years, 1839-1939	9
79-324	#MeToo: Naming and Resisting Gender Violence	6
79-330	Medicine and Society	9
79-343	Education, Democracy, and Civil Rights	9
79-349	United States and the Holocaust	6
79-397	Environmental Crises and the City	6
80-244	Environmental Ethics	9
80-335	Social and Political Philosophy	9
82-215	Arab Culture Through Film & Literature	9
82-541	Special Topics: Hispanic Studies	Var.
84-275	Comparative Politics	9
84-310	International Political Economy	9
84-318	Politics of Developing Nations	9
84-362	Diplomacy and Statecraft	9

Nation–based Elective Courses

79-214	Paris in Revolt: History, Literature, Film	6
79-216	Genghis Khan and the Mongol Empire	3
79-256	Sex, Guns, and Rock 'n Roll: Youth Rebellion in 1960s & 1970s Europe	6
79-257	Germany and the Second World War	9
79-258	French History: From the Revolution to De Gaulle	9
79-259	France During World War II	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-263	Mao and the Chinese Cultural Revolution	9
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-269	Russian History: From Socialism to Capitalism	9
79-309	The Chinese Revolution Through Film (1949-2000)	9
79-319	India Through Film	6
79-320	Women, Politics, and Protest	9
79-322	Stalin and the Great Terror	9
79-326	German History through Film	9
79-331	Body Politics: Women and Health in America	9
79-392	America at War: From Vietnam to Afghanistan	9
82-253	Korean Culture Through Film	9
82-254	World of Korea, Then and Now	9
82-273	Introduction to Japanese Language and Culture	9
82-278	Japanese Film and Literature: The Art of Storytelling	9
82-293	Russian Cinema: From the Bolshevik Revolution to Putin's Russia	9
82-294	Topics in Russian Language and Culture	9
82-303	Introduction to French Culture	9
82-305	French in its Social Contexts	9
82-333	Introduction to Chinese Language and Culture	Var.
82-342	Spain: Language and Culture	9
82-344	U.S. Latinos: Language and Culture	9
82-361	Italian Language and Culture I	9
82-420	The Crucible of Modernity:Vienna 1900	9
82-425	Topics in German Literature and Culture	9
82-427	Nazi and Resistance Culture	9
82-428	History of German Film	9
82-433	Topics in Contemporary Culture of China	9
82-434	Studies in Chinese Traditions	9
82-440	Studies in Chinese Literature & Culture	9
82-473	Topics in Japanese Studies	9

VII. Senior Capstone Course (12 units)

The research seminar is the capstone course for Global Studies majors and is designed to give students the chance to define and carry out a research project of personal interest. Students are strongly encouraged to incorporate their prior coursework (including foreign language training), study abroad, or internships into their research. Students must earn a final grade of "C" or better for the course to count toward the major.

79-400	Global Studies Research Seminar	12

Global Studies Major — Sample Curriculum

This sample curriculum presents a course of study for completing the requirements for the Global Studies major that includes an optional study abroad semester. Students may declare the Global Studies major and take required courses as early as the second semester of the freshman year and as late as the junior year.

Freshman		**Sophomore**	
Fall	**Spring**	**Fall**	**Spring**
79-104 Global Histories	79-275 Introduction to Global Studies	GS Theoretical & Topical Core Course	GS Theoretical & Topical Core Course
76-101 Interpretation and Argument	Language Course or Gen Ed	GS Transnational, Global, Regional Course	GS Transnational, Global, Regional Course

Fifth Course (open)	Fourth Course (open)	Fifth Course (open)	Fifth Course (open)
	Fifth Course (open)		

*Spring semester of the junior year is a popular semester for study abroad. However, Global Studies majors may instead choose to study abroad in spring of sophomore year, or fall of junior year. Students should discuss study abroad and curricular planning with the Academic Advisor, Dr. Andrew Ramey, (aramey@andrew.cmu.edu). Study Abroad in a summer program is also an option.

**Many Global Studies majors choose to apply for the senior honors thesis program. The department strongly encourages students to take advantage of this option.

VIII. Additional Major

Global Studies may be elected as a primary or an additional major; the requirements for each are the same. Contact the Academic Advisor, Dr. Andrew Ramey,(aramey@andrew.cmu.edu), to elect the additional major.

The Major in Ethics, History, and Public Policy

Alex John London, *Director*
Location: Baker Hall 150A
ajlondon@andrew.cmu.edu
www.cmu.edu/dietrich/ehpp

The B.A./B.S. in Ethics, History, and Public Policy is an interdepartmental major offered jointly by the Departments of History and Philosophy. It prepares students for leadership positions by providing them with a rigorous, interdisciplinary humanistic and social-scientific education. It also serves as an excellent springboard for graduate study in a wide variety of disciplines such as law, public policy, ethics, and advocacy. The program focuses equally on the historical understanding of how modern-day problems have evolved, and the importance of developing clear criteria for ethical decision-making. The capstone project course provides students with the opportunity to engage with real-world public policy challenges using the methods, theories, and knowledge that they have gained through the major. Offered jointly by the departments of History and Philosophy, the B.A./B.S. in EHPP encourages specialization, internship experiences, and research in a wide range of policy areas.

Curriculum

Students graduating with a primary major in Ethics, History, and Public Policy may elect to receive either a Bachelor of Arts or a Bachelor of Science Degree (additional requirements apply; see below). Basic requirements include 120 units encompassing 9 units in Economics, 36 units in History, 36 units in Philosophy, 27 units of elective courses, and a 12-unit senior capstone course. This program may also be taken as an additional (e.g., second) major. All courses toward the major must be taken for a letter grade, and 79-300 must be passed with a grade of "C" or better. Students can double count any course for the major with another major or minor, with the exception of Social and Political History, for which a student can double count a maximum of two courses.

I. Foundations of Public Policy 9 units

Choose one 9-unit course from the list below.

73-102	Principles of Microeconomics	9
84-104	Decision Processes in American Political Institutions	9
84-110	Foundations of Political Economy	9

II. History Core 36 units

Choose one 9-unit course from each category below:

Policy History (9 units)

79-300	Guns in American History: Culture, Violence, and Politics	9

U.S. History (9 units)

79-240	Development of American Culture	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-249	20th & 21st Century U.S. History	9
79-320	Women, Politics, and Protest	9

Non-U.S. History (9 units)

79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-205	20th Century Europe	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-237	Comparative Slavery	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-264	Tibet and China: History and Propaganda	6
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-307	Religion and Politics in the Middle East	9

History Elective (9 units)

Take at least 9 additional units in the History Department with course number 79-200 or above. The following courses may not count: 79-400, 79-420, 79-449, 79-491, 79-505, 79-506.

III. Philosophy Core 36 units

Choose one 9-unit course from each category below. No more than 9 units at the 100 level may be counted toward the Philosophy Core.

Ethics (9 units)

80-130	Introduction to Ethics	9
80-330	Ethical Theory	9

Political Philosophy (9 units)

80-135	Introduction to Political Philosophy	9
80-335	Social and Political Philosophy	9

Foundations of Social Science (9 units)

80-221	Philosophy of Social Science	9
80-321	Causation, Law, and Social Policy	9
80-324	Philosophy of Economics	9

Applied Philosophy (9 units)

80-136	Social Structure, Public Policy & Ethics	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-249	AI, Society, and Humanity	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

IV. Senior Capstone Project Course 12 units

79-449	EHPP Project Course [cross-listed]	12
80-449	EHPP Project Course	12

The Ethics, History and Public Policy Project Course is required for the Ethics, History and Public Policy major and is taken in the fall semester of the senior year. In this capstone course, Ethics, History and Public Policy majors carry out a collaborative research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis. The students develop an original research report based on both archival and contemporary policy analysis and they present their results to a client organization in the community.

V. Elective Courses 27 units

Choose any three courses (at least 27 units) from any category or categories shown below. Substitution of elective courses that cohere with a student's interest or concentration may be allowed after consultation with and approval from the Director.

Engineering and Public Policy (some courses have prerequisites; see EPP catalog listing)		
19-424	Energy and the Environment	9
Business		
70-311	Organizational Behavior	9
70-321	Negotiation and Conflict Resolution	9
70-332	Business, Society and Ethics	9
70-364	Business Law	9

70-365	International Trade and International Law	9
70-430	International Management	9

Economics (some courses have prerequisities; see Economics catalog listing)

73-352	Public Economics	9
73-359	Benefit-Cost Analysis	9
73-365	Firms, Market Structures, and Strategy	9
73-372	International Money and Finance	9
73-408	Law and Economics	9
73-476	American Economic History	9

English

76-492	Rhetoric of Public Policy	9

History

Courses from the EHPP History Core (above) may be taken as electives only if they are not being used to fulfill the core requirement. Double counting is not permitted.

79-206	Crime and Punishment in Early Modern Europe	9
79-228	The Civil Rights Movement and the World	9
79-233	The United States and the Middle East since 1945	9
79-234	Technology and Society	9
79-242	African American History: Reconstruction to the Present	9
79-247	African Americans, Imprisonment, and the Carceral State	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-298	Mobile Phones & Social Media in Development & Human Rights: A Critical Appraisal	6
79-299	From Newton to the Nuclear Bomb: History of Science, 1750-1950	9
79-301	History of Surveillance: From the Plantation to Data Capitalism	6
79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
79-303	Pittsburgh and the Transformation of Modern Urban America	6
79-305	Moneyball Nation: Data in American Life	9
79-310	Modern U. S. Business History: 1870 to the Present	9
79-315	Thirsty Planet: The Politics of Water in Global Perspective	9
79-320	Women, Politics, and Protest	9
79-322	Stalin and the Great Terror	9
79-325	U.S. Gay and Lesbian History	6
79-330	Medicine and Society	9
79-331	Body Politics: Women and Health in America	9
79-336	Oil & Water: Middle East Perspectives	6
79-338	History of Education in America	9
79-339	Juvenile Delinquency & Film: From Soul of Youth (1920) to West Side Story (1961)	6
79-340	Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)	6
79-342	Introduction to Science and Technology Studies	9
79-343	Education, Democracy, and Civil Rights	9
79-349	United States and the Holocaust	6
79-370	Disasters in American History (2):Epidemics & Fires	6
79-371	African American Urban History	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
79-397	Environmental Crises and the City	6

Philosophy

Courses from the EHPP Philosophy Core (above) may be taken as electives only if they are not being used to fulfill the core requirement. Double counting is not permitted.

80-256	Modern Moral Philosophy	9
80-305	Choices, Decisions, and Games	9
80-405	Game Theory	9

Institute for Politics and Strategy

84-310	International Political Economy	9
84-380	Grand Strategy in the United States	9
84-393	Legislative Decision Making: US Congress	6
84-402	Judicial Politics and Behavior	6

Social and Decision Sciences

88-223	Decision Analysis	12
88-281	Topics in Law: 1st Amendment	9
88-444	Public Policy and Regulation	9

VI. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Director of EHPP to accept equivalent courses as substitutions.

21-257	Models and Methods for Optimization	9
36-202	Statistics & Data Science Methods	9
or 36-208	Regression Analysis	
or 70-208	Regression Analysis	
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
70-257	Optimization for Business	9
80-305	Choices, Decisions, and Games	9
80-405	Game Theory	9
84-265	Political Science Research Methods	9
88-251	Empirical Research Methods	9
88-221	Analytical Foundations of Public Policy	9
88-223	Decision Analysis	12
88-300	Programming and Data Analysis for Social Scientists	9

Additional Major

The B.A./B.S. in Ethics, History, and Public Policy may be scheduled as an additional major in consultation with the Director of Ethics, History, and Public Policy, Professor Alex John London, ajlondon@andrew.cmu.edu.

Ethics, History, and Public Policy Sample Curriculum

Junior Year		Senior Year	
Fall	**Spring**	**Fall**	**Spring**
Core requirement in Economics	Core requirement in History or Philosophy	Capstone Course	EHPP Elective Course
Core requirement in History or Philosophy	Core requirement in History or Philosophy	EHPP Elective Course	Second Course (open)
Core requirement in History or Philosophy	Core requirement in History or Philosophy	EHPP Elective Course	Third Course (open)
Core requirement in History or Philosophy	Core requirement in History or Philosophy	Fourth Course (open)	Fourth Course (open)
Core requirement in History or Philosophy	Fifth Course (open)	Fifth Course (open)	Fifth Course (open)

The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be. Students may enter the EHPP major, and begin major course requirements, as early as the start of the sophomore year, or even in the first year. Students should consult their advisor when planning their program.

The Minor in Social & Political History (*SPH*)

Professor Steven Schlossman, Director of Undergraduate Studies
sls@cmu.edu, Baker Hall 236A, 412-268-2885

Dr. Andrew Ramey, Academic Advisor
aramey@andrew.cmu.edu, Baker Hall 240, 412-268-7906

www.cmu.edu/dietrich/history/undergraduate/minors/sph.html

The minor in Social & Political History involves a minimum of 54 units of History course work.

Curriculum (54 units)

I. Required History Survey Courses (choose two -- 18 units)

Students must complete 18 units (typically 2 courses) from the following list of survey courses:

79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-205	20th Century Europe	9
79-206	Crime and Punishment in Early Modern Europe	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-225	West African History in Film	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-233	The United States and the Middle East since 1945	9
79-235	Caribbean Cultures	9
79-240	Development of American Culture	9
79-241	African American History: Africa to the Civil War	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-249	20th & 21st Century U.S. History	9
79-258	French History: From the Revolution to De Gaulle	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-269	Russian History: From Socialism to Capitalism	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-307	Religion and Politics in the Middle East	9
79-320	Women, Politics, and Protest	9

II. Elective courses for the Minor in Social & Political History (36 units)

Students must complete 36 elective History units (typically 4 courses). Social & Political History minors have considerable flexibility in choosing their elective courses, but should feel free to consult with the Director of Undergraduate Studies in making their selections.

The Minor in Anthropology

Professor Paul Eiss, Faculty Advisor
pke@andrew.cmu.edu, Baker Hall 366, 412-268-6580

Dr. Andrew Ramey, Academic Advisor
aramey@andrew.cmu.edu, Baker Hall 240, 412-268-7906

www.cmu.edu/dietrich/history/undergraduate/minors/anthropology.html

The Minor in Anthropology is offered by the Department of History to train students in ethnographic methods and in theoretical understandings of culture. Students examine the evolution, depth, and complexities of ethnography, and explore notions of "culture" in diverse settings, over time and across space. In today's world, students are increasingly aware of the importance of developing a sophisticated approach to culture and its articulation with changes in the domains of the arts, technology, economics, and politics. The Minor in Anthropology, which may be taken alone but especially complements the majors in Global Studies and in Social & Political History, provides students with the tools to link diverse kinds of cultural practices to various aspects of globalization.

The Minor in Anthropology requires that students complete two "Introductory and Methods" courses (18 units) and four "Anthropological Perspectives" courses (36 units). In addition, 79-104 Global Histories is required (9 units), but it may be taken at any time during the student's coursework. Including this course, the Minor in Anthropology totals 63 units.

The minor in Anthropology involves a minimum of 54 units of History Department course work (not including 79-104 Global Histories), as described below.

Curriculum (63 units)

I. Required General Education Course (9 units)

This requirement need not be satisfied before beginning any minor in the History Department.

79-104	Global Histories	9

II. Introductory and Methods Courses (18 units)

Students must complete 18 units (typically 2 courses) for the Introductory and Methods Courses, selecting from the list below. (Other courses may fulfill these requirements, with permission of the Faculty Advisor.)

79-201	Introduction to Anthropology	9
79-379	Extreme Ethnography	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9

III. Anthropological Perspectives (36 units)

Students must complete 36 units (typically 4 courses) for Anthropological Perspectives Courses, selecting from the list below.

57-306	World Music	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-224	Mayan America	9
79-235	Caribbean Cultures	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-264	Tibet and China: History and Propaganda	6
79-275	Introduction to Global Studies	9
79-276	Beyond the Border	6
79-278	How (NOT) to Change the World	9
79-286	Archaeology: Understanding the Ancient World	6
79-313	"Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration	6
79-314	The Politics and Culture of Memory	9
79-315	Thirsty Planet: The Politics of Water in Global Perspective	9
79-317	Art, Anthropology, and Empire	9
79-333	Sex, Gender & Anthropology	9
79-334	Climate Change and Climate Justice: Global Perspectives	6
79-342	Introduction to Science and Technology Studies	9
79-368	Un-natural Disasters: Societies and Environmental Hazards in Global Perspective	6
79-377	Food, Culture, and Power: A History of Eating	9

Relevant Anthropology courses may be taken at another university (for instance study abroad, or the University of Pittsburgh or other Pittsburgh institutions) with permission of the Anthropology Minor's Faculty Advisor.

Senior Honors

Senior Honors Thesis: Dietrich College

The Dietrich College Honors Program may be undertaken by students completing the major in Social & Political History, the major in Global Studies, or the interdepartmental major in Ethics, History, and Public Policy. An Honors Thesis requires two semesters of work. Eligibility requirements are set by the College; contact the Associate Dean of Dietrich College for details.

Study Abroad

Study abroad is especially encouraged for all students in the History Department; this experience can help students better understand the relationship between cultural heritage and modern political processes in a host country. To make study abroad successful and determine how specific study abroad programs fit into History Department graduation requirements, History majors should consult with a relevant faculty member and/or with the Academic Advisor.

RICKY W. LAW, Associate Professor of History – Ph.D., University of North Carolina; Carnegie Mellon, 2013–

KATHERINE A. LYNCH, Professor of History – Ph.D., Harvard University; Carnegie Mellon, 1980–

DEEPA NAIR, Assistant Teaching Professor of History, Carnegie Mellon-Qatar – Ph.D., National University of Singapore; Carnegie Mellon, 2019–

ABIGAIL E. OWEN, Assistant Teaching Professor of History; Director of Education, Steinbrenner Institute for Environmental Education & Research – Ph.D., Columbia University; Carnegie Mellon, 2016–

CHRISTOPHER J. PHILLIPS, Associate Professor of History – Ph.D., Harvard University; Carnegie Mellon, 2014–

BENJAMIN REILLY, Teaching Professor of History, Carnegie Mellon-Qatar – Ph.D., University of Pittsburgh; Carnegie Mellon, 2004–

EDMUND RUSSELL, Professor of History – Ph.D., University of Michigan; Carnegie Mellon, 2019–

SCOTT A. SANDAGE, Associate Professor of History – Ph.D., Rutgers University; Carnegie Mellon, 1995–

STEVEN SCHLOSSMAN, Professor of History; Director of Undergraduate Studies – Ph.D., Columbia University; Carnegie Mellon, 1988–

NICO SLATE, Professor of History; Director of Graduate Studies – Ph.D., Harvard University; Carnegie Mellon, 2009–

JOHN SOLURI, Associate Professor of History; Director of Global Studies – Ph.D., University of Michigan; Carnegie Mellon, 1999–

JOEL A. TARR, Richard S. Caliguiri University Professor of History and Policy – Ph.D., Northwestern University; Carnegie Mellon, 1967–

LISA M. TETRAULT, Associate Professor of History – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2005–

NOAH THERIAULT, Assistant Professor of Anthropology and History – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2017–

JOE WILLIAM TROTTER, Giant Eagle Professor of History and Social Justice – Ph.D., University of Minnesota; Carnegie Mellon, 1985–

BENNO R. WEINER, Assistant Professor of History – Ph.D., Columbia University; Carnegie Mellon, 2015–

Affiliated Faculty

JOSEPH E. DEVINE, Associate Dean for Undergraduate Studies, Dietrich College of Humanities and Social Sciences – D.A., Carnegie Mellon University; Carnegie Mellon, 1979–

CARRIE SETTLE HAGAN, Associate Director and Academic Advisor, Special Faculty, BXA Intercollege Degree Programs – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2013–

TIMOTHY HAGGERTY, Director of the Humanities Scholars Program – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2000–

LAUREN HERCKIS, Simon Initiative Research Faculty – Ph.D., University of Pittsburgh; Carnegie Mellon, 2016–

JEFFREY HINKELMAN, Special Faculty, English Department – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2016–

Visiting Faculty

MICHAL R. FRIEDMAN, Visiting Assistant Professor of History – Ph.D., Columbia University; Carnegie Mellon, 2010–

LANSINE KABA, Distinguished Visiting Professor of History, Carnegie Mellon-Qatar – Ph.D., Northwestern University; Carnegie Mellon, 2009–

Emeriti

CAROLINE JEAN ACKER, Associate Professor Emeritus of History – Ph.D., University of California, San Francisco; Carnegie Mellon, 1993–

EDWIN FENTON, Professor Emeritus of History – Ph.D., Harvard University; Carnegie Mellon, 1954–

RICHARD MADDOX, Professor Emeritus of Anthropology and History – Ph.D., Stanford University; Carnegie Mellon, 1993–

DAVID W. MILLER, Professor Emeritus of History – Ph.D., University of Chicago; Carnegie Mellon, 1967–

JOHN MODELL, Professor Emeritus of History – Ph.D., Columbia University; Carnegie Mellon, 1982–

DANIEL P. RESNICK, Professor Emeritus of History – Ph.D., Harvard University; Carnegie Mellon, 1966–

JUDITH SCHACHTER, Professor Emeritus of Anthropology and History – Ph.D., University of Minnesota; Carnegie Mellon, 1984–

DONALD S. SUTTON, Professor Emeritus of History and Anthropology – Ph.D., Cambridge University, England; Carnegie Mellon, 1969–

Department of History Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

79-104 Global Histories
Fall and Spring: 9 units
Human activity transcends political, geographical, and cultural boundaries. From wars to social movements, technological innovations to environmental changes, our world has long been an interconnected one. Acquiring the ability to understand such transnational and even worldwide processes is an indispensable part of any college education. This course provides students with an opportunity to develop the skills and perspectives needed to understand the contemporary world through investigating its global history. All sections are comparable in their composition of lectures and recitations, required amounts of reading, and emphasis on written assignments as the central medium of assessment. The sections all aim to help students: (1) master knowledge through interaction with the instructors, reading material, and other students, (2) think critically about the context and purpose of any given information, (3) craft effective verbal and written arguments by combining evidence, logic, and creativity, and (4) appreciate the relevance of the past in the present and future. For descriptions of specific sections, see "First Year Experience" at the Dietrich College General Education Website: http://www.hss.cmu.edu/gened/topics-79104.html
Course Website: http://www.hss.cmu.edu/gened/topics-79104.html

79-198 Research Training: History
Fall and Spring: 9 units
This course is part of a set of 100-level courses offered by Dietrich College departments as independent studies for second-semester freshmen and first- or second-semester sophomores in the College. In general, these courses are designed to give students some real research experience through work on a faculty project in ways that might stimulate and nurture subsequent interest in research participation. Faculty and students devise a personal and regularized meeting and task schedule. Each Research Training course is worth 9 units, which generally means a minimum for students of about 9 work-hours per week. Prerequisites/restrictions: For Dietrich College students only; minimum cumulative QPA of 3.0 (at the time of registration) required for approved entry; additional prerequisites (e.g., language proficiency) may arise out of the particular demands of the research project in question. By permission of the relevant professor and the Director of Undergraduate Studies. Students sign up for these courses through both the History Department and the Dean's Office.

79-200 Introduction to Historical Research & Writing
Fall and Spring: 9 units
This course introduces students to methods and materials that historians use to study the past. Its goals are: first, to familiarize students with ways that historians think about their research, how they carry it out, and how they debate findings with other historians; second, to train students in "best practices" for doing historical research in primary and secondary sources. We discuss how to ask questions about the past and develop a one-semester research topic, find appropriate primary and secondary sources, take notes from those sources, and write a paper that answers an original question using skills we have studied. In the Spring 2019 semester, we will use the topic of the history of witchcraft and witch-hunting to focus the class. Although Western beliefs in witchcraft and "devil worship" dated back to antiquity, the 16th and 17th centuries witnessed the "Great European Witch-Hunt," which cost the lives of thousands across Europe and in its American colonies. Ever since, historians have struggled to explain why fears of witchcraft suddenly became so acute in this period. And although the witch-hunts in early modern Europe and its colonies gradually came to an end, beliefs in witchcraft persist into the modern era and, in many parts of the world today, continue to generate campaigns of popular violence against alleged perpetrators. In this course, we'll examine both primary historical sources and secondary scholarship to explore competing interpretations of this complex historical puzzle. At the end of the term, students will submit a final 10-15 page research paper on a topic of their choice related to the themes of the course.

79-201 Introduction to Anthropology
Intermittent: 9 units
Cultural anthropologists "make the strange familiar and the familiar strange," attempting to understand the internal logic of cultures which might, at first glance, seem bizarre to us, while at the same time probing those aspects of our own society which might appear equally bizarre to outsiders. The goal of this course is to raise questions basic to the study of culture and social relationships in a multitude of contexts. We will also discuss the anthropologist's relationship to the people s/he studies, and the responsibilities inherent in that relationship. The readings have been chosen to focus on topics that have long captured anthropologists' attention and that continue to be intensely debated: social inequality, race, colonialism, body, kinship, gender, history and memory, social lives of things, affect, globalization, and migration and humanitarianism. They reveal the diversity of human practices and experiences across time and space, as well as the wide range of approaches to these practices within the field of anthropology. This class will follow the format of a seminar. I will introduce the readings by placing them within larger debates, but the course will mainly be discussion-oriented. Through written work, readings, films, and in-class discussion, we will examine how anthropology makes us more aware of our own culturally-ingrained assumptions, while broadening our understanding of human experiences.

79-202 Flesh and Spirit: Early Modern Europe, 1400-1750
Intermittent: 9 units
This course examines European history from the Black Death to the French Revolution, a period known to history as the "early modern" period. That is, it marks a period in European history that was not quite medieval, and yet not quite modern. Many features of modern society, such as the nation-state, free-trade economies, religious pluralism, scientific rationalism, and secular culture trace their origins to the early modern era, yet the period was also marked by important continuities with the Middle Ages. During this course, we will explore how Europeans re-imagined their world in its transition from the medieval to the modern. Topics to be considered will include the "renaissance" of the arts, the problems of religious reform, exploration and colonialism, the rise of science, and the expansion of the state. Through these developments, we will focus on Europeans' changing notions of the human body, the body politic, and the natural world, as well as their re-interpretations of the proper relation between the human and the divine, the individual and the community, and the present and the past.

79-203 Social and Political Change in 20th Century Central and Eastern Europe
Intermittent: 9 units
Organized as a combination of lectures and seminar discussions, this course explores the political, intellectual, social, and cultural changes occurring in 19th century and 20th century Central and Eastern Europe. It begins with an examination of the emergence of nationalist movements during the 19th century, to then explore the darker side of romantic nationalisms as they unfolded into the radical political ideologies such as socialism and fascism of the interwar period. We will ask to what extent these earlier histories continued to subtly influence post-1945 Central and Eastern Europe under socialism. The second part of the course will focus on the social and political transformations occurring at distinct moments in the history of the Soviet bloc: the 1950s Stalinization, the 1960s De-Stalinization, the emergence of the more subtle forms of dissent in the late 1970s and the early 1980s, and the revolutions of 1989. Course materials include not only historical and anthropological readings, but also historical documents, memoirs, and documentaries. The assignments include: mandatory attendance of lectures, regular participation in the class discussions, weekly diary entries and two take-home exams (midterm and final). The diary entries aim to make you better understand the mentalities and social and political changes at an individual level, by vicariously experience the events through "your" historical character. At the beginning of the semester, you will be assigned two specific characters that you will "impersonate" throughout the semester (one at the time), bringing in material from lectures and readings to bear on "your" character's own experiences.

79-205 20th Century Europe
Intermittent: 9 units
This course surveys the history of Europe from 1900 to 2000 and beyond. While it covers major political trends and social changes in 20th century Europe, it concentrates on the following themes: The end of empire and the rise of the nation-state and ethno-nationalism in Europe; the extraordinary violence of two World Wars and the Spanish Civil War — and their continuing impact on politics, society, and culture; social and political movements/regimes of the far right and of the socialist/communist left; the rise and crisis of the European welfare state and of the European Union; the wars of the 1990s in the former Yugoslavia; conflicts within the European Union such as Brexit and the crisis between Spain & Catalonia; contemporary debates over historical memory of the Spanish Civil War, World WWII and the Balkan wars; cultural and political controversies surrounding Islam and Muslims and re-emergent antisemitism in Europe.

79-206 Crime and Punishment in Early Modern Europe
Intermittent: 9 units
This course will examine European legal institutions and their role in defining and enforcing societal norms of conduct and belief in the early modern era (c. 1400-1800). European society was fundamentally transformed in this period of transition between the medieval and the modern eras, and the laws and legal systems that exist in the Western world today reflect those influences at the deepest levels. This course will focus on how shifting definitions of "crime" and "punishment" reflected prevailing societal attitudes and anxieties toward perceived acts of deviance and persons on the margins of society. Assigned readings will examine the evolution of early modern European criminal court systems, the investigation and punishment of crime, the criminalization of social deviance (witches, vagrants, religious minorities and other outcasts), and the legal enforcement of sexual morality and gender roles. We will address not only the historical significance of these developments, but their influence upon current debates concerning social deviancy, policing, torture, and criminal punishment.

79-208 Witchcraft and Witch-Hunting
Intermittent: 9 units
Between the late 15th and the early 18th centuries, many Europeans became convinced that their society was threatened by a conspiracy of diabolic witches. Although Western beliefs in witchcraft and "devil worship" dated back to antiquity, the 16th and 17th centuries witnessed the most intense campaign of witch-hunting in all of Europe's history. Before it was over, the "Great European Witch-Hunt" of the early modern era cost the lives of thousands across Europe and in its colonies. And although the witch-hunts in early modern Europe and its colonies gradually came to an end, beliefs in witchcraft persist into the modern era and, in many parts of the world today, continue to generate campaigns of popular violence against alleged perpetrators. This course examines witchcraft beliefs and witch-hunting in historical perspective in both their European and colonial contexts. In addition to the early modern witch-hunts, it will address modern witchcraft beliefs and consider witch-hunting as a global problem today. It will focus on the origin and rationale of witch beliefs, the factors driving the timing and intensity of witch-hunts, and the patterns of accusations. Throughout, we will examine the many historical and regional variations in witch beliefs and prosecutions and explore how they reflect major social and cultural issues such as the relationship between "popular" and "elite" culture; religious change; state formation; gender and patriarchy; and the rationalization of law, medicine, and science. This course satisfies one of the elective requirements for the Religious Studies minor.

79-209 The Art of Historical Detection
Intermittent: 6 units
How do historians determine how and why episodes in the past transpired? This course takes students behind the scenes and acquaints them with the techniques by which historians practice their craft in interpreting historical events. Using dramatic case studies in American history, we will examine a wide array of tools and sources at the historian's disposal, among them oral evidence, photographs and images, maps, official documents, memoirs, psycho-history, media and popular culture. Through in-class workshops and solo and group assignments, students will experiment with different methods of historical analysis using a variety of source material. Students will develop a familiarity with the historian's toolbox and a new-found appreciation for the painstaking efforts that go into producing the history books they may otherwise take for granted.

79-210 Identity, Nationhood, and State
Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. This broad introductory course to general history through the prism of literature and politics aims at appreciating humanism and identity from the distant past on. 1. It discusses the significance of language and speech aptitude as a primordial and universal trait upon which rests the possibility of association and organization. This aptitude has made humans history conscious. 2. It explores some basic facts about the pre-19th century Western tradition of governance and the place of the individual within it, along with the expansion of these European states into the world in the aftermath of the maritime navigation and colonial conquest. An emphasis is placed on the pivotal European movements of the Renaissance and Enlightenment. The first, with its humanism in the 16th century, promoted a sense of identity associated with the language spoken in ones area and the rise from the old medieval notion of suzerainty of the local gentry over local communities to the sovereignty of the monarchy of the area, thereby the nation state. The second, the 18th century Enlightenment, led to reforms and revolutions. These transformations, including the growth of literacy, have significantly marked Europe and subsequently the rest of the world that experienced European domination or influence. All this has resulted in the making of broad communities of European language speakers who are not of European descent.

79-211 Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange
Intermittent: 9 units
When you hear the term "Southeast Asia," what comes to mind? The Vietnam War? The ruins of the Angkor civilization? Rich culinary traditions? Or perhaps your own ethnic heritage? However you imagine it, Southeast Asia is an incredibly diverse and dynamic region that has long been integral to world affairs and whose importance continues to grow. This course offers a wide-ranging survey of Southeast Asia's peoples, their histories, and some of the issues they face today. Together we will explore the region as a "global crossroads," where the world's religions, economies, cultures, and politics come together in generative, sometimes traumatic, and often surprising ways.

79-213 The American Railroad: Decline and Renaissance in the Age of Deregulation
Intermittent: 6 units
Railroads in the USA are often considered as a subject for nostalgia or public sector failure, an image largely based on passenger service. However, the USA's private sector freight rail industry is considered a model for the world as the result of its renaissance following deregulation in 1980. This is a "stealth" industry whose history and economics are both intertwined and complex. Starting with the development of the first U. S. railroads, students will gain a basic understanding of the industry's history and economics, with special attention to the past half-century. In addition, students will participate in small group research projects in particular areas of special interest — for example, economic history, industry culture, network economics, utility regulation or transportation policy.

79-214 Paris in Revolt: History, Literature, Film
Intermittent: 6 units
This course asks a simple question with a complex answer: Why is it that the modern history of the French capital has been so marked by uprisings that challenged and sometimes overthrew the existing political regime? What accounts for this political instability? We answer these questions by studying a selection of well-known examples of Paris uprisings from the period of great the French Revolution (began 1789) through May, 1968. We examine major causes of the revolt, the kinds of people who led and followed it, and its consequences in the short- and longer-term. We also learn about the "culture" that surrounded political and social movements through eyewitness accounts, speeches, literature and the arts. While we are doing this, we'll try to learn as much as we can about continuities and changes in the city itself — its population and built environment. Coursework will consist of attending lectures, responding orally and in writing to assigned readings and several films, and a comparative final essay.

79-216 Genghis Khan and the Mongol Empire
Intermittent: 3 units
This course examines the rise, rule, and impact of the Mongol Empire on global history. In the 13th century, Eurasia was shaken by a force contemporary chroniclers likened to an apocalypse. Within a few decades, horsemen under the command of Chinggis (Genghis) Khan swept out of the northeastern steppe to establish the largest land empire the world would ever know. Few events in world history have inspired such fear and awe. However, the Mongol period also ushered in the so-called pax Mongolica, the first period of sustained contact and exchange across Eurasia as people, technologies, arts, biodiversity, and ideas spread throughout the Mongol domains and beyond. Questions to be examined include: Who was Genghis Khan and how did he lead a little known nomadic people to conquer much of the known world? What cultural and technological innovations aided the Mongols rise and conquest? How did Genghis's successors rule their vast, diverse domains? What role did religion play in Mongol Eurasia? Why did a unified Mongol empire fall apart in such a relatively short period of time? And how did the Mongols and their empire help shape the world we live in today?

79-217 The War in Vietnam
Intermittent: 6 units
The Vietnam War, the first war to be televised, is one of the most controversial and influential events in the post-World War II history of the United States. A limited advisory role for U. S. troops to help the pro-Western government of South Vietnam fight off a Communist insurgency soon escalated to a full-scale American-led war against North Vietnam. This provoked widespread domestic protest and resistance to compulsory military service - "the Draft." Eventually, the strategic basis for U. S. foreign policy in general came into question. The U. S. withdrew combat troops and much financial support in 1973; Saigon (now Ho Chi Minh City) fell to the North in 1975 as Americans watched from their living rooms. This course covers war in Vietnam from the intervention of the U. S. in the mid-1950s through the fall of Saigon in 1975, with particular emphasis on the last decade, which saw the "Americanization" and subsequent "Vietnamization" of the war under the administrations of presidents Johnson and Nixon. It examines the military and political aspects of the war, as well as some of the social and cultural consequences in the U. S. as a result.

79-218 Tiananmen Square and Popular Protest in Modern China
Intermittent: 6 units
Thirty years ago, on June 4, 1989, the world watched as tanks rolled into Beijing's Tiananmen Square ending what had been six weeks of student-led protest calling for reform of the Chinese Communist Party and its policies. This was not the first time students had gathered at Tiananmen to demand political change. This year also marks the centennial anniversary of the student-led protests that launched the May 4th Movement, a social and intellectual revolution that fundamentally changed China and helped birth both the Nationalist Party of Chiang Kaishek and Communist Party of Mao Zedong. This class examines the causes and consequences of popular protest in twentieth-century China. While the focus is on the protests of 1919 and 1989, we will also look at other popular protests, including the Cultural Revolution (1966-1969), Democracy Wall Movement (1979), and post-Tiananmen protests among workers, farmers, ethnic minorities (especially Tibetans and Uyghurs), and others.

79-220 Screening Mexico: Mexican Cinema, 1898 to Present
Intermittent: 6 units
This mini-course is a survey of Mexican cinema from its origins in silent film to the present. Some areas of focus will include documentary footage and films of the Mexican Revolution (1910-1920), films of the Mexican "Golden Age" (1930-1960), and "New Mexican Cinema" from the 1990s forward. We will explore cinema as a window on Mexico's changing social, cultural and political dynamics, and as a way to probe such topics as: changing conceptions of Mexican identity; political critique and revolutionary movements; and urbanization, migration and the "drug war" in contemporary Mexico. **Please Note**: in addition to two weekly class meetings, this course also includes a required weekly film screening at 6:30 on Tuesday evenings.

79-223 Mexico: From the Aztec Empire to the Drug War
Intermittent: 9 units
This course provides a survey of Mexican history and culture over a variety of periods, from the rise of the Aztec empire, to Spanish conquest and colonization, to national independence, to the Mexican Revolution and contemporary Mexico. A wide range of topics will be addressed, such as: race, ethnicity, and indigeneity; state formation and politics; national identity and the politics of memory; migration and the border; and the drug war. Students will discuss historical and anthropological scholarship on Mexico, but will also consider cultural documents of various kinds, like Mexican music, art, and food.

79-224 Mayan America
Intermittent: 9 units
This course will explore the history and culture of the Maya from before the European conquest of the Americas to the present. After a survey of ancient Mayan society and of the European conquest of Mexico and Central America, we will consider the experience of the indigenous Maya under Spanish colonial rule and under the rule of Latin American nation-states in the nineteenth and twentieth centuries. Finally, we will cover the recent history of political conflict and military repression in Guatemala, the Zapatista uprising in southern Mexico, and increasing Mayan migration to the United States. Drawing upon the varied perspectives of archaeology, cultural anthropology, and social history, this course will explore several recurrent themes in Mayan America, such as: conquest, adaptation and resistance; indigenous political and communal organization; popular religion, prophecy and apocalypse; Mayan cultural and ethnic identity; "tradition" and "modernity"; state violence and human rights; and indigenous political and cultural mobilization at the local, national, and transnational levels.

79-225 West African History in Film
Intermittent: 9 units
West Africa is a vibrant, diverse, and rich region, which has had the largest influence demographically, culturally, socially, and linguistically on the Americas. This course will examine West Africa's history from the pre-colonial to the independence period. It will cover such topics as states vs. stateless societies, urbanization, trans-Saharan trade, Islamization, European interaction, the trans-Atlantic slave trade, colonialism, cash crops, missionaries, nationalism, and independence. Students will understand how this dynamic region changed over time as a result of internal factors, such as state formation, as well as external factors, interaction with Muslim and European traders. Students will also be exposed to the variety of sources used by historians to reconstruct West Africa's rich history. The course will use historical films by some of West Africa's most famous filmmakers, such as Ousman Sembene, to illustrate the diversity of the region and its historical change over time. Course includes two class meetings and mandatory film screenings on Tuesdays from 6:30-9:20pm.

79-226 African History: Earliest Times to 1780
Intermittent: 9 units
A beginning point for this course will be the question: how do historians reconstruct history when few written sources are available? Breaking disciplinary boundaries, the course will draw on linguistics, "climateology," archaeology, and anthropology to reconstruct dynamic social, cultural, political, and economic processes in Africa before the arrival of Europeans and before the availability of written source materials. When written sources are available, the course will interrogate them to illuminate the changes that occurred in African societies during the early period of contact with Europeans. Lastly, by focusing on long-term processes, such as economic specialization, urbanization, and Islamization, the course will begin to put the slave trade in an African-centered perspective.

79-227 Modern Africa: The Slave Trade to the End of Apartheid
Intermittent: 9 units
The course is designed to give students an understanding and appreciation of African history and culture from the "inside out." Though it deals with the period of European expansion in Africa, it is centered on African language/ethnic groups, villages, and individuals as historical actors who daily make collective and personal decisions to pass down, innovate, and borrow practices, technology, spiritual systems, etc. in the face of social, political, and economic realities. The course is also designed to get students thinking critically about how historians select and interpret sources to construct and reconstruct history at these different levels.

79-228 The Civil Rights Movement and the World
Intermittent: 9 units
The American civil rights movement was a global phenomenon. Throughout the twentieth century, the fight for racial justice involved multiple areas of conflict that transcended national boundaries. The purpose of this course is to understand how global events and crises influenced the ways in which activists understood political power. How did civil rights activists pioneer a global identity for American blacks and create solidarities with oppressed people worldwide, and how did these solidarities in turn influence activism at home? Answering these questions will require us to analyze various ideologies and political movements and their impact on anti-racist activism within the United States. World historical events, and their impact on the civil rights movement, will cover the 1917 Russian Revolution, the rise of Fascist Europe, the Second World War, the United Nations, the Cold War, and today's struggle for racial justice. By examining these issues, this class will shed light on the dynamic geo-political and socio-economic conditions that shaped the civil rights movement as well as today's activism.

79-229 Origins of the Arab-Israeli Conflict, 1880-1948
Intermittent: 9 units
This course considers the historical origins of the contemporary Arab-Israeli conflict, beginning with the decline of the Ottoman Empire and the rise of Arab nationalism and Zionism in the late 19th century and emphasizing the period of the British Mandate over Palestine (1920-1948). Students will move beyond textbooks to explore primary source documents, maps, photographs, biographies and historical testimony. For five weeks in the middle of the semester, students will immerse themselves in an extended role-playing exercise, "The Struggle for Palestine, 1936," an elaborate simulation game linked to Barnard College's "Reacting to the Past" program. Students portraying British examiners, specific Arab and Zionist characters and journalists will recreate the activities of the 1936 Royal Commission which came to Palestine to investigate the causes of an Arab rebellion and Arab-Jewish strife. This historical reenactment experience constitutes an exciting pedagogical opportunity for delving deeper into the topic material than regular coursework allows. All the role-playing will take place during regular class time, but students should be aware that they will need to devote outside time for preparation and research. Outstanding attendance is also a requirement. Regular classroom activity resumes at the end of the five weeks. The goal of the course is for students to develop a nuanced understanding of the varying goals and priorities of all the actors in Mandate Palestine. Running throughout the course is the question, was peace ever possible?

79-230 Arab-Israeli Conflict Since 1948
Intermittent: 9 units
This course begins in 1948 with the establishment of the State of Israel, the Palestinian dispersal and the first of many Arab-Israeli wars, and continues up to the present time. The examination of the many facets of the Arab-Israeli and Palestinian-Israel conflicts is accompanied by attention to the search for peace and its frustration. We will also situate this conflict within the framework of the war, chaos and religious extremism currently consuming the Middle East. The course culminates in an intensive role-playing game in which students conduct simulated Arab-Israeli negotiations. For the role-playing we will be partnering with Arab and Israeli students from universities in the Middle East: real-time negotiations will take place via Facebook and continue via various social media. The simulation game experience constitutes an exciting pedagogical experiment and an opportunity for delving deeper into the topic material than regular coursework allows.

79-232 Arabian Peninsula Environmental History
Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. This course will look at the history of the Arabian Peninsula from a fresh perspective, examining human/environmental interactions over a long stretch of time. In contrast to the way that Arabian history is typically taught in academia, this course will take the pre-Islamic period of Arabian history (al-jahiliyya) as seriously as the post-Islamic period, and will focus on continuities between the two periods as much as discontinuities. What is more, while conventional histories of the Arabian Peninsula focus on political and religious affairs, this course will try to understand Arabian history on a deeper level by focusing on the lifeways of the Arabian people, including pastoralism, oasis "bustan garden" agriculture, fishing and pearling, and shifting patterns of long-distance trade. What is more this course will draw heavily from material from other disciplines, especially medical sciences, to better understand patterns of change over time. Finally, this course will examine to what degree these older patterns of human/landscape interactions are still valid for the Arabian Peninsula today, which has undergone a transformation almost unparalleled in world history due to the discovery natural gas and oil.

79-233 The United States and the Middle East since 1945
Intermittent: 9 units
This course begins by introducing students to the Middle Eastern priorities and policies which the US inherited from the British in the aftermath of the Second World War. The focus then moves to American interests and involvement in the region from the Cold War through today, with special attention to recurrent historical themes. Topics include the US role in the Arab-Israeli conflict and peace process, the role of oil, politics and conflicts in the Persian Gulf, the impact of 9/11 on American foreign policy in the Middle East, and selected case studies of US political and military intervention there. Readings and discussion progress with a dual goal in mind: to understand American foreign policy interests in the Middle East, and to understand the forces and nuances endemic to the region itself. Students will learn how to analyze primary source documents, such as presidential speeches and UN resolutions. The course culminates in a week-long role-playing exercise in which students portraying NSA members must advise the US President on a policy response to a Middle East crisis.

79-234 Technology and Society
Intermittent: 9 units
How has technology shaped human society? And how have human beings shaped technology in return? This course investigates these questions across history-from stone tools, agriculture, and ancient cities to windmills, cathedrals, and the printing press; from railroads, electricity, and airplanes to atom bombs, the internet, and the dishwasher. In analyzing these tools, we will explore the dynamic relationships between technological systems and the social, political, religious, artistic, and economic worlds in which they emerged. We will also pay particular attention to technology's effects, asking both who benefited from and who was harmed by technological change. By the end of the course, students will be able to reflect critically on how humanity chooses which technologies to exploit and how human societies have been transformed by these choices.

79-235 Caribbean Cultures
Intermittent: 9 units
This course will examine the cultures and societies of the Caribbean focusing on their colonial past, their current positioning in the world, their social structure, cultural patterns and current transnationalism. Using social history, film and music we will explore the topics of race, class, family, gender, religion, national identity and underdevelopment. Comparative research projects will provide concrete instances of the differences and similarities between the Anglo-Caribbean, Franco-Caribbean, and Hispanic Caribbean. This course is open to all students.

79-236 Coming to America: The View from New York City, Past and Present
Intermittent: 6 units
Immigration became a prominent issue in national politics during the 2016 presidential campaign, and a contentious debate around immigration policy has carried forward into the Trump administration. American immigration history is long and complicated, but by pairing it with the history of a particular place (New York City) we can better understand the social, political, and cultural trends that have affected the policies of the United States government, the perceptions of Americans towards newcomers, and the lived experience of immigrants since as early as the 1600s. This course will explore such issues as whether New York, the nation's quintessential city of immigrants, has been a "melting pot" and entry point to the Land of Liberty. Has the city been a place where diverse groups of people from around the world have acculturated and Americanized? Or have immigrants to New York City mainly struggled to find acceptance, maintain their culture and traditions, and gain an economic foothold?

79-237 Comparative Slavery
Intermittent: 9 units
This course will examines the pervasive, world-spanning institution of human slavery. Although the time frame this course deals with is broad - from the rise of complex societies in the ancient world to slavery-like labor systems in the modern era - this class will focus more thoroughly on a few case studies, especially slavery in the Middle East and sub-Saharan Africa, the US, and the Caribbean. These disparate examples will be related to a number of core themes, including race, class, family, gender, religion, national identity and underdevelopment. This course will be co-taught on CMU's Pittsburgh and Qatar campuses.

79-239 The Great Depression in America, 1929-1941
Intermittent: 6 units
Until the "Great Recession" of 2008, it had become virtually unthinkable that the United States would ever again experience a financial downturn coming close to that which followed the stock market crash of 1929. Lasting for more than a decade, the Great Depression affected American life and culture in ways that were both pronounced and profound. This course looks at the multiple ways that American life changed in the decades between the two world wars. It assesses social, cultural, political, economic, and technological changes that, in the midst of deprivation and economic uncertainty, ultimately brought "modernity" to everyday American life. Relating to the Great Depression itself, students will evaluate varying political approaches to the complex financial and social issues wrought by economic downturn, comparing and contrasting Herbert Hoover's local and regional relief focus with Franklin Roosevelt's massive, federally funded New Deal initiatives. In addition, students will analyze first-person narratives from everyday Americans describing their day-to-day experiences. Finally, the course will explore how the Depression became a near-constant cultural focus in this era, reflected in popular movies, music, and works of fiction.

79-240 Development of American Culture
Intermittent: 9 units
This is an introductory survey of American history from colonial times to the present. The course focuses on cultural history instead of the more traditional emphasis on presidents, wars, and memorizing facts or timelines. The major theme of the course is the changing meaning of freedom over three centuries. Required readings include several short books, historical documents, and a study of the concept of freedom. There is no textbook; background facts and events are covered in lectures to provide students with context needed to think about and understand America's cultural history. Assignments include exams and essays.

79-241 African American History: Africa to the Civil War
Intermittent: 9 units
The African American experience had deep roots in the rapid globalization of the world's people during the transatlantic slave trade. Like people of European, Asian, and Latino/Latina descent, Africans were part of the early Great Migrations of people from the Old World to the New. Unlike other ethnic and nationality groups, however, African people arrived in chains and swiftly acquired the legal status of "slaves for life." Was their enslavement inevitable? Was their transformation into commodities complete? Were they able to form viable families, communities, and movements to topple the institution of human bondage? Did they find dependable white allies? Did they Africanize American culture, politics, and economics? How did some 500,000 of these African people become free (some significant property holders) before the Civil War? Focusing on the development of African and African American life from the beginning of the colonial era through the late antebellum years, this course will explore these and many other questions in the lives of the earliest generations of African people on American soil. Based upon a variety of assigned texts, primary and secondary sources, and lectures, students will become familiar with a wide range of intellectual debates in African American history; write a series of short analytical essays; and advance their own well-argued and well-documented analyses of major controversies in both popular and scholarly interpretations of early African and African American life in the United States.

79-242 African American History: Reconstruction to the Present
Intermittent: 9 units
This course explores changes in the African American experience from the end of the Civil War to the emerging era of Donald Trump. The course emphasizes transformations in both inter- and intra-race relations; economic mobility as well as economic inequality; and forms of political engagement and grassroots movements for social change. In Part I, the course opens with an examination of the notion of a "Post-Racial Society" in the United States. This idea emerged in the wake of the Modern Black Freedom Movement and persists to this day as the 21st century unfolds. Part II locates the roots of 20th century black life and history in the emancipation of enslaved people in the years after the Civil War. This segment of the course will not only give close attention to the meaning of emancipation and freedom for black people, but also charts the rise of a new Jim Crow social order by World War I. Third and most important, this course will illuminate the transformation of African American culture, politics, and community under the impact of the 20th century Great Migration; the rise of the urban-industrial working class; increasing residential segregation; growth and expansion of the middle class; and the fluorescence of the Modern Black Liberation Movement. Students will compare the dynamics of the contemporary Black Lives Matter Movement with earlier 20th century grassroots social and political movements in African American and U.S. history. Finally, based upon a mix of primary and secondary sources and lectures, students will examine a wide range of intellectual debates in African American history; write a series of short analytical essays; and establish their own unique interpretation of key issues in Black History.

79-243 The Civil War in American Memory
Intermittent: 6 units
The American Civil War remains among the most cherished and fought over stories in American history. This class explores those debates. Was the war fought over slavery? Was the Confederate cause noble? Did the North oppose slavery? Why do Americans flock to reenact the Civil War? What does it mean to fly the Confederate flag? Tackling ongoing debates in the news today, including recent events in Charleston, we'll trace the roots of those events back to the American Civil War. And we'll strive to understand why the war continues to be one of the most defining moments in U.S. history - 150 years later.

79-244 Women in American History
Intermittent: 9 units
This course is a survey. It examines U.S. history through the eyes of women and gender. It begins in the colonial era (1600s) and runs chronologically to the present. It covers topics such as witchcraft, the story of Pocahontas, women's work, motherhood, slavery, and much more. We will look at the lives of individual women, as well as trends among women, paying attention to questions of race and class. At the same time, we will explore changing concepts of gender, meaning ideas about what women are or should be. Finally, the course asks: how different does American history look when we factor in women and gender?

79-245 Capitalism and Individualism in American Culture
Intermittent: 9 units
This small discussion course traces ideas about individualism and capitalism in the U.S., from colonial times to the present. We will focus on three main themes: 1) the relationship between capitalism, work, and identity; 2) changing definitions of success and failure; and 3) the historical origins of students' attitudes toward 1 & 2. In short, we will study the economics and emotions of the American dream: how class, race, gender, occupation, and ambition shape our identities. Readings include "The Autobiography of Benjamin Franklin," studies by Alexis de Tocqueville and Max Weber, writings of Frederick Douglass, Ralph Waldo Emerson, Herman Melville, Henry Thoreau, Charlotte Perkins Gilman, Andrew Carnegie's classic essay "Gospel of Wealth," Arthur Miller's "Death of a Salesman," and Malcolm Gladwell's "Outliers." Grading is based upon a readings journal, participation in discussion, three short essays and a longer final paper.

79-246 Industrial America
Intermittent: 9 units
This course examines the transformation of America into an urban industrial society during the 19th and 20th centuries. The transformation of work, culture, and politics will receive close attention, but the course will primarily focus around how workers defined their own labor and changes in the culture of work over time. This course will investigate how race, class, and gender informed workplace relations as well as how immigration and migration changed the nature of American work. Through lecture, discussion, and three short writing assignments we will uncover how workers defined America.

79-247 African Americans, Imprisonment, and the Carceral State
Intermittent: 9 units
The mass incarceration of people of African descent has emerged as one of the most daunting issues in contemporary U.S. society and politics. But too often discussions of this important phenomenon proceeds without sufficient historical perspective. Thus, this course explores the history of African Americans in the nation's prison system from the emancipation of some four million enslaved people following the Civil War through recent times. Specifically, we examine the process by which the nation's prison population shifted from predominantly white inmates during the mid-19th century through the inter-World War years to majority African Americans and other people of color by the closing years of the 20th century. In addition to examining the role of law, policing, and racist social policies and practices, students explore the lived experiences of imprisoned people, with an emphasis on the impact of class and gender as well as racial considerations. Along with selected primary documents, assigned readings include a series of scholarly case studies on the carceral experiences of black men and women in the North and South during the industrial and emerging postindustrial eras in African American and U.S. history. Finally, students will write a series of short essays on particular facets of African American life in the American prison system.

79-249 20th & 21st Century U.S. History
Intermittent: 9 units
[Note: students who have already taken this course under its former title, 79-249, 20th Century U.S. History may not enroll.] The twentieth century marked the rise of the United States as a global power. By the end of the century, the United States had achieved economic, military, and political dominance. The United States also made great strides in expanding political and civil rights for workers, women, African Americans, and gays and lesbians. This course explores the social and cultural implications of these developments on the generations of American people who came of age in the twentieth century. It assesses both the triumphs and tribulations of twentieth-century life. We will analyze continuities, contradictions, and conflicts in American history, especially in regard to the nation's dueling political ideologies: conservatism and liberalism. Special attention will be paid to the relationship between movements for social change and the maintenance of law and order. Topics include: the Progressive Era, World War I, the Great Depression, World War II, the Cold War, Civil Rights, Vietnam, and the New Conservatism.

79-256 Sex, Guns, and Rock 'n Roll: Youth Rebellion in 1960s & 1970s Europe
Intermittent: 6 units
Between 1960 and 1980, young Europeans rebelled against the conservatism of their parents and politicians. Heterosexual mores became strikingly looser. Women demanded sexual freedom and abortion rights. In capitalist Paris and in socialist Prague, masses of students challenged their government in the streets. In West Germany and Italy, a minority of radicals took up the gun to bring former Nazis and Fascists to "justice." From The Beatles to The Clash, British bands created variations on rock and roll that were spectacularly popular from London to Moscow. Rebellion took different forms in every country but also became European as activists, musicians, and fans carried ideas about politics and sex, fashions, and music across national boundaries and the "Iron Curtain." The course will mix lectures with discussion of scholarly articles/chapters, a novel, and films. Students will write one 4/5 and one 6/7-page essay based on class readings/films.

79-257 Germany and the Second World War
Intermittent: 9 units
This course examines the Second World War from the perspective of the country that was central to it in every way. The course will cover: Hitler's ideology, war plans, and military strategy; the military/technological history of the War in Europe and North Africa; the role of the SS; the Holocaust; the occupation of Europe and Resistance movements; the political, social, and economic history of the Third Reich, including popular opinion, the German Resistance, and the use of slave labor in factories and on farms. Readings will include historical studies, a novel, and a memoir/diary.

79-258 French History: From the Revolution to De Gaulle
Intermittent: 9 units
This survey course looks at French society and culture from the period after the French Revolution (roughly 1815) to the Nazi invasion of 1940. We first look at the multiple impacts of the Revolution on French society. We try to understand some of the lasting features of nineteenth and early-twentieth century France by studying the lives of different social groups including workers, peasants, and members of the elites. We follow the continuing problem of French political instability in the nineteenth century, trying to understand the deep rifts that divided different groups of French people from one another. We look at the devastating impacts of World War One and the Great Depression, and end with the collapse of France in 1940. Coursework is based on the use of works of fiction, film, personal memoirs, and art as well as historians' writings. Written work includes papers and in class tests.

79-259 France During World War II
Intermittent: 9 units
This course surveys French society, economy, and culture in the years 1939 to 1945 focusing on problems that the war and German Occupation presented. Understanding life under the Occupation and the collaborationist government in Vichy requires us to look back at major political, social and economic conditions of the 1930s that divided the French people. We use film and personal memoirs as well as recent historical studies to recreate and understand life during the war, and try to answer such questions as: What accounts for the French military collapse of 1940? Which groups of French men and women benefitted from collaboration with Germany? How did France's collaboration in the Holocaust come about? We also consider how the French people have tried to come to terms with their wartime experience since the 1940s. Classes include lecture and discussion as well as several in-class writing responses to the reading and lectures.

79-260 Adolf Hitler
Intermittent: 9 units
Who was Adolf Hitler? What motivated him? What did he believe? Why did Germans support him? How did he rise to power? How did he use his power? This course covers the biography of Hitler, placing his life in the political and economic context of his era. Through a combination of lectures and discussion, the class will consider: Hitler and his political movement, Hitler and his people, Hitler and his enemies, Hitler and his war, Hitler and his crimes, Hitler and his place in history. We will discuss his upbringing, personality, and strengths and weaknesses as a political leader and military strategist. We will study his worldview, including his ethno-nationalism, antisemitism, and anti-Communism. We will examine his role in the origins and implementation of the Holocaust. Readings will include works by historians, excerpts from Mein Kampf, and the writings of his fellow Nazis and other contemporaries. The class will also analyze the portrayal of Hitler in documentary and feature films. Students will write three papers: two papers of 5-6 pages each, based on in-class readings/films, and a final research paper of 12 pages, based on six outside readings.

79-261 The Last Emperors: Chinese History and Society, 1600-1900
Intermittent: 9 units
This course is an introduction to late-imperial "Chinese" history and society with a focus on the Qing dynasty (1644-1912). We begin by examining the Qing not just as the last of China's imperial dynasties but also as an early-modern, multi-ethnic empire that included Mongolia, Tibet, and Xinjiang. In fact, China's "last emperors" were actually Manchus from northeast Asia. Secondly we investigate the social, economic, intellectual and demographic developments that transformed late-imperial China prior to the coming of the West. Thirdly, we examine Qing responses to a string of nineteenth-century disruptions, including but not limited to western imperialism, that threatened to not only end the dynasty but also challenged the very tenants of Chinese civilization. Lastly, we will look at the fall of China's imperial system, the end of empire, and the post-imperial struggle to reformulate the state and re-imagine society for the twentieth century.

79-262 Modern China: From the Birth of Mao ... to Now
Intermittent: 9 units
This course is an introduction to major themes in twentieth-century Chinese history, including the transition from empire to nation, revolution, social change and modernization, western and Japanese imperialism, the rise of the party-state, Chinese socialism, economic liberalization and the so-called "Chinese Dream." The first half of the class is devoted to the period between the fall of the imperial system and the founding of the People's Republic of China (1911-1949). If the victory of the Chinese Communist Party and development of the socialist state are to be considered in historical context, it is necessary to first understand the political, cultural, economic and intellectual currents that immediately preceded them. During the second half of the course, we will examine the Maoist period (1949-1976). We will investigate the Chinese Communist Party as both a state-building institution and an engine of social transformation, and consider the tensions these dual roles produced. Finally, we will look at the Reform Period (1978-present), and reflect on a newly robust China's attempts to come to terms with its own recent past and what the consequences might be for both China and the world.

79-263 Mao and the Chinese Cultural Revolution
Intermittent: 9 units
This course is an in-depth examination of China's "Great Proletarian Cultural Revolution" (1966-1976), one of the most impactful and bewildering events of the twentieth century. It started when Mao Zedong announced that enemies had infiltrated the Communist Party that he led. Soon students were attacking their teachers, teenagers in army uniforms were raiding homes and destroying remnants of "feudal" and "bourgeois" culture, and armed fighting had erupted among factions of ordinary Chinese people. Why? What were the political and social dynamics of Maoist China that propelled it along this violent trajectory? What was everyday life like during the Cultural Revolution, an event that could be both terrifying and empowering for those that lived through it? What were the social, political and cultural consequences? How has the Cultural Revolution been judged in China and the west, and are their other possible interpretations? This class will explore these questions from a variety of perspectives and sources, including documents, literature, memoir, film, academic writings, visual arts and performing arts.

79-264 Tibet and China: History and Propaganda
Intermittent: 6 units
This course is an introduction to the "Tibet Question," the dispute over whether Tibet should be part of China, an independent nation-state, or, as the current Dalai Lama now advocates, something in between. "History" often serves as the battleground on which competing visions of the nation are fought - who should be included and excluded, where "natural" boundaries begin and end. This almost always requires a process of simplification in which inconvenient details are forgotten or repurposed in the service of national agendas. The "Tibet Question" is a telling example. In this class, we investigate the historical relationship between "China" and "Tibet" from the 13th century through the present, and note the ways advocates on both sides of the "Tibet Question" have constructed historical narratives (propaganda) in support of their political positions. We will also discuss the prospects for a political solution and consider the lessons the "Tibet Question" may hold for understanding other outstanding "historical" disputes.

79-265 Russian History: From the First to the Last Tsar
Intermittent: 9 units
This course covers a broad sweep of Russian history beginning with the first settlements of tribal nomads in the ninth century and ending with the fall of the 300-year-old Romanov dynasty in 1917. Our course profiles how the Russian state was formed and how its territory expanded to become a mighty empire. Over the centuries, we make the acquaintance of Mongol marauders, greedy princes, and peasant rebels, as well as Ivan the Terrible, Peter the Great, and the long succession of reformers and reactionaries who occupied the Russian throne. We explore terrorism, general strikes, and development of the revolutionary movement that ultimately brought down the Tsar in 1917.

79-266 Russian History and Revolutionary Socialism
Intermittent: 9 units
This course covers an epic set of events in Russian history from the emancipation of the serfs in 1861 to the death of Stalin in 1953. Spanning almost a century of upheaval and transformation, it examines what happened when workers and peasants tried to build a new society built on social justice and economic equality. Learn about Lenin, Trotsky, Stalin, and other revolutionary thinkers and dreamers. The course surveys the revolutions in 1917, the Civil War and the Red victory, the ruthless power struggles of the 1920s, the triumph of Stalin, the costly industrialization and collectivization drives, the "Great Terror," and the battle against fascism in World War II. It ends with the death of Stalin, and the beginning of a new era of reform.

79-267 The Soviet Union in World War II: Military, Political, and Social History
Intermittent: 9 units
On June 22, 1941, Hitler invaded the Soviet Union. German troops quickly reached the hills above Moscow, surrounded Leningrad in the longest running siege in modern history, devastated the country's economy, and slaughtered millions of Soviet civilians. Over 26 million Soviet citizens died in the war. Eventually, the Red Army came back from defeat to free the occupied territories and drive Hitler's army back to Berlin. Using history, films, poetry, veterans' accounts, documentaries, and journalism, this course surveys the great military battles as well as life on the home front. It highlights the rise of fascism, the Stalinist purges of the Red Army, and the Nazi massacres of Soviet Jews, peasants, and partisans. Occasional evening film screenings required.

79-268 World War I: The Twentieth Century's First Catastrophe
Intermittent: 9 units
This course offers a comprehensive retrospective of the First World War (1914-1918), focusing primarily on the American experience. The course will cover the military, political, social, and business history of the war. Guiding questions will be: Why did the US enter the war? How did the country adjust its economic output to rapidly field an Army of nearly five million? How did the war impact the country's immigrant and African-American communities? What role did women play in the war effort? What was the war's legacy on American culture and politics? Students will read approximately five secondary sources over the course of the semester, and engage with primary sources including songs and records, soldiers' and welfare workers' letters and diaries, and government and welfare organizations' documents. Students will complete three 7-8 page essays and a longer 10 page final essay.

79-269 Russian History: From Socialism to Capitalism
Intermittent: 9 units
Beginning with Stalin's death in 1953, this course will focus the efforts of a new group of Soviet leaders to eliminate the repression of the Stalinist period and to create a more democratic socialism. It will examine the reforms of Khrushchev and the reaction against them, the long period of Brezhnev's rule, and the hopeful plans of Gorbachev. Finally, it will survey Gorbachev's loss of control, the collapse of socialism and the Soviet Union, and the growth of "wild west" or "gangster" capitalism. We will look at the rise of the oligarchs and the impact of the capitalist transition on ordinary people. The course provides essential background for anyone interested in understanding Russia's place in the world today and its relationship with the West.

79-270 Anti-Semitism Then and Now: Perspectives from the Middle Ages to the Present
Intermittent: 6 units
This course will examine the history of anti-Jewish hatred and violence from the Middle Ages through the Holocaust. The course will focus on representative case studies, texts, and films. These will include pre-modern incidents of "fake news" such as the medieval rumor of "blood libel" that unleashed massacres and mass expulsions of Jews from countless communities. In examining the rise of modern anti-Semitism we shall focus on debates over Jewish assimilation and citizenship and consider the popular impact of the print media's dissemination of conspiracy theories of Jewish world domination, including the infamous forgery "The Protocols of the Elders of Zion." We will also examine cases of mass anti-Jewish violence, known as pogroms, in Eastern Europe and Russia, and the genocidal onslaught against European Jewry by the National Socialist regime. Finally, we will discuss the resurgence of anti-Semitism in contemporary Europe.

79-275 Introduction to Global Studies
Spring: 9 units
We live in an increasingly interconnected world, one in which our everyday actions have repercussions across vast distances. To understand this ever-denser web of connections, we must think beyond simplistic accounts of globalization as a uniformly positive, negative, or homogenizing process. Economic crisis, impoverishment, rising inequality, environmental degradation, pandemic disease, and irredentist movements are just as much a part of the story as are technological innovation, digital communication, global supply chains, cultural exchange, the promotion of human rights, and the rise of cosmopolitan values. This course aims to equip you with a conceptual toolkit for thinking critically and holistically about the many dimensions of globalization. By examining how globalization connects and shapes the everyday lives of people around the world, including our own, we will establish a foundation both for your advanced coursework in Global Studies and for your lifelong education as a globally aware professional and citizen.

79-276 Beyond the Border
Intermittent: 6 units
In this course we will consider the historical emergence and transformation of the U.S.-Mexico border, as much as an idea as a physical boundary. Our explorations will be far-ranging: from the initial encounters of Christopher Columbus and Hernán Cortés with indigenous populations, to social, cultural and political dynamics of the borderlands in subsequent centuries; from the experiences and practices of cross border migrants, to contemporary immigration debates and policies surrounding migration, border control and walling, and the deportation of unauthorized migrants.

79-277 From Venice to Chicago: How "The Ghetto" Came to America
Intermittent: 6 units
This course will explore the genealogy of the term "ghetto". For most Americans, "ghetto" probably makes them think of poor urban neighborhoods, or of Jews living under Nazi oppression. Most do not know that the first ghetto was established 500 years ago, to keep Jews separate from Catholics. After quickly reviewing how ghettos spread throughout early modern Europe, the course will shift its focus to the Americas. We will examine when and how the term "ghetto" arrived in the United States, and how the use and application of the term changed before the 1930s. For the majority of the course we will study how "ghetto" became associated with black urban neighborhoods, and what role local, state, and federal governments played in forming postwar American ghettos. By the end of the course students should better understand the origins of current urban policy and will be prepared to critique and make arguments about how urban policy is often used as a political tool.

79-278 How (NOT) to Change the World
Intermittent: 9 units
Everyone, it seems, wants to "change the world." Aspiring to enact positive change is what motivates me as a professor and, I suspect, what has drawn many of you to pursue higher education. But what form do our noble aspirations take in practice? What assumptions do we bring with us when we set out to change the world and with what (unintended) consequences? How do others go about pursuing change and how might we engage with their efforts? In this course, we will critically examine a diverse set of attempts to bring about change, taking time to interrogate the cultural values and social structures that shape them. These will include some of our own engagements (e.g., campus activism, volunteering abroad), those of nearby communities (e.g., regional environmental-justice activism), and some that may be more distant from our everyday lives (e.g., Indigenous resurgence). Applying concepts from anthropology and critical social theory, we will consider examples from around the world while engaging with diverse perspectives, including those of scholars, practitioners, and activists.

79-279 Comparative Study of Nationalism Case Studies: USA, Arabia, South Africa
Intermittent: 9 units
This course is offered only at Carnegie Mellon's campus in Qatar. This course, dealing with a significant historical question of the past century, will enable students to develop a deeper understanding of the origins of many contemporary states as well as problems in former colonies. Participants will work individually or in teams on research papers pertaining to their chosen countries.

79-280 Coffee and Capitalism
Intermittent: 9 units
[Note: students who have taken the mini course, 79-280, Brewing Revolution? Coffee and Social Change from Adam Smith to Starbucks, may not enroll.] What role has coffee played in connecting people and places to capitalist markets and consumer cultures? What are the economic, social, and environmental consequences of these connections? How did espresso change from an "ethnic drink" to something served at McDonalds? Why do college students (and professors!) hang out in coffee shops? This course will answer these questions and more by using coffee to learn about the history of capitalism, and capitalism to understand the history of coffee. We will follow the spread of coffee and capitalism across the globe, with excursions to places where people grow coffee (Ethiopia, Yemen, Indonesia, Brazil, and Costa Rica), and also where they drink coffee (Seattle, Tokyo, Seoul, New York, and Berlin). In the process, we will confront global problems linked to economic inequality, trade, gender relations, and environmental degradation. Course meetings will combine interactive lecture, group discussions, and mini-presentations. Assignments will include journal responses, ethnographic observations, and writing a short script that tells a story about coffee and capitalism.

79-281 Introduction to Religion
Intermittent: 9 units
Religion can be understood from the "outside," through the academic lenses of history, sociology, psychology, philosophy, etc., and from the "inside," listening to the experiences and reflections of those who practice various faiths. The course will examine major religious traditions from several perspectives, and begin to explore such topics as the relationship between religion and science, faith and reason, and religion in public life. This introduction is designed for students with a general interest in religion, as well as those contemplating a Religious Studies minor.

79-282 Europe and the World Since 1800
Intermittent: 9 units
This course will introduce students to topics of historical and contemporary relevance in European society and culture from the nineteenth-century to the present. The course will focus on issues of national and cultural identity with special attention to the situation of inhabitants who have been considered outsiders or "others." We shall examine Europe's place in shaping debates—both new and old—about topics such as: religious, ethnic, and national identity; immigration to and within Europe; Islamophobia; anti-Semitism, and marginalization of the Roma. Throughout the course we shall also consider the shifting meanings that have been assigned to the concept of Europe as well as how these meanings have been contested. In addition to class lectures, students will become familiar with these themes through the reading and discussion of historical and anthropological texts, current political and cultural debates, music and film.

79-283 Hungry World: Food and Famine in Global Perspective
Intermittent: 9 units
The science and technology of the Green Revolution in the second half of the 20th century were heralded as a miracle. Agricultural science promised seeds, peasants, companies, governments, scientists, economists, exporters, and planners would work together to support growing populations, especially in the post-colonial world. The human population on Earth reached 6 billion by the year 2000; 7.6 billion were estimated around 2017. The United Nations predicts 8.6 billion by 2030. Awareness of living in this unique period of human history brought new debates among scholars, practitioners, and planners thinking about the critical role of agriculture and development on Earth. How can we conceptualize, hope, and plan for best possible outcomes for a human population that depends on agriculture and development? How has the legacy of the Green Revolution encouraged (or betrayed) public enthusiasm for innovative fixes? This interdisciplinary course will use methods and case studies drawing on History, Historical Demography, Anthropology, Cultural Studies, Regional Studies, Geosciences and Agricultural Sciences, and International Economic Development. If students wish to pursue a particular thematic or regional interest, there will be room in this course to explore particular cases in depth.

79-286 Archaeology: Understanding the Ancient World
Intermittent: 6 units
This course will familiarize students with archaeology as a field, including the techniques and methods archaeologists use to test hypotheses using archaeological data. Secondary objectives are to provide students with a framework for understanding the many archaeological sites that are open to the public across the United States and around the world and to explore problems having to do with the method and practice of archaeological investigation.

79-287 The Mummy's Curse: Uses and Abuses of Archaeology
Intermittent: 6 units
Popular representations of ancient civilizations often present fantastical versions of the past. This course will examine popular topics such as cursed mummies, ancient aliens, lost cities, and other alternative archaeologies to understand how they intersect with academic understandings of archaeology and human history. Students will explore how archaeologists and others answer questions about the past, and how we can evaluate competing interpretations.

79-288 Bananas, Baseball, and Borders: Latin America and the United States
Intermittent: 9 units
This course will use readings, film/video, and popular music to examine the tumultuous and paradoxical relationship between Latin America and the United States from the early 1800s to the present, with an emphasis on Mexico, Central America, and the Caribbean during the Cold War era (1945-1989) and its aftermath (1989-2014). During the Cold War years, the United States intervened frequently in Latin America; following the Cold War, a new geopolitics emerged shaped by trade policies, immigration, and illicit drug trades. We will study relationships between U.S. and Latin American governments ("state-state" relations), but we will also consider many other kinds of people and institutions including artists, athletes, businessmen, coffee farmers, consumers, corporations, Hollywood studios, journalists, migrant workers, musicians, rebels, scientists, and tourists. Evaluation will be based on class discussions, quizzes, mini-presentations, and written analysis of historical documents.

79-289 Animal Planet: An Environmental History of People and Animals
Intermittent: 9 units
Why do modern societies go to great lengths to protect some animals and slaughter others? How do people use animals to demarcate boundaries among themselves and between "humans" and "nature?" What are the environmental ramifications of domestication? What role do animals play in visual culture? These are some of the questions that we will seek to answer as we explore the role of human—animal relationships in making the modern world (ca. 1400-present). We will pay particular attention to visual representations of animals across time and cultures. Evaluation will be based on active participation in class discussions, submission of weekly field notes, and a final assignment focused on visual representations of people and animals.

79-290 The Slave Passage: From West Africa to the Americas
Intermittent: 6 units
"The Slave Passage" begins among flourishing, technologically advanced, and globally connected regions of Western Africa before the advent of the trans-Atlantic slave trade. It tells the painful story of African captives during the Middle Passage, piecing together the historical record to recognize their suffering aboard the slaving vessels and their multiple strategies of resistance. Students will study slave narratives, slave ship logs, and autobiographies of former enslaved people, as well as analyze films and theater performances depicting the Middle Passage and New World enslavement.

79-291 Globalization in East African History
Intermittent: 6 units
Most Americans would identify slavery and colonialism when thinking of Africa's relationship to the rest of the world. While these two institutions have been critically important in shaping Africa's present condition and recent history, they only constitute a fraction of Africa's past and its interaction with the wider world. This course traces globalization to ancient times and seeks to understand it from an African perspective.

79-293 Inward Odyssey
Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. Inward Odyssey will explore world history by examining it through the outward-looking eyes of travel writers, on the assumption that travelogues, though supposedly written about the "other," in fact provide crucial insights about the mindset of the culture that produced them, and often serve as a vehicle for cultural self-exploration or even self-criticism. In terms of content, this course is intended to overlap with World History, Islam and the European World, and US-Arab Encounters. However, this course is intended to be a skills course, designed not to teach students about specific historical periods, but rather to give students the tools they need to conduct their own critical explorations into the historical past.

79-294 Islam on the Main Street in the West since the 18th Century
Intermittent: 9 units
This course is offered only at Carnegie Mellon in Qatar. This introductory course to the humanities and social sciences through the prism of religion and faith, aims at: 1. analyzing the interaction between these central disciplines and at appreciating the significance of Western and Islamic humanism and applying it to the present context of cultural globalism, confrontation and dialogue; 2. becoming familiar with some important literary texts of the modern era; 3. learning how to articulate one's thoughts in a cogent manner. The discussion will stress how religion, a powerful instrument of socialization may, under some circumstances, foster intolerance and inequality or openmindedness and tolerance. Understanding this process may lead to a new appreciation of classical Western writings.

79-295 Archaeology of Technology
Intermittent: 6 units
Archaeology of Technology is a new course that surveys the archaeology of invention and the "immaterial". We live in an increasingly immaterial world, in which many of the artifacts we value are digital, and our relationships are built beyond the confines of face-to-face interactions. This course will explore the relationship between people and the artifacts they create by addressing one big question of equal concern to innovators, archaeologists, and historians alike: Why and how do some inventions spread like wildfire and dramatically transform society?

79-296 Religion in American Politics
Intermittent: 6 units
"Separation of church and state" is an expression widely used but poorly understood. Thomas Jefferson's phrase, which does not actually appear in the Constitution, reminds us that religious institutions are kept separate from government in America, even though religious commitments and motivations have always played an important part in American politics. This course will provide an historical perspective on the role of religion in public life from the late 18th century to the present, including religion's influence on political parties and public policies, and the boundaries set by the Constitution on such activity.

79-298 Mobile Phones & Social Media in Development & Human Rights: A Critical Appraisal
Intermittent: 6 units
This course will examine the ways that social media and the ubiquity of mobile phones with good cameras and Internet access are changing how information about development and human rights is gathered, analyzed, and disseminated. We will ask: What are the new possibilities opened up by these technologies? What are the potential pitfalls—e.g., privacy concerns, risks to sources, or the false confidence that we are now able to know everything about what is happening in the world? What are the biggest technical, cultural, and political challenges in this domain? Who is responding to these challenges and what are they doing? And perhaps most importantly, to what extent can advances in technology ameliorate problems that are fundamentally political in nature?

79-299 From Newton to the Nuclear Bomb: History of Science, 1750-1950
Intermittent: 9 units
This course provides an introduction to the history of modern science in Europe and North America, from the Enlightenment to the mid-twentieth century. Our goal is to understand scientific theories and practices on their own terms and as products of their own contexts, rather than as a progression of developments moving inevitably toward the present. The course seeks to explore both how and why science has become the dominant way of knowing about the natural world, as well as how scientific activity intersects with the history of religion, war, commerce, and the state. Most classes will involve active discussion of texts written by scientists, including Darwin, Einstein, McClintock, Laplace, Joule, Lovelace, and Paley.

79-300 Guns in American History: Culture, Violence, and Politics
Intermittent: 9 units
This course will describe and analyze aspects of the development of law and public policy related to guns in the United States from the colonial era to the present. Students will be expected to synthesize perspectives from social history, ethnography, public health, criminology, policy analysis, and legal scholarship. They will also engage the critical examination of popular culture and media representations of gun cultures and gun violence. Particular emphasis will be placed on changing views about the authority of the government to intervene in the production and ownership of guns, as well as the best way to balance individual and collective interests in a pluralistic society. Assignments may include reading quizzes, in-class debates, policy position papers, and film/documentary reviews.

79-301 History of Surveillance: From the Plantation to Data Capitalism
Intermittent: 6 units
Our awareness of surveillance has been dramatically heightened over the past few years. From Edward Snowden's revelations about the U.S. National Security Agency's data collection infrastructure to the extent to which companies like Facebook and Google monetize our personal information, surveillance has become one of the most controversial political issues of our time. In this course, we will place these developments in context, examining the long history of surveillance in the United States. We will begin with the 18th-century plantation "overseer," who was charged with ensuring the productivity and obedience of slaves under his watch. We will then move on to explore the emergence of commercial surveillance in the 19th century, which sought to gather intelligence on the credit worthiness and moral worthiness of businessmen in a rapidly growing, and increasingly impersonal, economy. Next, we will examine the shifting focus of surveillance from the late 19th century to the present, as it expanded from immigrants and criminals to include industrial workers, political radicals, civil rights activists (most notably Martin Luther King), the poor, and ultimately, all of us. Today, anyone who has a cell phone in their pocket, surfs the Internet, keeps up with friends through social networks, makes purchases with a credit card, uses membership cards, travels, or even just spends time in public spaces ought to assume that their movements, purchasing habits, communication metadata, social connections, and Internet browsing histories are being recorded, stored and analyzed for a variety of governmental and commercial purposes. In the final week of the course, we will debate the implications of these incursions into our public and private lives.

79-302 Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems
Intermittent: 6 units
[Note: students who have already taken this course under its former title 79-302, Drone Warfare and Killer Robots: Ethics, Law, Politics, and Strategy, may not enroll.] Unmanned aerial vehicles (drones) have become a central feature of the United States' global counterterrorism strategy since September 11, 2001, and autonomous weapons systems (often called "killer robots" by critics) are increasingly being integrated into military arsenals around the world. According to proponents, drones and autonomous weapons systems are much safer than manned systems, so accurate that they can be used to target individuals and detect threats in real time, and efficient and inexpensive enough to be used for long-term surveillance and protection missions around the globe. According to critics, the use of such systems is problematic because of the obfuscation of historically accepted chains of accountability and responsibility, and the difficulty of translating complex ethical decision making processes into computer code. This course will evaluate these issues through the lenses of law, politics, morality, history, and military strategy.

79-303 Pittsburgh and the Transformation of Modern Urban America
Intermittent: 6 units
This course will focus on the transformations, both positive and negative, of Pittsburgh and the Pittsburgh region in the period from 1945 through the present. It will explore the following themes: the redevelopment of the city in the Pittsburgh Renaissance; urban renewal and its consequences; the collapse of the steel industry and its impacts; the development of an Eds/Meds service economy; air, land and water environmental issues; and the city's changing demography.

79-304 African Americans in Pittsburgh
Intermittent: 6 units
This course will examine the development of Pittsburgh's African American community from the Great Depression and World War II through the era of deindustrialization during the late 20th and early 21st centuries. The course will emphasize not only the ways that a variety of external socioeconomic, cultural, and political forces shaped the history of black people in western Pennsylvania, but also the diverse strategies that African Americans devised to give meaning to their own lives and how these changed over time. Students will read both primary and secondary accounts of Pittsburgh's African American history; write short analytical papers on specific topics or themes; and engage in regular classroom discussions of assigned readings.

79-305 Moneyball Nation: Data in American Life
Intermittent: 9 units
From conducting clinical trials and evaluating prisoners' parole cases to drafting professional ballplayers, we increasingly make decisions using mathematical concepts and models. This course surveys the development of—and resistance to—such tools by grounding them in the recent cultural history of the United States. Focusing on baseball, medicine, and the law, we'll explore how and why Americans have come to believe mathematical and computational methods can solve complicated problems, even in seemingly unrelated moral, political, and social domains. The course encourages students to think critically about the wider implications of these transformations by situating their development historically.

79-306 Fact into Film: Translating History into Cinema
Intermittent: 9 units
From the very beginning, film has provided a window into the past. But how useful are the images we see through that window? For every person who reads a work of history, thousands will see a film on the same subject. But who will learn more? Can written history and filmed history perform the same tasks? Should we expect them to do so? How are these two historical forms related? How can they complement each other? This course will draw examples from across the history of film in order to examine how the medium of film impacts our understanding of facts and events, the ways that film transfers those facts to the screen, and how that process affects the creation of historical discourse. Films may include such titles as The Fall of the Roman Empire, The Gunfight at the O.K. Corral, Saving Private Ryan, World Trade Center, Enemy at the Gates, Lagaan and Hero.

79-307 Religion and Politics in the Middle East
Intermittent: 9 units
This course looks at the historic relationship among Islam, Judaism and Christianity and what they have to say about the nature of government, the state's treatment of religious minorities, and relations among states in the Middle East. We will consider the impact of religion on domestic and foreign policy in selected Middle Eastern countries and communities, the role of religion in fueling conflicts, the phenomenon of religious fundamentalism, the challenge and opportunity this presents to the United States, and the potential for religion to help advance Middle East peace. We will take advantage of the unprecedented upheavals roiling the Middle East since 2011 and use contemporary social media to contact people on the ground in the states we are studying to produce "updates" as to where religion and politics seem to be intersecting at this time.

79-308 Crime and Justice in American Film
Intermittent: 9 units
Films dealing with criminal activities and criminal justice have always been popular at the box office. From the gangsters of the Thirties and the film noir of the Fifties to the more recent vigilante avenger films of Liam Neeson, the film industry has profited from films about crime and its consequences. How those subjects are portrayed, however, tells us a great deal about larger trends in American history and society. Every imaginable type of criminal activity has been depicted on screen, as have the legal ramifications of those acts. But these films raise profound questions. What is the nature of crime? What makes a criminal? Are there circumstances in which crime is justified? How do socioeconomic conditions affect the consequences? How fair and impartial is our justice system? Perhaps most importantly, how do depictions of crime and justice in popular media influence our answers to these questions? This class will utilize a variety of films to discuss the ways in which popular media portrays the sources of crime, the nature of criminals, the court and prison systems, and particular kinds of criminal acts. Films to be screened may include such titles as The Ox-Bow Incident, Out of the Past, 12 Angry Men, Young Mr. Lincoln, Brute Force, The Equalizer, Jack Reacher and Minority Report. By thoroughly discussing these films and related readings we will be able to trace the various changes in attitude towards crime and justice in America over the last century.

79-309 The Chinese Revolution Through Film (1949-2000)
Intermittent: 9 units
This course is about both film and history. It is not a detailed history of film, but rather introduces some key issues of modern Chinese history and examines how that history is treated in film. Most of the films are made in China (including Taiwan and Hong Kong) but some are produced in the west. Topics that may be explored include the rise of the Communist Party, life in Maoist China, the Cultural Revolution, the Cold War/anti-imperialism, depictions of China's minority peoples, and the Reform-era under Mao's successors. Along with feature movies, we may view documentaries, propaganda films, TV shows and even music videos. In addition to providing a general history of the period, accompanying readings and assignments explore the social context and methodology of the films while developing critical skills in writing, analysis, and historical imagination.

79-310 Modern U. S. Business History: 1870 to the Present
Intermittent: 9 units
This course explores the development of American business within its economic, political, and social context from the late nineteenth century to the present. Through the lens of "history of capitalism," readings and discussions will explore the interconnections of State and Market in the twentieth century United States that shaped how, why, and where business transactions occurred. Particular attention will be paid to the institutional, social, technological, environmental, labor, and cultural context in which American commerce developed, from the rise of the modern corporation in the late nineteenth century to the emergence of a true information economy in the twenty-first. Students will encounter primary sources, scholarly secondary readings, business case studies, and cultural artifacts as they explore how business functioned and changed over time in an American context.

79-311 PaleoKitchen: Food and Cooking in the Ancient World
Intermittent: 6 units
From home cooking to haute cuisine, people are passionate about food. But what did people eat in the ancient world? This class will center around the origins of the human diet, including human dietary adaptation to diverse ecological and technological situations; social, cultural, behavioral, and ecological factors which influenced diet in ancient societies; and the origins of cuisines around the world.

79-313 "Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration
Intermittent: 6 units
What is home? What does it mean to belong, or not belong? What does it mean to be mobile? Is mobility a privilege or a curse? How do experiences of migration, exile, and displacement shift one's understanding of home? This course will examine the modern patterns of migration, mobility, and displacement, with a particular focus on the US and Europe in the 20th and 21st centuries. We will engage with anthropological and historical analyses of global migrations of people, capital, and ideas; social inequalities; and new forms of political control (surveillance, "profiling," militarization of borders, and race-related forms of rejection and violence). The course will rely on seminar discussions and interactive lectures¿a combination of lecture and discussion, which will productively challenge the students to engage with the material in a critical manner and will help them contextualize and enrich the knowledge they gain from the course readings.

79-314 The Politics and Culture of Memory
Intermittent: 9 units
What is the relationship between an individual person and collective memories? How do societies "remember"? This course proposes an interdisciplinary approach to the relationship between memory and history. It explores various ways in which societies have mobilized their remembrances of the past for political and economic ends in the present; how and whose memory began to matter in a global 20th century; and how individual testimonies have highlighted the role of body, experience, trauma, and nostalgia for writing new, more inclusive and heterogenous histories. We will analyze how the politics of memory intermesh at a local and global scale, via a set of case studies that focus on: the use and erasure of the past in post-1945 Western and Central Europe; political violence, civil war, and reconciliation in post-1990 Guatemala; and the role of remembrance and testimony for claims of moral retribution in the aftermaths of colonialism (the Mau Mau in Kenya). This class will follow the format of a seminar. The professor will give short lectures each week in order to introduce the readings and place them within larger debates, but the course will mainly be discussion-oriented.

79-315 Thirsty Planet: The Politics of Water in Global Perspective
Intermittent: 9 units
Water is necessary for all forms of life on Earth. The purpose of this course is to introduce students to social and political aspects of water, using in-depth case studies that draw on a variety of perspectives. Examples of regional water projects we'll study include traditional tank irrigation in South India; international negotiations along the Nile River; and the U.S. Government in negotiation with native activists and fisheries on the Columbia River. In addition to regional variety, readings will explore a variety of themes, for example, water and gender; water and armed conflict; and water and private companies versus public management. By the end of this course, students should be able to articulate their own answers to these questions: How have global organizations and participants characterized, enacted, and addressed problems of water supply and delivery for those who need it most? How do particular regions reflect global trends in water resource development, and how might these diverge from global trends? How have social and environmental studies in the literature of development come to understand the problem of water? One set of readings is assigned each week. Students should be prepared to discuss each week's readings in a thoughtful way during class meeting time.

79-316 Photography, the First 100 Years, 1839-1939
Intermittent: 9 units
Photography was announced to the world almost simultaneously in 1839, first in France and then a few months later in England. Accurate "likenesses" of people were available to the masses, and soon reproducible images of faraway places were intriguing to all. This course will explore the earliest image-makers Daguerre and Fox Talbot, the Civil War photographs organized by Mathew Brady, the introduction in 1888 of the Kodak by George Eastman, the critically important social documentary photography of Jacob Riis and his successor, Lewis Hine, the Photo-Secession of Alfred Stieglitz, the Harlem Renaissance of James VanDerZee, the precisionist f64 photographers Ansel Adams, Imogen Cunningham, and Edward Weston, and other important photographers who came before World War II. The class will be introduced to 19th century processes, such as the daguerreotype, tintype, and ambrotype, as well as albumen prints, cyanotypes, and more.

79-317 Art, Anthropology, and Empire
Intermittent: 9 units
This seminar will explore the anthropology and history of aesthetic objects, as they travel from places considered "primitive" or "exotic," to others deemed "civilized" or "Western." First, we will consider twentieth-century anthropological attempts to develop ways of appreciating and understanding objects from other cultures, and in the process to reconsider the meaning of such terms as "art" and "aesthetics." Then we will discuss several topics in the history of empire and the "exotic" arts, including: the conquest, colonization and appropriation of indigenous objects; the politics of display and the rise of museums and world fairs; the processes by which locally-produced art objects are transformed into commodities traded in international art markets; the effects of "exotic" art on such aesthetic movements as surrealism, etc.; and the appropriation of indigenous aesthetic styles by "Western" artists. Finally, we will consider attempts by formerly colonized populations to reclaim objects from museums, and to organize new museums, aesthetic styles, and forms of artistic production that challenge imperialism's persistent legacies.

79-318 Sustainable Social Change: History and Practice
Intermittent: 9 units
If you wanted to change the world, who would you ask for guidance? Mahatma Gandhi? Rachel Carson? Nelson Mandela? In this interdisciplinary course, we will examine the history of efforts to create sustainable social change. Through a series of targeted case studies, we will examine the successes and failures of notable leaders, past and present, who strove to address social problems nonviolently and to create lasting improvements in fields such as education, healthcare, and human rights. In keeping with the example of the people we will be studying, we will bring our questions and our findings out of the classroom through a variety of creative, student-driven experiments in sustainable social change.

79-319 India Through Film
Intermittent: 6 units
Bollywood films attract hundreds of millions of viewers, not just in India but throughout the world. The name "Bollywood" makes it seem that the Indian film industry is a junior partner, merely an echo of Hollywood. But more films are made in Mumbai every year than in Los Angeles. And Mumbai is only one of many film hubs in India. The rich diversity of Indian cinema speaks to the equally rich history of India itself. This course uses Indian movies to examine several key themes in India's history. We will focus on the twentieth century and on questions of democracy, diversity, and development. This course includes a mandatory film screening on Wednesday evenings beginning at 6:30pm.

79-320 Women, Politics, and Protest
Intermittent: 9 units
This course examines the history of women's rights agitation in the United States from the early nineteenth-century to the present. It investigates both well-known struggles for women's equality—including the battles for women's voting rights, an Equal Rights Amendment, and access to birth control—and also explores the history of lesser-known struggles for economic and racial justice. Because women often differed about what the most important issues facing their sex were, this course explores not only the issues that have united women, but also those that have divided them¿keeping intersectionality and women's diversity at the center of the course.

79-322 Stalin and the Great Terror
Intermittent: 9 units
Joseph Stalin has been vilified and praised, damned and worshipped. He left behind a mixed and complex legacy. He created an industrialized modern economy in the Soviet Union and won a great and painful victory over the Nazis. At the same time, he built a police state, sent millions to labor camps, and destroyed the possibilities for socialist democracy. When he died, thousands of Soviet citizens wept at his funeral. This course will combine elements of biography and social history to examine Stalin, the man, and Stalinism, the phenomenon. Using history and film, we will explore one of the most complicated and influential dictatorships of the 20th century.

79-323 Family, Gender, and Sexuality in European History, 500-1800
Intermittent: 9 units
The medieval and early modern periods witnessed a transformation in the cultural and social understandings of gender. During this period, the mutable sexual categories of the pre-modern world evolved into the definitions of masculinity and femininity recognizable today. This course examines these changes in the understanding of gender and the family in Europe in the medieval and early modern periods, drawing upon readings in gender history, marriage and the family, and the history of sexuality. We will explore the ideal of Christian marriage and family and examine how the "ideal" compared to the reality on such issues as marriage practices, family, gender roles, and sexuality. We will also explore the fashioning of female and masculine gender norms and the construction of the male and female sense of self over time. In the process, we will examine the larger historiographical issue of the use of gender as a tool of historical analysis.

79-324 #MeToo: Naming and Resisting Gender Violence
Intermittent: 6 units
#metoo represents a sea change in society's response to gender-based violence. But what is sexual harassment, exactly? When does something cross over into being inappropriate? Would you always know violence when you see it? Chances are, you wouldn't. Focusing on the U.S., this class dives into where we are, and how we got here. It addresses gender-based violence as a public health & human rights issue. It will delineate the legal and social definitions of gender violence, explore how those definitions function both positively and negatively, and examine the long history of protest that has culminated in this moment. Come join the conversation!

79-325 U.S. Gay and Lesbian History
Intermittent: 6 units
US Gay and Lesbian History offers an overview of the changing context and circumstances of sexual minorities in American culture. From early constructions of moral opprobrium, criminal deviance or medical pathology, the LGBT community emerged in the twentieth and twenty-first century as a political constituency and a vital part of contemporary society. Students should be aware that this course will necessarily address issues of intimate relations and sexuality as well as broader historical issues.

79-326 German History through Film
Intermittent: 9 units
This course offers both a history of German cinema and a survey of 20th-century Germany as seen through German films. As film history, the course introduces students to movies spanning the silent era, Nazi films, the West German New Wave, socialist cinema, and post-unification movies. We will consider stylistic and technical trends as well as dramatic content. As a course in German history, the course sets major movies from each era against a backdrop of political, social, and cultural developments. We will also analyze the portrayal of World War II and the Third Reich in films made after 1945. We will view approximately 18 films, mostly in class but several outside of class. Readings will include works on the history of German film and a textbook on 20th-century German history. Writing will consist of three 5-page essays and one 8-10 page paper.

79-327 Modern Girlhood: Historical and Contemporary Perspectives
Intermittent: 6 units
Through primary documents, film and popular media, material culture, and interdisciplinary scholarship from the emerging field of girl(hood) studies, this course will examine historical conceptions of girlhood and accounts of girls' lives, to contemporary concerns and representations. In seeking to understand the meaning and experience of "modern" girlhood, our focus will primarily be on the 20th and 21st century American experiences, though at times we may look to perspectives from earlier periods and elsewhere in the world. Because there is no single experience or representation of girlhood, we will pay attention to the ways that girlhood is lived and constructed differently across social, cultural, geographic, and chronological perspectives.

79-328 Photographers and Photography Since World War II
Intermittent: 9 units
Invented in 1839, photography was a form of visual expression that immediately attracted a large public following. Starting around 1900, photography was practiced with two dominant strands. One of these firmly believed in the power of photographs to provide a window on the world, and was led by Lewis Hine, whose documentary photographs for the National Child Labor Committee helped to ameliorate living and working conditions for thousands of immigrant children. The other strand adhered to the philosophy of Alfred Stieglitz who adamantly affirmed that photographs were first and foremost reflections of the soul and were art objects, equal to painting, drawing and sculpture. These two schools of thought guided photographers throughout the twentieth century. This course explores in depth the tremendous range of photographic expression since World War II and examines in particular the contributions of significant image-makers such as Helen Levitt, W. Eugene Smith, Robert Frank, Diane Arbus, Garry Winogrand, Charles "Teenie" Harris, Cindy Sherman, Carrie Mae Weems, Nan Goldin, James Nachtwey, and many others. Classes include a slide lecture, student presentation, and video segments that introduce a focused selection of images by major photographers in an attempt to understand their intentions, styles, and influences. As available, students will be expected to make one or more visits to photography exhibitions on view in Pittsburgh (locations to be announced at the first class.)

79-329 "High Crimes and Misdemeanors": The Constitution and Impeachment
Intermittent: 6 units
A few years ago, the word "impeachment" drew talk of President Bill Clinton, White House interns, and definitions of the word, "is". Since President Donald Trump's inauguration in early 2017, the prospect of impeachment charges has become a regular media concern. In this course, we will examine the basis for the option of impeachment - the Constitutional power of the legislature to remove the President or other federal officials from office for "treason, bribery, or other "high crimes and misdemeanors." While Presidents may be the most high-profile subjects of impeachment, we will also examine the other 17 federal officers that have been impeached in the past, as well as a number of state officials who have been impeached, including Louisiana Governor Huey Long in 1929 and Illinois Governor Rod Blagojevich in 2009.

79-330 Medicine and Society
Intermittent: 9 units
This course examines the history of American medicine, public health, medical research and education, disease patterns, and patients' experiences of illness from the colonial period to the present. Students read the voices of historical actors, including physicians, patients, policy makers, and researchers. In analyzing these voices, students will learn what was at stake as Americans confronted diseases and struggled to explain and cure them. Readings include a range of primary sources as well as fiction and non-fiction accounts of medicine and health in America.

79-331 Body Politics: Women and Health in America
Intermittent: 9 units
[Note: Students who have taken 79-178, Freshman Seminar: Body Politics: Women and Health in America, may not enroll.] This course takes a topical, intersectional approach to the history of U.S. women's health in the nineteenth and twentieth centuries. It is less about governmental politics, although we do some of that. Rather, it sees bodies as cultural texts through which power is built and contested. The course covers topics such as the history of anatomy, menstruation, reproductive rights, body image, mental health, sexuality, violence, childbirth, and menopause. We explore how science and American culture both have constructed these issues over time (some of it is super whacky!), while also examining women's organizing around them. This course is open to all students.

79-333 Sex, Gender & Anthropology
Intermittent: 9 units
This course introduces students to an anthropological perspective on the relationship between sex (biological) and gender (cultural). In order to understand the various debates we will examine the ideas of manhood, womanhood, third genders and sexuality in cross-cultural perspective. The focus will be primarily on non-western cultures and will examine the construction of status, sexuality, and gender roles within the broader context of ritual, symbolism, marriage, and kinship. Utilizing film, the popular media, and anthropological case studies, this course will provide students with ways to understand and question how and why we express ourselves as "men," "women," and "other."

79-334 Climate Change and Climate Justice: Global Perspectives
Intermittent: 6 units
There remains no credible doubt that human activities are a leading cause of climate change, but profound questions persist over what measures to take, whom to hold accountable, and how to help those affected. What does an effective and just response look like when those who are most responsible for climate change are also often the most protected from its consequences? Who gets to participate in international negotiations and whose cosmologies or values are recognized there? How do debates about climate change relate to those concerning social policy? In this mini-course, we will examine these questions through the lens of Climate Justice. Both a transnational movement and an analytical orientation, Climate Justice compels us to consider how climate change reflects (and exacerbates) systemic inequalities within and between societies. Our exploration will engage case studies and perspectives from different parts of the world, including climate-related health disparities in the US, Indigenous Peoples' calls for climate reparations, island nations facing displacement, and efforts by various parties to influence scientific and popular knowledge.

79-336 Oil & Water: Middle East Perspectives
Intermittent: 6 units
This course provides an introduction to the field of global environmental history, while using regional case studies from the geographic region of the Middle East. It highlights key issues in global history, seeking ways to examine Middle East history from a global historical perspective. Several themes in environmental history will receive special attention, including: agricultural systems; water resources; climate variability; the temporalities of natural resources; and narratives of 'development.' In addition, we will examine the historiography, or changing assumptions over time, of historians and other scholars who have studied the environmental resources of the Middle East.

79-338 History of Education in America
Intermittent: 9 units
Americans have long understood schools both as mechanisms for inculcating communal values and as instruments for social reform. Schools have been alternatively described as pillars of democratic society and as authoritarian institutions for managing deviance. Institutions of education - whether schools, colleges, or universities - figure prominently in discussions of inequality and discrimination, opportunity and meritocracy. This course provides an introductory historical survey of American educational ideas and institutions. From debates in the 17th and 18th centuries over the proper balance of religious and secular education to fierce battles today over the role of the federal government, citizens have been politically mobilized through their concerns about education. By understanding the complicated history of American educational ideas and institutions, this course prepares students to engage critically with ongoing debates about the curriculum, vouchers, charter schools, and national standards.

79-339 Juvenile Delinquency & Film: From Soul of Youth (1920) to West Side Story (1961)
Intermittent: 6 units
How have American films portrayed juvenile delinquency and the juvenile justice system? What does filmmakers' portrayal of juvenile delinquency tell us about American culture and society? Do films vividly capture or badly distort the "realities" of crime and the operations of the justice system? This course uses feature films (to be viewed in advance of class) from the 1920s to the early 1960s, as well as various sociological, psychological, and historical readings, to explore these issues. The course is run as a colloquium, with students playing central leadership roles in launching and guiding class discussions. The course will have a take-home midterm exam (essay), a final exam (essay), and a few short, written assignments linked to students' required oral presentations in class.

79-340 Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)
Intermittent: 6 units
How have American films portrayed juvenile crime, drug use, gang violence, and law enforcement responses (especially police and prisons) to juvenile crime and violence? How have American films portrayed individual juvenile delinquents, their families, and the communities in which they live? Do films vividly capture or distort the "realities" of juvenile crime and the operations of law enforcement? This course uses feature films from the late 20th and early 21st centuries, as well as social science and historical readings, to explore these issues. The course is run as a colloquium, with students playing central leadership roles in launching and guiding class discussions.

79-341 The Cold War in Documents and Film
Intermittent: 9 units
This course is based on use of historical documents and films to study problems that reshaped the world during and after the Cold War. We will examine how documentary and feature films depicted the most important events of the Cold War, such as the Korean War, the construction of the Berlin Wall, the Cuban missile crisis, and others. In addition to films, sources will include documents, lectures and readings.

79-342 Introduction to Science and Technology Studies
Intermittent: 9 units
This course provides an introduction to Science and Technology Studies, a vibrant interdisciplinary field that examines the ways that science and technology interact with contemporary politics, culture, and society. Using theories and methods from history, philosophy, anthropology, and sociology, we will examine topics including: the nature of scientific and technical knowledge; the formation of new fields of interdisciplinary expertise (e.g., atomic science, artificial intelligence, or genetic engineering); the emergence of risk societies; systems of classifications and categories and their impact on ideologies of race, sex, and gender; the possibility of objectivity; and the public understanding of science.

79-343 Education, Democracy, and Civil Rights
Intermittent: 9 units
What is the relationship between education and democracy? By examining a series of case studies at the intersection of education and the civil rights movement, this course will prepare students to approach contemporary educational debates as historically-informed critical thinkers. The controversy surrounding charter schools, vouchers, the common core, and the role of standardized testing cannot be understood outside the long history of debates regarding the relationship between education and democracy. Are schools meant to perpetuate the status quo? How did both traditional and more radical forms of education advance the struggle for civil rights? What role have students played in advancing civil rights and democracy? While exploring these questions, we will also partner with local high school students and teachers to bring our learning beyond the classroom.

79-344 Public History: Learning Outside the Classroom
Intermittent: 6 units
Museums and other non-academic institutions reach large audiences with an array of history offerings, including exhibitions, films, publications, performances, oral history, workshops, lectures, events, research, reenactments, lectures, social media, webinars, online, radio and television programming. These educational tools are calculated to engage diverse audiences. Museums and educational nonprofits are also actively collecting and preserving artifacts and archival materials. This course will focus on Pittsburgh history as students examine best practices in Public History. The class will study the inner workings of a large history museum's collection, exhibition, conservation and education programs. Students will participate in field trips and behind-the-scenes tours, virtual explorations, and "hands-on history" outside the classroom at the Heinz History Center and other Pittsburgh attractions. This course will especially interest students considering non-traditional careers in history, education, communications, and nonprofits. MAXIMUM ENROLLMENT IS 15. ALL CLASSES WILL BE HELD ONCE PER WEEK OFF CAMPUS, STARTING AT THE HEINZ HISTORY CENTER IN THE STRIP DISTRICT (1212 SMALLMAN STREET).

79-345 Roots of Rock & Roll
Intermittent: 9 units
This course is about open source, collaborative innovation and the impact of social and technological change on American music. We will spend the first 8 weeks on early "remix" music (slave songs, Anglo-Appalachian ballads, ragtime, and Depression era blues and country). After studying Bessie Smith, Woody Guthrie, Lead Belly, Hank Williams, and other early artists, we'll spend the last 7 weeks on revolutionaries like Chuck Berry, Bob Dylan, Jimi Hendrix, and Janis Joplin. The format is informal lecture and discussion. Assignments include reading two books plus some articles, weekly music listening, short papers, and a final project. NB: This course may be taken pass-fail (with submission of appropriate form).

79-346 American Political Humor
Intermittent: 9 units
This course takes a cultural approach to U.S. history since the Civil War, as seen by the nation's most astute and influential critics: its political humorists. Besides immortals like Mark Twain and contemporaries like Jon Stewart and Stephen Colbert, we will (re)discover the satirical yet hilarious voices of H.L. Mencken, Will Rogers, Lenny Bruce, Dick Gregory, Richard Pryor, Nora Ephron, Dave Chapelle, and others through essays, recordings and films. At its sharpest edges, humor addresses issues of class, gender and race in American life, and provokes alternative thinking about mass culture, consumerism, and conformity. Assignments include short analytical essays and a final paper.

79-348 Abraham Lincoln
Intermittent: 9 units
This course explores Lincoln's historical importance and his changing status as an American icon. We will not only learn about his life, we will address controversies about him (such as his attitudes and motives regarding slavery and racism). Readings will include a short biography, a book about his struggles with mental illness, a book about his friendship with Frederick Douglass, and Lincoln's own speeches and writings. His skills as a precise and succinct writer will be an ongoing focus; hence, assignments will emphasize the drafting, revising, and polishing of short essays, rather than the memorization of facts.

79-349 United States and the Holocaust
Intermittent: 6 units
This course will challenge you to explore profoundly disturbing historical material. We will examine aspects of history on both sides of the Atlantic with regard to Hitler, the Nazis and America's response in the 1930s and 1940s. This course will compel you to think not only about what happened and why, but also about the implications for us today as individuals and as Americans. Films, a meeting with a survivor or child of survivor as well as the inclusion of survivor accounts in the readings will serve to strengthen the learning impact.

79-350 Early Christianity
Intermittent: 9 units
This course examines the origins of Christianity in historical perspective. Using both Christian and non-Christian sources from the period, we will examine how and why Christianity assumed the form that it did by analyzing its background in the Jewish community of Palestine, its place in the classical world, and its relationship to other religious and philosophical traditions of the time. We will also examine historically how the earliest Christians understood the life and message of Jesus, the debates about belief and practice that arose among them, and the factors influencing the extraordinary spread of the movement in its earliest centuries. This course satisfies one of the elective requirements for the Religious Studies minor.

79-352 Christianity Divided: The Protestant and Catholic Reformations, 1450-1650
Intermittent: 9 units
At the dawn of the sixteenth century, most western Europeans shared a common religious identity as members of the Roman Catholic Church. Within less than two decades, this consensus began to crumble, and the very fabric of western culture was irrevocably altered. By 1550, Europe was splintered into various conflicting churches, confessions, sects, and factions, each with its own set of truths and its own plan for reforming the church and society at large. This period of rapid and unprecedented change in western history is commonly known as the Reformation. Though this term has traditionally referred to the birth of Protestantism, it also encompasses the simultaneous renewal and reform that occurred within Roman Catholicism. This course will survey the Reformations of the sixteenth century, both Protestant and Catholic, examining the causes of the Reformation, the dynamics of reform, and its significance for western society and culture. In the process, we will analyze such on-going problems as religious persecution and the accommodation of dissent, the relationship between religion and politics, and the interactions between ideology and political, social, and economic factors in the process of historical change.

79-354 Kids and Schools in the 20th Century
Intermittent: 6 units
This course examines the history of children's experiences in American K-12 schools, both public and private, at three critical moments in the 20th and early 21st centuries. We will first examine the emergence of Progressivism as a perceived antidote to the impacts of industrialization, urbanization, and the immigrant experience on children and youth in the early 1900s. We will then study the retreat from Progressive educational ideas in the wake of the Cold War and "Space Race" with the Soviet Union in the decades following World War II. Finally, we will analyze the impacts on American schoolchildren of the "Excellence" and "No Child Left Behind" movements that began around the turn of the 21st century and and continue today. To ground class discussions, we will use both secondary and primary historical sources, including policy and curricular documents, documentary film, and first-person accounts of both children and teachers in schools.

79-355 Fake News: "Truth" in the History of American Journalism
Intermittent: 6 units
Scandal, conspiracy, and partisan propaganda have been among the stuff of media ever since newspapers first appeared in America, and now they figure prominently in electronic media as well. The question "What is truth?" is not just a matter of philosophical speculation, but an essential issue at every level of American life, from individuals on social media to citizens, journalists, and politicians responsible for sustaining a democratic society. This course is literally "ripped from the headlines," examining contemporary conflicts over credibility in print and online, in the context of historical experience. My goal is to help you think in new ways about how to assess when news really is "fake" and when it's just "an inconvenient truth."

79-356 Neuroscience and the City
Intermittent: 9 units
How do we, as human beings, experience the urban environment? We explore the underlying psychological and neural basis of our perceptions as they create the experience of historical change.

79-359 Truth, Lies, and Propaganda: A Historical Inquiry
Intermittent: 9 units
For many commentators, the election of Donald Trump in November 2016 marks the beginning of the "post-truth" era, in which reality is no longer knowable, or even relevant. While this narrative certainly captures the unease that many Americans feel, it is historically inaccurate. There never was a time in the past when we could readily discern truth from falsehood without difficulty. The goal of this course is to examine the social history of truth. We will explore the concept of truth in philosophy and science; the evolution of methods for discovering facts about the world; the centrality of trust in knowledge production; and the innumerable ways that facts have been questioned, manipulated, discredited, purposefully ignored, and fabricated over the past several centuries. The course will include case studies from science, law, politics, war, art, journalism, and history.

79-363 The Rise of Modern Golf, 1860 to the Present
Intermittent: 6 units
Aristocratic pastime or the people's game? This course will examine the emergence of golf as both a professional and amateur sport and as a popular leisure activity between 1860 — when Prestwick Golf Club in Scotland hosted the first (British) Open — and the present day. Students will read and discuss historical, sociological, and literary texts, and view several documentary and feature films as well. The course will have a take-home midterm exam (essay), a final exam (essay), and a few short, written assignments linked to students' required oral presentations in class.

79-364 From Midwife to Obstetrician: The Transformation of Modern Childbirth
Intermittent: 6 units
At-home births, epidurals, C-sections: women's experiences with childbirth have varied widely over time. Many of these differing experiences stem from societal developments that first occurred in Europe during the seventeenth and eighteenth centuries. Focusing specifically on England and the United States, we will identify the factors (e.g., human agents, ideologies, etc.) that influenced major changes in the childbirth process and examine how these changes affected mothers and childbirth practitioners of the time. Additionally, we will consider what implications this historical study holds for interpreting contemporary debates surrounding women's health issues, including but not limited to childbirth. Throughout this course, we make liberal use of primary sources to develop arguments about the large-scale changes that occurred between 1600 and the present. Through assigned readings, class discussions, and diverse course assignments, students will develop an informed perspective on the transformation(s) of childbirth.

79-367 Disastrous Encounters
Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. Disastrous Encounters explores the complex interaction between human beings and their environment by examining incidents in which those disasters have proven destructive or fatal to humankind. By the end of the class students will be able to: Explain the scientific principles behind "natural" disasters, including cyclonic weather, global climate change, volcanoes, earthquakes, tsunamis, river flooding, famines, and diseases. Analyze to what extent a given disaster is in fact "natural" at all, but rather was either caused by or exacerbated by human actions. Draw connections between different types of disasters, recognizing that major disasters often produce predictable secondary disaster effects. Read documents critically, especially in terms of the author's agenda and the author's likely biases. Write strong analytical essays.

79-368 Un-natural Disasters: Societies and Environmental Hazards in Global Perspective
Intermittent: 6 units
In the wake of Hurricane Katrina, Neil Smith famously observed that "there is no such thing as a natural disaster." This course takes a cue from Smith by examining the social production of disasters in the past and present, from acute environmental events like typhoons and earthquakes to disasters of "slow violence" like chronic exposure to toxic pollution and food insecurity. Examining case studies from around the world, we will explore how these different forms of disaster collide with inequalities of race, class, and gender - and in the process challenge us to rethink the relationship between nature and society.

79-369 Disasters in American History: Floods and Hurricanes
Intermittent: 6 units
In this course we will investigate the historical roles played by people in creating the conditions for disastrous floods and hurricanes in the United States, examining the material causes of "natural disasters" and analyzing how Americans have been affected differently according to race and class. By the end of the course, we will have examined some of America's largest flood and hurricane disasters in their historical contexts, and we will use this knowledge to think about disasters that Americans face now and in the future.

79-370 Disasters in American History (2):Epidemics & Fires
Intermittent: 6 units
This course investigates the historical roles played by people in creating the conditions for disastrous outbreaks of disease and fire in the United States, examining the material causes of "natural disasters" and analyzing how Americans have been affected differently according to race and class. By the end of the course, we will have examined some of America's largest epidemics and wildfires in their historical contexts, and we will use this knowledge to think about disasters that Americans face now and in the future.

79-371 African American Urban History
Intermittent: 9 units
Popular perceptions of poor and working class people occupy a prominent place in discussions of today's African American urban community in the unfolding Age of Donald Trump. In the contemporary quest to build livable urban communities, however, journalistic, public policy, and academic analysts often discuss the black poor and working class as "consumers" rather than "producers," as "takers" rather than "givers," and as "liabilities" instead of "assets" in the present moment of the nation's history. Effective public policies, movement strategies, educational programs, media campaigns, and sensitive philanthropic decisions require deeper and more thoughtful perspectives on the history of urban race and class relations in the past. Focusing on the development of African American urban history from its colonial beginnings through today's "Black Lives Matter Movement," this course will emphasize the many ways that people of African descent shaped American and African American urban life through their roles as workers, community-builders, and social justice activists. In addition to weekly classroom discussions of assigned readings, students will write a series of short essays (based upon a mix of secondary and primary sources) on selected topics/themes in the development of African American urban life, culture, and politics.

79-372 Cities, Technology, and the Environment
Intermittent: 6 units
This course will explore the interaction of cities, technology and the natural environment over time. In doing so it will consider major issues confronting cities today including landscape and site changes; water supply, wastewater disposal and flooding; solid waste disposal; transportation and suburbanization; energy changes; and the impact of deindustrialization. These themes will be approached through a combination of class discussions, lectures, and visiting speakers. Class participation is expected, and will comprise a portion of the grade. In addition to required texts, readings will be distributed on Canvas.

79-373 Culture and Revolution: The Socialist Experiment in Soviet Russia
Intermittent: 6 units
In 1917, revolutionaries took power in Russia to create the world's first socialist society. In this great and untried experiment, they initially attempted to remake every phase of social and cultural life, from the family to art to education. Before Stalin's rise to power at the end of the 1920s, the new socialist society challenged tradition and created new possibilities. How could life be lived in a new way and better way? What values could and should replace the old traditions of patriarchy and class hierarchy? How could ordinary people be empowered to create a new culture? In this course, we will study the 1920s, a riotous decade of experimentation in cultural, sexual, and political life. Looking at literature, art, social relations, education, and law, we will examine the theories and experiments that bloomed in the wake of revolution.

79-375 Science & Religion
Intermittent: 6 units
A widely-held notion is that science and religion are perennially at "war" with one another. Debates over evolution, and more recently climate change, are often cited as examples, while predictions that science will eventually render religion obsolete are at least as old as the Enlightenment. Nevertheless, science and religion are both thriving in the twenty-first century, which raises the question of whether these two ways of seeing the world might, for some people at least, be more complementary than conflictual. We'll explore the history of the relationship between science and religion and the different "ways of knowing" employed by each. A number of common assumptions will be critically examined as we consider questions of fact and value, and the competency of both science and religion to address some of the major challenges of our day.

79-377 Food, Culture, and Power: A History of Eating
Intermittent: 9 units
This course explores food production and consumption in the modern world. This semester, we will focus on ongoing debates over how to feed a world of seven billion people on a planet undergoing major climate change. We will explore the historical roots of the problem of "feeding the world" and consider the overlapping yet competing ideas of food security and food sovereignty. What are the cultural, economic, environmental and political contexts that create opportunities and constraints for changing food systems? After exploring this big question through readings and group discussions, the second half of the semester will be devoted to individual research projects focused on the historical and cultural dimensions of food provisioning.

79-379 Extreme Ethnography
Intermittent: 9 units
Observation, participation and direct experience of "the field" are hallmarks of anthropological ways of knowing, and their representation has played a foundational role in ethnographic writing both past and present. Yet reflexive and postmodernist explorations of these topics have triggered contentious debates over the nature of anthropology as a scientific or humanistic enterprise, and over its ethical, political and epistemological value. In this seminar, we will approach such questions through an exploration of the extremes of ethnographic fieldwork and writing. We will consider such topics as: the colonial history and politics of explorers and ethnographers; liminality and the place of extreme experience—such as cultural dislocation, violence, derangement, intoxication, sex, possession, and dreaming-in fieldwork and writing; field-notes as an ethnographic genre, and their relationship to "official" published ethnography; ethnographic surrealism and surrealist ethnography; the dimensions of sensory experience (visual, auditory, olfactory, etc.) in fieldwork and ethnography; collecting and the powers of "exotic" objects; inter-subjectivity and its implications; and experimentation with alternate ethnographic forms, such as autobiography, film, diary, and poetry.

79-380 Hostile Environments: The Politics of Pollution in Global Perspective
Intermittent: 9 units
Earth is an increasingly toxic planet. Fossil-fueled industrialization, chemical engineering, and resource-intensive consumerism have generated immense wealth, but they have also left long-term, cumulative legacies of toxic pollution and ecological harm. While these legacies affect everyone, their impacts are by no means evenly distributed. In this course, we will use the tools of anthropology, political ecology, and history to examine experiences of toxic exposure in different parts of the world, including Pittsburgh. Our analyses will ask how inequalities of race, class, and gender shape exposure as well as how cultural differences create divergent understandings of ecology, health, and their interrelationship. We will consider, moreover, how these disparities shape what people know about pollution and whether/how they demand accountability for it. Cases we explore will range from acute industrial disasters (and their aftermath) to the harms experienced by other-than-human beings to the gradual, often invisible exposures that affect all of us to varying degrees.

79-381 Energy and Empire: How Fossil Fuels Changed the World
Intermittent: 9 units
Few things have changed the world as much as petroleum: cars, airplanes, fertilizers, plastics are just some of the technologies derived from oil. Moreover, the wealth and power associated with "black gold" has shaped geopolitics in the twentieth century, giving rise to so-called "petro-states." For the first five weeks, we will trace the evolution and expansion of "petrocultures" around the world. The remainder of the course will be organized around individual student research projects. The major learning objective of this course is to give students experience writing an original research paper. Students will be expected to define a research question, assemble a bibliography of sources, write and revise an analytical paper, and do an oral presentation. This course, open to all students, partially fulfills the Theoretical and Topical Core course requirement for Global Studies majors.

79-382 Law, Voting Rights, & American Democracy: Historical & Contemporary Perspectives
Intermittent: 6 units
Voter participation in free and fair elections is one of the most basic principles of the American republic, yet our country's history is fraught with examples of citizens having to fight to exercise this right. From literacy tests to poll taxes, gerrymandered districts to controversial campaign financing rules, the federal and state governments have been called upon to establish protections for citizens and, when these protections fail, determine a remedy. This course will examine various key elements of voting and elections especially relevant to the current body politic, including campaign finance and gerrymandering.

79-383 The History of Capitalism
Intermittent: 9 units
What is capitalism? How does it differ from the systems that preceded it, and how did it come to revolutionize the globe? This course will cover the development of capitalism from the 16th century to the present. We will examine the theories of Karl Marx and Adam Smith, who both attempted to theorize the new, emerging system. We will look at how the transition from feudalism to capitalism took place, and the impact of new world slavery, commodity production, and the role of women and the household. We will examine the development and demise of the factory system and deindustrialization in America's rust belt cities. We will examine "globalization," the latest dynamic phase of capitalism, and its impact on people and the environment. Finally, we will discuss the advent of robotization, and the impact of casual labor, low wages, and unemployment on democracy, the prison system, and the rise of a new technocratic elite.

79-384 Gender and Sports
Intermittent: 9 units
This course will examine how gender has fundamentally shaped the logic of organized sports for men and women during the past century and a half, especially in the U.S. A variety of competitive levels will be examined, with the focus on amateur as well as professional sports. Several sports will receive special attention, including basketball, track, tennis and golf — both men's and women's participation in each sport. The course will be in a discussion format, with reading assignments required for each class. All examinations will be in essay format.

79-385 Out of Africa: The Making of the African Diaspora
Intermittent: 9 units
The trans-Atlantic slave trade dispersed Africans in the New World and the Old, creating the African Diaspora. Generations of scholars have disputed whether descendants of enslaved Africans could have retained any of their African culture and/ or fully assimilated into New World societies. This course will combine a chronological, geographical, and a thematic approach to the creation of new Africa-inspired cultures in both Africa and the African Diaspora. It will explore societies in the Caribbean, the US South, Latin America, and Africa and address themes, such as Africanisms, African survivals, African retentions, Creole languages, and religion.

79-386 Entrepreneurs in Africa, Past, Present and Future
Intermittent: 9 units
Fifty years after Ghana, the first sub-Saharan African nation, gained its independence from colonial rule, African economies continue to rest on a fragile foundation. Entrepreneurs must play an important role in developing the African continent, because both African governments and foreign aid have overall failed. In the face of these myriad of internal and external constraints on economic development, the history of entrepreneurship and future potential for entrepreneurship is often overlooked. This course will show that sub-Saharan Africa is-and has been for centuries-a thriving place of business, despite the obstacles of war, political and economic instability, disease, and famine. It will also focus on the challenges, such as local, regional, and national integration, access to credit and capital accumulation, and debt burden that African economies faced in the past, present, and future. Lastly, it will focus on the strategies that entrepreneurs in Africa-local and foreign-have developed to circumnavigate these challenges-and the opportunities that they have created in spite of them. By taking a historical approach to the subjects of entrepreneurship, innovation, and technology in Africa, this course will define African entrepreneurship in a way that is rooted in Africans' historical experiences and use this definition to put Africa's current and future roles in the global economy into historical perspective.

79-387 General Francisco Franco: Fascism and its Legacies in Spain
Intermittent: 6 units
Francisco Franco was Europe's longest-ruling dictator. He ruled over Spain from 1939 to 1975. This course will examine the social and cultural context of the rise of Fascism in Spain. We will focus especially on Franco's seizure of power during the Spanish Civil War; the decades of his lengthy dictatorship; the social and cultural politics in transitioning Spain to democracy after his death; and the legacy of Spanish Fascism and Franco's dictatorship in contemporary Spain.

79-388 The History of Sports in the United States
Intermittent: 9 units
The course will survey the history of sports in the United States, focusing primarily on the 20th century. Topics considered will include sports and race, gender, and politics; the commercialization of sport; and collegiate sports. We will pay particular attention to the way in which sports have served as an arena for dissent. Also covered will be Pittsburgh's relation to national sports trends. By the end of the semester students will gain an understanding of the changing role of sports in the United States.

79-390 History Workshop: Computer Science
Intermittent: 9 units
This course examines the history of computing with a focus on the history of computers and computing at Carnegie Mellon University. Students will read historical accounts of computing as well as research the history of computing at Carnegie Mellon using the materials and resources of the University Archives and libraries. Students in the course will collaboratively produce a public exhibition on the history of computing as their final project.

79-392 America at War: From Vietnam to Afghanistan
Intermittent: 9 units
In this course we will look at fundamental changes in the approach of the United States to preparing for and engaging in armed conflict that have taken place since the War in Vietnam. The lowering of the voting age to eighteen and the end of conscription ("the Draft"), committed the United States to the challenge of continuing the Cold War and winning - there has been no acceptable alternative since the fall of Saigon - post-Cold War conflicts with an all-volunteer military whose members were now enfranchised. At the same time, the U.S. defense establishment continued its pursuit of advanced technologies in all facets and at all levels of warfare, evolving through various regional interventions and culminating in the Gulf War, "Operation Desert Storm," in 1991. We will examine the continuing and increasing role of hi-tech in the chaotic decade after the collapse of the Warsaw Pact and in the American-led "War on Terror" since 9/11, waged by a much smaller, highly professionalized military, and we will engage some ethical and social issues about the American Way of War in the recent past and the citizens who practice it.

79-393 Institutions of the Roman Church
Intermittent: 9 units
This course is only offered at Carnegie Mellon's campus in Qatar. This course will explore the history of the Catholic Church, with a particular focus on the church as an evolving European institution. Although we will have to deal with theological arguments at times, abstract theology will not be the focus of the course. Instead, the course will be centered on two main questions. First, how did the Catholic Church manage to persist, for nearly two millennium, as a stable institutional entity within an ever-changing European milieu? Secondly, to what degree did the Catholic Church influence and/or reflect developments within Western European culture?

79-394 Exploring History through Geography
Intermittent: 6 units
For studying the past, space can be as important as time. Digital mapping and GeoLocation technologies influence our everyday interactions and perceptions of the world around us. Historians are thinking about how these technologies can change their fields of study, too. Through the "spatial turn" in the Humanities and Social Sciences, historians are using spatial experience to think more deeply about the meaning of place and space. Visualizing spatial relationships via new technologies can offer meaningful new ways to approach historical questions. This course will consider viewpoints from the discipline of Geography and explore the impact of new methods in the Digital Humanities, including the impact of digital tools such as Geographic Information Systems (GIS).

79-395 The Arts in Pittsburgh
Intermittent: 9 units
This course will examine the arts in Pittsburgh, both historically and in the present. We will focus especially on art exhibits and musical events scheduled by the city's museums and concert halls during the semester. The "curriculum" will derive from the artistic presentations themselves, which will provide a springboard for reading assignments, seminar discussions, and research papers in the history of music and art. We will also examine the historical development of cultural institutions in Pittsburgh. The History Department will pay for students' admission to all museums and studios. However, students will be charged a supplemental fee of approximately $275 to help subsidize the considerable expense of purchasing tickets for concerts and performances by the Pittsburgh Symphony, Pittsburgh Opera, Chamber Music Society, and Renaissance and Baroque Society. Attendance at all art exhibits and musical events is required. Prerequisite: Please check your overall course schedule: you must be available to attend art exhibits on several Fridays and Saturdays, and to attend musical events on several Thursday, Friday and Saturday evenings.

79-396 Music and Society in 19th and 20th Century Europe and the U.S.
Intermittent: 9 units
This course will explore the interrelations between society and classical and popular music in the nineteenth and twentieth centuries in Europe and the United States. We will examine the importance of different musical forms in the life of society and how music contributed to the making of political consciousness, especially in the twentieth century. In addition to reading assignments, seminar discussions, and research papers in the history of music, students will be taken to performances of the Pittsburgh Symphony, Pittsburgh Opera, and Chamber Music Pittsburgh. A supplemental fee of approximately $275 will be charged to subsidize part of the considerable expense of purchasing tickets for concerts and performances. Prerequisite: Availability to attend musical events on several Friday and Saturday evenings.

79-397 Environmental Crises and the City
Intermittent: 6 units
Concern over Global Climate Change has increasingly focused on the environment of cities. our largest and most vulnerable population centers. Yet, since their origins, cities have consistently faced environmental challenges from both natural and human made factors. This course will explore some of these environmental challenges over time, examining issues including air and water pollution, floods, heat waves, earthquakes and hurricanes, disease and public health, and warfare. It will examine how these events have shaped and altered cities and urban life over time and consider issues relating to the desirability or undesirability of life in cities.

79-398 Documenting the 1967 Arab-Israeli War
Intermittent: 9 units
This course considers how historians practice their craft in interpreting great events with the Arab-Israeli war of 1967 serving as the case study. Students read recent scholarly accounts of the war and then check them against one another as well as a variety of primary source materials such as memoirs, documents, speeches, newspapers, maps, eye-witness reports and UN resolutions. We will constantly be asking if the sources support the secondary accounts or if there are other interpretations that might lead to different conclusions. We will be examining the texts for tangents left unexplored and possibly worthy of further research. Students should expect a significant reading load, frequent short assignments and a final research paper of 15-20 pages on a 1967 War-inspired topic.

79-400 Global Studies Research Seminar
Fall: 12 units
This research seminar is the capstone course for Global Studies majors. The course is designed to give you a chance to define and carry out a research project of personal interest. The first few weeks of the course will be devoted to developing a research topic and locating sources. We will then work on how to interpret and synthesize sources into a coherent and compelling thesis before you begin drafting your paper. Your research may be based on in-depth reading of a body of scholarly work, field notes from ethnographic observations, archival research, analysis of literary or visual media, or some combination of these sources. Incorporation of some non-English language sources is strongly encouraged where possible. Independent work, self-initiative, participation in discussion, and peer evaluations are required. There are several interim deadlines that will be strictly enforced in order to ensure successful completion of the course.
Prerequisites: 79-275 and Theoretical and Topical Core must be complete or concurrently enrolled. Corequisite: 79-275.

79-420 Historical Research Seminar
Fall: 12 units
The purpose of this research seminar is to help students conceptualize, design, organize, and execute a substantial research project that embodies and extends the knowledge and skill set they have been developing as History majors at Carnegie Mellon. The identification, collection and interpretation of relevant primary source data are integral parts of this intellectual task. Students will strive to hone written and oral presentation skills, deepen their command of research methodologies and strategies, and sharpen their abilities as a constructive critic of others' research. The seminar seeks to develop these intellectual skills through a combination of in-class, student-led discussions of everyone's research-in-progress, and regular individual consultations with the instructor.
Prerequisite: 79-200 Min. grade C

79-449 EHPP Project Course
Fall: 12 units
The Ethics, History and Public Policy Project Course is required for the Ethics, History and Public Policy major and is taken in the fall semester of the senior year. In this capstone course, Ethics, History and Public Policy majors carry out a collaborative research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis for a chosen client. The students develop an original research report based on both archival and contemporary policy analysis and they present their results to their client and a review panel.

79-470 Simulating Conflict Resolution
Intermittent: 3 units
This course is only offered at Carnegie Mellon's campus in Qatar. This pass-fail, 3-credit course for the Qatar campus is designed to prepare students for a capstone event: an international conflict resolution exercise, to be held in the 2018 Spring semester, that simulates a current Middle Eastern crisis. The course will consist of two parts. First, students will meet weekly with an instructor for 1 hour/week to discuss the historical and modern Middle East, so that they will be prepared to participate meaningfully in the simulation. For these classes, students will be expected to complete and discuss readings prepared by the instructor. Secondly, students will participate in the simulation exercise in late spring, taking the role of one of the Middle Eastern actors (these will be decided ahead of time) and role-playing their nation's response to the specific crisis scenario. Finally, after the simulation, students will submit to the instructor a reflection paper on what they learned from participating in the event. Suggested pre- or co-req: Conflict Resolution (80-242 or 70-321).

79-491 Independent Study
Intermittent
An Independent Study is meant for students with a special interest in an area not covered by a formal history course. Readings and other work are negotiated between the student and an individual faculty member.

79-503 Senior Thesis I
Fall: 9 units
Seniors may write a thesis with permission of the Undergraduate Advisor and a designated faculty member who will supervise its completion.

79-505 Social & Political History Internship
All Semesters
The Social & Political History program strongly encourages students to locate internship opportunities in Pittsburgh or elsewhere that complement their historical interests (as, for example, in a museum or historical society) or areas of policy research that link closely with their historical interests (as, for example, in a government agency or non-profit organization). To earn academic credit for their internship, students will be required to maintain a weekly journal; write a short critical reflection on how the internship connects to their academic interests; and share their experience with other Social & Political History majors. The Academic Advisor will assist students with matching their interests to local organizations. SPH students can earn up to 9 units in each internship. However, the internship credits they earn will not count toward fulfillment of the course requirements (93 units) for the SPH major.

79-506 Global Studies Internship
Fall and Spring
This course provides Global Studies majors with a chance to explore global connections in Pittsburgh. Majors, working in close consultation with the Global Studies director and advisor, will arrange an internship with a non-governmental organization (usually in Pittsburgh) whose mission has a global reach. This could include an organization that supports projects in other countries, works with immigrants in the Pittsburgh area, or participates in international policy making/governance. We strongly encourage students to seek out opportunities that require use of a second language. Students will be required to maintain a weekly journal; write a short critical reflection on how the internship connects to academic work; and share their experience with other Global Studies majors. Global Studies advisor and director will assist students with matching their interests to local organizations and identifying an on-site supervisor available to collaborate in the ongoing and final evaluation of the student's work.
Prerequisite: Students must be Global Studies majors and obtain permission for the proposed internship from the Global Studies advisor.

The Major in Information Systems

Joe Mertz, Faculty Director

Gary DiLisio, Principal Academic Advisor

Brandy Wilson, Senior Academic Advisor

Susan Miller, Senior Administrative Coordinator

Email: isinfo@andrew.cmu.edu
Location: Hamburg Hall 3031
www.cmu.edu/information-systems

Information Systems (IS), found within the Dietrich College of Humanities and Social Sciences, is an internationally recognized undergraduate major for students who want to design and implement effective solutions to meet organizational, societal and management needs for information and decision support.

In today's complex, interconnected world, the effective creation, distribution, and use of information via technology is central to daily life. Computer based information systems facilitate, enable and often define the relationships between corporations and consumers, buyers and suppliers, businesses of all sizes, social networks, and citizens and their governments. Understanding these relationships and effectively addressing the collection, flow, and distribution of information is vital to running a modern organization, enterprise or government agency.

Information Systems involves the effective design, delivery, use and impact of information and communications technologies in organizations and society. The importance of information technology and information systems to organizations and the need for well-educated professionals in the field is the basis for the Information Systems curriculum at Carnegie Mellon. Whether implementing applications, providing management or decision support, managing complex systems projects, or helping organizations design business processes or cope with rapid change, IS professionals fill an essential need across all sectors of society.

Information systems students at Carnegie Mellon learn to use, manage and deploy information technologies to address real problems or opportunities. They develop a solid foundation in computing, communications, as well as software development principles, languages, and methods. Since Information Systems generally operate within organizations, IS students study social sciences and organizational theory. IS students learn how to right-size information technology solutions to meet real-world economic and organizational constraints. Information Systems students also learn, through hands-on experience, the importance of professional communications, problem analysis, critical thinking and teamwork. Building on the multi-disciplinary strengths of the university and the Dietrich College of Humanities and Social Sciences, graduates in Information Systems are ideally suited to take a leading role in shaping our information-based future.

The flexible nature of the program encourages students to explore their own interests through program electives, study in a contemporary content area or through optional second majors and minors.

IS students are well prepared to pursue graduate work in a wide range of fields. For students interested in master's degree-level graduate work at Carnegie Mellon, there are many possibilities, including accelerated Masters degree programs in Information Systems Management, Human Computer Interaction, Information Security Policy and Management, Engineering Technology and Innovation Management, and Business Administration.

IS graduates continue to be in high demand in the information-age workplace. There has been a strong job market for IS students in recent years, and national trends indicate that this is likely to continue. IS majors often take jobs in consulting companies, major software firms, large corporations, and start-up companies. Internship opportunities closely parallel the job market.

In addition to the Dietrich College General Education Requirements and basic prerequisites in Mathematics, Statistics and Computer Science, IS students must complete the Professional Core, the Disciplinary Core and a focused Content Area. In the Professional Core (consisting of six courses), students learn the basic skills necessary to analyze, design, implement and test high-quality, cost effective information systems. Two of the Professional Core courses are project-based experiences in which small teams of students develop and deliver solutions to real information problems.

In the Disciplinary Core (consisting of three courses), students study key areas fundamental to understanding and solving problems in information systems: professional communications; quantitative analysis and research methods; and organizations, policy, and social science.

IS students also complete three courses within one Content Area. The content areas are designed to provide students an opportunity to gain additional depth in a focused area. Currently, twelve content areas are available: (1) Business / Enterprise Systems, (2) Computing and Information Systems & Technology, (3) Social and Global Systems, (4) Quantitative Analysis, (5) Game Design, (6) Animation and Special Effects, (7) Media Design, (8) Design for Learning, (9) Sonic Arts, (10) Innovation and Entrepreneurship, (11) Intelligent Environments, (12) Physical Computing. Content areas (5) through (12) are offered through CMU's Integrative Design, Arts, and Technology (IDeATe) (http://www.cmu.edu/ideate) initiative combining arts and technology.

Study Abroad Options in Information Systems

Given the importance of globalization, we encourage students to consider expanding their international experience by spending a semester studying abroad. The IS program is very flexible in allowing students to pursue these opportunities. With careful planning, study abroad is possible during most semesters. Students interested in study abroad should talk with the IS Academic Advisor to help plan an appropriate course of study. With prior approval, study abroad courses may be applied to major requirements.

Information Systems as Additional Major or Minor

Information Systems is not available as either an additional major or minor.

Curriculum

The Information Systems major is offered only as a Bachelor of Science (B.S.) degree. In addition to major requirements outlined below, all Information Systems students must fulfill the General Education requirements for the Dietrich College of Humanities and Social Sciences. A total of 360 units is required for the degree.

Requirements are subject to revision. Advisor approval is required for each student's major curriculum plan. Any proposed course substitutions to courses required for the IS major must be approved in advance by the IS Academic Advisor.

Prerequisites

Information Systems requires completion of prerequisite courses in Mathematics, Statistics and Computer Science. All prerequisites must be successfully completed prior to the start of Fall semester, junior year.

Mathematics and Statistics

Complete one of the following calculus sequences:

		Units
21-111	Differential Calculus	10
21-112	Integral Calculus	10

OR

		Units
21-120	Differential and Integral Calculus	10
21-256	Multivariate Analysis (Required for advanced business courses)	9

OR

		Units
21-120	Differential and Integral Calculus	10
21-122	Integration and Approximation (Required for advanced computer science courses)	10

AND also complete:

		Units
36-200	Reasoning with Data	9

Computer Science

Three Computer Science courses are required. To maintain normal progress toward the Information Systems degree, students must complete 15-121

Introduction to Data Structures prior to the start of Spring Semester, sophomore year.

Students entering the program as freshmen will have the option to complete a Computer Science Placement Test. Depending on appropriate Advanced Placement credit and/or results of the Computer Science Placement Test, entering students may place directly into 15-112 or 15-121. 15-110 is taken as the first Computer Science prerequisite unless a student places directly into 15-112 or 15-121. Most students entering the program will begin the sequence with 15-110.

		Units
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
15-121	Introduction to Data Structures	10

Note: Students cannot receive credit for both 15-104 Introduction to Computing for Creative Practice and 15-110 Principles of Computing.

Professional Core

The Professional Core consists of six courses (five core courses and one core elective).

Complete all five of these courses:

		Units
67-250	The Information Systems Milieux (Spring Semester Only)	9
67-262	Database Design and Development (Fall Semester Only)	9
67-272	Application Design and Development (Spring Semester Only)	9
67-373	Information Systems Consulting Project (Spring Semester Only)	12
67-475	Innovation in Information Systems	12

* Departmental approved courses are available as substitutions for 67-475. Please discuss with IS advisor.

Professional Core Elective

Plus, complete 6 to 12 units chosen from the following options:

		Units
19-402	Telecommunications Technology and Policy for the Internet Age	12
19-403	Policies of Wireless Systems	12
67-202	The Softer Side of Software	6
67-211	Business Oriented Sys:History, Des & Dev-Lens of CoBOL Programming Language	6
67-240	Mobile Web Design & Development	9
67-261	Information Design Fundamentals	9
67-265	Design Fundamentals I: Shaping Interactions and Experiences	9
67-279	Introduction to Geographical Information Systems	6
67-306	Special Topics: Management of Computer and Information Systems	6
67-308	Innovation Studio: Health Care Information Systems	9
67-309	Special Topics: Information Assurance and Security	6
67-317	Mobile Web Development and Usability Testing	9
67-324	Accelerating Innovation and Entrepreneurship	9
67-327	Web Application Security	6
67-328	Mobile to Cloud: Building Distributed Applications	9
67-329	Contemporary Themes in Global Systems	9
67-330	Technology Consulting in the Community	9
67-338	Information & Grid Design	9
67-344	Organizational Intelligence in the Information Age	9
67-353	IT & Environmental Sustainability	6
67-364	Practical Data Science	9
67-442	Mobile Application Development in iOS	9
88-223	Decision Analysis	12
88-275	Bubbles: Data Science for Human Minds	9

OR Any Computer Science OR related courses above 15-121 with prerequisite of 15-112 or higher.

OR Any Human-Computer Interaction course (05-xxx).

OR other *pre-approved* 67-2xx. 67-3xx or 67-4xx which may be offered from time to time. Students wishing to apply such courses to their Professional Core requirement must complete a course substitution application through the IS Academic Advisor.

OR other *pre-approved* courses offered by the Engineering & Public Policy Department (19-xxx).

NOTE: 67-1xx may not be applied to this requirement.

Disciplinary Core

Complete one course (9 units) from each of the three Disciplinary Core categories.

Professional Communications

Information systems professionals communicate with a wide range of people in most organizations and often facilitate communications between diverse groups of stakeholders. Consequently, the most successful professionals typically are those with strong communication skills. These courses help students see that the structure and presentation of information affects how well (and how easily) it can be understood and used.

Complete one course. It is recommended that this requirement be completed by the end of junior year:

		Units
05-341	Organizational Communication	9
36-315	Statistical Graphics and Visualization	9
51-261	Design Center: Communication Design Fundmntls: IxD for Communications	9
or 51-262	Design Center: CD Fundamentals: Design for Interactions for Communications	
67-202	The Softer Side of Software	6
67-261	Information Design Fundamentals	9
67-265	Design Fundamentals I: Shaping Interactions and Experiences	9
67-338	Information & Grid Design	9
70-321	Negotiation and Conflict Resolution	9
70-340	Business Communications	9
70-341	Team Dynamics and Leadership	9
70-342	Managing Across Cultures	9
70-350	Acting for Business	9
70-483	Advertising and Marketing Communications	9
76-270	Writing for the Professions	9
76-272	Language in Design	9
88/70/85-341	Team Dynamics and Leadership	9

Quantitative Analysis and Research Methods

This area focuses on decision making and data analysis — essential to development of useful information systems. this area exposes students to analytic methods in the social sciences and quantitative methods for approaching complex methods.

Complete one course (9 units). It is recommended that this requirement be completed in the sophomore year:

		Units
21-257	Models and Methods for Optimization	9
21-325	Probability	9
36-202	Statistics & Data Science Methods	9
36/70-208	Regression Analysis	9
36-217	Probability Theory and Random Processes	9
36-218	Probability Theory for Computer Scientists	9
36-225	Introduction to Probability Theory	9
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
67-364	Practical Data Science	9
67-445	Seminar in IS: Intelligent Agents	9
70-257	Optimization for Business	9
80-305	Choices, Decisions, and Games	9
80-405	Game Theory	9

88-223	Decision Analysis	12
88-251	Empirical Research Methods	9
88-275	Bubbles: Data Science for Human Minds	9

Organizations, Policy, and Social Science

The focus of this area is on how organizations function in modern social and economic environments. Students will develop a greater understanding of how social policy and technology influence organizations and how they operate.

Complete one course (9 units):

		Units
08-200/19-211	Ethics and Policy Issues in Computing	9
15-390/70-421	Entrepreneurship for Computer Science	9
19-402	Telecommunications Technology and Policy for the Internet Age	12
19-403	Policies of Wireless Systems	12
19-411	Global Competitiveness: Firms, Nations and Technological Change	9
67-308	Innovation Studio: Health Care Information Systems	9
67-315	A Web For Everyone	9
67-344	Organizational Intelligence in the Information Age	9
67-353	IT & Environmental Sustainability	6
70-311	Organizational Behavior	9
70-332	Business, Society and Ethics	9
70/85/88-341	Team Dynamics and Leadership	9
70-342	Managing Across Cultures	9
70-415	Introduction to Entrepreneurship	9
70-416	New Venture Creation	9
70-437	Organizational Learning and Knowledge Management	9
80-249	AI, Society, and Humanity	9
80-341	Computers, Society and Ethics	9
88-223	Decision Analysis	12
88-275	Bubbles: Data Science for Human Minds	9

Content Area

Complete a minimum of 27 units from one of the Content Areas below. No Content Area course may also be used to fulfill a Disciplinary Core or Professional Core requirement.

Business/Enterprise Systems

This content area broadens a student's knowledge in the business, economics and policy aspects of large scale information systems.

		Units
19-402	Telecommunications Technology and Policy for the Internet Age	12
19-403	Policies of Wireless Systems	12
19-411	Global Competitiveness: Firms, Nations and Technological Change	9
67-240	Mobile Web Design & Development	9
67-261	Information Design Fundamentals	9
67-306	Special Topics: Management of Computer and Information Systems	6
67-308	Innovation Studio: Health Care Information Systems	9
67-309	Special Topics: Information Assurance and Security	6
67-315	A Web For Everyone	9
67-317	Mobile Web Development and Usability Testing	9
67-324	Accelerating Innovation and Entrepreneurship	9
67-328	Mobile to Cloud: Building Distributed Applications	9
67-331	Technology Consulting in the Global Community	6
67-344	Organizational Intelligence in the Information Age	9
67-353	IT & Environmental Sustainability	6
67-442	Mobile Application Development in iOS	9
70-332	Business, Society and Ethics	9
70-366	Intellectual Property and E-Commerce	6
70-371	Operations Management	9
70-395	Funding Entrepreneurial Ventures	9
70-437	Organizational Learning and Knowledge Management	9
70-438	Commercialization and Innovation	9
70-443	Digital Marketing and Social Media Strategy	9
70-449	Social, Economic and Information Networks	9
70-460	Mathematical Models for Consulting	9
70-465/	Technology Strategy	
70-471	Supply Chain Management	9
73-359	Benefit-Cost Analysis	9
73-469	Global Electronic Markets: Economics and the Internet	9
76-391	Document & Information Design	12
76-487	Web Design	12

Computing and Information Systems & Technology

This content area allows students to focus on current and emerging technologies.

		Units
05-391	Designing Human Centered Software	12
05-410	User-Centered Research and Evaluation	12
05-430	Programming Usable Interfaces	15
05-431	Software Structures for User Interfaces	15
05-432	Personalized Online Learning	12
05-433	Programming Usable Interfaces OR Software Structures for Usable Interfaces	6
05-499	Special Topics in HCI	Var.
16-311	Introduction to Robotics	12
16-362	Mobile Robot Algorithms Laboratory	12
19-411	Global Competitiveness: Firms, Nations and Technological Change	9
60-415	Advanced ETB: Animation Studio	10
67-240	Mobile Web Design & Development	9
67-315	A Web For Everyone	9
67-327	Web Application Security	6
67-328	Mobile to Cloud: Building Distributed Applications	9
67-364	Practical Data Science	9
67-442	Mobile Application Development in iOS	9

* Any Computer Science OR related courses above 15-121 with prerequisite of 15-112 or higher.

Social and Global Systems

This content area exposes students to key themes in globalization and global systems management, policy, international business, and technology.

		Units
19-402	Telecommunications Technology and Policy for the Internet Age	12
19-403	Policies of Wireless Systems	12
19-411	Global Competitiveness: Firms, Nations and Technological Change	9
67-329	Contemporary Themes in Global Systems	9
67-331	Technology Consulting in the Global Community	6
67-353	IT & Environmental Sustainability	6
70-342	Managing Across Cultures	9
70-365	International Trade and International Law	9
70-430	International Management	9
70-443	Digital Marketing and Social Media Strategy	9
70-480	International Marketing	9
73-372	International Money and Finance	9
76-318	Communicating in the Global Marketplace	9
76-386	Language & Culture	9
79-318	Sustainable Social Change: History and Practice	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
88-411	Rise of the Asian Economies	9

Additionally, other *pre-approved* courses offered by the Engineering & Public Policy Department (19-xxx) may be used to fulfill the Social and Global Systems Content Area.

Quantitative Analysis

Students will learn to apply analytic and quantitative methods for approaching complex, ambiguous problems.

		Units
21-257	Models and Methods for Optimization	9
21-292	Operations Research I	9
36/70-208	Regression Analysis	9
36-217	Probability Theory and Random Processes	9
or 36-225	Introduction to Probability Theory	
36-218	Probability Theory for Computer Scientists	9
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-350	Statistical Computing	9
36-401	Modern Regression	9
36-410	Introduction to Probability Modeling	9
or 36-46x Topics in Statistics		
67-364	Practical Data Science	9
67-445	Seminar in IS: Intelligent Agents	9
70-257	Optimization for Business	9
70-460	Mathematical Models for Consulting	9
70-462	Uncertainty and Risk Modeling	9
73-274	Econometrics I	9
73-374	Econometrics II	9
88-223	Decision Analysis	12
88-251	Empirical Research Methods	9

Integrative Design, Arts, and Technology (IDeATe) Content Areas:

An IDeATe content area consists of a minimum of 27 units which may include one Portal Course (other than 15-104 Introduction to Computing for Creative Practice) plus 2 courses from one of the areas below. Course information can be found on the IDeATe website (https://ideate.cmu.edu/undergraduate-programs).

Game Design (IDeATe)

In this content area, students will learn both theory and skill in the key areas of games: dramatic narrative and character development, visual and sound synthesis, special effects and performance capture, programming and engine development, interface and interaction architecture development, game assessment and redesign.

Animation and Special Effects (IDeATe)

The interconnected components of performance capture, rendering, 3D and 2D animation, and special effects will be covered in this content area.

Media Design (IDeATe)

The digital mediation of experiences content area explores the interconnected development of technology and content in new media systems and the meaning that arises from the resulting forms. Students learn to design mediated experiences across different platforms, from mobile to large-scale installations.

Design FOR LEARNING (IDeATe)

Students in this content area will combine their diverse skills for the design of effective new media systems for learning; from games for learning to tangible learning tool kits and remote learning systems. They will leverage new technologies, media arts knowledge, and learning science principles to create engaging experiences with measurable real world impact.

SONIC ARTS (IDeATe)

This content area will explore the processes and products of digital sound and music. Students will receive basic training in key areas: principles of computer music, hybrid instrument building, concepts in sound design. 62-150 IDeATe Portal: Introduction to Media Synthesis and Analysis (10 units) is the required portal course for this content area and will serve as one of the courses for this content area.

Innovation and Entrepreneurship (IDeATe)

Students in this content area will develop the knowledge and skills to lead and innovate in creative industries. Their interdisciplinary, hands-on coursework will emphasize the conceptualization of innovative products and the structuring of innovation processes.

Intelligent Environments (IDeATe)

The focus of this content area is on spaces that support efficiency and high quality of experience, addressing both the integrated development of such environments and the resulting experience.
The required portal course for this content area is 62-150 IDeATe Portal: Introduction to Media Synthesis and Analysis (10 units) or 16-223/60-223 IDeATe: Introduction to Physical Computing (10 units) and will serve as one of the courses for this content area.

Physical Computing (IDEATE)

The barriers between computing devices and their users have slowly dissolved. The physical world is becoming a key interface for computing and the internet of things is becoming the next generation of connectivity. Students in this content area will explore the technical, experiential, and semantic issues of this evolution.

Sample Curriculum

Freshman		**Sophomore**	
Fall	**Spring**	**Fall**	**Spring**
67-100 Information Systems Freshman Workshop	67-250 The Information Systems Milieux	67-262 Database Design and Development	67-272 Application Design and Development

Academic Policies

Transfer into Information Systems

Most IS students are admitted directly into Information Systems as incoming freshmen. Only Information Systems major students are permitted to enroll in the Professional Core courses (67-250 and above), and IS students have enrollment priority in IS electives.

Students in high academic standing may apply to be admitted to the Information Systems major as transfer students. Transfers into Information Systems will always be subject to availability of space in the major. Applications will be considered based on the following criteria:

- Strong record of academic performance at Carnegie Mellon (minimum QPA of 3.4)
- Relevance and clarity of personal statement
- Interview with IS Academic Advisor. Current Dietrich students must also interview with their Academic Advisory Center (AAC) advisor while non-Dietrich students will only be required to meet with the IS Academic Advisor.
- Relevance of courses completed to date

- Completion of 15-112 Fundamentals of Programming and Computer Science with final grade of 'A' or 'B'
- Relevance of prior experiences and projects

Application materials must be submitted no later than the last day of classes of the fall or spring semester. Current Dietrich students will submit materials to the Academic Advisory Center while non-Dietrich students will submit all materials directly to Information Systems in Hamburg Hall 3031.

Students accepted as transfers to the IS program would normally be expected to complete the usual prerequisites and begin the Professional Core courses during the next available semester.

Students interested in applying for transfer to the Information Systems major should contact the IS Academic Advisor for information regarding availability, application procedures and deadlines. Potential applicants to the IS major should be working toward a sensible alternative major, so that their success at Carnegie Mellon is not predicated on admission to the IS program.

Double Counting of Courses

"Double Counting" refers to instances when a course taken to fulfill one requirement counts simultaneously toward a requirement in another major or minor program. Double Counting is permitted in the Dietrich College on a very limited basis. Information Systems students may double count no more than two courses used to fulfill any Information Systems major requirement (beyond the Dietrich College General Education requirements and Prerequisite courses) with any combination of dual degrees, additional majors, minors or graduate degree programs. Only one course may double count with any minor. No course can count for more than one requirement within the major. Students must also adhere to any policy restrictions on double counting enforced by the academic department of the student's additional major or minor.

Course Repeats

Per university policy, when a course is repeated, all grades will be recorded on the official academic transcript and will be calculated in the student's QPA. This is the case regardless if the first grade for the course is a passing or failing grade.

Undergraduate students who wish to repeat a course already passed must obtain approval from the student's Dean or Department Head. When a student takes a course s/he has already passed, only one set of units will count towards graduation requirements.

Faculty

CHADI AOUN, Associate Teaching Professor – Ph.D., Univeristy of New South Wales; Carnegie Mellon, 2015–

ANIS CHARFI, Associate Teaching Professor – Dr.Ing., Technische Universitat Darmstadt; Carnegie Mellon, 2015–

SUSAN HAGAN, Associate Teaching Professor – PhD., Carnegie Mellon University; Carnegie Mellon, 2004–

C.F. LARRY HEIMANN, Teaching Professor – Ph.D., Washington University (St. Louis); Carnegie Mellon, 1998–

DIVAKARAN LIGINLAL, Teaching Professor – Ph.D., University of Arizona - Tucson; Carnegie Mellon, 2009–

SELMA LIMAM MANSAR, Teaching Professor – Ph.D., National Polytechnic Institute of Grenoble; Carnegie Mellon, 2007–

JOSEPH S. MERTZ, Faculty Director, Teaching Professor (joint Appointment with Heinz College) – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1997–

SARA MOUSSAWI, Assistant Teaching Professor – Ph.D. , City University of New York; Carnegie Mellon, 2016-–

DANIEL PHELPS, Associate Teaching Professor – Ph.D., Florida State University; Carnegie Mellon, 2007–

JERIA QUESENBERRY, Associate Teaching Professor – Ph.D., Pennsylvania State University; Carnegie Mellon, 2007–

RAJA SOORIAMURTHI, Teaching Professor – Ph.D., Indiana University; Carnegie Mellon, 2007–

SAVANID (NUI) VATANASAKDAKUL, Associate Teaching Professor – PhD., University of New South Wales; Carnegie Mellon, 2018–

RANDY S. WEINBERG, Teaching Professor; Information Systems – Ph.D., University of Minnesota; Carnegie Mellon, 1998–

The Major in Information Systems Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

67-100 Information Systems Freshman Workshop
Fall: 1 unit
This class provides an overview of the Information Systems Program for freshman students. The Program's academic advisor facilitates discussion of the field of IS, the curriculum, and careers, as well as co-curricular experiences such as internships and study abroad. Guest lecturers include the IS faculty, IS alumni, the IS career consultant, and various campus representatives. Discussions will include students' progress in their first semester, as well as guidance in course planning, for creating their Spring semester schedule of classes, and their overall four-year plan.

67-102 Concepts of Information Systems
Fall: 9 units
This course is an introduction to the world of Information Systems (IS). It introduces the core concepts of IS and its importance in the modern world around us. The course provides a general overview on the implications of information systems on organizations, by describing what an information system is; presenting some IS applications and discussing the implications of information systems on social and human aspects. The course also provides an initiation to essential information systems skills such as team work and project management.

67-202 The Softer Side of Software
Intermittent: 6 units
Even the best technologist has to rely on soft skills in their lives and jobs-whether they want a team member to take their constructive feedback or an angel investor to understand why their product is better than the competition. Classes will cover delivering engaging presentations, writing emails co-workers want to read, conducting meetings and workshops, delivering criticism and more. This mini course requires students to participate in a combination of short readings, in-class simulations, theater exercises, individual and group projects to practice soft skills. This course has some space available to students outside of the Information Systems program.

67-211 Business Oriented Sys:History, Des & Dev-Lens of CoBOL Programming Language
Fall: 6 units
Using computers to process business information began in the early 1960's. This course examines the technology evolution of business systems from the basic transaction processing of early business systems to today's event driven, web-based, big data systems. Students explore the unique aspects of business systems such as longevity, maintainability, good information reporting practices, and development methods. Lecture material includes important historical milestones, business systems terminology, and business oriented problem-solving approaches. Students will apply lessons learned in the lectures to programming assignments where they will gain a practical understanding of data representations, persistent storage structures, and algorithms common to business systems. The programming assignments use CoBOL, a standardized language designed for business systems development. Some minimal programming experience in any language is necessary. Good listening skills and class interaction are required.

67-240 Mobile Web Design & Development
Fall and Spring: 9 units
The Mobile Web Design and Development course provides a solid web design and development foundation focusing on responsive and user-centered design, and client-side components. Students explore the current standards and best practices of web design. Throughout the course, students work with HTML5, CSS3, Twitter Bootstrap, and Javascript, and learn how the various web components function together. The course utilizes a hands-on approach to guide students through learning and understanding the design and development process. This course is primarily designed for students with minimal technical experience. By the end of the course, students will be able to plan, design, and implement a basic functioning mobile web site/ app.
Prerequisites: 15-104 Min. grade C or 15-112 Min. grade C

67-250 The Information Systems Milieux
Spring: 9 units
Information systems (IS) are changing work practices, reshaping organizations, transforming cultures, and giving new meaning to the ways we see the world. This course is designed to help students understand the role of IS in the enterprise and the means by which these systems are created, utilized and maintained. The course will focus on enterprise information architecture including the components of enterprise strategy, business, application, information, and infrastructure layers. This course provides not only a framework for understanding information systems, but also a language to identify their dynamic complexities and interdependencies.

67-261 Information Design Fundamentals
Fall: 9 units
Information Design Fundamentals builds from a foundation in visual composition and typographic layout, to visual/verbal communication through the interplay of images, text, and typeface. Students apply this core understanding to information design problems that consider both qualitative and quantitative data developed for descriptive and strategic purposes that take the form of timelines, maps, hierarchies, and networks. While exercises concentrate on mastery of the tools and usability testing, projects importantly incorporate user studies methods as the first design step in order to help users perform tasks that meet their goals in ways that minimize barriers

67-262 Database Design and Development
Fall: 9 units
Data driven decision making is a core process of organizations. In this class students will study the principles of database management systems, their design, and development. Recent alternatives to the classical relational model will also be examined. This course is a required professional core course and is open only to sophomores in the IS major who have completed 67-250 or equivalent.
Prerequisites: (15-121 or 15-122 or 15-112) and 67-250

67-265 Design Fundamentals I: Shaping Interactions and Experiences
Fall: 9 units
This is an introductory course in interaction design, user experience, and the process of designing for people and technologies. The course introduces students to basic human-centered design research and concept development in the development of digital, service, and user experiences. Students also develop component skills in user interface design. Coursework promotes design thinking and practice for application in tech fields. Offered only on the Qatar campus.

67-272 Application Design and Development
Spring: 9 units
This course provides students with the concepts and techniques to design and develop software applications, and to understand the design process. Students will learn the importance of user-centered design and will develop a prototype of a web application as a course project. In the process of developing the application, students will learn how to design and create relational databases, how to acquire competency in new programming languages quickly, how to use the Model-View-Controller pattern to develop software applications, how to ensure technical quality in software development, and how to apply principles of user-centered design. This course is a required professional core course and is open only to sophomores and juniors in the IS major who have completed 67-250 or equivalent.
Prerequisites: (15-122 or 15-121) and 67-262

67-276 Building Better Web Applications
Fall: 3 units
This class introduces students to new technologies that will help improve web application performance and responsiveness. Classes will begin with a time of instruction followed by hands-on activities to reinforce learning principles.
Prerequisite: 67-272

67-279 Introduction to Geographical Information Systems
Intermittent: 6 units
Geographical Information Systems (GIS) allow us to visualize information that uses location. Through displaying layers of information in computer generated maps, we can see, analyze, understand and explore spatial patterns and relationships in new and novel ways. People in many different fields use Geographical Information Systems in their work: for visualizing the environment, human development, demographics, traffic and transportation, public health and many more. In this course, students will learn the basics of GIS through hands-on experience with popular mapping tools. Sources of data, principles of coordinate and projection systems and elementary geo-analysis techniques will be included. Upon completion of the course, students will have the background to begin using GIS techniques in their own areas of interest and will be prepared for further study in advanced GIs courses.

67-306 Special Topics: Management of Computer and Information Systems
Intermittent: 6 units
The course provides the overall knowledge of how Information Technology departments are managed in organizations of all sizes. It is about the technology people, the necessary best practice processes, and how innovation occurs transforming organizations in the way they operate and compete.

67-308 Innovation Studio: Health Care Information Systems
Intermittent: 9 units
Healthcare information systems are intended to improve patient outcomes while reducing the cost of clinical care. However, with the highest per person healthcare expenditures, the United States ranks low in healthcare quality compared to other countries. Although healthcare information systems are improving, challenges persist because information workflow, human interface design, and interoperability are not emphasized. In this course, students will learn to solve real-world healthcare information systems challenges in a team-based format.

67-309 Special Topics: Information Assurance and Security
Intermittent: 6 units
Special Topics: Information Assurance is an introduction course for Information Systems students that focuses on information security concepts. This course will be a broad introduction to many aspects of information security that affect computer systems, your everyday life on the internet, your activities - and those of others, and the practices of all organizations using and building information systems. You will learn an introduction to the practice of securing information systems, how organizations manage risk to their information assets, what threats there are to the security of an information systems, strategies for organizational resilience, applicable US cyber laws, and how organizations respond to real incidents. You will hear about some of the major cyber incidents that have shaped the way security is performed by organizations on the internet today, and you will participate through class discussions and homework analyzing important recent cyber issues, real incidents, and internet-scale events. By the end of the class you will be able to analyze systems for security using the language of security professionals and analyze the implications of real world attacks on security systems by applying core information security concepts.
Prerequisites: (15-112 or 15-110) and 67-250

67-315 A Web For Everyone
Spring: 9 units
This course provides a strong foundation in user-centered design and the engineering of web accessibility. The student will gain expertise in methodologies and toolkits for designing, prototyping, and evaluating a web site ensuring that the content is equally accessible to people with disabilities. Upon successful completion of this course, the student will be able to discuss standards and metrics for use in web development projects and be proficient in different stages of the project life cycle including data gathering methods, analysis techniques, requirements specifications, application of universal design principles, prototyping, and testing for usability and WCAG (Web Content Accessibility Guidelines) compliance. A term-long individual project will involve analysis of an organization's website for compliance with WCAG 2.1 guidelines, design and development of an improved prototype, and usability studies of the prototype
Prerequisites: 67-272 or 67-240

67-317 Mobile Web Development and Usability Testing
Intermittent: 9 units
Designing for mobile web applications enables businesses to harness the explosive growth and new opportunities on the mobile internet, besides enabling innovation in many ways. This course emphasizes a 'mobile first' approach to responsive web design, development, and user experience. Students gain a deep understanding of the mobile web development process, the grammar of building mobile web sites, emerging web standards, and state-of-the-art mobile usability testing methods. They gain first-hand exposure to developing with HTML5 and CSS3 and applying heuristic methods and testing tools such as Morae and Tobii eye tracker, to achieve an enhanced mobile user experience. Recent reports state that 80 percent of mobile websites in the US get traffic from other regions of the world. The course will address the need for facilitating a 'global' user experience, through independent student projects that target a 'global or social' theme and deliver a complete solution involving design, development, and usability testing of a localized and responsive web site.
Prerequisites: (15-122 or 15-121) and 67-272

67-319 Global Technology Consulting Groundwork
Spring: 3 units
This course is by invitation only for participants in the Technology Consulting in the Global Community program. For information on the program and how to apply, see http://cmu.edu/tcingc.

67-324 Accelerating Innovation and Entrepreneurship
Fall: 9 units
Mastering innovation processes and incorporating entrepreneurial methods into one's career is a cornerstone of success. Whether one endeavors into a startup or large company, successfully incorporating innovation and entrepreneurship will propel a career in software development, consulting, financial services, and many others. Innovation and entrepreneurship is a discipline with established tools and methods that must be properly harnessed in order to translate ideas into commercial successes. This course will expose and educate students to the discipline of innovation and entrepreneurship that will be portable to most any career and industry focus. After the completion of this course students will be able to understand and differentiate among "right sized" innovation and entrepreneurial methodologies

67-327 Web Application Security
Fall: 6 units
This is a technical course designed to help students learn how to exploit web applications and to be better able as developers to defend against such exploits. The course covers the process of hacking a web application, starting with initial mapping and analysis, followed by identifying common logic flaws in web apps, database and network exploits, command and SQL injections, and the like. This hands-on course requires students to be familiar with a popular web application framework or language (such as Ruby on Rails, PHP, Django/Python, ASP.NET or the like). Prerequisite: 67-272 or permission of instructor.
Prerequisite: 67-272

67-328 Mobile to Cloud: Building Distributed Applications
Fall: 9 units
Web 2.0, Mashups, Mobile Apps, and Cloud Computing are just a few of the new terms people are using to describe emerging technologies for building complex, distributed applications. Protocol standards, web services, open-APIs, increasingly more powerful mobile devices, and the Internet have enabled new possibilities for weaving complex applications using globally-distributed data and computing resources. Application development has largely left any single computer, and is distributed across a wide range of hardware and software platforms. This class will explore these developing technologies and models for structuring their complexity, while building projects that go from mobile to the cloud. Prerequisite: 67-272 (with "C" or higher) or permission of instructor.
Prerequisite: 67-272 Min. grade C

67-329 Contemporary Themes in Global Systems
Fall: 9 units
Globalization and outsourcing of information systems (IS) is a mainstay of the business environment. The decision to outsource software services to providers in distant places has many risks and thus careful management of critical success factors is essential. Likewise, products and services are being developed and delivered by teams of people in diverse locations working together. Management of these sourcing models and human capital relationships will be an increasingly important skill for students expecting to fully participate in the emerging IS marketplace of the 21st century. This course introduces the effective fundamentals of global project management and the mechanics of sourcing arrangements including offshore outsourcing. Students will also examine the effects of human diversity and cross-cultural considerations in the creation, use and management of information systems.

67-330 Technology Consulting in the Community
Spring: 9 units
In this course, the student develops technical consulting and management skills while collaborating on-site with a community leader of a non-profit community organization or school. This service-learning course has students analyze a complex organization, then design and implement a work plan that will expand the organization's capacity to use information technology. Student consultants do not merely provide IT support, nor do they focus on system development. Rather they focus on solving organizational problems using IT solutions. In doing so, they may develop a system, or adapt open source or commercial tools as appropriate to the situation. Throughout the semester, students develop a consulting report. They learn how to use this working document to collaborate with others and to think through and communicate a strategic technology plan. Students also experience how urban community organizations function, seeing the valuable benefits these organizations provide to society. Prerequisites: 76101 and (15121 or 70451) At least sophomore standing.
Prerequisites: 70-451 or 15-121 or 15-122

67-331 Technology Consulting in the Global Community
Fall
This course is by invitation only for participants in the Technology Consulting in the Global Community program. Admitted ONLY BY Permission of Instructor

67-335 Introduction to Data Analysis
All Semesters
This course teaches the basic techniques and practical skills required to make sense out of a variety of data, with the help of the most acclaimed software tools in the data science world: pandas, numpy, scipy, scikit-learn, etc. Thanks to a new set of software tools that allows to easily process and analyze data at scale, we are now able to extract invaluable insights from the vast amount of data generated daily. As a result, both the business and scientific world are undergoing a revolution which is fueled by one of the most sought after job profiles: the data scientist.

67-338 Information & Grid Design
Fall: 9 units
Whether you create, oversee, or want practice in solving problems through grid systems for websites, responsive applications, slide presentations, or data visualizations, this course provides the skills needed to communicate using the interplay of image, text, and typography in grid environments.

67-339 User-Centered Web Design
All Semesters: 9 units
User-Centered Web Redesign builds on the student's knowledge of design fundamentals, adding a stronger focus on user studies and usability testing. Our object of study is the redesign the website created as the final projects in Database Design and Development in order to synthesize design thinking as a system that not only functions on the back end but also on the front. Students engage in user studies by first developing an hypothesis of the user that they test through interviews and observations, leading to a revised hypothesis that more fully appreciates the user's goals, tasks, and internal barriers. Students will use these insights to develop site architecture through card sorting for organization, stress testing for navigation, and label testing for language use. The architecture of the site will then be explored for the visual/verbal communication design needed to help users perform tasks that meet their goals, which students will confirm through usability testing. Students will not only gain a stronger understanding of why "I am not the user," they will also gain insights concerning the complex features that inform a fully functional site.
Prerequisites: 67-265 and 67-262

67-344 Organizational Intelligence in the Information Age
Fall: 9 units
Across all organizations people find that the actions they take affect, and are affected by, the technology, norms, procedures, culture, and members of the organization. In order to navigate through this organizational world, agents need a better understanding of social and organizational intelligence. How do organizations (and the people who populate them) acquire and then process information? In what ways have new technologies affected the norms, procedures, and culture of organizations? How do leaders successfully guide their organizations through a world where new information and new technologies are constantly being produced? This course is about information assessment and analysis in organizations, and the way organizations are transformed by technology. This course is for Sophomores, Juniors, and Seniors.

67-352 Electronic Business
Intermittent: 9 units
The objective of this course is to give students a good understanding on how e-business is conducted and managed including opportunities, limitations, issues, and risks. E-business applications require certain technological infrastructures and other support mechanism in areas of business-to-consumer, business-to-business, and consumer-to-consumer. Topics will cover the technologies, skills and business concepts that surround the emergence of electronic business and the impacts of applying these information technologies to different commercial processes from both an operational and strategic perspective. The course will also explore the problems surrounding electronic business such as security, privacy, intellectual property rights, legal liabilities and global issues. The course provides a contemporary exposure to concepts and practices associated with a new and dynamic digital environment in the real business world. The information technologies associated with the delivery of Internet sites as well as internal operations will be discussed. After completion of this course, students are expected to have appropriate level of knowledge, skills, and concept of the digital operations in a modern business world.
Prerequisites: 67-272 or 67-371

67-353 IT & Environmental Sustainability
Intermittent: 6 units
Sustainable living and sustainable development are serious challenges facing individuals, communities, organizations and countries around the world. Addressing these challenges is a multidisciplinary effort. In particular, while Information and Communications Technologies have been among the most transformative developments in recent decades, they have the potential to address some of society's most urgent needs. For examples, intelligent use of IS/IT can help enable smarter cities, more efficient transportation systems, smarter energy systems, more efficient logistics and 'greener' product life cycle design. In this course, students will reflect on the challenges of sustainability and the potential role IS/IT may play in enabling adaptation and mitigation of these challenges.

67-354 Information Systems and Sustainability
Intermittent: 9 units
Environmental, economic, and societal challenges are affecting the sustainability of many communities around the globe. Given its multidisciplinary foundation, IS presents an important potential for enabling adaptation and mitigation to these challenges. IS innovation could also play a prominent role in transforming unsustainable problem spaces into sustainable and resilient systems. What is needed is sustainability minded IS professionals to lead such transformation. This course introduces students (future IS leaders) to the fundamentals of sustainability in the 21st century. It includes topics on Green IS, Smart Cities, and the Information Economy. The course invites students to proactively reflect on sustainability issues and their effects on policy and leadership. In such reflection, students are encouraged to consider various case-based scenarios where they evaluate challenges to sustainability and developed innovative, strategic, practical, and rigorously supported IS based solutions.
Prerequisite: 67-250

67-357 Healthcare Analytics and Big Data
Intermittent: 9 units
The objectives of this course are: (1) to provide a sound understanding of how healthcare analytics helps to re-engineer the complex processes that drive return on investment and lower medical costs and (2) how the big data revolution is accelerating value and innovation in healthcare. Topics in healthcare business intelligence (BI) to be covered include how data quality and data governance improve the quality of healthcare, architectural implications of BI, technology management, and how BI facilitates evidence-based medicine and effective clinical decision support. Besides gaining hands-on lab experience with BI technologies and tools used in real-world healthcare organizations, students will also work on a group project to understand better the challenges that big (and unstructured) data present to traditional clinical database systems.
Prerequisites: (70-451 or 67-250) and 15-121 and 36-201 and 67-272

67-364 Practical Data Science
Spring: 9 units
From empirical, to theoretical, to computational science, we are at the dawn of a new revolution—-a fourth paradigm of science driven by data. Like archaeological remnants, data, by its very nature, is a marker of what happened in the past. How can data be used to better understand this past and what is happening in the present? How can data be leveraged to forecast what will happen in the future? Better still, how can data be used to mold what should happen in the future? In this course we will study descriptive, predictive, and prescriptive methods by which data can be used to gain insight and inform actions of people and organizations. The real excitement of data science is in the doing. This is an application oriented course requiring skill in algorithmic problem solving. We will use Python based data science tools. While prior programming experience with Python will be helpful the course will strive to be self-contained. If you have not programmed in Python before, you need to be comfortable programming in some language (e.g., Ruby, R, Java, C++) and will need to come up to speed with the Pythonic way of problem solving.
Prerequisites: (36-201 Min. grade C or 36-200 Min. grade C) and 15-112 Min. grade C

67-373 Information Systems Consulting Project
Spring: 12 units
Information Systems (IS) Consulting Project is a junior level team-based course that focuses on working as a team to build a solution to meet the needs of a client. With your teammates, you will work with an actual client to design, build, and deliver an information system solution while following a disciplined software project life cycle approach. By term's end, your team must provide a sustainable solution that fits the client's objectives, organization constraints and capabilities
Prerequisite: 67-272

67-390 Independent Study in Information Systems
Fall and Spring
Independent studies are opportunities to engage in research with an IS faculty member to advance your learning in certain areas of interest. Information Systems students may enroll in independent study for 3, 6, 9, or 12 units of academic credit by obtaining an IS faculty sponsor who will oversee the academic component of the coursework, monitor progress, and assign a final grade.

67-391 Independent Study in Information Systems
Fall and Spring
Independent studies are opportunities to engage in research with an IS faculty member to advance your learning in certain areas of interest. Information Systems students may enroll in independent study for 3, 6, 9, 12 units of academic credit by obtaining an IS faculty sponsor who will oversee the academic component of the coursework, monitor progress, and assign a final grade.

67-440 IDeATe Mobile Application Design & Development
Spring: 9 units
TBD

67-442 Mobile Application Development in iOS
Fall: 9 units
This course provides students with the concepts and techniques to design and develop mobile applications with iOS and to understand the design and development process involved. Students will develop a series of smaller iOS applications in weekly lab sessions as well as larger application as part of a course project. In the process of developing these applications, students will develop a strong understanding of the Swift programming language, iOS application development, mobile-centered design, and how to ensure technical quality in software development. This course is open only to juniors and seniors in the IS major who have completed 67-272.
Prerequisite: 67-373

67-445 Seminar in IS: Intelligent Agents
Spring: 9 units
The purpose of this seminar is to study behavioral interactions with and perceptions of intelligent agents. This research seminar is intended for junior and senior students in Information Systems and other university departments who wish to engage in research at the intersection of Information Systems, Artificial Intelligence, and Psychology. All students are expected to have some prior knowledge in Statistics (36-201 or 36-309 or similar courses). For each topic, students will be reading, analyzing, discussing, and presenting several papers. This discussion-based course has two main objectives: 1) to facilitate in-depth discussions of current research articles and essential topics in this domain, and 2) to build and expand students' research skills through in-depth analysis of papers, critiques, presentations and discussions.
Prerequisites: 36-201 or 36-309

67-475 Innovation in Information Systems
Fall: 12 units
This course is a senior level team-based capstone experience that aims to capture the challenge and excitement of creating a solution that adds value - whether a process, product or service - and to provide students with an opportunity to experience the innovation process. In this course, we will focus on exploring various types of innovation (e.g. design thinking, blue ocean, business innovation, etc.). This course will also help you develop a new set of tools aimed at framing challenges, addressing the right problems, and thinking outside of the box to solve present and future business challenges. The purpose of this course is not merely to create a new app but to identify a real problem or business need, and to apply structured tools in order to solve the problem. To substantiate their thinking, teams will talk to stakeholders and users; observe people in their native environments; consider real physical, technical, and social constraints; and understand how to identify and resolve users' needs and pain points.
Prerequisite: 67-373

67-476 Innovation in Information Systems: Health Care
Spring: 9 units
Healthcare information systems are intended to improve patient outcomes while reducing the cost of clinical care. However, with the highest per person healthcare expenditures, the United States ranks low in healthcare quality compared to other countries. Although healthcare information systems are improving, challenges persist because information workflow, human interface design, and interoperability are not emphasized. In this course, students will learn to solve real-world healthcare information systems challenges in a team-based format. Juniors and Seniors

67-490 Practicum in Information Systems
Intermittent
This course is offered only at Carnegie Mellon's campus in Qatar. The practicum in information systems allows students interested in applying skills acquired in the field of information systems in the context of a working environment. Students will complete a project and be accountable to a stakeholder that is external to their program of study. They may shadow and observe practices in the field of information systems, and also perform tasks as assigned. A hands-on experience is expected. By completing this course, students practice desirable skills for employability, such as time management, project management, team work, and professional development.

67-509 Independent Study in Information Systems
Fall and Spring
Independent studies are opportunities to engage in research with an IS faculty member to advance your learning in certain areas of interest. Information Systems students may enroll in independent study for 3, 6, 9, or 12 units of academic credit by obtaining an IS faculty sponsor who will oversee the academic component of the coursework, monitor progress, and assign a final grade.

Institute for Politics and Strategy

Kiron K. Skinner, Director and Taube Professor
Location: Porter Hall 223E
www.cmu.edu/ips

Founded in 2015, the Institute for Politics and Strategy (https://www.cmu.edu/ips) (IPS) is a university-wide institute for research and undergraduate and graduate education in the fields of political science, international relations, national security, and grand strategy. IPS is dedicated to the study of politics through the discipline of political science with support from other social sciences. In this way, IPS carries on a respected tradition of interdisciplinary political science at Carnegie Mellon University (CMU). IPS also builds upon the university's rich heritage of applying basic science to issues of public policy.

International Relations and Politics is the flagship academic program in IPS. The name of the major signifies that those studying IRP learn about international relations and domestic politics from the standpoint of the discipline of political science. The IRP major preserves and expands CMU's tradition in political science, while at the same time, taps into and contributes to CMU's strengths in other social sciences that combine analytical and empirical methods. IRP recently launched an innovative initiative to incorporate decision science in political science. Thus, students learn to apply the burgeoning science of judgment and decision making to understanding political actors' strategies and foibles, the strengths and weaknesses of formal methods of policy analysis (i.e., cost, risk, benefit, analysis), and the factors shaping public responses to politics and policies. IRP provides a rich set of courses and programmatic offerings that have made it an attractive course of study for students from all of CMU's colleges.

Basic science is the foundation for the public policy activities of IPS. Analytical social science and interdisciplinary research and teaching are used to better understand, explain, anticipate, and solve public policy problems.

The CMU traditions of analytical political science and applied social science are reflected in the degree programs and entities that IPS supports and oversees. The academic programs included in the Institute for Politics and Strategy are:

- B.S. International Relations and Politics Major (primary and additional);
- B.S. Economics and Politics (primary and additional);
- International Relations and Politics Minor;
- Cybersecurity and International Conflict Minor;
- Politics and Public Policy Minor;
- Accelerated Master of Science in International Relations and Politics; and
- Master of Information Technology Strategy.

The Economics and Politics major is offered jointly between the Undergraduate Economics Program (UEP) and IPS. Students are equal members of both academic units and receive advising from both units. The major will appeal to any student interested in the design, evaluation, and political implementation of policy.

The IRP minor shares core courses with the IRP major. The minor in Politics and Public Policy has a greater focus on domestic politics and public policy than either the IRP major or minor. The minor in Cybersecurity and International Conflict analyzes the role of cyber warfare and cybersecurity in international politics – past, present, and future.

The Accelerated Master of Science in International Relations and Politics (IRP/AMP) (http://www.cmu.edu/ips/masters%20degrees) is open only to Carnegie Mellon undergraduate students. Students should have an undergraduate major, additional major, or minor in IPS, they should have participated in the Carnegie Mellon University Washington Semester Program, or they should have special approval from the faculty admissions committee. Current undergraduates will apply for the IRP/AMP during the junior year. The primary focus of the IRP/AMP is international security, along with coursework in political institutions.

The Master of Information Technology Strategy (MITS) (http://www.cmu.edu/mits) program provides graduate students with core interdisciplinary competencies in cybersecurity. The master's program is a joint initiative of the College of Engineering, the Institute for Politics and Strategy, and the School of Computer Science. The Institute for Software Research, a department in the School of Computer Science, is the administrative home for MITS.

IPS administers these initiatives:

- The Center for International Relations and Politics;
- The Carnegie Mellon University Washington Semester Program; and
- The Institute for Strategic Analysis.

The Center for International Relations and Politics (CIRP) is a university hub for scholarly and policy-oriented activities on domestic and international issues. CIRP (http://www.cmu.edu/ir) supports and promotes student and faculty research and hosts national and international thought leaders through its Policy Forum (https://www.cmu.edu/ir/cirp-policy-forum). The CIRP Journal (https://www.cmu.edu/ir/cirp-journal) is an opportunity for undergraduate and graduate students to publish their work in international relations and political science. Students from across campus contribute scholarly analyses of current problems facing the United States and the international system and perform interviews with the nation's thought leaders. The CIRP Journal is published in print and online format about twice per academic year.

The Carnegie Mellon University Washington Semester Program (CMU/WSP) (http://www.cmu.edu/ips/cmuwsp) is a semester-long program for undergraduates interested in taking courses and interning in Washington. The minor in Politics and Public Policy may be earned by completing CMU/WSP and taking an additional core course in the Institute for Politics and Strategy.

Founded in 2013, the Institute for Strategic Analysis (http://www.cmu.edu/isa) facilitates and supports CMU faculty members interested in bringing their scientific research to bear upon problems of national security. These problems include terrorism, artificial intelligence, cyber challenges, war avoidance, intelligence, and the intersection of energy and security. ISA facilitates strategic engagements between CMU faculty and leaders in the defense and intelligence community as they seek mutually beneficial ways to have basic research inform national security policy.

Bachelor of Science in International Relations and Politics

Kiron K. Skinner, *Faculty Director*
kskinner@andrew.cmu.edu, Porter Hall 223E

Emily Half, *Deputy Director*
ehalf@andrew.cmu.edu, Porter Hall 223H, 412-268-7082

www.cmu.edu/ips

Offered through the Institute for Politics and Strategy (IPS), the Bachelor of Science in International Relations and Politics (IRP) analyzes the role of politics at the national, regional, international, and transnational levels; examines political and institutional arrangements within and among these levels; and investigates the grand strategy of nation-states.

Statesmen, scholars, and policy makers often define grand strategy as the combination of diplomatic, economic, military, and political factors used by leaders to defend their respective nation-states. The IRP major investigates the way in which leaders and citizens construct grand strategy and national security policy more generally; the impact of domestic and international forces on states' security and economic policies; and the significance of alliances, coalitions, and international institutions for world politics. Although the study of grand strategy and political institutions is the flagship initiative of the major, students are also able to study the effects of culture, economics, and society on the international system through a rich set of elective courses.

Thinking systematically about international and domestic politics is the core objective of the IRP major. To this end, the major has required courses in mathematics and statistics that help to sharpen students' ability to undertake scientific analysis in the required substantive and historical courses. The major is rooted in the discipline of political science but also utilizes the interdisciplinary strengths of decision science, economics, and political history. Thus, students pursuing this major will use the analytic tools of game theory, economic and statistical analysis, qualitative analysis, rational choice theory, and theories of behavioral decision making as they study alliances, coalitions, institutions, and political strategy.

The name of the major signifies that those studying IRP learn about international relations and domestic politics from the standpoint of the discipline of political science. Also, the major taps into and contributes to CMU's strengths in other social sciences that combine analytical and empirical methods. IRP includes an innovative initiative that incorporates decision science in political science. It enables students to apply the burgeoning science of judgment and decision making to understanding political actors' strategies and foibles, the strengths and weaknesses of formal methods of policy analysis (e.g., cost, risk, benefit, analysis), and the factors shaping public responses to politics and policies.

Recognizing the influence of language and culture on politics, students are required to complete the intermediate (200) level, or its equivalent, in a modern language other than English. Advanced-level study is strongly encouraged.

Open to all Carnegie Mellon undergraduates, the Carnegie Mellon University Washington Semester Program (CMU/WSP) (https://www.cmu.edu/ips/cmuwsp) allows students to study public policy and intern in Washington for one semester. Courses taken through CMU/WSP will count toward the elective sequence in politics and public policy for IRP majors.

IRP majors interested in developing their research skills are encouraged to apply for a research position with the Center for International Relations and Politics or work directly with a member of the IPS faculty. Students are also encouraged to join student organizations focused on domestic or international politics. Becoming involved in the Institute for Politics and Strategy, as well as attending lectures and events sponsored by the Center for International Relations and Politics (https://www.cmu.edu/ir) will provide additional opportunities for students. Students are also encouraged to submit their work for publication in the CIRP Journal (https://www.cmu.edu/ir/cirp-journal), an online and print publication that analyzes current problems facing the United States and the international system.

In addition to the primary major in International Relations and Politics, IPS offers an additional major. Minors in International Relations and Politics, Cybersecurity and International Conflict, and Politics and Public Policy are also available. IPS also offers a Bachelor of Science in Economics and Politics jointly with the Undergraduate Economics Program.

Double Counting: Students may double count a maximum of four courses with another major or minor.

Curriculum

Core Courses

Students must complete all of the following core courses.

84-104	Decision Processes in American Political Institutions	9
84-250	Writing for Political Science and Policy	9
84-265	Political Science Research Methods	9
84-275	Comparative Politics	9
84-326	Theories of International Relations	9
84-369	Decision Science for International Relations	9
84-450	Policy Forum	6
36-202	Statistics & Data Science Methods	9
84-110	Foundations of Political Economy	9
or 73-102	Principles of Microeconomics	

Mathematics Requirement

Excluded from all double counting rules. Students must complete one of the following courses.

21-120	Differential and Integral Calculus	10
or 21-112	Integral Calculus	

Language Requirement

Students are required to complete the intermediate (200) level or the equivalent in a modern language other than English. Advanced level study is strongly encouraged. Students who successfully pass a language placement exam on campus, at the intermediate II level or higher, are required to take an advanced language course to satisfy the language requirement.

Electives

International Relations and Politics students will fulfill the elective requirement by pursuing either **option 1** or **option 2** listed below:

Option 1: take 45 units (five courses) from the elective lists below. At least three courses (27 units) must be from the Institute for Politics and Strategy (84-xxx). Most courses listed below are 9-unit courses, but some are fewer. When courses offered for fewer than 9 units are chosen, students should note that a minimum of 45 units is required, and should plan to take one or more additional courses as appropriate.

OR

Option 2: complete the majority of their electives via the Carnegie Mellon University Washington Semester Program (CMU/WSP) politics and public policy elective sequence. Any elective units not fulfilled during CMU/WSP may be completed through coursework from the Institute for Politics and Strategy (84-xxx) elective list.

The Washington Semester Program (CMU/WSP) Politics and Public Policy sequence includes:

- Policy Forum (12 units) - This course will count as the Policy Forum (84-450) Core Course Requirement.
- Internship Seminar 84-360 CMU/WSP Internship Seminar (12 units)
- CMU/WSP Elective Seminars (24 units total)

A list of CMU/WSP elective seminars may be found in the Politics and Public Policy elective list below.

Grand Strategy and Political Institutions

66-221	Topics of Law: Introduction to Intellectual Property Law	9
79-298	Mobile Phones & Social Media in Development & Human Rights: A Critical Appraisal	6
79-301	History of Surveillance: From the Plantation to Data Capitalism	6
79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
80-135	Introduction to Political Philosophy	9
80-321	Causation, Law, and Social Policy	9
80-335	Social and Political Philosophy	9
84-309	Political Behavior	9
84-319	U.S. Foreign Policy and Interventions in World Affairs	9
84-320	Domestic Politics and International Affairs	9
84-321	Autocrats and Democrats	9
84-322	Nonviolent Conflict and Revolution	9
84-323	War and Peace in the Contemporary Middle East	9
84-324	The Future of Democracy	6
84-325	Contemporary American Foreign Policy	9
84-362	Diplomacy and Statecraft	9
84-363	Comparative Legal Systems	9
84-364	Comparative Presidential Behavior: Leadership, Personality, and Decision Making	9
84-366	The American Presidency	9
84-370	Global Nuclear Politics	9
84-372	Space and National Security	9
84-373	Emerging Technologies and the Law	9
84-380	Grand Strategy in the United States	9
84-386	The Privatization of Force	9
84-387	Technology and Policy of Cyber War	9
84-388	Concepts of War and Cyber War	6
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-393	Legislative Decision Making: US Congress	6
84-402	Judicial Politics and Behavior	6
84-405	The Future of Warfare	9
84-414	International and Subnational Security	9
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9

Economics and Society

19-452	EPP Projects	12
70-342	Managing Across Cultures	9
70-365	International Trade and International Law	9
70-430	International Management	9
73-103	Principles of Macroeconomics	9
73-328	Health Economics	12
73-332	Political Economy	9
79-386	Entrepreneurs in Africa, Past, Present and Future	9
80-136	Social Structure, Public Policy & Ethics	9
80-244	Environmental Ethics	9
80-249	AI, Society, and Humanity	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9
84-308	Political Economy of Latin America	9
84-310	International Political Economy	9
84-311	International Development: Theory and Praxis	9

84-312	Gender and Development in Sub-Saharan Africa	6
84-313	International Organizations and Law	9
84-315	Contemporary Debates in Human Rights	9
84-318	Politics of Developing Nations	9
88-411	Rise of the Asian Economies	9

International Cultures

76-318	Communicating in the Global Marketplace	9
76-386	Language & Culture	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-205	20th Century Europe	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-224	Mayan America	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-233	The United States and the Middle East since 1945	9
79-257	Germany and the Second World War	9
79-259	France During World War II	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-264	Tibet and China: History and Propaganda	6
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-275	Introduction to Global Studies	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-291	Globalization in East African History	6
79-307	Religion and Politics in the Middle East	9
79-313	"Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration	6
79-314	The Politics and Culture of Memory	9
79-318	Sustainable Social Change: History and Practice	9
79-320	Women, Politics, and Protest	9
79-338	History of Education in America	9
79-342	Introduction to Science and Technology Studies	9
79-343	Education, Democracy, and Civil Rights	9
79-377	Food, Culture, and Power: A History of Eating	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
79-385	Out of Africa: The Making of the African Diaspora	9
79-398	Documenting the 1967 Arab-Israeli War	9
85-375	Crosscultural Psychology	9
300 or 400- level language course		

CMU/WSP Politics and Public Policy

84-330	The Shading of Democracy: The Influence of Race on American Politics	6
84-331	Money, Media, and the Power of Data in Decisionmaking	6
84-332	Effects of US Policy on Businesses: Perspectives of Asian Americans	6
84-333	Power and Levers for Change in Washington, DC	12
84-334	Presidential Power in a Constitutional System	6
84-336	Implementing Public Policy: From Good Idea To Reality	12
84-337	Biomedical Science Research, Policy, and Governance	6
84-340	Making Change: How Organized Interests Work in Washington	12
84-343	Language and Power: How to Understand and Use Political Speech	6
84-346	Legal Issues in Public Administration	6
84-348	Advocacy, Policy and Practice	6

NOTE: Some courses have additional prerequisites.

SAmple four year plan

These sample curricula represent a plan for completing the requirements for the B.S. in International Relations and Politics. International Relations and Politics students are encouraged to spend a semester studying and interning in Washington, DC, through the CMU/WSP (http://www.cmu.edu/ips/cmuwsp), and/or study abroad. The plan below demonstrates that a semester off-campus fits well into the curriculum. As with most majors in the Dietrich College, the International Relations and Politics major can be completed in as few as two years of undergraduate study, not that it must be. Students may declare the B.S. in International Relations and Politics as early as the second semester of the freshman year and should consult frequently with the deputy director (see above) about their course of study.

Freshman		**Sophomore**	
Fall	**Spring**	**Fall**	**Spring**
36-200 Reasoning with Data	First-Year Writing (FYW)	84-326 Theories of International Relations	84-250 Writing for Political Science and Policy
79-104 Global Histories	Freshman Seminar	36-202 Statistics & Data Science Methods	84-265 Political Science Research Methods
21-120 Differential and Integral Calculus*	Language Course	Language Course	Language Course
84-104 Decision Processes in American Political Institutions **	84-110 Foundations of Political Economy	IRP Elective	IRP Elective
Language Course	84-275 Comparative Politics	Gen Ed or Elective	IRP Elective
99-101 Computing @ Carnegie Mellon			

*If required to start with 21-111 in fall of freshman year, complete 21-112 in spring of freshman year.

**This course should be taken as the first course in the International Relations and Politics major sequence. It is intended for students in the first or second year.

Junior		**Senior**	
Fall	**Spring**	**Fall**	**Spring**
84-369 Decision Science for International Relations	CMU/WSP or STUDY ABROAD*	IRP Elective	84-450 Policy Forum**
Language Course or Elective	Elective	Elective	Elective
IRP Elective	Elective	Elective	Elective
Elective	Elective	Elective	Elective
Elective	Elective	Elective	Elective

*All students are strongly encouraged to participate in the CMU/WSP (http://www.cmu.edu/ips/cmuwsp) and/or in a study abroad program. Spring semester of the junior year is a popular semester to study off-campus. However, International Relations and Politics majors may instead choose to participate in the CMU/WSP or study abroad in spring of sophomore year, fall of junior year, or fall of senior year. Students should consult the deputy director when planning their curricular program.

**Students who participate in the CMU/WSP (https://www.cmu.edu/ips/cmuwsp) will complete the Policy Forum while studying in Washington, DC. Students who do not participate in the CMU/WSP will take the Policy Forum in the spring of the senior year in Pittsburgh.

Additional Major

Students who elect International Relations and Politics as an additional major must fulfill all of the requirements of the International Relations and Politics major.

Bachelor of Science in Economics and Politics

Politics and economics are deeply interconnected. Political institutions and decision-making impact economic growth, income distribution, and many other aspects of economic life. Both fiscal and monetary policies affect the economy, but these policies are often employed with political considerations in mind and can influence political activity. Conversely, economic outcomes shape political preferences and policy choices. The overlap between these two disciplines is endless. For example, while the United Nations is often thought of in purely political terms, the Security Council can and does impose sanctions on countries- an example of an economic policy used for political change.

The Economics and Politics major is offered jointly between the Undergraduate Economics Program (https://www.cmu.edu/tepper/programs/undergraduate-economics) (UEP) and the Institute for Politics and Strategy (https://www.cmu.edu/ips) (IPS). Students are equal members of both academic units and receive advising from both units. The major will appeal to any student interested in the design, evaluation, and political implementation of policy. It will be especially attractive to students considering careers in politics, government agencies, political and business consulting, lobbying, or the law.

The B.S. in Economics and Politics is an interdisciplinary major. The major will develop the political context and underpinnings of economic policy making. It will explore how political institutions resolve the tradeoffs and disagreements associated with policymaking and how they can facilitate or impede desirable economic outcomes.

IPS strengths lie in topics like national security, grand strategy, and globalization. Economic policy is just one facet of grand strategy, through which an administration pursues domestic and international goals. This major will also address key issues such as the complementarity between the multilateral economic institutions such as the IMF and World Bank and the use of economic coercion, and enable students to understand economic statecraft more broadly. Whether coercion is successful depends not just on the levers of power but on also on variations in authoritarian regime structure, and complex linkages in the international economy. This is also important for our understanding of the relationship between international economics on human rights practices, extending even to how treaty commitments can facilitate compliance with a global initiative to combat climate change. And, not least important, there is broad recognition that the viability of the “Euro Zone” depends on whether the political-economic agreements necessary to mitigate institutional weaknesses are politically feasible or destined to failure.

Economics and Politics is available as both a primary and additional major.

Curriculum

Students must earn a grade of "C" or better in all courses taken in the Department of Economics (73-xxx).

Prerequisites

Students must complete all of the following courses.

21-120	Differential and Integral Calculus	10
or 21-112	Integral Calculus	
36-200	Reasoning with Data	9

Foundations (48 units)

Students must complete all of the following courses.

21-256	Multivariate Analysis	9
73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9
84-104	Decision Processes in American Political Institutions	9
84-275	Comparative Politics	9
73-210	Economics Colloquium I	3

Core (63 units)

Students must complete all of the following courses.

73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9
73-265	Economics and Data Science	9
73-274	Econometrics I	9
84-265	Political Science Research Methods	9
84-326	Theories of International Relations	9
84-310	International Political Economy	9

Communication (9 units)

Students must complete one course from the following list.

73-270	Professional Communication for Economists	9
84-250	Writing for Political Science and Policy	9

Electives (27 units)

Majors are required to take 27 units (three courses) from the elective lists below. At least one course (9 units) must be taken from Economics (73-xxx) and at least one course (9 units) must be taken from the Institute for Politics and Strategy (84-xxx). Students may complete electives through coursework in the Carnegie Mellon University Washington Semester Program (CMU/WSP) (https://www.cmu.edu/ips/cmuwsp) Politics and Public Policy elective sequence.

Economics Electives

73-328	Health Economics	12
73-332	Political Economy	9
73-338	Financial Crises and Risk	9
73-352	Public Economics	9
73-353	Economic Foundations of Regulation: Applications to Financial Markets	9
73-359	Benefit-Cost Analysis	9
73-365	Firms, Market Structures, and Strategy	9
73-367	Technology Jobs and the Future of Work	9
73-372	International Money and Finance	9
73-415	Data Driven Business and Public Policy Decision Making	9
73-421	Emerging Markets	9
73-427	Sustainability, Energy, and Environmental Economcs	9

Politics and Strategy Electives

84-308	Political Economy of Latin America	9
84-309	Political Behavior	9
84-311	International Development: Theory and Praxis	9
84-313	International Organizations and Law	9
84-318	Politics of Developing Nations	9
84-319	U.S. Foreign Policy and Interventions in World Affairs	9
84-322	Nonviolent Conflict and Revolution	9
84-323	War and Peace in the Contemporary Middle East	9
84-324	The Future of Democracy	6
84-325	Contemporary American Foreign Policy	9
84-362	Diplomacy and Statecraft	9
84-363	Comparative Legal Systems	9
84-364	Comparative Presidential Behavior: Leadership, Personality, and Decision Making	9
84-366	The American Presidency	9
84-369	Decision Science for International Relations	9
84-370	Global Nuclear Politics	9
84-372	Space and National Security	9
84-373	Emerging Technologies and the Law	9
84-380	Grand Strategy in the United States	9
84-386	The Privatization of Force	9
84-387	Technology and Policy of Cyber War	9
84-388	Concepts of War and Cyber War	6
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-393	Legislative Decision Making: US Congress	6
84-402	Judicial Politics and Behavior	6
84-405	The Future of Warfare	9
84-414	International and Subnational Security	9

CMU/WSP Politics and Public Policy Electives

84-330	The Shading of Democracy: The Influence of Race on American Politics	6
84-331	Money, Media, and the Power of Data in Decisionmaking	6
84-332	Effects of US Policy on Businesses: Perspectives of Asian Americans	6
84-333	Power and Levers for Change in Washington, DC	12
84-334	Presidential Power in a Constitutional System	6
84-336	Implementing Public Policy: From Good Idea To Reality	12
84-337	Biomedical Science Research, Policy, and Governance	6
84-340	Making Change: How Organized Interests Work in Washington	12
84-343	Language and Power: How to Understand and Use Political Speech	6
84-346	Legal Issues in Public Administration	6
84-348	Advocacy, Policy and Practice	6

Additional Electives

19-411	Global Competitiveness: Firms, Nations and Technological Change	9
19-425	Sustainable Energy for the Developing World	9
70-365	International Trade and International Law	9
70-430	International Management	9
79-280	Coffee and Capitalism	9
79-318	Sustainable Social Change: History and Practice	9
80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-321	Causation, Law, and Social Policy	9
80-335	Social and Political Philosophy	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9
88-366	Behavioral Economics of Poverty and Development	9
88-419	International Negotiation	9
88-444	Public Policy and Regulation	9

CAPSTONE (15-21 units)

Students must complete all of the following courses.

84-450	Policy Forum 12 units if taken during CMU/WSP, 6 units if taken in Pittsburgh	6
73-497	Senior Project or Senior Honors Thesis	9

SAMPLE Four Year Plan

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	21-256 Multivariate Analysis	73-210 Economics Colloquium I	73-240 Intermediate Macroeconomics
36-200 Reasoning with Data	73-103 Principles of Macroeconomics	73-230 Intermediate Microeconomics	Communication Course (84-250 or 73-270)

Economics and Politics students are highly encouraged to participate in the Carnegie Mellon University Washington Semester Program (CMU/WSP) (https://www.cmu.edu/ips/cmuwsp) during the junior year. Study abroad is also encouraged.

Minor in Cybersecurity and International Conflict

Kiron K. Skinner, *Faculty Director*
kskinner@andrew.cmu.edu, Porter Hall 223E

Emily Half, *Deputy Director*
ehalf@andrew.cmu.edu, Porter Hall 223H, 412-268-7082

www.cmu.edu/ips

The minor in cybersecurity and international conflict analyzes the role of cyber warfare and cybersecurity in international politics—past, present, and future. Cyber attacks by nation-states and their proxies have the potential to reshape how wars are fought in the twenty-first century. As such, the complexity and policy challenge of cyber-engagements is immense and altogether without precedent. The minor addresses the role of deterrence, dissuasion, and attribution in cyber conflict, while also studying the nuances of key components of modern warfare—from the security dilemma to escalation management.

Courses in this minor focus on the existing gaps in our understanding of cybersecurity and international conflict, such as whether or not cyberspace is offense or defense dominant and which factors are most important in determining the answer to this, and other relevant questions, including how nation-states, their primary adversaries, and a bevy of nonstate actors engage online and in the virtual and information environments. Accordingly, the minor exposes students to basic technology concepts, methods of attack and defense, potential strategy and goals for cyber-engagement, and response and forensics for cyber-engagements.

Alongside conventional methods of warfare, cybersecurity has rapidly developed into a centerpiece of state's ability to project power and impose its will in order to achieve its national priorities and strategic objectives. As the United States and other emerging cyber powers craft and implement doctrine in this nascent domain, there is likely to be a rapid increase in activity, from efforts to disrupt the online activities of global terrorist networks like the Islamic State to near daily raids on foreign networks designed to cripple states' cyberweapons before they can be deployed.

In the shifting landscape of cyber capabilities, how will laws, authorities, and policies keep pace? What are the implications and consequences of actions that may be considered "short of war" by some countries but "above the threshold" of conflict by others? Will a more aggressive defensive posture with respect to cybersecurity inadvertently increase the risk of conflict with states that sponsor malicious hacking groups? What is the proper balance between offense and defense in cybersecurity and how are cyber operations best integrated into a country's overall military strategy?

Unlike other kinds of conflicts, the attribution of attacks presents significant challenges. Indeed, in many cases, it can be difficult to determine whether the attacker is a nation-state, a nonstate actor, a criminal gang, or a lone hacktivist. Investigators must combine technical and traditional methods to identify potentially responsible parties and to understand their intent. If the aggressor's identity cannot be confirmed, how can a counterattack be launched? Some attackers may seek to mount "false flag" attacks and deception, for example, that misdirect defenders to counter-attack in the wrong direction. Additionally, what are appropriate responses to attacks made on civil infrastructure and private business operations, such as in the areas of financial services, transportation, energy, entertainment, and health care? In other words, what are the appropriate rules of engagement for national systems, infrastructural systems, businesses, and individuals? When, for example, is a counterattack or a "kinetic" response permissible?

These questions have major implications for the study of war and peace. More than at any time in the past, those who seek to start war may be harder to find and their motives more difficult to discern. Many of the technical challenges posed by cyberspace activities will be addressed in the School of Computer Science's new security and privacy concentration for SCS students. The SCS program, available to non-SCS students as a minor, requires a high degree of math and quantitative training. The cybersecurity and international conflict minor proposed herein tackles the social-scientific dimensions of cybersecurity with a focus on the implications of the cyber age for modern statecraft, warfare, elections (local, state, and national), and politics, more generally.

CURRICULUM
60 units

Foundational Course

Students must take one of the following two foundational courses (9 units):

84-275	Comparative Politics	9
84-326	Theories of International Relations	9

Core Courses

Students must take all of the following core courses (24 units):

84-387	Technology and Policy of Cyber War	9
84-388	Concepts of War and Cyber War	6
84-405	The Future of Warfare	9

Elective Courses

Students must take three courses from the following list of elective courses (27 units). At least one course (9 units) must be taken from the Institute for Politics and Strategy and have an 84-number.

79-298	Mobile Phones & Social Media in Development & Human Rights: A Critical Appraisal	6
79-301	History of Surveillance: From the Plantation to Data Capitalism	6

79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
80-249	AI, Society, and Humanity	9
84-319	U.S. Foreign Policy and Interventions in World Affairs	9
84-323	War and Peace in the Contemporary Middle East	9
84-325	Contemporary American Foreign Policy	9
84-370	Global Nuclear Politics	9
84-372	Space and National Security	9
84-373	Emerging Technologies and the Law	9
84-380	Grand Strategy in the United States	9
84-386	The Privatization of Force	9
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-414	International and Subnational Security	9
17-200	Ethics and Policy Issues in Computing	9
17-303	Cryptocurrencies, Blockchains and Applications	Var.
17-331	Information Security, Privacy, and Policy	12
17-333	Privacy Policy, Law, and Technology	9
17-334	Usable Privacy and Security	9
17-702	Current Topics in Privacy Seminar	3

Students are permitted to double count a maximum of two courses between the minor in Cybersecurity and International Conflict and another major or minor.

Minor in International Relations and Politics

Kiron K. Skinner, *Faculty Director*
kskinner@andrew.cmu.edu, Porter Hall 223E

Emily Half, *Deputy Director*
ehalf@andrew.cmu.edu, Porter Hall 223H, 412-268-7082

www.cmu.edu/ips

The International Relations and Politics (IRP) minor analyzes the role of politics at the national, regional, international, and transnational levels; examines political and institutional arrangements within and among these levels; and investigates the grand strategy of nation-states.

Statesmen, scholars, and policy makers often define grand strategy as the combination of diplomatic, economic, military, and political factors used by leaders to defend their respective nation-states. The IRP minor investigates the way in which leaders and citizens construct grand strategy and national security policy more generally; the impact of domestic and international forces on states' security and economic policies; and the significance of alliances, coalitions, and international institutions for world politics. The study of grand strategy and political institutions is the flagship initiative of the minor.

In the tradition of Carnegie Mellon University, political science is studied and taught in an interdisciplinary manner. Utilizing the interdisciplinary strengths of the social sciences at CMU, IRP students study political phenomena through the perspectives of decision science, economics, and political history. Students pursing the minor will be asked to develop an understanding of game theory, economic and statistical analysis, qualitative analysis, rational choice theory, and theories of behavioral decision making as they study alliances, coalitions, institutions, and political strategy. Recognizing the influence of language and culture on politics and international relations, students are encouraged to study a modern language other than English.

The International Relations and Politics minor is offered through the Institute for Politics and Strategy. A maximum of two courses may double count between the minor in International Relations and Politics and another major or minor.

Curriculum

54 units

Core Courses

Students must take all three core courses (27 units):

84-104	Decision Processes in American Political Institutions	9
84-275	Comparative Politics	9
84-326	Theories of International Relations	9

Economics Requirement

Students must complete one of the following courses. Excluded from all double counting rules.

84-110	Foundations of Political Economy	9
73-102	Principles of Microeconomics	9

Electives

Students select three courses (27 units) from any of the elective sequences below. Two courses (18 units) must be taken from the Institute for Politics and Strategy and have an 84-number.

Grand Strategy and Political Institutions

66-221	Topics of Law: Introduction to Intellectual Property Law	9
79-298	Mobile Phones & Social Media in Development & Human Rights: A Critical Appraisal	6
79-301	History of Surveillance: From the Plantation to Data Capitalism	6
79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
80-135	Introduction to Political Philosophy	9
80-321	Causation, Law, and Social Policy	9
80-335	Social and Political Philosophy	9
84-309	Political Behavior	9
84-319	U.S. Foreign Policy and Interventions in World Affairs	9
84-320	Domestic Politics and International Affairs	9
84-321	Autocrats and Democrats	9
84-322	Nonviolent Conflict and Revolution	9
84-323	War and Peace in the Contemporary Middle East	9
84-324	The Future of Democracy	6
84-325	Contemporary American Foreign Policy	9
84-362	Diplomacy and Statecraft	9
84-363	Comparative Legal Systems	9
84-364	Comparative Presidential Behavior: Leadership, Personality, and Decision Making	9
84-366	The American Presidency	9
84-369	Decision Science for International Relations	9
84-370	Global Nuclear Politics	9
84-372	Space and National Security	9
84-373	Emerging Technologies and the Law	9
84-380	Grand Strategy in the United States	9
84-386	The Privatization of Force	9
84-387	Technology and Policy of Cyber War	9
84-388	Concepts of War and Cyber War	6
84-389	Terrorism and Insurgency	9
84-390	Social Media, Technology, and Conflict	9
84-393	Legislative Decision Making: US Congress	6
84-402	Judicial Politics and Behavior	6
84-405	The Future of Warfare	9
84-414	International and Subnational Security	9
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9

Economics and Society

19-452	EPP Projects	12
70-342	Managing Across Cultures	9
70-365	International Trade and International Law	9
70-430	International Management	9
73-103	Principles of Macroeconomics	9
73-328	Health Economics	12
73-332	Political Economy	9
79-386	Entrepreneurs in Africa, Past, Present and Future	9
80-136	Social Structure, Public Policy & Ethics	9
80-244	Environmental Ethics	9
80-249	AI, Society, and Humanity	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9
84-308	Political Economy of Latin America	9
84-310	International Political Economy	9

84-311	International Development: Theory and Praxis	9
84-312	Gender and Development in Sub-Saharan Africa	6
84-313	International Organizations and Law	9
84-315	Contemporary Debates in Human Rights	9
84-318	Politics of Developing Nations	9
88-411	Rise of the Asian Economies	9

International Cultures

76-318	Communicating in the Global Marketplace	9
76-386	Language & Culture	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-205	20th Century Europe	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-224	Mayan America	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-233	The United States and the Middle East since 1945	9
79-257	Germany and the Second World War	9
79-259	France During World War II	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-264	Tibet and China: History and Propaganda	6
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-275	Introduction to Global Studies	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-291	Globalization in East African History	6
79-307	Religion and Politics in the Middle East	9
79-313	"Unwanted": Refugees, Asylum Seekers, and Patterns of Global Migration	6
79-314	The Politics and Culture of Memory	9
79-318	Sustainable Social Change: History and Practice	9
79-320	Women, Politics, and Protest	9
79-338	History of Education in America	9
79-342	Introduction to Science and Technology Studies	9
79-343	Education, Democracy, and Civil Rights	9
79-377	Food, Culture, and Power: A History of Eating	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
79-385	Out of Africa: The Making of the African Diaspora	9
79-398	Documenting the 1967 Arab-Israeli War	9
85-375	Crosscultural Psychology	9
300 or 400 level language class		

Minor in Politics and Public Policy

Kiron K. Skinner, *Faculty Director*
kskinner@andrew.cmu.edu, Porter Hall 223E

Emily Half, *Deputy Director*
ehalf@andrew.cmu.edu, Porter Hall 223H, 412-268-7082

www.cmu.edu/ips

Rooted in the discipline of political science, the minor in Politics and Public Policy investigates U.S. public policy issues and other matters of domestic politics while providing students hands-on and practical learning experiences. Students pursuing the Politics and Public Policy minor must participate in the Carnegie Mellon University Washington Semester Program for one semester during their undergraduate experience.

From embassy headquarters to nongovernmental organizations, think tanks to advocacy organizations, and consulting firms to media outlets, Washington, DC, is a focal point for many international and public policy activities. Open to all Carnegie Mellon undergraduates, the Carnegie Mellon University Washington Semester Program (CMU/WSP) allows students to study public policy and intern in Washington for one semester. Undergraduates from any course of study who would value firsthand policy experience are invited to apply to the Carnegie Mellon University Washington Semester Program and declare a minor in Politics and Public Policy.

In this semester-long program, students live, work, and study in Washington, DC, coming into direct contact with political, business, and community leaders and learning about the most pressing policy issues of the day.

Students earn 48 units for the Carnegie Mellon University Washington Semester Program, interning about twenty-four hours per week in any sector or field of interest within Washington, DC, while taking classes taught by Carnegie Mellon faculty. The Institute for Politics and Strategy sponsors events and policy-oriented opportunities in Washington for students participating in the program to further enrich their experience and enhance their understanding of how Washington functions as a hub of international and public policy decision making.

The minor in Politics and Public Policy is offered through the Institute for Politics and Strategy. A maximum of two courses may double count between the minor in Politics and Public Policy and another major or minor.

Curriculum 57 units

Core Seminars

Students must take the following two courses while participating in the CMU/WSP (24 units):

84-360	CMU/WSP Internship Seminar	12
84-450	Policy Forum	6
84-450	Policy Forum	6

Elective Seminars

Students must take 24 units from the below list of elective seminars offered in the CMU/WSP. Offerings vary by semester. (24 units):

84-330	The Shading of Democracy: The Influence of Race on American Politics	6
84-331	Money, Media, and the Power of Data in Decisionmaking	6
84-332	Effects of US Policy on Businesses: Perspectives of Asian Americans	6
84-333	Power and Levers for Change in Washington, DC	12
84-334	Presidential Power in a Constitutional System	6
84-336	Implementing Public Policy: From Good Idea To Reality	12
84-337	Biomedical Science Research, Policy, and Governance	6
84-340	Making Change: How Organized Interests Work in Washington	12
84-343	Language and Power: How to Understand and Use Political Speech	6
84-346	Legal Issues in Public Administration	6
84-348	Advocacy, Policy and Practice	6

Foundational Course

Students select one course from the following list of courses offered at Carnegie Mellon University's Pittsburgh or Qatar campus. Students may take this course before or after participating in the CMU/WSP. (9 units):

84-104	Decision Processes in American Political Institutions	9
84-275	Comparative Politics	9
84-326	Theories of International Relations	9

Economics Requirement

Students must complete one of the following courses. Students may take this course before or after participating in the CMU/WSP. Excluded from all double counting rules.

84-110	Foundations of Political Economy	9
73-102	Principles of Microeconomics	9

Accelerated Master of Science in International Relations and Politics

The accelerated Master of Science in International Relations and Politics (IRP/AMP) is open only to Carnegie Mellon undergraduate students. Students should have an undergraduate major, additional major, or minor in the Institute for Politics and Strategy, they should have participated in the Carnegie Mellon University Washington Semester Program, or they should have special approval from the faculty admissions committee.

Students interested in applying for the IRP/AMP should consult with the Institute for Politics and Strategy (IPS) Deputy Director in the sophomore or junior year for details and advice on shaping undergraduate coursework to qualify for the program. Current undergraduates will apply for the IRP/AMP during the junior year. Detailed information on the IRP/AMP curriculum is available on the Institute for Politics and Strategy website (http://www.cmu.edu/ips/masters%20degrees).

Intellectual Rationale

At the end of the Cold War, there was widespread belief among democratic elites that the end of history finally had arrived. They predicted that the United States (indeed the West, if not the world) would benefit from the peace dividend resulting from the dissolution of the Soviet Union and the undisputed role of the United States as the world's predominant power. But the spread of democracy across Eastern Europe and Latin America as the Cold War ended has been met with highly unanticipated reversals. Relations among nation-states are in flux. In the twenty-first century, the United States has been engaged in continuous Middle East and South Asian wars, intense territorial disputes among the great powers (US, China, and Russia) are redefining the international landscape, civil wars routinely spill over into larger regional conflicts, and cyber warfare and terrorism intersect in deadly ways.

For the generation of students we are now teaching, war has been a constant in their lifetime. Accordingly, the primary focus of the International Relations and Politics Accelerated Master's Program (IRP/AMP) is *international security*.

Perhaps at no time since the interwar period of the twentieth century has there been so much uncertainty about what path the international system will take and how states will internally organize themselves. During this current period of uncertainty, transformation, and chaos, there is no denying President Barack Obama's dictum: The United States is the world's indispensable nation. In other words, the United States is the main nation-state actor that helps to organize and enforce norms in the anarchic international system. It is a system marked by the absence of any authority above states or any commonly agreed-upon authority for the use of force – the opposite of domestic society. Perforce, understanding domestic political institutions must be a component of the accelerated master's program.

It is important to comprehend how the political institutions of other nations function because domestic political processes of all sorts help to shape international relations. Theorists of international relations no longer contend, as they did a half century ago, that politics stops at the water's edge. International security will be the area of concentration in this accelerated master's program. Courses in political institutions also will be integral to IRP/AMP because they will enrich students' scientific understanding of political processes.

Faculty

KIRON K. SKINNER, Taube Professor of International Relations and Politics; Institute Director – Ph.D., Harvard University; Carnegie Mellon, 1999–

IGNACIO ARANA, Assistant Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2016–

COLIN P. CLARKE, Assistant Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2014–

BARUCH FISCHHOFF, Howard Heinz University Professor in the Institute for Politics and Strategy and Department of Engineering and Public Policy – Ph.D., The Hebrew University of Jerusalem; Carnegie Mellon, 1987–

Executive Committee

KIRON K. SKINNER, Taube Professor of International Relations and Politics; Institute Director – Ph.D., Harvard University; Carnegie Mellon, 1999–

KATHLEEN CARLEY, Professor – Ph.D., Harvard University; Carnegie Mellon, 1984–

BARUCH FISCHHOFF, Howard Heinz University Professor in the Institute for Politics and Strategy and Department of Engineering and Public Policy – Ph.D., The Hebrew University of Jerusalem; Carnegie Mellon, 1987–

Lecturers

MOLLY DUNIGAN, Lecturing Faculty in the Institute for Politics and Strategy – Ph.D., Cornell University; Carnegie Mellon, 2014–

GEOFFREY MCGOVERN, Lecturing Faculty in the Institute for Politics and Strategy – Ph.D., Binghamton University, J.D., Harvard University; Carnegie Mellon, 2013–

Post-Doctoral Fellows

JOHN J. CHIN, Post-Doctoral Fellow in the Institute for Politics and Strategy – Ph.D., Princeton University; Carnegie Mellon, 2016–

DANIEL HANSEN, Post-Doctoral Fellow in the Institute for Politics and Strategy – Ph.D., Michigan State University; Carnegie Mellon, 2018–

DANI NEDAL, Post-Doctoral Fellow in the Institute for Politics and Strategy – Ph.D., Georgetown University; Carnegie Mellon, 2018–

DANIEL M. SILVERMAN, Post-Doctoral Fellow in the Institute for Politics and Strategy – Ph.D., The Ohio State University; Carnegie Mellon, 2017–

Fellows

RASHALL BRACKNEY, Fellow in the Institute for Politics and Strategy – Ph.D., Robert Morris University; Carnegie Mellon, 2018–

FRED CRAWFORD, Fellow in the Institute for Politics and Strategy – J.D., Georgetown University; Carnegie Mellon, 2017–

DALE CROWELL, Fellow in the Institute for Politics and Strategy – M.A., Catholic University of America; Carnegie Mellon, 2018–

MARCIELA DEGRACE, Fellow in the Institute for Politics and Strategy – Ph.D., Harvard University; Carnegie Mellon, 2018–

JOSEPH E. DEVINE, Associate Dean of Undergraduate Studies; Fellow in the Institute for Politics and Strategy – Ph.D., Carnegie Mellon; Carnegie Mellon, 1978–

THOMAS KARAKO, Fellow in the Institute for Politics and Strategy – Ph.D., Claremont Graduate University; Carnegie Mellon, 2015–

KIM SMACZNIAK, Fellow in the Institute for Politics and Strategy – J.D., Harvard University; Carnegie Mellon, 2017–

SACHIKO TAKAYASU, Fellow in the Institute for Politics and Strategy – M.B.A., The Ohio State University; Carnegie Mellon, 2018–

BEVERLEY WHEELER, Fellow in the Institute for Politics and Strategy – D.Ed., Harvard University; Carnegie Mellon, 2012–

JULIE WILSON, Fellow in the Institute for Politics and Strategy – J.D., American University; Carnegie Mellon, 2017–

SEAN ZEIGLER, Fellow in the Institute for Politics and Strategy – Ph.D., Duke University; Carnegie Mellon, 2019–

Adjunct Faculty

SOPHIE LE BLANC – Ph.D., University of Delaware; Carnegie Mellon, 2017–

MICHELLE GRISÉ – Ph.D., Yale University, J.D.,University of Michigan; Carnegie Mellon, 2019–

MARIA MCCOLLESTER – Ph.D., Boston College; Carnegie Mellon, 2020–

FORREST E. MORGAN – Ph.D., University of Maryland; Carnegie Mellon, 2017–

ISAAC R. PORCHE III – Ph.D., University of Michigan; Carnegie Mellon, 2017–

CHAD C. SERENA – Ph.D., University of Pittsburgh; Carnegie Mellon, 2016–

SUSAN SOHLER EVERINGHAM – M.A., University of California, Los Angeles; Carnegie Mellon, 2017–

Institute for Politics and Strategy Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

84-104 Decision Processes in American Political Institutions
Fall: 9 units
This is an interdisciplinary introduction to the study of politics and government in the United States. It familiarizes the student with the basic structures and processes of American government, but moves beyond the purely descriptive into the realm of the analytical. The main theoretical tools are spatial models of political decision-making, and models of collective action problems. The position taken in this course is that understanding American philosophical ideas about authority, power, and freedom is as central to demystifying the U.S. form of democracy as is understanding how decision-making institutions function. Thus, on one side, this course looks at how American political thought is infused into political institutions and society. On the other side, it investigates institutional arrangements using rationalistic theories. In addition, scientific writings at the intersection of psychology and economics are used to probe the possibility of gaining explanatory leverage on U.S. politics from the perspective of behavioral decision-making theories.

84-110 Foundations of Political Economy
Spring: 9 units
Political Economics studies the interplay between economics and politics. Politicians, for example, may deviate from welfare-maximizing policies due to political pressures. Conversely, the economic and political consequences of policy decisions can shape the choices of future governments. The course will provide a broad, accessible introduction to the key issues in micro and macroeconomics, international economics, and financial markets, emphasizing those most valuable to understanding the interaction of politics and economics. The course will examine core economic concepts to illuminate how economies work, what constraints governments face, and what the welfare implications are of policy choices. From there, the course will expand to illustrate the political and ideological influences on monetary policy and central banking, the political factors shaping economic crises, the international factors influencing the implementation of domestic polices, and political influences on economic integration.

84-198 Research Training: Institute for Politics and Strategy
Fall and Spring
This course is part of a set of 100-level courses offered by Dietrich College departments as independent studies for second-semester freshmen, and first- or second-semester sophomores, in the College. In general, these courses are designed to give students some real research experience through work on a faculty project or lab in ways that might stimulate and nurture subsequent interest in research participation. Faculty and students devise a personal and regularized meeting and task schedule. Each Research Training course is worth 9 units, which generally means a minimum for students of about 9 work-hours per week. These courses are offered only as electives; i.e., they cannot be applied toward a college or major requirement, although the units do count toward graduation as elective units. Additional details (including a roster and descriptions of Research Training Courses available in any given semester) are available in the Academic Advisory Center. Prerequisites/ restrictions: for Dietrich College students only; only for second-semester freshmen, or first- or second-semester sophomores; minimum cumulative QPA of 3.0 (at the time of registration) required for approved entry; additional prerequisites (e.g., language proficiency) may arise out of the particular demands of the research project in question.

84-250 Writing for Political Science and Policy
Spring: 9 units
The aim of this course is to equip students with the essential skills necessary to successfully write academic research papers and theses in political science, and professional documents such as policy memos, op-eds, political speeches, briefs, and PowerPoint slides. Students thus learn fundamentals of writing for political science and public policy. Key topics include principles of rhetoric, evidence-based argumentation, citation, concision, and framing. Students also learn how to cite properly using citation management software EndNote and construct powerful tables and figures using quantitative datasets. This is a writing-intensive course in which students practice writing, edit peers' writing, read about how to write, and analyze examples of stellar writing. A final project entails writing a draft senior thesis proposal.

84-265 Political Science Research Methods
Spring: 9 units
This course provides an overview of research methods in political science. Students will learn to think like social scientists and develop skills required by the discipline. The course emphasizes the nature of causality and how causal claims can be made in the social sciences. The goal for the class is for students think critically about the strengths and weaknesses of various methodological approaches and identify the methodological tools that are most appropriate for answering different research questions. Furthermore, students will increase their ability to consume political science research from a variety of subfields while also learning to design and present their own research.
Prerequisites: 70-207 or 36-220 or 36-247 or 36-207 or 36-201 or 36-200

84-275 Comparative Politics
Spring: 9 units
This course is an introduction to the subfield of Political Science called Comparative Politics. Scholars in this subfield -comparativists- use comparative methods to study and compare domestic politics across countries. In this course, we aim to learn about how political systems differ, discuss why they differ and explore the consequences of such variation. The course is divided into four sections. In the first part, we will examine the main theories and methods used to conduct research in the subfield, and discuss the development and consolidation of the modern state. In the second section, we will examine political regimes, including variation among democracies and nondemocracies. In the third unit, we will study some of the countries' central political institutions. We will compare presidentialism to parliamentarism, and examine legislatures, electoral systems, and political parties. In the final segment, we will scrutinize political mobilization and conflict. We will discuss interest groups, nationalism, social movements, protests, populism, clientelism, revolutions, civil wars, terrorism, and globalization. Throughout the course, the discussion will focus mainly on the Americas and Europe, but not exclusively. Students will be required to apply the comparative methods discussed in the course to make in-class presentations about different countries.

84-308 Political Economy of Latin America
Spring: 9 units
For most of its history, Latin America has been home to numerous political and economic experiments. Revolutions, coups, military dictatorships, democratic and authoritarian regimes have coexisted with dramatic oscillations on economic policies regarding the size and functions of the state and the role of the market. Governments have experimented with a range of strategies to attain development, using the region as a laboratory of politico-economic theories. In this course, we will examine how the complex relationship between politics and economic policies helps us to explain the current level and range of economic development in the region. The course is divided into three main sections. The first part will focus on Latin American history from its conquest to the end of the First World War (1492-1918). The second portion will cover from the aftermath of the First World War to the end of the Cold War. The third segment will center on the macro processes that have characterized the region since 1990, with an emphasis on the existing challenges to democratic and economic consolidation. In a final paper, students will discuss how current events connect to the region¿s historical complex marriage between politics and economics. Students will be encouraged to submit their papers to the CIRP Journal (https://www.cmu.edu/ir/cirp-journal), Panoramas (http://www.panoramas.pitt.edu) or similar academic magazines.

84-309 Political Behavior
Intermittent: 9 units
The goal of this course is to understand how citizens engage with and influence the political system. This course is devoted to the study of how people behave when interacting with other citizens, politicians, and political institutions. We will primarily focus on the behavior of non-elite political actors using examples from the United States, other developed democracies, as well as developing countries. We will address questions such as what influences people to vote or abstain in an election, how people decide between candidates, how trust and cooperation develop within and across ethnic groups, and how citizens respond to political violence and terrorism. The course will integrate game theoretical perspectives with insights from psychology to help students gain a deeper understanding of the interplay between citizens' political goals and the political system in which they operate.

84-310 International Political Economy
Fall: 9 units
This course explores how political institutions, process, and actors influence economic interactions both domestically and internationally. During the semester, we will address two key questions: 1) how do governments collaborate to regulate, and stabilize, the trans-boundary flow of capital, goods, and services?; 2) what are the distributional effects of the current world economic order? In exploring these question from diverse theoretical lenses, we will discuss topics ranging from monetary and exchange rate policies, intentional trade, and global integration of production to the role of multinational corporations, social movements and civil society organizations, as well as institutions for corporate social responsibility, in the global economy. By the end of the course, students will be prepared to compare and contrast the theoretical propositions, and policy recommendations, of rival schools of thought.
Prerequisites: 73-102 or 84-110 or 12-421 or 88-220 or 73-100

84-311 International Development: Theory and Praxis
Intermittent: 9 units
What is the difference between a developed country and one that is developing? How did some countries achieve a state of development, while others remain mired in underdevelopment? What is the best solution for assisting people living in developing countries? This course will explore these key questions and many more related to theoretical foundations and daily applications of international development. Because development theory and praxis are interdisciplinary in nature, this course will take a similar approach and draws upon readings from political science, economics, history, and sociology. We will also examine the various intersections of development, gender, indigeneity, race, class, and citizenship, as they are manifest in contemporary development approaches.

84-312 Gender and Development in Sub-Saharan Africa
Intermittent: 6 units
The purpose of this course is to continue a discussion on the debates, structures, and agents that inform international development in Africa but through the varied perspectives and experiences of African women. Their perspectives offer critical interventions into development discourses and practices traditionally viewed through masculine and Western lenses. In studying development from the African woman's perspective, one is better able to engage both the successes and failures of this formal process we call "development" in Africa. By examining African women and their relationship to this process, we will also see the alternative frames of feminisms and knowledges that emerge from these realities. The core questions driving this course are: (i) what are the various development ideologies and processes that have shaped contemporary Africa? (ii) How have African women adopted, rejected, and/or creolized these ideologies and processes for the purposes of changing their cultural, political, and economic conditions? The course readings come predominantly from African women, although there are texts from non-African women and men that generally serve to highlight the larger discourses taking place around a particular topic.

84-313 International Organizations and Law
Spring: 9 units
This course will take a comprehensive view on the role and function of both international organizations (IOs) and international law (IL) in world politics, and will examine its implications for both international political economy as well as security studies. It will begin with a review of classical theoretical debates regarding the function of these institutions. Do these institutions have any exogenous impact on world affairs? Do IOs meaningfully impact international cooperation? Further, it will engage with headline contemporary issues: can a non-binding international treaty such as the Paris Climate Accord meaningfully influence international climate goals? The course thus critically examines whether these institutions are effective and, if so, under what plausible conditions. It will examine a broad range of global institutions and will examine international security elements, such as how IOs and IL influence the conduct of war, human rights and civil conflict outcomes. But it will also engage with important themes in political economy, such as how institutions like the IMF relate to development or financial stability; compliance under the WTO; and whether international treaties influence international investments patterns.
Prerequisites: 36-200 or 36-201

84-315 Contemporary Debates in Human Rights
Intermittent: 9 units
What are human rights? Are human rights universal or provincial? This class will survey the origins, debates, and application of human rights around the world. As a class, we will explore the history of the term and the evolution of human rights as a set of formal and informal institutions derived from the global aspirations of the Universal Declaration of Human Rights (UDHR) and the quotidian interactions between the powerful and ostensibly powerless. By the end of this course, you should come away with both a renewed and wavering belief in the idea of human rights.

84-318 Politics of Developing Nations
Fall: 9 units
Be it on our feet, in our grocery bags or in the news, our daily lives connect us to people in the developing world. Despite such an intricate relationship, we tend to know very little about developing nations and their challenges beyond a common stereotype of poverty. What are developing nations? What is their place in the world? What challenges do those nations and their populations face? In this class, we will strive to answer those questions through readings of political science and political economy scholarship and in-class activities and discussions. We will explore the socio-economic and political issues that developing nations face and take special care to practice perspective taking (i.e. we will put ourselves in specific nations' shoes and consider situations from their point of view). We will adopt various lenses (e.g. post colonialism, liberalism, feminism) throughout the semester to inform our understanding of the various positions taken by global actors. By addressing the unequal power balance between developed and developing nations as well as among developing nations, we will enrich our world view and understanding of major global issues, such as development. We will practice those skills in class through discussions and activities (you should expect very little lecturing) and outside of class through guided readings. Your learning in the course will be assessed through various writing assignments (take home exams, a final paper, weekly responses) where you will practice composing arguments based on evidence.

84-319 U.S. Foreign Policy and Interventions in World Affairs
Intermittent: 9 units
This course will discuss the various ways in which the United States, like other countries around the world, tries to influence developments within other states by intervening in their domestic affairs. Interventions of various kinds, utilizing numerous tools, are frequently undertaken by the United States with major effects on the intervened country and subsequent U.S. foreign policy. The goal of this course is to provide a better understanding of such interventions in general and a more complete picture of this frequently neglected aspect of American foreign policy in particular. Accordingly this course will focus on explaining, among other things, why interventions of various types are done, their effectiveness in achieving their goals and their effects on the target and (occasionally) on the U.S.. It will also discuss in depth various historical cases of American interventions ranging from the early 20th century to the present, widening the depth and breadth of student knowledge on American foreign policy. The course will cover both military and non-military forms of interventions including (for example): Military interventions in civil wars, FIRCs/regime change operations (both the overt and covert types), humanitarian interventions, partisan electoral interventions, economic sanctions, external help in state-building, and drone warfare.

84-320 Domestic Politics and International Affairs
Intermittent: 9 units
This course will provide students with a broad overview of the literature which investigates the effects of political institutions, or, more specifically, the inclusiveness of political institutions, on both domestic and foreign policies. Domestic political institutions influence policies through shaping policymakers' incentives, and, in turn, outcomes of domestic and international affairs influence the political survival of policymakers and even of political institutions. With this in mind, our main objective is to develop students' ability to critically and logically analyze global patterns of governance, conflict, and cooperation. To this end, students will also be introduced to fundamentals of research design and game theory, an analytical tool to analyze strategic interactions. The substantive questions we will ask include, but not limited to, the following: how does domestic politics constrain or encourage state leaders to go to war, sign trade pacts, and develop economy?; how can citizens incentivize policymakers to achieve desirable policy goals?; how do international affairs affect our lives in the long run?; and do certain foreign policies affect citizens of democracies and non-democracies differently, and if so, why?

84-321 Autocrats and Democrats
Intermittent: 9 units
The international system is populated by countries with many different types of national governments. A common simplification of the many diverse political systems in the world is to divide them into democratic states and non-democratic states or "autocracies." This simplification misses many key differences among autocracies and causes us to overlook key similarities between autocracies and democracies. This course will cover three major areas. First, we will evaluate the strategic incentives faced by all leaders and discuss how these incentives differ by regime type. Second, we will discuss how leader responses to these incentives shape policy outcomes such as economic growth. Third, we will examine the factors that promote transitions from one regime type to another. Throughout the course, students will be asked to re-consider much of what they've thought about both democratic and non-democratic leaders. Class assignments will ask students to critically examine existing theories of political organization and apply their knowledge to real world cases, both historical and contemporary.

84-322 Nonviolent Conflict and Revolution
Spring: 9 units
Conflict and revolution are usually associated with armed struggle and violence. But over the course of the last century, nonviolent conflict has become an increasingly prominent source of institutional change and political revolution around the world, from Gandhi's salt march to Filipino "people power" to the post-Soviet "color revolutions" to the Arab Spring. What are the causes, strategies, tactics, dynamics, and consequences of nonviolent conflict, and how do these differ from violent or armed conflict? When and how do unarmed "people power" campaigns topple repressive authoritarian regimes? This course addresses these questions and in the process engages contending theories of power, revolution, and insurgency. The first half of the course introduces students to key concepts, theories, and historical patterns of nonviolent conflict. In the second half of the course, the class analyzes case studies of landmark nonviolent campaigns, both successful and failed. By the end, students will be expected to write an original 10 page analysis of an historical or ongoing nonviolent conflict.

84-323 War and Peace in the Contemporary Middle East
Spring: 9 units
This course examines the drivers of war and peace in the contemporary Middle East and North Africa (MENA) region. The course is structured around five major types of armed conflict that plague the region today - civil wars, insurgent and terrorist campaigns, enduring rivalries, regional disputes, and external interventions. We will delve into the theories of what fuels - and what resolves - each of these types of conflict, while exploring cases around the region such as the disputes in Libya, Syria, Yemen, Iraq, and Turkey, as well as broader clashes like the Arab Israeli conflict, Shi'a-Sunni conflict, and recent great power interventions in the region. The course will rely on a mixture of research articles and books as well as more diverse materials such as war reporting, films, and memoirs in order to give students a holistic understanding of these issues.

84-324 The Future of Democracy
Intermittent: 6 units
After the Cold War, Francis Fukuyama famously argued that humanity had reached the "end of history" insofar as liberal democracy had become the last viable form of government. Yet today, illiberal democracies and dictatorships persist and the world has witnessed the return of authoritarian great powers led by China and Russia. What is the future of democracy globally? How strong and secure are autocratic regimes from Iran to North Korea? Do populist movements in the United States and Europe really put democracy in the heart of the "democratic west" at risk? This course surveys the historical rise of democracy, the domestic and international causes of democratization and democratic consolidation, the rise and fall of democracy promotion, and the impact of democratic and autocratic major powers on the spread of democracy worldwide. By the end, students will be expected to write an intelligence memo on democratic prospects in a specific country or region or a policy memo with a proposal to reform democracy promotion.

84-325 Contemporary American Foreign Policy
Spring: 9 units
This course provides a survey of American foreign policy since World War I. We will cover topics such as America's entry into the Great War, the League of Nations and America's role in global self-determination movements, the perennial battles between isolationism and internationalism, the creation of a US-led world order after 1945, Cold War nuclear strategy and nuclear nonproliferation, the modern domestic politics of foreign policy, the international dimensions of the civil rights movement, US covert action, the challenges of managing unipolarity, and contemporary issues of climate change, humanitarian intervention, terrorism, and international economic policy. This is an interdisciplinary course that marries International Relations and Political Science with American, Diplomatic and Military History. We will make ample use of primary sources and some data analysis. A good grasp of 20th century American and World History, and some familiarity with International Relations Theory are not requirements but will prove helpful. By the end of the semester, students will have the requisite historical background and analytical toolkit to analyze and evaluate contemporary foreign-policy decision-making.

84-326 Theories of International Relations
Fall: 9 units
This course focuses on teaching the main approaches for the study of international relations. Although you will learn about some current international issues and about the evolution of international relations, and see how various theories would explain important past international events, the focus of this course is analytic rather than substantive. In other words, it will focus on general arguments and their underlying logic rather than on specific events and details or, for that matter, definitive answers as to 'which side is right'. As such, this course will help you to better understand the world we live in and provide you with tools for analyzing various international events. It will also acquaint you with many of the frameworks frequently used by statesmen, either implicitly or explicitly, in order to understand the world and to make policy on various issue areas. The course will begin by analyzing approaches from the three main levels of analysis: the individual, domestic (liberal and non-liberal theories) and systemic (neorealism, etc.). It will move on to discuss approaches which focus on, for example, the effects of strategic interactions between states, of international institutions and of norms and of the overall 'social environment' that states live in. The course will then conclude by discussing the future of international relations.

84-330 The Shading of Democracy: The Influence of Race on American Politics
Intermittent: 6 units
This course will explore intersections of race, political influence and the shaping of America's democracy. Discourse will focus on racial and ethnicity-related policies, practices and processes designed to influence democratic outcomes. Students will examine complex, and often pivotal occurrences that have transformed the political landscape through the works of Richard Rorty, Achieving Our Country: Leftist Thought in Twentieth-Century America; Michelle Alexander, The New Jim Crow: Mass Incarceration in the Age of Colorblindness; and, Steve Phillips, Brown Is the New White: How the Demographic Revolution Has Created a New American Majority. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-331 Money, Media, and the Power of Data in Decisionmaking
Intermittent: 6 units
This course focuses on the impact of three critical influences on policy and decisionmaking in Washington D.C.: money, in the form of political campaign dollars in particular; media, from national to local; and data that can define the policy problem and solution. The course will dive into each topic through a series of case studies of policies whose successful adoption and implementation hinged upon money, media or data. Students will come away from the course with the background and context to critically consider tough questions about the right role of these powerful influences on national policy. (Is the media "broken?" ; What is the prospect for moderating the impact of money on policy? ; Is the influence of data and facts on the wane in a hyper partisan political context?) THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-332 Effects of US Policy on Businesses: Perspectives of Asian Americans
Intermittent: 6 units
This course explores the effects of policy, advocacy, and government on the U.S. business sector, specifically from the perspective of Americans of Asian heritage and various kinds of business entities (corporations, start-ups, small business, etc.). Each student or small group of students will be assigned a particular kind of business entity and a designated Asian heritage, and the class would work through select policies, exploring how they affect the different enterprises and Asian Americans. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-333 Power and Levers for Change in Washington, DC
Intermittent: 12 units
Political and policy change often appears to sweep in at the direction of high-profile, centralized decision makers. The path to change is in truth a longer tale, driven by a diversity of actors and influencers. This course aims to more fully map out the diversity of levers that drive change in federal policymaking and implementation, examining key influences such as Congress, money, media, social movements, rhetoric and data. The course aims to give students a fuller picture of how their own particular strengths and interests are valuable to creating change, through seminar dialogue, guest speakers, and reflections on students' internship organizational structures. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-334 Presidential Power in a Constitutional System
Intermittent: 6 units
The United States Constitution vests the executive power in a president who is sworn to faithfully execute the laws and to defend the Constitution. What this means was disputed in the Pacificus-Helvidius debate in 1793, and continues to be debated in our present circumstances. This course will examine how the constitutional framework and political forces shape presidential behavior, and how they are affected by it. Special attention will be given to executive orders, signing statements, appointments and removals, and other means presidents use to accomplish their goals in a system of separated powers and a large administrative bureaucracy. Class visitors will include individuals who have written orders, shepherded nominations through Congress, argued for or against presidential actions in federal courts, worked on presidential transition teams, covered the presidency for the press, and more. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-336 Implementing Public Policy: From Good Idea To Reality
Spring: 12 units
Good public policy doesn't just "happen." Rather, successful policy is the result of thorough research, careful drafting, and successful navigation within the government or non-government organization whose leadership may ultimately promulgate it. The course begins with a brief review of government and organizational behavior in a bureaucracy, and the identification of a federal agency's current policy system as a framework to which we will turn throughout the term. Study then turns to an overview of legal research skills. Though usually the province of law students and attorneys, such skills will enable students to know when policy may be crafted "from scratch" — or where, when, and how policy must conform to larger governing legal or regulatory structures. Students will then consider a particular sub-specie of public policy, administrative law, which addresses the special circumstance of regulatory agencies and the statutory regimes that create and govern them. The course culminates with students developing and "staffing" a notional policy, modeled on the federal agency policy system studied throughout the term. This course may benefit a range of audiences: students considering government and related policy careers; future business leaders who must set standards for business practices, employee behavior, or operations within the confines of governmental regulations; prospective paralegals and attorneys; or anyone interested in exploring "what the rules are" and why. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-337 Biomedical Science Research, Policy, and Governance
Intermittent: 6 units
This course is designed for those with science backgrounds or an interest in science to explore how the biomedical sciences intersect with policy and governance on a national and international scale. Biomedical research, in addition to contributing fundamental scientific knowledge, can lead to improvements in health, reduced illness, and have the secondary impact of job creation and other economic benefits. The course will explore how the US funds biomedical science, how Congress and government agencies implement science policies, and the policy implications of new scientific fields using biomedical research topics such as emerging infectious disease, genomics, stem cell research, etc. By the end of the course, the students will be able to understand the process of policy implementation in the US government and consider the effects of policy on biomedical science. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-340 Making Change: How Organized Interests Work in Washington
Fall: 12 units
American politics has many elements and founding principles. Among them is the right of individuals- alone or in groups- to assemble and petition the government in pursuit of their interests and beliefs. This class will highlight the intersection between pressure groups, politics, and policy in Washington, DC. More specifically -based in the political science and other academic literature- the class will examine how organized interests engage and try to influence elected and public officials as they make decisions and take actions related to the nation's political and policy agenda. The class will also interact with Washington-based advocacy and lobbying organizations to see how those ideas are applied in real life scenarios. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-343 Language and Power: How to Understand and Use Political Speech
Intermittent: 6 units
Political writing is a subspecies of language with several manifestations. There is an art to the op-ed and to the editorial, to the polemical essay and to the review. Within government, there are skills particular to writing speeches and ghosting essays, preparing Congressional testimony and Federal commission reports, and to drafting policy memoranda. There are even special forms and qualities of expression for hosting award and memorial ceremonies, and for writing thank-you notes, toasts, and letters of condolence. This course is designed to teach an appreciation for the range and nature of political writing and speech in both its public and governmental forms. It also introduces students to the fundamental skills required to do effective political writing. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-346 Legal Issues in Public Administration
Intermittent: 6 units
Part I of the course will focus on legal issues in public administration and cover the relationship between the government and its employees, including the role of labor unions and collective bargaining in the federal sector. Part II will cover official immunity for government officials, "equal protection of the law" and substantive due process. Part III will cover separation of powers, federalism and judicial review of agency action. Reading assignments will include short excerpts from relevant books/periodicals. Students will also be asked to read court opinions. Although these opinions may be filled with legal jargon, at their essence, most concern the tension between individual rights and government efficiency and control. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-348 Advocacy, Policy and Practice
Intermittent: 6 units
This course examines the role that advocacy and advocacy organizations play at all stages of the policymaking and implementation process, from grassroots to professional advocacy organizations, public facing communications initiatives to internal policy-focused actions. Part of the course will focus on the history of advocacy in policy making, and case studies will be used to explore the players, outcomes, and influences of advocates when designing and implementing policy. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-360 CMU/WSP Internship Seminar
Fall and Spring: 12 units
The internship is the experiential "core" of the Washington Semester Program. Students intern three days per week, for approximately 24-25 hours, in offices from Capitol Hill to the White House and including opportunities in cabinet agencies, nonprofit institutions, museums, advocacy groups, policy think tanks, cultural institutions, and news organizations. Through the internship, students gain professional experience and make long-lasting professional and personal contacts. In addition, students meet once a week with the CMU internship faculty for a 2-hour seminar to report and reflect on their internship experiences, and address pressing current issues from the perspective of their internship organization. In addition, the weekly seminar typically includes 1-2 CMU alumni from the Washington, DC, area. Their personal and professional experiences become part of the seminar conversation, and they make themselves available to students as ongoing sources of information and advice. THIS COURSE IS RESTRICTED TO STUDENTS PARTICIPATING IN THE CARNEGIE MELLON UNIVERSITY WASHINGTON SEMESTER PROGRAM (CMU/WSP) ONLY.

84-362 Diplomacy and Statecraft
Fall: 9 units
Diplomacy and statecraft are the driving forces behind foreign policy and international politics. The class first surveys the evolution of great power politics from the Peace of Westphalia to today and examines the history and practice of different types of statecraft, including coercive diplomacy, crisis management, and economic statecraft (e.g. trade, foreign aid, financial bailouts, and exchange rate policy). The class then surveys contemporary diplomatic challenges, including challenges posed by human trafficking, global climate change, nuclear proliferation, democracy promotion, and major powers such as Russia and China. Both in the classroom and in writing, students are encouraged to think, act, and write like diplomats and to appreciate diplomacy as a vocation. Throughout the course, students build skills in foreign policy memo writing, participate in various diplomatic role-playing simulations, and connect diplomatic trend lines with today's international headlines.

84-363 Comparative Legal Systems
Intermittent: 9 units
This course carries out a comparative study of the nature of courts and law, their position in political systems and the role of judges as political actors, and the potential of legal political institutions to impact society. The course is very theoretical and is organized around key themes and concepts, rather than historical detail on countries. We will examine the political and regime logic behind the origin of judicial power, competing theories about judicial decision making, the meaning and significance of judicial independence, and the potential effectiveness of courts as tools for social and political change.

84-364 Comparative Presidential Behavior: Leadership, Personality, and Decision Making
Fall: 9 units
Presidents receive universal attention for good reasons. As the most powerful politicians in the 49 countries that they govern, their behavior and decisions have enormous consequences. Given the vast amounts of energy dedicated to understanding presidents, one would expect that many questions about presidential behavior and performance have been answered. However, there is still little understanding of how presidents matter. In this course we address the pressing question of how presidents matter from a multidisciplinary and comparative perspective. We will mainly incorporate insights from political science and psychology, but also from other disciplines that study leadership (e.g., management and history).
In the first section we will discuss the comparative history, evolution, and characteristics of the presidency, examining cross-country variation of presidential powers and roles. In the second part, we will discuss theories that have addressed the role of political leaders from different disciplines and methodological approaches. In the third (and main) section, we will study the personal presidency, or how the unique background of the leaders and their personality traits are related to relevant political outcomes. In the last section, we will examine how the broader social, political, and economic context explains presidential behavior and performance.

84-366 The American Presidency
Spring: 9 units
The person elected president of the United States immediately assumes many formal and informal roles including, but not limited to, head of the Executive Branch, diplomat-in-chief, commander-in-chief, leader of party, and legislator-in-chief. Yet the president must fulfill these roles within the confines of a three-branch government and the limitations of power placed upon the office; a literal catch-22. This course therefore seeks to understand how the presidency developed to acquire its many different roles, and how the holders of the office must maneuver the intricacies and challenges of the U.S. government to influence policy and effect change. The first part of the course will study the development of the presidency from 1789 to present, interweaving the roles and responsibilities of the office as they formed and morphed throughout the course of history. The second part will survey different areas of public policy to see how the presidency has played a role in those areas through the examination of relevant cases. The course will provide students with a deep understanding of the presidency, helping them to appreciate the inherent challenges and opportunities faced by those who dare to hold the office.

84-369 Decision Science for International Relations
Fall: 9 units
Decision Science looks at choices from three interrelated perspectives: analysis, characterizing decision makers' options, in terms of expected effects on outcomes that they value; description, characterizing decision makers' beliefs and preferences; and interventions, helping decision makers to choose among the options available to them or create better ones.
The course integrates foundational research in Decision Science with applications to international relations and politics.
Prerequisites: 36-200 or 36-201

84-370 Global Nuclear Politics
Fall: 9 units
The taming of the atom is one of the defining features of the modern era. The awesome creative and destructive potential of nuclear energy has had enormous impact on great power politics, the environment, economic development, and international institutions. Limiting the risk of nuclear Armageddon is one of the dominant challenges in US foreign policy and global governance alike. In this course, we will study 1) why and how countries pursue nuclear weapons and what happens when they acquire them; 2) the national policies and international regimes that have been devised to curb their spread and use, while allowing for the diffusion of energy technology, 3) the national and transnational civil society movements that have fought to roll back the nuclear age or limit its harmful effects, and 4) the role of private actors such as scientists and corporations.

84-372 Space and National Security
Spring: 9 units
Space systems contribute a great deal to America's security, prosperity, and quality of life. This course examines how space-based services provide critical support to military and intelligence operations and contribute to national security more broadly. The course is designed to investigate several interrelated themes, weaving together relevant aspects of technology, strategy, and policy. The material is approached from both functional and historical perspectives, beginning with the basics of military and intelligence space operations and ending with an examination of the space- and cyber-related technical, strategic, and political challenges facing the nation today and in the foreseeable future.

84-373 Emerging Technologies and the Law
Spring: 9 units
This course provides a forum for students to consider the relationship between key emerging technologies and the law. In the first half of the course, each session will be dedicated to discussing the legal implications of a particular emerging technology, including autonomous vehicles, artificial intelligence, cryptocurrency and blockchain technology, stem cell therapy, quantum computing, and 3D printing. In the second half of the course, we will turn to overarching themes at the intersection of law and technology, including emerging technologies and the law of armed conflict, policing and surveillance, intellectual property, and privacy. Throughout the course, students will be asked to consider whether existing legal frameworks are sufficient to address issues related to emerging technologies.

84-380 Grand Strategy in the United States
Fall: 9 units
This course introduces students to the concept of grand strategy in the United States, broadly defined as the combination of diplomatic, economic, military, and political factors used by American presidents and their administrations to advance U.S. interests throughout the world. In the context of highly interdependent domestic and international politics, leaders must develop strategies that address a diverse range of internal, state, and non-state challenges while also dealing with the myriad challenges resulting from globalization, or the intersection of international politics, culture, markets, and technology. This course will review American diplomatic history over the ages, with a focus on both Cold War and post- Cold War American presidencies and their respective approaches to defending American national security whilst also playing a role as one of the world's leading powers. The course will conclude with an assessment of American grand strategy over the course of the past decade and how the United States manages relations with rising powers like China, revanchist states like Russia, and host of near-peer and other adversaries, including Iran and North Korea.

84-386 The Privatization of Force
Intermittent: 9 units
This course considers different forms of privatized force and security over time and across various strategic contexts, from historical mercenarism up to modern-day private military and security contractors. While going through the historical and modern material chronologically, the course considers the various issues that arise with each form of privatized force, including questions that arise regarding the state's monopoly on violence, legal and humanitarian issues, and civil-military relations. These range from theoretical concerns regarding modern definitions of the state, to practical operational-level concerns pertaining to field coordination issues between the military and private contractors in modern conflicts.

84-387 Technology and Policy of Cyber War
Spring: 9 units
This course examines underlying and emerging technologies and policies associated with cyber war and cyber threats. The technological concepts reviewed in this course include but are not limited to the internet, networks and sensors, and trends associated with "hyperconnectivity" (e.g., The Internet of Things). The course will review history, international policy, military doctrine, and lessons learned from the use of cyber operations and cyberspace in conflicts. The principle objective of this course is to introduce students to the technological and policy variables that affect the ability to manage cyber conflicts.

84-388 Concepts of War and Cyber War
Fall: 6 units
This course examines traditional theories, concepts, and practices in international relations and warfare- conventional, unconventional, and modern- and relates them to the emerging dynamics of cyber war. The principle concepts examined in this course reflect, have shaped, and continue to shape state and non-state actor behaviors and their calculations of how to prepare for and prosecute warfare. These include, among others, conventional and nuclear deterrence, offense-defense dynamics, first strike capabilities, and irregular warfare. The course will focus on theory but will leverage history, military doctrine, and cases to highlight the challenges of integrating cyber war into defense planning and practice. Students will be challenged to consider how the 2009 introduction of cyberspace as a warfighting domain- in addition to land, maritime, air, and space- affects the ways that scholars and practitioners- operating with force structures and strategic, operational, and tactical concepts that are decades, if not centuries old- conceive of and practice warfare in the 21st Century. The principle objective of this course is to introduce students to cyber war within the context of traditional, and emerging, concepts of armed and unarmed warfare. This course will focus on two core areas: 1) a discussion of traditional concepts of warfare in the physical domains; and, 2) a discussion of cyber war and its intersection with these traditional concepts.

84-389 Terrorism and Insurgency
Spring: 9 units
There are many forms of political violence but not all are created equal. Some, like terrorism, are a tactic while others, like insurgency, are a strategy. How important is it to define terrorism and insurgency? What are the differences and similarities between them? This course will go into depth to analyze both terrorism and insurgency and their various manifestations. The course will provide a historical overview of how terrorism and insurgency have evolved over time, while also focusing on groups, methods, ideologies and organizational structures. Is the terrorism conducted by Salafist groups like Al-Qaida and the Islamic State significantly different than that perpetrated by ethno-nationalist groups like the Provisional Irish Republican Army and Tamil Tigers? What are the best methods to counter-terrorism and how successful have states been- both historically and more recently- at combating the threat posed by terrorism and insurgency?

84-390 Social Media, Technology, and Conflict
Spring: 9 units
This course will examine the role that social media and technology have had on conflict and governance over the past decade. Interconnectedness has expanded dramatically and continues to expand, not only within coastal cities but also between them and their hinterlands, from city to city, and between home populations and global networks, including diaspora populations. The Arab Spring uprisings were significantly influenced by the use of cell phones, social media, and text-messaging as organizing tools. But it is not only protesters that are harnessing the power of social media and emerging technologies- insurgent groups like the Islamic State have been able to use Twitter, YouTube, Telegram and other social media platforms to their advantage. Apps have been used to both recruit and fund raise for terrorist groups, while individuals living on the other side of the world are radicalized by virulent ideologies spread through the Internet. The proliferation of so-called "fake news" and the ubiquity of social media has introduced an entirely new variable into the study of conflict and relations between individuals, small groups, non-state actors, and nation-states.

84-393 Legislative Decision Making: US Congress
Spring: 6 units
This course analyzes decision-making by the United States Congress. The course examines legislative behavior by focusing on the way Congress is organized (institutional and constitutional structure) and the ways legislators, voters, and various other parties interact (strategic constraints). Students will both learn the legislative process and explore the influence of norms, rules, expectations, incentives and, perhaps most important of all, the power of the electorate in influencing legislative outcomes and policy. Elections, voting decisions, committee assignments, political party power, and intra-branch relations across the Federal government are some of the topics into which we will delve. This course does not require any prior knowledge of the U.S. Congress, and there are no prerequisites for the course.

84-402 Judicial Politics and Behavior
Intermittent: 6 units
This course is a survey of research and insight into one of the most unique American government institutions: the judiciary. Rather than exclusively reading case law (as one would do in a Constitutional Law class), this course examines court structure, rules of law and, most importantly, judges as actors within an institutional setting. We will focus on how rules, norms, and expectations guide the decisions, actions, and range of options available to judges. Here we will study the nature of judicial decision-making and its antecedents, the organization of the judicial branch and its implications for behavior, and the strategic interactions both within courts and between the courts and the more "political" branches of government. The course will look at state and federal courts within the United States, supplemented with examples from international jurisdictions. Material from law, history, economics, political science, sociology, and psychology will be introduced throughout the semester. Although some of the literature uses empirical and/or game theoretical models, students are not expected to have mastered these tools prior to taking the course.

84-405 The Future of Warfare
Fall: 9 units
Warfare is constantly evolving. Long gone are the days of set-piece battles involving conventional military forces. In the contemporary conflict environment, hybrid actors and proxy groups wage war in an asymmetric and irregular manner, relying on ambiguity, strategic surprise and deception to accomplish their objectives. This course will examine new trends in warfare, from the onset of cyber war to the development of violent non-state actors with conventional military capabilities. Moreover, this course will explore the concept of the "gray zone," an area of neither declared nor undeclared hostilities where U.S. adversaries like Russia, China, Iran and others are gradually allocating resources. Case studies examined in this course will include Russian hybrid warfare in Crimea and Ukraine, Chinese cyberwarfare and information operations, Iranian sponsorship of proxy militias in Syria and Lebanon and a range of other emerging trends in areas such as technology, demographics, urbanization and social media, all of which are combining to radically alter the way wars are fought today.

84-414 International and Subnational Security
Intermittent: 9 units
Why do states fight wars? Why do some wars last for years while others end in days? How is it possible that powerful states may lose wars to under-resourced non-state actors? Why are some peace settlements stable, while other ceasefires crumble precipitously? Why do some states get challenged by subnational groups? By surveying the most recent quantitative research in political science, this course explores various security challenges that contemporary states face at the international level and in the intrastate political environment. We will focus in depth on the bargaining explanations for war, democratic/regime similarity/capitalist peace, deterrence, interdependence through trade, cooperation through international organizations, and civil wars. The goal of this course is to demonstrate how theoretical and empirical approaches in social sciences can be used to answer questions about war and peace. Students will acquire training in graphical literacy as well.

84-450 Policy Forum
Fall and Spring: 6 units
The Policy Forum course takes a critical look at decision making in domestic politics and US foreign policy. It does so through weekly roundtable discussions with a diverse set of thought leaders. Based on intellectually significant essays that students are expected to read in advance of each class, these discussions give students an opportunity to ask probing questions about the three branches of the US government, media, embassies, advocacy groups, international organizations, and nongovernmental organizations. This course seeks to help students understand the responsibilities and activities that leaders and decision makers carry out on behalf of their organizations. Students are instructed in how to confidently and respectfully ask critical questions of those shaping policy. The term "roundtabling" is used to describe submitting an issue for critical discussion among relevant stakeholders. Knowing how to direct a roundtable is a significant element in the professional development of anyone interested in taking part in the policy arena, and this course helps students hone this important skill. In requiring students to read important essays related to each class session and then step back from discussions with leaders to write analytical essays, this course teaches students how to develop strong arguments based on solid logic and credible evidence, an essential component in making democracy work.

84-498 Undergraduate Research
Fall and Spring
Students conduct research under the supervision of an Institute for Politics and Strategy faculty member. Students who wish to engage in research should seek out a faculty member whose interests are appropriate to the research. Prerequisite: Students must also complete an "Independent Study/Research for Credit" form, available from the Deputy Director or on the IPS website. Permission of a faculty sponsor.

84-499 Independent Study
Fall and Spring
Students conduct independent academic study under the supervision of an Institute for Politics and Strategy faculty member. Students who wish to engage in an independent study should seek out a faculty member whose interests are appropriate to the topic. Students must also complete an "Independent Study/Research for Credit" form, available from the Deputy Director or on the IPS website. Prerequisite: Permission of a faculty sponsor.

84-505 Undergraduate Internship
Fall and Spring
An internship is an approved and monitored work experience than can be related to an academic field of study through active reflection and specific learning goals. Students will be in regular contact with a faculty member in the Institute for Politics and Strategy, who will assign and evaluate academic work. Internships are available for 3, 6, or 9 units, depending on the type and amount of academic work produced. Students are responsible for finding their own internships and faculty sponsors, although assistance is available through the Deputy Director.

Department of Modern Languages

Susan G. Polansky, Department Head

Bonnie L. Youngs, Director of Undergraduate Studies

Location: Baker Hall 160
www.cmu.edu/dietrich/modlang

Studying foreign languages and their cultures is desirable and essential for understanding our complex global world. It is crucial to educate global citizens who will be sensitive to other cultures and capable of communicating in other languages. Proficiency in a foreign language by itself, or combined with other professional training, may lead to a variety of rewarding careers. Moreover, the personal experience of mastering another language is enriching and gratifying.

Modern Languages Majors

These majors are designed to lead to acquisition of communicative language proficiency and substantive knowledge of other cultures.

Drawing on the unique interdisciplinary climate of the Carnegie Mellon campus, the undergraduate majors in Modern Languages encourage the acquisition of multiple skills by students with varied backgrounds, talents, and interests. An important resource in support of these goals is the Modern Language Resource Center (MLRC), a state-of-the-art facility that provides students with access to authentic foreign language materials such as original television broadcasts, interactive video projects, Technology Enhanced Language Learning (TELL) courses, international audio and video resources, and computerized assessment tools.

Students majoring in a modern language are also encouraged to enroll, preferably during their junior year, in a study-abroad program or to spend a summer abroad at a language institute or in an internship. Semester or year-long programs are available in places such as China, France, Germany, Japan, Africa, Russia, Spain, and Latin America. The Department also sponsors summer courses in China, Germany, and Spain. Foreign film series, informal conversation tables, native-speaker conversation partners, speaking and writing assistants, and Student Advisory Committee cultural events are some of the activities organized by the Department of Modern Languages to increase students' ability in languages and knowledge of cultures.

The major in Modern Languages is designed to permit students to acquire communicative language proficiency in their language of specialization. Courses in culture and civilization offer students a solid introduction to the main currents in national literatures as well as artistic and social movements. These courses integrate study of cultures with skill development in reading, writing, and aural/oral communication. In addition, the student who majors in Modern Languages will develop a perspective on the learning and use of second languages, from both a social and cognitive point of view, within contemporary American society and in an increasingly global community. Working closely with their advisor, language majors are guided to develop personal interests by taking courses in other disciplines such as fine arts, history, psychology, philosophy, and other humanities and social sciences, which often include readings, discussions, and papers in the foreign language. The rich technological environment of the campus strongly enhances all fields of language study.

Second language proficiency is an asset which provides students with practical as well as theoretical bases for a variety of paths after graduation. Students of Modern Languages have taken paths to a wide variety of careers in government, entrepreneurship and business, law, technology and engineering firms, media, public health, health policy, and health professions, non-profit organizations, entertainment and creative arts, and education. They are also prepared to pursue graduate studies in second language-related fields (e.g. linguistics, second language acquisition, literary and cultural studies).

Specializations within Modern Languages

Six specializations are available in the Department of Modern Languages: Chinese Studies, French and Francophone Studies, German Studies, Hispanic Studies, Japanese Studies, and Russian Studies.

Language-specific faculty advisors for these majors are:

Chinese Studies - Dr. Yueming Yu, Teaching Professor of Chinese Studies
French & Francophone Studies - Dr. Bonnie Youngs, Teaching Professor of French & Francophone Studies
German Studies - Dr. Stephen Brockmann, Professor of German
Hispanic Studies - Dr. Therese Tardio, Associate Teaching Professor of Hispanic Studies
Japanese Studies - Dr. Yasufumi Iwasaki, Associate Teaching Professor of Japanese and Dr. Keiko Koda, Professor of Japanese and Second Language Acquisition
Russian Studies - Dr. Tatyana Gershkovich, Assistant Professor of Russian Studies

The Major in Chinese Studies (96-99 units)

Faculty Advisors

Dr. Yueming Yu, Teaching Professor of Chinese Studies
(yyu@andrew.cmu.edu)

Prerequisites

Intermediate-level proficiency in the Chinese language. This is equivalent to the completion of three courses (two at the 100-level and one at the 200-level), or placement or exemption based on Advanced Placement, International Baccalaureate or CMU internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all majors. (Study abroad advisor - Dr. Yueming Yu, yyu@andrew.cmu.edu)

Students with native or near-native proficiency in listening and speaking of the language prior to entering CMU should consult with the major advisor for a different curriculum that may accelerate their completion of the requirement.

Students may double count a maximum of one course taken for the Chinese Studies major that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Core Courses in Chinese Studies (39–42 units*)

Complete all four courses

		Units
82-232	Intermediate Chinese II (may be substituted by 82-235 Fables, Lengends & Stories from Ancient Chinese Civilization) *	12
82-331	Advanced Chinese I	9
82-332	Advanced Chinese II	9
82-333	Introduction to Chinese Language and Culture **	Var.

*Students who place out of 82-232/82-235 must take a minimum of 9 additional units chosen from List A Electives.

**Students must take this course for 12 units to fulfill the requirement. Students who take this course for 9 units prior to declaring their major must register for 3 units of independent study later in their studies.

2. Core Courses in Modern Languages (12 units)

Complete one 9 unit course* plus the Senior Seminar (3 units) in the spring of the senior year.

		Units
82-280	Learning About Language Learning	9
82-281	Tutoring for Community Outreach	Var.
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9
82-284	Multicultural Pittsburgh: A Creative Media Exploration of Cmmnty, Lang & Identit	9
82-285	Podcasting: Language and Culture Through Storytelling	9
82-286	Understanding Cultural Complexities	9
82-383	Second Language Acquisition: Theories and Research	9

82-388	Understanding Second Language Fluency	9
82-480	Social and Cognitive Aspects of Bilingualism	9
82-580	Senior Seminar in Modern Languages	3

* In consultation with the major advisor, students may substitute a Modern Languages course elective with one related to language analysis, language learning, or acquisition of language and culture from the listings in Chinese Studies or from another department. Examples: 80-180 Nature of Language, 85-421 Language and Thought.

3. Core Courses in History & Society (9 units)

Complete one course after consultation with the major advisor and the designated History or Modern Languages professor.

		Units
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-309	The Chinese Revolution Through Film (1949-2000)	9
82-230	Topics in Cultural Comparison	9
82-234	Topics in Chinese History	9
82-238	Topics in Chinese Culture	9

4. Chinese Studies and Interdisciplinary Electives (36 units)

Complete two courses (18 units) from List A and two courses (18 units) from List B, or two courses (18 units) from List A, one (9 units) from List B, and one (9 units) from List C.

List A. Core Chinese Studies Electives (18 units)

		Units
82-432	Popular Culture in China	9
82-433	Topics in Contemporary Culture of China *	9
82-434	Studies in Chinese Traditions *	9
82-436	Introduction to Classical Chinese	9
82-439	Modern China Through Literature *	9
82-440	Studies in Chinese Literature & Culture *	9
82-531/532	Special Topics in Chinese Studies *	Var.

*Students may repeat these courses with new topics.

List B: Chinese Studies Electives (minimum 9 units)

		Units
82-235	Fables, Legends and Stories from Ancient Chinese Civilization *if using for List B, another course on List B must be chosen from the same list, not List C.	9
82-334	Structure of Chinese	9
82-335	Chinese Culture Through Legends and Folktales	9
82-337	Mandarin Chinese for Oral Communication I	9
82-338	Mandarin Chinese for Oral Communication II	9
82-339	Business Language & Culture in China I	9
82-340	Business Language & Culture in China II	9
82-431	China and the West	9
82-432	Popular Culture in China	9
82-433	Topics in Contemporary Culture of China *	9
82-434	Studies in Chinese Traditions *	9
82-436	Introduction to Classical Chinese	9
82-439	Modern China Through Literature	Var.
82-440	Studies in Chinese Literature & Culture	9
82-436	Introduction to Classical Chinese	9
82-505	Undergraduate Internship	Var.
82-531/532	Special Topics in Chinese Studies *	Var.

* Students may repeat these courses with new topics.

List C. Interdisciplinary Electives

This list is compiled from possibilities such as but not limited to the following. Students should consult SIO and their major advisor for the most up to date interdisciplinary electives appropriate for the Chinese Studies curriculum. Courses may be suggested to the major advisor for approval as a substitute. Note that not all courses are offered each semester.

Architecture		Units
48-351	Human Factors in Architecture	9
48-551	Ethics and Decision Making in Architecture	9

Art		Units
60-399	Critical Studies Independent Study	9

Business		Units
70-342	Managing Across Cultures	9
70-365	International Trade and International Law	9
70-430	International Management	9

English		Units
76-318	Communicating in the Global Marketplace	9
76-339	Topics in Film and Media: Hollywood vs. the World	9
76-386	Language & Culture	9
76-387	Writing in the Disciplines	6

History		Units
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-309	The Chinese Revolution Through Film (1949-2000)	9

Modern Languages		Units
82-230	Topics in Cultural Comparison	9
82-234	Topics in Chinese History	9
82-238	Topics in Chinese Culture	9
82-280	Learning About Language Learning	9
82-281	Tutoring for Community Outreach	Var.
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9
82-383	Second Language Acquisition: Theories and Research	9
82-388	Understanding Second Language Fluency	9
82-480	Social and Cognitive Aspects of Bilingualism	9

Philosophy		Units
80-180	Nature of Language	9
80-263	Approaching Chinese Philosophy: Basic Texts and Implications	9
80-276	Philosophy of Religion	9
80-280	Linguistic Analysis	9
80-380	Philosophy of Language	9

Psychology		Units
85-375	Crosscultural Psychology	9
85-421	Language and Thought	9

Social and Decision Science		Units
88-411	Rise of the Asian Economies	9

5. Oral Proficiency Interview

Complete an oral proficiency interview. At the latest, this exam should be scheduled by midterm of the senior spring semester. Students are permitted to retake the test.

Study Abroad

A semester or year of study abroad is strongly recommended. Consult with your advisor and the Office of International Education (OIE) about possible options.

Senior Honors Thesis

Modern Languages majors are encouraged to undertake a Senior Honors Thesis (82-591/82-592 Modern Languages Honors Thesis or 66-501 H&SS Senior Honors Thesis I/66-502 H&SS Senior Honors Thesis II). The Honors Thesis program provides qualified seniors with a valuable opportunity to combine their academic and personal experiences and interests into a unique research project. (Prerequisites: a 3.5 QPA in Chinese and a 3.25 QPA overall)

Sample Curriculum

This sample curriculum assumes that all prerequisites for 82-331 are fulfilled prior to the Junior year.

Junior Year		Senior Year	
Fall	**Spring**	**Fall**	**Spring**
82-331 Advanced Chinese I	82-332 Advanced Chinese II	Core Chinese Studies Elective From List A	Core Chinese Studies Elective From List A
82-333 Introduction to Chinese Language and Culture (12 units)	Core History and Society Elective	Chinese Studies Elective From List B	82-580 Senior Seminar in Modern Languages
Modern Languages core course or equivalent approved by advisor	Chinese Studies Elective From List B or Interdisciplinary Elective From List C	Chinese Studies Elective From List B or Interdisciplinary Elective From List C	Elective
Elective	Elective	Elective	Elective
Elective	Elective	Elective	Elective

This is presented as a two-year (junior-senior) plan for completing the major requirements. It is intended to show that this program can be completed in as few as two years, not that it must be. Students may enter their major and begin major course requirements as early as the start of the sophomore year, and in some instances in the first year. Students should consult their advisor when planning their program.

This plan is also an example of the suggested sequence of study for students who have had little or no prior exposure to the language. Such students would need to satisfy the prerequisites (elementary and intermediate language study) during their freshman and sophomore years.

The Major in French and Francophone Studies (93 units)

Faculty Advisor

Dr. Bonnie Youngs, Teaching Professor of French and Francophone Studies (byoungs@cmu.edu)

Prerequisites

Intermediate-level proficiency in French. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all majors. (Study abroad advisor: Dr. Michael West, mjwest@andrew.cmu.edu)

Students may double count a maximum of one course taken for the French & Francophone Studies major that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Core Courses in French and Francophone Studies (27 units)

Complete all three courses.

		Units
82-303	Introduction to French Culture	9
82-304	The Francophone World	9
82-305	French in its Social Contexts	9

2. Core Courses in Modern Languages (12 units)

Complete one 9 unit course* plus the Senior Seminar (3 units) in the spring of the senior year.

		Units
82-280	Learning About Language Learning	9
82-281	Tutoring for Community Outreach	Var.
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9
82-284	Multicultural Pittsburgh: A Creative Media Exploration of Cmmnty, Lang & Identit	9
82-285	Podcasting: Language and Culture Through Storytelling	9
82-286	Understanding Cultural Complexities	9
82-383	Second Language Acquisition: Theories and Research	9
82-388	Understanding Second Language Fluency	9
82-480	Social and Cognitive Aspects of Bilingualism	9
82-580	Senior Seminar in Modern Languages	3

* In consultation with the major advisor, students may substitute a Modern Languages course elective with one related to language analysis, language learning, or acquisition of language and culture from the listings in French & Francophone Studies or from another department. Examples:80-180 Nature of Language, 85-421 Language and Thought.

3. French and Francophone Studies Interdisciplinary Electives (54 units)

Complete six courses (54 units) from List A or five courses (45 units) from List A and one (9 units) from List B.

List A. French and Francophone Electives

		Units
82-415/416	Topics in French and Francophone Studies *	9
82-501/502	Special Topics in French & Francophone Studies *	Var.
82-505	Undergraduate Internship	Var.

* Students may repeat these courses with new topics.

List B. Interdisciplinary Electives

This list is compiled from possibilities such as but not limited to the following. Students should consult SIO and their major advisor for the most up to date interdisciplinary electives appropriate for the French & Francophone Studies curriculum. Courses may be suggested to the major advisor for approval as a substitute. Note that not all courses are offered each semester.

Architecture		Units
48-338	European Cities in the XIX Century: Planning, Architecture, Preservation	9
48-340	Modern Architecture and Theory 1900-1945	9
48-341	Expression in Architecture	9
48-448	History of Sustainable Architecture	9

English		Units
76-239	Introduction to Film Studies	9
76-318	Communicating in the Global Marketplace	9
76-385	Introduction to Discourse Analysis	9
76-386	Language & Culture	9
76-387	Writing in the Disciplines	6

History		Units
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-205	20th Century Europe	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-258	French History: From the Revolution to De Gaulle	9
79-275	Introduction to Global Studies	9
79-350	Early Christianity	9
79-385	Out of Africa: The Making of the African Diaspora	9
79-386	Entrepreneurs in Africa, Past, Present and Future	9
79-396	Music and Society in 19th and 20th Century Europe and the U.S.	9

Modern Languages		Units
82-227	Germany & the European Union	9

Social and Decision Sciences		Units
88-419	International Negotiation	9

4. Oral Proficiency Interview

Complete an oral proficiency interview. At the latest, this exam should be scheduled by midterm of the senior spring semester. Students are permitted to retake the test.

Study Abroad

A semester or year of study abroad or internship is strongly recommended. Consult with your advisor and the Office of International Education (OIE) about possible options.

Senior Honors Thesis

Modern Languages majors are encouraged to undertake a Senior Honors Thesis (82-591/82-592 Modern Languages Honors Thesis or 66-501 H&SS Senior Honors Thesis I/66-502 H&SS Senior Honors Thesis II). The Honors Thesis program provides qualified seniors with a valuable opportunity to combine their academic and personal experiences and interests into a unique research project. (Prerequisites: a 3.5 QPA in French and a 3.25 QPA overall)

Sample Curriculum

Junior Year		Senior Year

This is presented as a two-year (junior-senior) plan for completing the major requirements. It is intended to show that this program can be completed in as few as two years, not that it must be. Students may enter their major and begin major course requirements as early as the start of the sophomore year, and in some instances in the first year. Students should consult their advisor when planning their program.

This plan is also an example of the suggested sequence of study for students who have had little or no prior exposure to the language. Such students would need to satisfy the prerequisites (elementary and intermediate language study) during their freshman and sophomore years.

The Major in German Studies (93 units)

Faculty Advisor

Dr. Stephen Brockmann, Professor of German Studies
(smb@andrew.cmu.edu)

Prerequisites

Intermediate-level proficiency in German. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all majors. (Study abroad advisor: Dr. Gabriele Eichmanns Maier, eichgabi@andrew.cmu.edu)

Students may double count a maximum of one course taken for the German Studies major that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Core Courses in German Studies (27 units)

Complete all three courses.*

		Units
82-320	Contemporary Society in Germany, Austria and Switzerland	9
82-323	Germany, Austria and Switzerland in the 20th Century	9
82-327	The Emergence of the German Speaking World	9

* A 400-level course may be substituted with the major advisor's approval.

2. Core Courses in Modern Languages (12 units)

Complete one 9-unit course* in Modern Languages, plus the senior seminar (3 units) in spring of the senior year.

		Units
82-280	Learning About Language Learning	9
82-281	Tutoring for Community Outreach	Var.
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9
82-284	Multicultural Pittsburgh: A Creative Media Exploration of Cmmnty, Lang & Identit	9
82-285	Podcasting: Language and Culture Through Storytelling	9
82-286	Understanding Cultural Complexities	9
82-383	Second Language Acquisition: Theories and Research	9
82-388	Understanding Second Language Fluency	9
82-480	Social and Cognitive Aspects of Bilingualism	9
82-580	Senior Seminar in Modern Languages	3

* In consultation with the major advisor, students may substitute a Modern Languages course elective with one related to language analysis, language learning, or acquisition of language and culture from the listings in German Studies or from another department. Examples: 80-180 Nature of Language, 85-421 Language and Thought.

3. German Studies and Interdisciplinary Electives (54 units)

Complete five courses (45 units) from List A and one (9 units) from List B, or a minimum of three courses (27 units) from List A and one or two courses (9-18 units) from List B. The student may complete an additional 3 units of coursework in German to allow a List B elective to count as a List A elective, with permission of the major advisor and the course instructor.

List A. German Electives

		Units
82-420	The Crucible of Modernity:Vienna 1900	9
82-425/426	Topics in German Literature and Culture *	9

82-427	Nazi and Resistance Culture	9
82-428	History of German Film	9
82-505	Undergraduate Internship	Var.
82-521/522	Special Topics: German Studies *	Var.

* Students may repeat these courses with new topics.

List B. Interdisciplinary Electives

From possibilities such as but not limited to the following. Students should consult SIO and their major advisor for the most up to date interdisciplinary electives appropriate for the German Studies curriculum. Courses may be suggested to the major advisor for approval as a substitute. Note that not all courses are offered each semester.

Architecture		Units
48-338	European Cities in the XIX Century: Planning, Architecture, Preservation	9

The Major in Japanese Studies (102-105 units)

Faculty Advisors

Dr. Yasufumi Iwasaki, Associate Teaching Professor of Japanese Studies (yiwasaki@andrew.cmu.edu)
Dr. Keiko Koda, Professor of Japanese Studies and Second Language Acquisition (kkoda@andrew.cmu.edu)

Prerequisites

Intermediate-level proficiency in the Japanese language. This is equivalent to the completion of three courses (two at the 100-level and one at the 200-level), or placement or exemption based on Advanced Placement, Cambridge GCE Advanced level, International Baccalaureate or CMU internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all majors. (Study abroad advisor - Dr. Yasufumi Iwasaki, yiwasaki@andrew.cmu.edu)

Students may double count a maximum of one course taken for the Japanese Studies major that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Core Courses in Japanese Studies (36–39 units)

Complete all four courses.

		Units
82-272	Intermediate Japanese II *	12
82-273	Introduction to Japanese Language and Culture	9
82-371	Advanced Japanese I	9
82-372	Advanced Japanese II	9

*Students who place out of 82-272 Intermediate Japanese II must take 9 units chosen from List A electives.

2. Core Courses in Modern Languages (12 units)

Complete one 9-unit course* in Modern Languages, plus the senior seminar (3 units) in spring of the senior year.

		Units
82-280	Learning About Language Learning	9
82-281	Tutoring for Community Outreach	Var.
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9

The Major in Russian Studies (105-108 units)

Faculty Advisor

Dr. Tatyana Gershkovich, *Assistant Professor of Russian*

The major in Russian Studies is jointly administered by the Departments of History and Modern Languages. Students are required to fulfill requirements in history and in language and culture.

Prerequisites

The major in Russian Studies is an interdepartmental, interdisciplinary major jointly administered by the Departments of History and Modern Languages. Students are asked to fulfill requirements in history and in language and culture. Additionally, students are strongly encouraged to study abroad in Russia or other parts of the Russian-speaking world. Not only does study abroad offer students a memorable and formative experience of cultural immersion, it also helps them advance to their highest possible levels of linguistic and cultural competence by the time they graduate.

Students may double count one course taken for the Russian Studies major that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Required Courses in Russian Language (48 units)

Modern Languages		
82-191	Elementary Russian I	12
82-192	Elementary Russian II	12
82-291	Intermediate Russian I	12
82-292	Intermediate Russian II	12

N.B. Students with native or near-native proficiency in Russian or with prior study at elementary or intermediate levels may begin language study at a higher level. Students with previous experience in Russian must consult with the major advisor about language placement prior to enrolling and to confirm the number of classes to complete the major.

2. Required Courses in Russian Culture (24 units)

Complete two courses. These courses are conducted in English. Russian Studies majors must complete the additional 3-units of work for each course.

Modern Languages		
82-293	Russian Cinema: From the Bolshevik Revolution to Putin's Russia	9
82-294	Topics in Russian Language and Culture	9

3. Required Electives in History (18 units)

Complete two courses.		Units
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-341	The Cold War in Documents and Film	9

4. Required Elective (9-12 units)

Complete one course. Courses not listed below may be suggested to the major advisor for approval as a substitute. Note that not all courses are offered each semester. Courses marked by * are offered in English and Russian Studies majors must complete the additional 3-units of work for each course. All other courses are 9 units.

79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-322	Stalin and the Great Terror	9
79-341	The Cold War in Documents and Film	9
82-397	Radical, Heretics, Hackers: Russian Outlaws in History, Literature, and Film *	Var.
82-492	The Historical Imagination in Nineteenth-Century Russian Literature	Var.

5. Required Senior Thesis (9 units)

In their senior year, majors must complete a 20–25 page independent research or translation project making use of Russian sources. For this project, students may choose to work closely with a professor in History (79-XXX) or in Modern Languages (82-599). This in-depth research project offers students a unique opportunity to complete a piece of original scholarship in their areas of interest, and to develop an expertise with which to embark on future intellectual and professional pursuits. The number of credits for the thesis reflects the expectation that students will do significant work in Russian and use the project to advance their linguistic competence.

Recent theses topics have included:

- *Khrushchev, de-Stalinization, and the Twentieth Congress of the Communist Party*
- *Lunokhod and the Soviet Space Program*
- *Constructivism and New Sight: A Rhetorical Analysis of the Early Soviet Political Poster*
- *Alexander Rodchenko and the Development of Constructivism in Russian Art*
- *Boris Akunin and Contemporary Russian Fiction*

Dietrich College Honors Senior Thesis

Students who meet the eligibility requirements may extend their Russian Studies Thesis (9 units) into a Dietrich College Honors Thesis (18 units) with the approval of their advisor. Information on this program can be found at http://www.cmu.edu/dietrich/undergraduate/programs/shp/

Highly Recommended Opportunities for Majors

Study Abroad

Students are strongly encouraged to spend a semester or summer in Russia through an approved exchange program. Consult with your advisor and the Office of International Education (OIE) about possible options. Many exchange programs offer instruction at internationally recognized universities in Russian language, history, literature, and culture. They also offer travel to ancient sites and cities, visits to museums, palaces, exhibitions, and monuments, and the opportunity to live with a Russian host family. Scholarship opportunities are available.

Senior Seminar in Modern Languages

82-580 (3 units)

The senior seminar, offered in the senior spring semester, brings together majors from all of Modern Languages. In addition to offering students strategies for maintaining and advancing their language skills after they graduate, this course provides an occasion for students to reflect on their own language-learning experiences. Students are prompted to consider larger issues surrounding language learning and multiculturalism in the United States and globally.

Faculty Exchange Program

In 1993, the College of Humanities and Social Sciences at CMU initiated a faculty exchange program with the Russian State University of the Humanities (RGGU), one of the foremost universities in Russia, located in Moscow. Carnegie Mellon has hosted faculty members from RGGU specializing in history, language, and philosophy. These professors have joined our departments for a semester, offering unique courses on subjects not generally available to our students. Faculty members from Carnegie Mellon have visited Moscow, using the RGGU exchange to pursue archival research, attend conferences, and collaborate on common projects. The exchange offers students an opportunity to study language from native speakers, gain exposure to different perspectives on history and politics, and gather firsthand knowledge about recent developments in Russia. In addition, the exchange can provide important contacts for students interested in pursuing careers abroad.

Sample Curriculum

Junior Year		Senior Year	
Fall	**Spring**	**Fall**	**Spring**
82-291 Intermediate Russian I	82-292 Intermediate Russian II	82-399 Special Topics: Russian in Context	82-599 Russian Studies Thesis
Core Course in History 79-265 or 79-266	Required Elective in History	82-399 Special Topics: Russian in Context	Required Elective
Elective	Required Elective	Required Elective	82-580 Senior Seminar in Modern Languages
Elective	Elective	Elective	Elective
Elective	Elective	Elective	Elective

This is presented as a two-year (junior-senior) plan for completing the major requirements. Its purpose is to show that this program can be completed in as few as two years, not that it must be. Students may enter their major and begin major course requirements as early as the start of the sophomore year, and in some instances in the first year. Students should consult their advisor when planning their program.

This plan is also an example of the suggested sequence of study for students who have had little or no prior exposure to the language. Such students would need to satisfy the prerequisites (elementary and intermediate language study) during their freshman and sophomore years.

Modern Languages as an Additional Major

In addition to their primary major, a student may complete a major in Chinese Studies, French and Francophone Studies, German Studies, Hispanic Studies, Japanese Studies, and Russian Studies. Students outside of Dietrich College interested in an additional major in Modern Languages need to fulfill only the requirements for the Modern Languages major but not the Dietrich College General Education requirements.

Minors in the Department of Modern Languages

The Department of Modern Languages also offers minors in Arabic Studies, Chinese Studies, French and Francophone Studies, German Studies, Hispanic Studies, Japanese Studies, and Russian Studies. A minor in one of these language and culture areas requires core courses similar to the major and includes a variety of options for electives. Many students study abroad as part of their program. Students who minor in Modern Languages have found the program an enriching complement to their major areas of study and an asset to their work in government, entrepreneurship and business, law, technology and engineering firms, media, public health, health policy, and health professions, non-profit organizations, entertainment and creative arts, and education.

Curriculum

The minimum requirement for the minor in French and Francophone Studies, German Studies or Hispanic Studies is 54 units (not including any 100- or 200-level prerequisite work in the chosen language), as outlined below. The minimum requirement for the minor in Arabic Studies, Chinese Studies, Japanese Studies or Russian Studies is 54-60 units, depending on the student's language background.

Language-specific faculty advisors for these specializations are:

Arabic Studies - Dr. Khaled Al Masaeed, Assistant Professor of Arabic Studies **(Pittsburgh)** and Dr. Zeinab Ibrahim, Teaching Professor of Arabic Studies **(Qatar)**
Chinese Studies - Dr. Gang Liu, Assistant Teaching Professor of Chinese Studies, Dr. Sue-mei Wu, Teaching Professor of Chinese Studies, and Tianxue Yao, Lecturer of Chinese Studies
French & Francophone Studies - Dr. Bonnie Youngs, Teaching Professor of French & Francophone Studies
German Studies - Dr. Gabriele Eichmanns Maier, Associate Teaching Professor of German Studies
Hispanic Studies - Dr. Felipe Gómez, Associate Teaching Professor of Hispanic Studies
Japanese Studies - Dr. Yasufumi Iwasaki, Associate Teaching Professor of Japanese and Dr. Yoshihiro Yasuhara, Assistant Teaching Professor of Japanese Studies
Russian Studies - Dr. Tatyana Gershkovich, Assistant Professor of Russian Studies

The Minor in Arabic Studies (54-57 units)

Faculty Advisors

Dr. Khaled Al Masaeed, Assistant Professor of Arabic Studies (masaeed@andrew.cmu.edu) **(Pittsburgh)**
Dr. Zeinab Ibrahim, Teaching Professor of Arabic Studies (zeinab@qatar.cmu.edu) **(Qatar)**

Prerequisites

Pittsburgh Campus: Intermediate-level proficiency in the Arabic language. This is equivalent to the completion of three courses (two at the 100-level and one at the 200-level), or placement or exemption based on Advanced Placement, International Baccalaureate or CMU internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all minors. (Study abroad advisor - Dr. Khaled Al Masaeed (masaeed@andrew.cmu.edu).

Qatar Campus: Advanced-level proficiency in the Arabic language. CMU-Q students who need elementary and intermediate level courses should consult with the campus advisor for Arabic Studies before declaring the minor. Student progress may be accelerated or supplemented by study abroad. (Study abroad advisor for Qatar - Dr. Zeinab Ibrahim (zeinab@qatar.cmu.edu).

Students may double count a maximum of one course taken for the Arabic Studies minor that is also being used to fulfill the requirements of other majors, minors, and programs.

Students with native or near-native proficiency in listening and speaking of the language prior to entering CMU should consult with the minor advisors for a different curriculum that may accelerate their completion of the requirement.

Course Requirements

1. Core Courses in Arabic Studies (27-30 units)

Complete three courses.*

82-212	Intermediate Arabic II	12
82-311	Advanced Arabic I	9
82-312	Advanced Arabic II	9

*Students who place out of 82-212 must take a total of 27 units in Core Courses

2. Arabic Studies and Interdisciplinary Electives (27 units)

Pittsburgh: Complete two courses (18 units) from List A and one course (9 units) from List B, or three courses (27 units) from List A.
Qatar: Complete four courses (36 units) from List A, and two courses (18 units) from List B, or five courses (45 units) from List A and one course (9 units) from List B, or six courses (54 units) course from List A.

List A. Electives

82-117	Arabic Conversation & Dialect I	6
82-118	Arabic Conversation & Dialect II	6
82-313	Topics in Modern Arabic Language, Literature and Culture (CMU-Q)	9
82-314	Literature of the Arabic-speaking World (CMU-Q)	9
82-411	Topics in Arabic Media *	Var.
82-412	Topics in Arabic Studies *	9

82-505	Undergraduate Internship	Var.
82-511	Special Topics in Arabic Studies *	9
82-512	Special Topics: Arabic Language & Culture *	9

*Students may repeat these courses with new topics with the instructor's permission.

List B. Interdisciplinary Electives

Architecture

48-240	Historical Survey of World Architecture and Urbanism I	9
48-315	Environment I: Climate & Energy in Architecture	9

Business Administration

70-321	Negotiation and Conflict Resolution	9
70-342	Managing Across Cultures	9
70-365	International Trade and International Law	9

Engineering and Public Policy

19-411	Global Competitiveness: Firms, Nations and Technological Change	9
19-424	Energy and the Environment	9

English

76-318	Communicating in the Global Marketplace	9
76-472	Topics in Journalism: Storytelling in a Digital Age	9
76-386	Language & Culture	9
76-484	Discourse Analysis	9
76-491	Rhetorical Analysis	9

History

79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-233	The United States and the Middle East since 1945	9
79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
79-307	Religion and Politics in the Middle East	9
79-336	Oil & Water: Middle East Perspectives	6
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
79-398	Documenting the 1967 Arab-Israeli War	9

Information Systems

67-329	Contemporary Themes in Global Systems	9

Institute for Politics and Strategy

84-275	Comparative Politics	9
84-310	International Political Economy	9
84-322	Nonviolent Conflict and Revolution	9
84-323	War and Peace in the Contemporary Middle East	9
84-326	Theories of International Relations	9
84-362	Diplomacy and Statecraft	9
84-389	Terrorism and Insurgency	9

Linguistics

80-180	Nature of Language	9
80-280	Linguistic Analysis	9
80-282	Phonetics and Phonology I	9
80-381	Meaning in Language	9
80-383	Language in Use	9

Modern Languages

82-114	Arabic for Global Exchange Online	6
82-214	Topics in Modern Arabic Language, Literature, & Culture (CMU-Q)	9
82-215	Arab Culture Through Film & Literature	Var.
82-216	Literature of the Arabic-speaking World (CMU-Q)	9
82-280	Learning About Language Learning	9
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9
82-300	Language & Society in the Arab World	9
82-313	Topics in Modern Arabic Language, Literature and Culture (CMU-Q)	9
82-314	Literature of the Arabic-speaking World (CMU-Q)	9
82-383	Second Language Acquisition: Theories and Research	9
82-411	Topics in Arabic Media	Var.
82-412	Topics in Arabic Studies	9
82-480	Social and Cognitive Aspects of Bilingualism	9
82-448	Topics in Arabic Language, Literature, & Culture (CMU-Q)	9
82-505	Undergraduate Internship	Var.

Philosophy

80-136	Social Structure, Public Policy & Ethics	9
80-244	Environmental Ethics	9
80-281	Language and Thought	9
80-324	Philosophy of Economics	9
80-381	Meaning in Language	9
80-383	Language in Use	9

Psychology

85-219	Biological Foundations of Behavior	9
85-375	Crosscultural Psychology	9
85-421	Language and Thought	9

The Minor in Chinese Studies (57-60 units)

Faculty Advisors

Dr. Gang Liu, Assistant Teaching Professor of Chinese Studies (gangliu@andrew.cmu.edu)
Dr. Sue-mei Wu, Teaching Professor of Chinese Studies (suemei@andrew.cmu.edu)
Tianxue Yao, Lecturer of Chinese Studies (tyao@andrew.cmu.edu)

Prerequisites

Intermediate-level proficiency in the Chinese language. This is equivalent to the completion of three courses (two at the 100-level and one at the 200-level), or placement or exemption based on Advanced Placement, International Baccalaureate or CMU internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all minors. (Study abroad advisor - Dr. Yueming Yu, yyu@andrew.cmu.edu).

Students may double count a maximum of one course taken for the Chinese Studies minor that is also being used to fulfill the requirements of other majors, minors, and programs.

Students with native or near-native proficiency in listening and speaking of the language prior to entering CMU should consult with the minor advisors for a different curriculum that may accelerate their completion of the requirement.

Course Requirements

1. Core Courses in Chinese Studies (36–39 units)

Complete four courses.

82-232	Intermediate Chinese II (may be substituted by 82-235 Fables, Legends, and Stories from Ancient Chinese Civilization *	12
82-235	Fables, Legends and Stories from Ancient Chinese Civilization *	9
82-331	Advanced Chinese I	9
82-332	Advanced Chinese II	9
82-333	Introduction to Chinese Language and Culture **	Var.

*Students who place out of 82-232/82-235 must take a minimum of 9 additional units chosen from List A Electives.

**Students must take this course for 12 units with the additional work in Chinese to fulfill the requirement. Students who take this course for 9 units prior to declaring their minor must register for 3 units of independent study later in their studies.

2. Chinese Studies and Interdisciplinary Electives (18 units)

List A. Chinese Studies Electives

Complete two courses (18 units) from List A or one course (9 units) from List A and one (9 units) from List B.

82-334	Structure of Chinese	9
82-335	Chinese Culture Through Legends and Folktales	9
82-337	Mandarin Chinese for Oral Communication I	9
82-338	Mandarin Chinese for Oral Communication II	9
82-339	Business Language & Culture in China I	9
82-340	Business Language & Culture in China II	9
82-431	China and the West	9
82-432	Popular Culture in China	9
82-433	Topics in Contemporary Culture of China *	9
82-434	Studies in Chinese Traditions *	9
82-436	Introduction to Classical Chinese *	9
82-439	Modern China Through Literature *	Var.
82-440	Studies in Chinese Literature & Culture *	9
82-505	Undergraduate Internship	Var.
82-531/532	Special Topics in Chinese Studies *	Var.

*Students may repeat these courses with new topics.

List B. Interdisciplinary Electives

This list is compiled from possibilities such as but not limited to the following. Students should consult SIO and their minor advisor for the most up to date interdisciplinary electives appropriate for the Chinese Studies curriculum. Courses may be suggested to the minor advisor for approval as a substitute. Note that not all courses are offered each semester.

Architecture		Units
48-351	Human Factors in Architecture	9
48-551	Ethics and Decision Making in Architecture	9

Art		Units
60-399	Critical Studies Independent Study	9

Business Administration		Units
70-342	Managing Across Cultures	9
70-365	International Trade and International Law	9
70-430	International Management	9

English		Units
76-318	Communicating in the Global Marketplace	9
76-339	Topics in Film and Media: Hollywood vs. the World	9
76-386	Language & Culture	9

History		Units
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-281	Introduction to Religion	9
79-309	The Chinese Revolution Through Film (1949-2000)	9
79-341	The Cold War in Documents and Film	9

Modern Languages		Units
82-230	Topics in Cultural Comparison	9
82-234	Topics in Chinese History	9
82-238	Topics in Chinese Culture	9
82-280	Learning About Language Learning	9
82-281	Tutoring for Community Outreach	Var.
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9

82-388	Understanding Second Language Fluency	9
82-480	Social and Cognitive Aspects of Bilingualism	9

Philosophy		Units
80-180	Nature of Language	9
80-263	Approaching Chinese Philosophy: Basic Texts and Implications	9
80-276	Philosophy of Religion	9
80-280	Linguistic Analysis	9
80-380	Philosophy of Language	9

Psychology		Units
85-375	Crosscultural Psychology	9
85-421	Language and Thought	9

Social and Decision Sciences		Units
88-411	Rise of the Asian Economies	9

The Minor in French and Francophone Studies (54 units)

Faculty Advisor

Dr. Bonnie Youngs, Teaching Professor of French and Francophone Studies (byoungs@cmu.edu)

Prerequisites

Intermediate-level proficiency in French. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all minors. (Study abroad advisor - Dr. Michael West, mjwest@andrew.cmu.edu (eichgabi@andrew.cmu.edu))

Students may double count a maximum of one course taken for the French & Francophone Studies minor that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Core Courses in French and Francophone Studies (27 units)

Complete three courses.

82-303	Introduction to French Culture	9
82-304	The Francophone World	9
82-305	French in its Social Contexts	9

2. French and Francophone Studies and Interdisciplinary Electives (27 units)

Complete three courses (27 units) from List A, or two courses (18 units) from List A and one
(9 units) from List B.

List A. French Electives

		Units
82-415/416	Topics in French and Francophone Studies *	9
82-501/502	Special Topics in French & Francophone Studies *	Var.
82-505	Undergraduate Internship	Var.

* Students may repeat these courses with new topics.

List B. Interdisciplinary Electives

This list is compiled from possibilities such as but not limited to the following. Students should consult SIO and their minor advisor for the most up to date interdisciplinary electives appropriate for the French & Francophone Studies curriculum. Courses may be suggested to the minor advisor for approval as a substitute. Note that not all courses are offered each semester.

Architecture		Units
48-338	European Cities in the XIX Century: Planning, Architecture, Preservation	9
48-340	Modern Architecture and Theory 1900-1945	9
48-341	Expression in Architecture	9
48-448	History of Sustainable Architecture	9

English		Units
76-239	Introduction to Film Studies	9
76-318	Communicating in the Global Marketplace	9

76-385	Introduction to Discourse Analysis	9
76-386	Language & Culture	9
76-387	Writing in the Disciplines	6

History		Units
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-205	20th Century Europe	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-385	Out of Africa: The Making of the African Diaspora	9
79-258	French History: From the Revolution to De Gaulle	9
79-275	Introduction to Global Studies	9

Music		Units
57-173	Survey of Western Music History	9
57-306	World Music	9

Philosophy		Units
80-180	Nature of Language	9
80-280	Linguistic Analysis	9
80-281	Language and Thought	9
80-380	Philosophy of Language	9

Psychology		Units
85-375	Crosscultural Psychology	9
85-421	Language and Thought	9

Social and Decision Sciences		Units
88-419	International Negotiation	9

The Minor in German Studies (54 units)

Faculty Advisor

Dr. Gabriele Eichmanns Maier, Associate Teaching Professor of German Studies (eichgabi@andrew.cmu.edu)

Prerequisites

Intermediate-level proficiency in German. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all minors. (Study abroad advisor - Dr. Gabriele Eichmanns Maier, eichgabi@andrew.cmu.edu)

Students may double count a maximum of one course taken for the German Studies minor that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Core Courses in German Studies (27 units)

Complete three courses.*

		Units
82-320	Contemporary Society in Germany, Austria and Switzerland	9
82-323	Germany, Austria and Switzerland in the 20th Century	9
82-327	The Emergence of the German Speaking World	9

* A 400-level course may be substituted with the minor advisor's approval.

2. German Studies & Interdisciplinary Electives (27 units)

Complete three courses (27 units) from List A or two courses (18 units) from List A and one (9 units) from List B.

List A. German Studies Electives

		Units
82-420	The Crucible of Modernity:Vienna 1900	9
82-425/426	Topics in German Literature and Culture *	9
82-427	Nazi and Resistance Culture	9
82-428	History of German Film	9
82-521/522	Special Topics: German Studies *	Var.

*Students may repeat these courses with new topics.

List B. Interdisciplinary Electives

This list is compiled from possibilities such as but not limited to the following. Students should consult SIO and their minor advisor for the most up to date interdisciplinary electives appropriate for the German Studies curriculum. Courses may be suggested to the minor advisor for approval as a substitute. Note that not all courses are offered each semester.

Architecture		Units
48-338	European Cities in the XIX Century: Planning, Architecture, Preservation	9
48-340	Modern Architecture and Theory 1900-1945	9
48-350	Postwar Modern Architecture and Theory	9

English		Units
76-239	Introduction to Film Studies	9
76-386	Language & Culture	9
76-387	Writing in the Disciplines	6
76-483	Corpus Analysis in Rhetoric	9

History		Units
79-205	20th Century Europe	9
79-257	Germany and the Second World War	9
79-349	United States and the Holocaust	6

Modern Languages		Units
82-227	Germany & the European Union	9
82-280	Learning About Language Learning	9
82-281	Tutoring for Community Outreach	Var.
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9
82-284	Multicultural Pittsburgh: A Creative Media Exploration of Cmmnty, Lang & Identit	9

54 units The Minor in Hispanic Studies

The Minor in Hispanic Studies (54 units)

Faculty Advisors

Dr. Felipe Gómez, Associate Teaching Professor of Hispanic Studies (fgomez@andrew.cmu.edu)

Prerequisites

Intermediate-level proficiency in Spanish. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all minors. (Study abroad advisor – Dr. Therese Tardio, tardio@andrew.cmu.edu)

Students may double count a maximum of one course taken for the Hispanic Studies minor that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Core Courses in Hispanic Studies (27 units)

Complete two courses.

		Units
82-342	Spain: Language and Culture	9
82-343	Latin America Language and Culture	9
82-344	U.S. Latinos: Language and Culture	9

Complete the following course.

		Units
82-345	Introduction to Hispanic Literary & Cultural Studies	9

2. Hispanic Studies and Interdisciplinary Electives (27 units)

Complete three courses (27 units) from List A or two courses (18 units) from List A and one (9 units) from List B.

List A: Hispanic Studies Electives

		Units
82-441	Studies in Peninsular Literature and Culture *	9
82-443	Spanish Reading and Translation Workshop	9
82-444	The Structure of Spanish	9
82-451	Studies in Latin American Literature and Culture *	9
82-455/456	Topics in Hispanic Studies *	9
82-505	Undergraduate Internship	Var.
82-541/542	Special Topics: Hispanic Studies *	Var.

* Students may repeat these courses with new topics.

List B. Interdisciplinary Electives

This list is compiled from possibilities such as but not limited to the following. Students should consult SIO and their minor advisor for the most up to date interdisciplinary electives appropriate for the Hispanic Studies curriculum. Courses may be suggested to the minor advisor for approval as a substitute. Note that not all courses are offered each semester.

Architecture		Units
48-348	Architectural History of Mexico & Guatemala	9

English		Units
76-385	Introduction to Discourse Analysis	9
76-484	Discourse Analysis	9

The Minor in Japanese Studies (54–57 units)

Faculty Advisors

Dr. Yasufumi Iwasaki, Associate Teaching Professor of Japanese (yiwasaki@andrew.cmu.edu)
Dr. Yoshihiro Yasuhara, Associate Teaching Professor of Japanese Studies (yyashuar@andrew.cmu.edu)

Prerequisites

Intermediate-level of proficiency in the Japanese language. This is equivalent to the completion of three courses (two at the 100-level and one at the 200-level), or placement or exemption based on Advanced Placement, Cambridge GCE Advanced level, International Baccalaureate or CMU internal placement test scores. In all cases, progress will be accelerated by study abroad, which is highly recommended for all minors. (Study abroad advisor - Dr. Yasufumi Iwasaki, yiwasaki@andrew.cmu.edu)

Students may double count a maximum of one course taken for the Japanese Studies minor that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Core Courses in Japanese Studies (27–39 units*)

Complete four courses.

82-272	Intermediate Japanese II *	12
82-273	Introduction to Japanese Language and Culture	9
82-371	Advanced Japanese I	9
82-372	Advanced Japanese II	9

*Students who place out of 82-272 must take 9 units chosen from the List A electives.

2. Japanese Studies and Interdisciplinary Electives (18 units)

Complete two courses (18 units) from List A, or one course (9 units) from List A and one (9 units) from List B.

List A. Japanese Studies Electives

82-373	Structure of the Japanese Language	9
82-374	Technical Japanese	9
82-473/474	Topics in Japanese Studies *	9
82-505	Undergraduate Internship	Var.
82-571/572	Special Topics in Japanese Studies *	Var.

*Students may repeat these courses with new topics.

List B. Interdisciplinary Electives

This list is compiled from possibilities such as but not limited to the following. Students should consult SIO and their minor advisor for the most up to date interdisciplinary electives appropriate for the Japanese Studies curriculum. Courses may be suggested to the minor advisor for approval as a substitute. Note that not all courses are offered each semester.

English		
76-239	Introduction to Film Studies	9
76-386	Language & Culture	9
76-387	Writing in the Disciplines	6

History		
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-275	Introduction to Global Studies	9

Modern Languages		
82-234	Topics in Chinese History	9
82-278	Japanese Film and Literature: The Art of Storytelling	9
82-280	Learning About Language Learning	9
82-281	Tutoring for Community Outreach	Var.
82-282	Community Service Learning	Var.
82-283	Language Diversity & Cultural Identity	9
82-373	Structure of the Japanese Language	9
82-374	Technical Japanese	9
82-383	Second Language Acquisition: Theories and Research	9
82-388	Understanding Second Language Fluency	9
82-480	Social and Cognitive Aspects of Bilingualism	9

Music		
57-306	World Music	9

Philosophy		
80-180	Nature of Language	9
80-280	Linguistic Analysis	9
80-380	Philosophy of Language	9

Psychology		
85-375	Crosscultural Psychology	9
85-421	Language and Thought	9

The Minor in Russian Studies (63 units)

Faculty Advisor

Dr. Tatyana Gershkovich, Assistant Professor of Russian Studies

The minor in Russian Studies is jointly administered by the Departments of History and Modern Languages. Students are required to fulfill requirements in history and in language and culture.

Prerequisites

Elementary-level proficiency in the Russian language. This is equivalent to the completion of two courses at the 100-level, or placement or exemption based on Advanced Placement, International Baccalaureate or CMU internal placement test scores. Carnegie Mellon students who arrive with previous language study and/or who have high AP or CEEB scores will be able to begin taking courses toward the minor earlier in their undergraduate program. In all cases, progress will be accelerated by study abroad, which is highly recommended for all minors.

Students may double count a maximum of one course taken for the Russian Studies minor that is also being used to fulfill the requirements of other majors, minors, and programs.

Course Requirements

1. Required Course in History (9 units)

Complete one course. *		Units
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9

* Both courses are recommended.

2. Required Electives in History (18 units)

In consultation with the minor advisor, students may choose a substitute.		Units
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-341	The Cold War in Documents and Film	9

3. Core Courses in Modern Languages (24 units)

Complete both courses.		Units
82-291	Intermediate Russian I	12
82-292	Intermediate Russian II	12

Should a student enter the Russian Studies program with demonstrated language proficiency at the intermediate or advanced level, higher level courses will be used to complete the required total of 18 units of core courses in Modern Languages. Advanced language options include 82-400 Russian Studies Topics, a repeatable course, as well as subject-oriented language supplements to existing courses taught in English in a variety of fields. The student can add a language supplement (3 units) to selected 9-unit electives, earning a total of 12 units for the language-supplemented course.

4. Interdisciplinary Electives (18 units)

Complete two courses. This list is compiled from possibilities such as but not limited to the following. Students should consult their minor advisor for the most up to date interdisciplinary electives appropriate for the Russian Studies curriculum. Courses may be suggested to the minor advisor for approval as a substitute. Note that not all courses are offered each semester.

History		Units
79-205	20th Century Europe	9
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-322	Stalin and the Great Terror	9
79-341	The Cold War in Documents and Film	9

Modern Languages		Units
82-283	Language Diversity & Cultural Identity	9
82-294	Topics in Russian Language and Culture *	Var.
82-296	A Century of Russian Film	9
82-396	The Faust Legend at Home and Abroad	Var.
82-397	Radical, Heretics, Hackers: Russian Outlaws in History, Literature, and Film	Var.
82-399	Special Topics: Russian in Context *	9
82-400	Russian Studies Topics (section A and/or B)	6
82-492	The Historical Imagination in Nineteenth-Century Russian Literature	Var.

* Students may repeat these course with new topics.

Study Abroad

A semester or year of study abroad is strongly recommended. Consult with your advisor and the Office of International Education (OIE) about possible options. Students are encouraged to spend a semester or summer in Russia via an approved exchange program. Many exchange programs offer instruction in Russian language, history, literature, and culture, in internationally recognized universities. They also offer travel to ancient sites and cities, visits to museums, palaces, exhibitions, and monuments, and the opportunity to live with a Russian host family. Scholarship opportunities are available.

Faculty

KHALED AL MASAEED, Assistant Professor of Arabic Studies – Ph.D., The University of Arizona; Carnegie Mellon, 2016–

STEPHEN BROCKMANN, Professor of German with courtesy appointments in English and History – Ph.D., University of Wisconsin Madison; Carnegie Mellon, 1993–

CHARLENE CASTELLANO, Teaching Professor of Russian Emeritus – Ph.D., Cornell University; Carnegie Mellon, 1990–

SÉBASTIEN DUBREIL, Teaching Professor of French & Francophone Studies and Second Language Acquisition & Technology Enhanced Learning – Ph.D., Emory University; Carnegie Mellon, 2016–

KENYA C. DWORKIN Y MENDEZ, Associate Professor of Hispanic Studies with courtesy appointments in English and History – Ph.D., University of California, Berkeley; Carnegie Mellon, 1993–

GABRIELE EICHMANNS-MAIER, Associate Teaching Professor of German – Ph.D., University of Washington; Carnegie Mellon, 2008–

JOSÉ ESTRADA, Assistant Teaching Professor of Hispanic Studies – Ph.D., University of Chicago; Carnegie Mellon, 2019–

BARBARA FREED, Professor Emeritus of French & Francophone Studies and Second Language Acquisition – Ph.D., University of Pennsylvania; Carnegie Mellon, 1990–

TATYANA GERSHKOVICH, Assistant Professor of Russian Studies – Ph.D., Harvard University; Carnegie Mellon, 2016–

FELIPE GOMEZ, Associate Teaching Professor of Hispanic Studies – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 2006–

CHRISTIAN HALLSTEIN, Teaching Professor of German – Ph.D., Pennsylvania State University; Carnegie Mellon, 1979–

ERIK HELIN, Special Lecturer, Carnegie Mellon - Qatar – MA , Eastern Michigan; Carnegie Mellon, 2006–

PAUL HOPPER, Paul Mellon Distinguished Professor Emeritus of the Humanities, Rhetoric and Linguistics with a courtesy appointment in Modern Languages – Ph.D., University of Texas; Carnegie Mellon, 1990–

ZEINAB IBRAHIM, Associate Teaching Professor, Carnegie Mellon - Qatar – Ph.D., Georgetown University; Carnegie Mellon, 2009–

YASUFUMI IWASAKI, Associate Teaching Professor of Japanese – Ph.D., University of Illinois; Carnegie Mellon, 2005–

BARBARA JOHNSTONE, Professor Emeritus of Rhetoric and Linguistics with a courtesy appointment in Modern Languages – Ph.D., University of Michigan; Carnegie Mellon, 1997–

CHRISTOPHER M. JONES, Teaching Professor of French & Francophone Studies and Director of Modern Language Resource Center – Ph.D., University of Massachusetts, Amherst; Carnegie Mellon, 1993–

KEIKO KODA, Professor of Japanese and Second Language Acquisition and Director of Graduate Studies – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 1995–

GANG LIU, Assistant Teaching Professor of Chinese Studies – Ph.D., University of Michigan; Carnegie Mellon, 2010–

BRIAN MACWHINNEY, Professor of Psychology with a courtesy appointment in Modern Languages – Ph.D., University of California, Berkeley; Carnegie Mellon, 1981–

MAME NIANG-MEUNIER, Assistant Professor of French & Francophone Studies – Ph.D., Louisiana State University; Carnegie Mellon, 2012–

SUSAN G. POLANSKY, Teaching Professor of Hispanic Studies and Head of Modern Languages – Ph.D., Boston College; Carnegie Mellon, 1986–

GIOVANNI PUPPO, Instructor of Italian – Ph.D., University of Rome; Carnegie Mellon, 1975–

JURIS SILENIEKS, Professor Emeritus of French – Ph.D., University of Nebraska; Carnegie Mellon, 1960–

CANDACE SKIBBA, Assistant Teaching Professor of Hispanic Studies – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2006–

DONALD SUTTON, Professor Emeritus of History with a courtesy appointment in Modern Languages – Ph.D. , Cambridge University; Carnegie Mellon, 1969–

NAOKO TAGUCHI, Associate Professor of Japanese and Second Language Acquisition – Ph.D., Northern Arizona University; Carnegie Mellon, 2005–

THERESE TARDIO, Associate Teaching Professor of Hispanic Studies – Ph.D., University of Pittsburgh; Carnegie Mellon, 2001–

G. RICHARD TUCKER, Paul Mellon University Professor Emeritus of Applied Linguistics with a courtesy appointment in Psychology – Ph.D., McGill University; Carnegie Mellon, 1992–

JAN VAIRO, Senior Lecturer – M.A., University of Pittsburgh; Carnegie Mellon, 1992–

REMI (ADAM) VAN COMPERNOLLE, Assistant Professor of French & Francophone Studies & Second Language Acquisition – Ph.D., Penn State; Carnegie Mellon, 2012–

MICHAEL J. WEST, Teaching Professor of French & Francophone Studies – PhD., University of California-Santa Barbara; Carnegie Mellon, 1989–

DANIELLE WETZEL, Teaching Professor and Director of First Year Writing with a courtesy appointment in Modern Languages – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2006–

SETH WIENER, Assistant Professor of Second Language Acquistion and Chinese – Ph.D., Ohio State University; Carnegie Mellon, 2015–

SUE-MEI WU, Teaching Professor of Chinese Studies – Ph.D., Ohio State University; Carnegie Mellon, 2000–

TIANXUE YAO, Senior Lecturer – M.A., Carnegie Mellon University, M.A., JiLin University; Carnegie Mellon, 1996–

YOSHIHIRO YASUHARA, AssociateTeaching Professor of Japanese Studies – Ph.D., Pennsylvania State University; Carnegie Mellon, 2010–

BONNIE L. YOUNGS, Teaching Professor of French & Francophone Studies and Director of Undergraduate Studies – Ph.D., University of Pennsylvania; Carnegie Mellon, 1993–

YUEMING YU, Teaching Professor of Chinese Studies – Ed.D., University of Pittsburgh; Carnegie Mellon, 1992–

Department of Modern Languages Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

82-101 Elementary French I
Fall and Spring: 12 units
This course is for students with no prior experience in French. Using a proficiency-oriented approach, students will develop contextually appropriate interpersonal communication skills in both written and spoken French, develop reading and listening skills through the use of various media, understand fundamental grammar, acquire vocabulary, and gain a basic understanding of French and francophone cultures through class activities. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. A student with prior experience in French must take the placement exam.

82-102 Elementary French II
Fall and Spring: 12 units
This course is designed for students who have taken first-semester French at Carnegie Mellon or learned its equivalent as determined by placement. Using a proficiency-oriented approach, students will expand contextually appropriate interpersonal communication skills in both written and spoken French, continue to develop reading and listening skills through the use of various media, review previously learned and practice new grammar and vocabulary, and gain a further understanding of French and francophone cultures through class activities. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. A student with prior experience in French must take the placement exam.
Prerequisites: 82-101 or 82-103

82-103 Elementary French I Online
Fall and Spring: 12 units
This course is designed for students with no prior experience with French and who need a more flexible approach to language learning than that offered in a standard classroom course. Beginning language learners will develop communicative competence in the four basic skills of listening, speaking, reading and writing. Basic vocabulary and sentence structures for use in essential daily-life situations, as well as cultural information, are taught through the course materials and assignments. Materials are web-based, with extensive use of Internet technologies for listening, reading, and communication. During regular semesters, this course is offered in a hybrid mode requiring one 80-minute class per week in addition to weekly 20-minute individual meetings with the instructor or a peer speaking assistant. There is a materials fee for taking this course which is paid by credit card on first log-in to the course website. A student with prior experience in French must take the placement exam.

82-104 Elementary French II Online
Fall and Spring: 12 units
This course is designed for students who need a more flexible approach to language learning than that offered in a standard classroom course. Students will learn more useful and complex expressions and sentence structures necessary for use in everyday life. Students will continue building their skills in listening, speaking, reading, and writing for everyday communication. Additionally, course materials and assignments are designed to improve students' understanding of French and francophone cultures and societies. Materials are web-based with extensive use of Internet technologies for listening, reading, and communication. During regular semesters, this course is offered in a hybrid mode requiring one 80-minute class per week in addition to weekly 20-minute individual meetings with the instructor or a peer speaking assistant. There is a materials fee for taking this course which is paid by credit card on first log-in to the course website. A student with prior experience in French must take the placement exam.
Prerequisites: 82-103 or 82-101

82-111 Elementary Arabic I
Fall: 12 units
This course introduces learners to Modern Standard Arabic (MSA) in its written and spoken forms to achieve communicative competence at the elementary level in all language skills (listening, speaking, reading, and writing). To this end the course follows a proficiency-oriented approach to language teaching. In addition to MSA, the course introduces students to one of the popular spoken dialects in the Arab world such as Egyptian, Levantine, or Moroccan (depending upon the instructor's background/expertise). Students will also study various cultural aspects of the Arab world through written, audio-visual and online-based materials. Students with prior knowledge of Arabic must take the placement exam.

82-112 Elementary Arabic II
Spring: 12 units
This course builds on Elementary Arabic I to continue introducing students to Modern Standard Arabic (MSA) to achieve communicative competence at the Novice-High/Intermediate-Low level in all language skills (listening, speaking, reading, and writing). To this end, the course follows a proficiency-oriented approach to language teaching. In addition to MSA, the course continues to introduce students to one of the popular spoken dialects in the Arab world such as Egyptian, Levantine, or Moroccan (depending upon the instructor's background/expertise). Students will continue to explore various cultural aspects of the Arab world through written, audio-visual and online materials.
Prerequisite: 82-111

82-114 Arabic for Global Exchange Online
Fall and Spring: 6 units
Arabic for Global Exchange is a course in Arabic language and culture that utilizes cognitive learning technologies and computer-assisted language instruction to enhance educational, governmental, and business exchanges that are increasingly vital to public policy and economic development in the global economy. This is a mini-course for individuals with no proficiency or extremely limited knowledge of Arabic language and culture who are about to begin study or work in an Arabic-speaking context. The course introduces learners to basic concepts and information to facilitate entry and engagement in an Arabic-speaking environment. The Arabic for Global Exchange project aims to meet a need for high quality, communication-oriented instructional materials to introduce basic cultural knowledge and survival language. Arabic for Global Exchange is a six-week, six-lesson, half-semester course (equivalent of six weeks of university-level instruction), or roughly sixty hours of student effort. Each of the six lessons in the course includes texts and activities to promote acquisition of cultural content in English as well as basic introductory exposure to the Arabic language.

82-115 Beginning Arabic for Oral Communication
Intermittent: 6 units
This course is meant for students who have either taken Arabic for Global Exchange or who seek an introductory course to the Arabic Language. It is designed to give learners an overview of Arabic, and introduce them to the letters, sounds, and symbols that make up the Arabic writing system. In addition to the sounds and letters of Arabic, the course also helps students to master basic vocabulary and important expressions for basic interaction with speakers of Arabic. Students will be provided with written, audio, and visual materials to prepare at home and should come to class ready to speak, read, and write using what they have studied outside class.

82-116 Arabic Cultural Issues Past & Present
Fall and Spring: 9 units
This course is offered only at Carnegie Mellon's campus in Qatar. This course is intended for students who wish to master speaking in Modern Standard Arabic (MSA). This is done through reading articles on customs and traditions of the Arabs and discussing them thoroughly in class using MSA. Since this is an elementary level course, it is to help students switch from their dialect to speaking MSA. Through the reading of complex articles and texts on customs and traditions of Arabs and discussing them thoroughly in class using Modern Standard Arabic (MSA), students will engage in academic conversations with the goals of a developing a deeper understanding of Arab cultures and a facility to use MSA at an academic level. An elementary level course, this course is designed for students who wish to improve their proficiency in speaking and reading MSA as an alternative to their dialect.

82-117 Arabic Conversation & Dialect I
Fall and Spring: 6 units
This course introduces students to a particular dialect of Arabic and to the culture of the region where the dialect is spoken. The dialect of the course will vary based on the instructor's background/expertise (for example, Levantine, Egyptian, Moroccan, etc.). This class adopts a proficiency-based approach and the content of the course will be organized around specific themes such as greetings, introductions, directions, family, food, etc. Students will be required to engage actively in speaking activities and complete a variety of related oral practice assignments outside of class. Because of the significant contribution of technology in facilitating and empowering language learning and language teaching, a substantial part of communication, activities, and assignments will be done via programs such as Aswaat Arabiyya, BYKI, Film clips, Skype, Youtube, etc. Please contact the department for specific information on the upcoming semester's course content.

82-118 Arabic Conversation & Dialect II
Fall and Spring: 6 units
This course continues students' exploration of the same regional dialect and culture taught in Arabic Conversation and Dialect I for that particular semester. The content of the course will be organized around specific themes that build on previously introduced topics (e.g., daily schedule, weddings, traveling, hobbies, etc.). Students will be required to engage actively in speaking activities and complete a variety of related oral practice assignments outside of class. Because of the significant contribution of technology in facilitating and empowering language learning and language teaching, a substantial part of communication, activities, and assignments will be done via programs such as Aswaat Arabiyya, BYKI, Film clips, Skype, Youtube, etc. Please contact the department for specific information on the upcoming semester's course content.
Prerequisite: 82-117 Min. grade C

82-119 Arabic Calligraphy Culture & Skills
Fall and Spring: 9 units
This course introduces its participants to historical and cultural contexts and various techniques used to produce Arabic calligraphy works. No previous knowledge of the Arabic script or language is necessary. At the end of the course, participants will demonstrate familiarity and comfort with key movements in the history and art of Arabic calligraphy, and read simple alphabet constructions or words in a variety of styles. Participants will apply proper techniques to producing calligraphy in two of the most commonly used styles, Naskh and Riq'ah, as well as experiment with some modern script styles. The class will use lecture discussions, audio-visual media, projects, guest speakers, and field trips as occasions arise.

82-121 Elementary German I
Fall and Spring: 12 units
This course is for students with no prior experience in German. Using a proficiency-oriented approach, students will develop contextually appropriate interpersonal communication skills in both written and spoken German, develop reading and listening skills through the use of various media, understand fundamental grammar, acquire vocabulary, and gain a basic understanding of German-speaking cultures through class activities. The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). A student with prior experience in German must take the placement exam.

82-122 Elementary German II
Fall and Spring: 12 units
This course is designed for students who have taken first-semester German at Carnegie Mellon or learned its equivalent as determined by placement. Using a proficiency-oriented approach, students will expand contextually appropriate interpersonal communication skills in both written and spoken German, continue to develop reading and listening skills through the use of various media, review previously learned and practice new grammar and vocabulary, and gain a further understanding of German cultures through class activities. The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). A student with prior experience in German must take the placement exam.
Prerequisites: 82-121 or 82-123

82-123 Directed Language Study: Elementary German I or II
Fall and Spring: 12 units
This course is a directed, instructor-supervised version of the courses 82-121 or 82-122. It is recommended for (1) students who are strongly motivated and have the time, self-discipline, and desire to work independently, (2) students whose schedule precludes enrollment in the regular elementary course, and/or (3) students who have had previous German study but are not prepared to take 82-122. This course develops the fundamental language skills as outlined in the descriptions of 82-121 and 82-122, and students complete the same work as for those courses. Written work is turned in for correction and tests covering each unit of material will be taken according to a schedule determined by the instructor. The instructor will be available during office hours or by appointment for individual consultations and testing. Students are permitted to take only one semester of 82-123. Prerequisite: There is no prerequisite for students enrolling for German Elementary I. For students enrolling in German Elementary II, the prerequisite is German Elementary I (82-121) or placement.

82-130 Navigating Chinese Culture: Intro to the Three Kingdoms
Intermittent: 9 units
This course introduces students to the basics of Chinese culture in order to assist them to better understand and appreciate traditional Chinese humanistic ideas, thoughts and value systems, with a focus on the Confucian point of view. Through the study of the classic novel, ?The Three Kingdoms?, the most valued virtues within Chinese culture and society - loyalty, filial piety, benevolence and righteousness ?are presented and discussed. Different aspects of the daily life culture will be introduced as well. Supplementary readings, video clips as well as video games will be used to provide students with a deeper insight, observation and motivation to explore more issues related to Chinese culture, history and philosophy. Assessment will be based on short essays, group projects and individual presentations. Some basic Chinese language instruction will be included to give students a taste of the Chinese language. After taking this course, students will - develop a basic understanding of the essence of Chinese culture - build an awareness of cultural differences between different countries - understand some basic characteristics of Chinese language This course is conducted in English; no prior knowledge of the Chinese culture is required.

82-131 Elementary Chinese I
Fall and Spring: 12 units
This course is for students with no prior experience in Chinese. Using a proficiency-oriented approach, students will develop contextually appropriate interpersonal communication skills in both written and spoken Chinese, develop reading and listening skills through various media, understand fundamental grammar, acquire vocabulary, and gain a basic understanding of Chinese cultures through class and extracurricular activities. Regular homework, quizzes, tests, and participation in class are mandatory (four in-class hours per week). Students will learn the phonetic transcriptions of Chinese (Pinyin) for speaking and listening as well as Chinese characters for reading and writing. The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. A student with prior experience in Chinese must take the placement exam.

82-132 Elementary Chinese II
Fall and Spring: 12 units
This course is designed for students who have taken first-semester Chinese at Carnegie Mellon or its equivalent by placement. Students will continue developing contextually appropriate interpersonal communication skills in both written and spoken Chinese, developing reading and listening skills through various media, and working toward a deeper understanding of Chinese culture. Work for this course will include the introduction and use of more complicated sentence structures, grammar, and expressions. Students are also encouraged to communicate in longer sentences and write short paragraphs and essays in Chinese. Regular homework, quizzes, tests, and participation in class are mandatory (four in-class hours per week). Students will continue to learn the phonetic transcriptions of Chinese (Pinyin) for speaking and listening as well as Chinese characters for reading and writing. The elementary level is designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. A student with prior experience in Chinese must take the placement exam.
Prerequisites: 82-131 or 82-133

82-133 Elementary Chinese Online I
Fall: 12 units
This course is designed for students who need a more flexible approach to language learning than that offered in a standard classroom course. It is designed to help beginners develop communicative competence in the four basic skills of listening, speaking, reading and writing the Chinese language. Basic vocabulary and sentence structures for use in essential daily-life situations, as well as cultural information, are taught through the course materials and assignments. Materials are web-based with extensive use of Internet technologies for listening, reading, and communication. This course is offered in a hybrid mode requiring one 80-minute class per week in addition to weekly 20-minute individual meetings with the instructor or a peer speaking assistant. There is a materials fee for taking this course which is paid by credit card on first log-in to the course website. Students in this class should be prepared to participate in such studies in the course of their classwork. A student with prior experience in Chinese must take the placement exam.

82-134 Elementary Chinese Online II
Spring: 12 units
This course is the continuation of 82-133, Elementary Chinese I Online. Students will continue learning more useful and complex expressions and sentence structures necessary for use in everyday life. Students will also continue building their skills in listening, speaking, reading, and writing for everyday communication, and their understanding of Chinese culture and society. This course is offered in a hybrid mode requiring one 80-minute class per week in addition to weekly 20-minute individual meetings with the instructor or a peer speaking assistant. There is a materials fee for taking this course which is paid by credit card on first log-in to the course website. A student with prior experience in Chinese must take the placement exam. Instructions for the placement exam are available in Baker Hall 160. Prerequisite: 82-131 or 82-133 or placement
Prerequisites: 82-131 or 82-133

82-135 Elementary Chinese for Heritage Students
Fall and Spring: 9 units
This course is designed for students who have some basic knowledge of spoken Chinese, but know little of how to read and write Chinese. While an integrated approach will be applied to the development of all the four language skills of listening, speaking, reading and writing simultaneously, the focus will be on the intensive study of Chinese characters through reading and writing practice. Based on their speaking and listening abilities, students will learn how to communicate in writing in everyday situations. The cultivation of cultural awareness will also be a focus of this course. At the end of this course, students will be well-equipped to continue their study of Chinese at the intermediate level. A student with prior experience in Chinese must take the placement exam. Prerequisites: Placement by test and Chinese group advisor

82-137 Chinese Calligraphy: Culture and Skills
Fall and Spring: 9 units
Chinese calligraphy is a crucial part of Chinese culture and world art. It is also a clear manifestation of Chinese philosophy that has influenced Chinese people for several thousand years. This introductory course on Chinese calligraphy provides students with basic knowledge of Chinese calligraphy and how it mirrors Chinese history, culture, and philosophy. It will also introduce the fundamental characteristics of the Chinese writing system, its cultural content, and principles of formation as well as the skills used in Chinese calligraphy. At the end of the course, students will have a good understanding of Chinese characters and their cultural and philosophical background but also be able to appreciate the art and beauty in Chinese calligraphy. Classes include lectures, movies, discussions, hands-on practice, and projects. Field trips and guest speakers may also be arranged if opportunities should arise.

82-141 Elementary Spanish I
Fall and Spring: 12 units
Elementary Spanish I is the first part of a two-semester course sequence for beginning students, emphasizing the development of communicative language and cultural competence. Students will work towards improving their writing, reading, listening and speaking abilities in Spanish, such that they become comfortable working with a variety of topics from Spanish-speaking cultural areas. Students will develop basic interactional and routine public communication patterns, frequently working in groups and pairs, and utilizing technologies that enhance learning opportunities and promote skill development. This course also provides extracurricular opportunities to interact with members of the Spanish-speaking community. Four hours of in-class instruction per week are required. A student with prior experience in Spanish must take the placement exam.

82-142 Elementary Spanish II
Fall and Spring: 12 units
Elementary Spanish II is the second part of a two-semester course sequence for beginning students, emphasizing the development of communicative language and cultural competence. Students will work towards improving their writing, reading, listening and speaking abilities in Spanish, such that they become comfortable working with a variety of topics from Spanish-speaking cultural areas. Students will develop basic interactional and routine public communication patterns, frequently working in groups and pairs, and utilizing technologies that enhance learning opportunities and promote skill development. This course also provides extracurricular opportunities to interact with members of the Spanish-speaking community. Four hours of in-class instruction per week are required. A student with prior experience in Spanish must take the placement exam.
Prerequisites: 82-143 or 82-141

82-143 Elementary Spanish I Online
Fall: 12 units
Elementary Spanish Online I is for beginning students, emphasizing the development of communicative language and cultural competence. Students will work towards improving their writing, reading, listening and speaking abilities in Spanish, such that they become comfortable working with a variety of topics from Spanish-speaking cultural areas. Students will develop basic interactional and routine public communication patterns. This course is designed for students with no previous knowledge of Spanish and who need a more flexible approach to language learning than that offered in a standard classroom course. All materials are Web-based, with extensive use of Internet technologies for research, writing, and communication. During regular semesters, this course is offered in a hybrid mode requiring one 80-minute class per week in addition to weekly 20-minute individual meetings with the instructor or a peer speaking assistant. There is a materials fee for taking this course which is paid by credit card on first log-in to the course website. Students who have taken Spanish before are required to take the placement exam.

82-144 Elementary Spanish II Online
Spring: 12 units
Elementary Spanish Online II is the second part of a two-course sequence, emphasizing the development of communicative language and cultural competence. Students will work towards improving their writing, reading, listening and speaking abilities in Spanish, such that they become comfortable working with a variety of topics from Spanish-speaking cultural areas. Students will develop basic interactional and routine public communication patterns. This course is designed for students who need a more flexible approach to language learning than that offered in a standard classroom course. All materials are Web-based, with extensive use of Internet technologies for research, writing, and communication. During regular semesters, this course is offered in a hybrid mode requiring one 80-minute class per week in addition to weekly 20-minute individual meetings with the instructor or a peer speaking assistant. There is a materials fee for taking this course which is paid by credit card on first log-in to the course website. A student with prior experience in Spanish must take the placement exam. Instructions for the placement exam are available in Baker Hall 160. Prerequisite: 82-141 or 82-143 or placement
Prerequisites: 82-141 or 82-143

82-161 Elementary Italian I
Fall: 12 units
This course is for students with no prior experience in Italian. Using a proficiency-oriented approach, students will develop contextually appropriate interpersonal communication skills in both written and spoken Italian, develop reading and listening skills through the use of various media, understand fundamental grammar, acquire vocabulary, and gain a basic understanding of Italian culture through class activities. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. A student with prior experience in Italian must take the placement exam.

82-162 Elementary Italian II
Spring: 12 units
This course is designed for students who have taken first-semester Italian at Carnegie Mellon or learned its equivalent as determined by placement. Using a proficiency-oriented approach, students will expand contextually appropriate interpersonal communication skills in both written and spoken Italian, continue to develop reading and listening skills through the use of various media, review previously learned and practice new grammar and vocabulary, and gain a further understanding of Italian culture through class activities. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. A student with prior experience in Italian must contact the Department of Modern Languages for placement.
Prerequisites: 82-163 or 82-161

82-163 Directed Language Study: Elementary Italian I or II
Fall and Spring: 12 units
A self-paced version of first or second semester Elementary Italian, this course is for highly motivated students capable of working independently. The coursework includes weekly classes, aural practice using online materials, periodic assessments, and individual meetings with the instructor. Students are permitted to take only one semester of 82-163. A student with prior experience in Italian must take the placement exam.

82-171 Elementary Japanese I
Fall and Spring: 12 units
This course is the first part of a two-semester course sequence (82-171, 82-172) for students with no prior experience in Japanese. It emphasizes the development of communicative language proficiency through oral practice, aural comprehension, reading, writing, and the study of cultural aspects of Japanese society. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. A student with prior experience in Japanese must take the placement exam.

82-172 Elementary Japanese II
Fall and Spring: 12 units
This course is a sequel to Elementary Japanese I (82-171) and continues to further the development of communicative language proficiency through oral practice, aural comprehension, reading, writing, and the study of cultural aspects of Japanese society. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. A student with prior experience in Japanese must take the placement exam.
Prerequisites: 82-171 or 82-174

82-173 Introduction to Japanese I
Fall and Spring: 9 units
This course is the first part of a two-semester sequence (82-173, 82-174) for students with no background in Japanese. Since it covers the first half of 82-171 in one semester, it is suitable for those students who need sufficient practice time both in and outside of class to begin their study of Japanese. It emphasizes the development of communicative language proficiency through oral practice, aural comprehension, reading, writing, and the study of cultural aspects of Japanese society. Regular homework, quizzes, tests, presentations, and class participation are mandatory (three in-class hours per week plus six hours of required homework). The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. Students who intend to minor or major Japanese should consult with their Japanese minor or major advisor before deciding on 82-171 or 82-173.

82-174 Introduction to Japanese II
Fall and Spring: 9 units
This course is a sequel to Introduction to Japanese I (82-173) for students with no background in Japanese. Since the course covers the second half of the 82-171 in one semester, it is suitable for those students who need lots of practice time both in and outside class. It continues to further the development of communicative language proficiency through oral practice, aural comprehension, reading, writing, and the study of cultural aspects of Japanese society. The elementary level is also designed to help students learn to reflect upon and draw upon strategies used by good language learners in their second language study. Regular homework, quizzes, tests, presentations, and class participation are mandatory (three in-class hours per week plus six hours of required homework The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. Upon completion of this course, students can take 82-172.
Prerequisite: 82-173

82-176 Intensive Japanese Language & Culture: Elementary Level
Intermittent
No course description provided.

82-191 Elementary Russian I
Fall: 12 units
This course is for students who have never studied Russian. It begins the Russian language sequence and is offered in the fall semester only. The course takes a communicative approach to teaching basic skills in listening, speaking, reading and writing. Language is presented in communicative contexts illustrating cultural aspects of daily Russian life. The elementary level is also designed to help students learn to reflect and draw upon strategies used by good language learners in their second language study. Daily homework and participation in class are mandatory (four in-class hours per week), as is weekly consultation and conversation practice with a course assistant. A student with prior experience in Russian must take the placement exam. **If you would like to take this course, but the current time slot does not work with your schedule please contact the instructor as soon as possible and we may be able to accommodate you**

82-192 Elementary Russian II
Spring: 12 units
Elementary Russian II is the second semester of a yearlong beginning Russian sequence. Students who complete this yearlong sequence will acquire the basics of Russian grammar and develop an active vocabulary of approximately 1,000 words. They will learn how to tell simple stories on familiar topics, ask questions, and express their opinions. They will be able to grasp the main ideas of short newspaper articles and understand the gist of straightforward Russian speech. Throughout the course, students will encounter oral, visual, and written content and engage in the interpretive, interpersonal, and presentational modes of communication. A student with prior experience in Russian must take the placement exam.
Prerequisite: 82-191

82-198 Research Training: Modern Languages
Fall and Spring
These courses are designed to give eligible and interested students some hands-on research experience working on a faculty project or in a lab in ways that might stimulate and nurture the students' interest in doing more research. They are open to students who are Dietrich College, SHS, or BHA majors, double majors, and minors who will be second semester freshmen or sophomores during the semester they take the course. Prerequisites: At least a 3.0 cumulative QPA or approval by petition and permission of instructor A sample course contract can be found here: http://www.cmu.edu/dietrich/docs/undergraduate/RTC-Contract.pdf S18: Section A: Section B:Encoding Hispanic Comics This project involves research of Spanish-language comics. The course will teach Comic Book Markup Language (CBML, a TEI-based XML vocabulary) for encoding and analyzing the structural, textual, visual, and bibliographic complexity of digitized comic books and related documents. Student researchers will assist in: a) editing, marking up, and structuring digitized Spanish-language comics; b) reading and subjecting these texts to interpretation, making inferences, and embarking in theoretical explorations of issues according to given criteria. Long-term results of this project entail possible inclusion of encoded materials in the Latin American Comics Archive, collaboration with national and international students and researchers, and perhaps a published work (for which student participants would be acknowledged as contributors). Interested students: Send an email to Professor Gomez and include information about your interests in this project. Open to one or two students with at least intermediate level reading skills in Spanish. Section C:

Course Website: http://www.cmu.edu/dietrich/docs/undergraduate/RTC-Contract.pdf

82-201 Intermediate French I
Fall and Spring: 9 units
At the intermediate level, students will continue to improve listening, speaking, reading and writing skills with the goal of becoming more proficient in daily and extended communication needs. In addition to an ongoing review of basic grammar, a greater variety of grammar, expressions and complicated sentence structures will be taught so that students can carry on more sophisticated conversations on various topics. In-class activities and homework using authentic texts related to the broad spectrum of French and francophone cultures will be used to integrate language learning with content and culture. Regular homework, quizzes, tests, presentations, essays, and class participation are mandatory. A student with prior experience in French must take the placement exam.
Prerequisites: 82-104 or 82-102

82-202 Intermediate French II
Fall and Spring: 9 units
At the intermediate level, students will continue to improve listening, speaking, reading and writing skills with the goal of becoming more proficient in daily and extended communication needs. In addition to an ongoing review of basic grammar, a greater variety of grammar, expressions and complicated sentence structures will be taught so that students can carry on more sophisticated conversations on various topics. In-class activities and homework using authentic texts related to the broad spectrum of French and francophone cultures will be used to integrate language learning with content and culture. Regular homework, quizzes, tests, presentations, essays, and class participation are mandatory. A student with prior experience in French must take the placement exam.
Prerequisite: 82-201

82-208 Topics in European Studies
Intermittent: 9 units
F17: European Society and Culture Between and After the Two Great Wars of the 20th Century. How did World War I and World War II change European society and culture? Defining the meaning of Europe or European is complicated, since it refers to both a geographical location and a shared history and cultural identity. Based on an interdisciplinary approach to the multiple regions and countries located on a single continent, the course will equip students with the skills, methods, and concepts essential for a better understanding of European culture, society and thought. It will focus particularly on such tragic events as World War I and World War II, and the rise and fall of Nazi and Communist regimes and ideologies. Students will learn how to present material effectively, to analyze texts critically and to construct coherent arguments.

82-211 Intermediate Arabic I
Fall: 12 units
This course builds on Elementary Arabic II to continue building students' communicative competence at the Intermediate Low-Mid level in Modern Standard Arabic in all four language skills (listening, reading, speaking, and writing) following a proficiency-oriented teaching approach. The course also continues to 1) integrate a spoken dialect to enrich students' background in oral communication; and 2) educate students about to various aspects of Arab culture through written and audio-visual materials.
Prerequisite: 82-112

82-212 Intermediate Arabic II
Spring: 12 units
This course follows Intermediate Arabic I. It continues to build students' communicative competence at the Intermediate Mid-High level in Modern Standard Arabic in all four skills (listening, reading, speaking, and writing) following a proficiency-oriented teaching approach. The course also continues to 1) integrate a spoken dialect to enrich students background in oral communication; and 2) educate students about to various aspects of Arab culture through written and audio-visual materials.
Prerequisite: 82-211

82-214 Topics in Modern Arabic Language, Literature, & Culture
Fall and Spring: 9 units
An integrated approach to the study of the Arabic language, literature and culture by means of literary and cultural readings.This course explores definitions of culture and analyzes the dynamic role of language in culture and culture in language, with an aim to foster cross-cultural awareness and self-realization while developing proficiency in Arabic. This course is designed to strengthen listening, speaking, reading and writing, within the context of an evolving Arabic culture.

82-215 Arab Culture Through Film & Literature
Fall and Spring: 9 units
This course introduces students to the Arab World through a lens that challenges stereotypes, fosters a better understanding of the social reality of Arab societies, and appreciates the diverse identities. The objective is to increase cross-cultural understanding and equip students with the skills needed to thrive in the 21st century and become global citizens. Students will build cultural literacy and relationships through virtual meetings with Arab students in Saudi Arabia, Egypt, Qatar, and Morocco, in addition to watching a variety of critically-acclaimed films and reading two novels. Topics covered are the diversity of the Arab World, homo/sexuality, gender roles, social values, the effect of modernization on changes, and revolution music and art that emerged since the Arab uprisings of 2011.

82-216 Literature of the Arabic-speaking World
Fall and Spring: 9 units
This course is offered only at Carnegie Mellon's campus in Qatar. This repeatable introductory course explores the Arab world through a thematic or conceptual focus. In spring 2016, the theme will be "Cultural Issues in the West and the Arab World". Coursework will include reading short stories and novels to understand the cultural context that gave rise to specific literary works. Students will also continue to develop their abilities to express their ideas both in speaking and in writing, as well as their listening skills in Modern Standard Arabic.

82-217 Multilingualism and Multiculturalism in the Arab World
Fall and Spring: 9 units
This course brings linguistic and cultural diversity in the Arab world to the forefront through exposing students to the key social issues in the study of multilingualism. To this end, the course will explore and analyze some of the deeply held language ideologies in Arab and international contexts. Topics to be covered in the course include (but are not limited to) multilingualism within and across languages (e.g., multidialectal practices, code-switching between languages, language variation and change), societal and individual multilingualism (e.g. language and identity), multilingualism in institutional sites (e.g. schools, the work place), language policy and planning, and language rights. The course is taught in a seminar, discussion-based format and students will construct projects to explore course topics in a hands-on manner. The course is taught in English and students who wish to take the course as a Modern Languages major or minor elective will need to complete their final project on a topic relevant to the language they study.

82-221 Intermediate German I
Fall and Spring: 9 units
The goal of Intermediate German I is to further develop students linguistic and cultural knowledge, allowing them to feel more comfortable as a user of German. By the end of the semester, students should be able to: use and understand German in everyday situations; communicate effectively in general areas and in individual areas of interest; understand general cultural perspectives in contemporary Germany; and read and understand authentic materials from German-speaking countries. Activities will help develop the four skills and of cultural knowledge. This course focuses on intercultural concepts and will help students see what things Germans view differently from other nations and what things might be similar. Topics will include issues such as travel, politics, immigration, and music. A student with prior experience in German must take the placement exam.
Prerequisites: 82-122 or 82-123

82-222 Intermediate German II
Fall and Spring: 9 units
In this class, students will expand and develop their speaking, listening, reading, and writing skills, as well as their cultural knowledge of German-speaking countries. This course focuses on intercultural concepts and will help students see what things Germans view differently from other nations and what things might be similar. Topics will include issues such as views on German history, prospects for Germany's future, art and artists, and the German film industry. By the end of the course, students should be able to make themselves understood in German and understand German-speakers with experience dealing with foreigners. A student with prior experience in German must take the placement exam. Instructions for the placement exam are available in Baker Hall 160. Prerequisite: 82-221 or placement
Prerequisite: 82-221

82-227 Germany & the European Union
Spring: 9 units
This course offers an overview of contemporary Germany, its problems and its promise, with a particular focus on German politics, the German economy, and Germany's role in the European Union and in the world system. Primary topics include: 1) Germany on the World Stage; 2) Germany and the Past; 3) the German political system; 4) the German economic system; 5) the European Union, its challenges, and Germany's role in it; 6) Germany, the EU, and multiculturalism and ethnic and cultural pluralism, including the role played in Germany and Europe by ethnic, religious, and cultural minorities. Each of these topics will take about 2-3 weeks of the course. Students in the course will be required 1) to complete all required course readings (the equivalent of about three books in English, although in most cases we will be reading chapters from books rather than entire books, plus about five separate articles in English), 2) to take five short fifteen-minute quizzes on the some of the various themes of the course, 3) to do a book review of a book of their choosing dealing with contemporary Germany and/or the European Union and to make a presentation about that book in class, 4) to write three short (four page) papers on the themes of the course, and 5) to participate in two debates about A) Germany's response to the past; and B) Whether or not Germany and the EU should be more open to ethnic, cultural, and religious minorities.

82-230 Topics in Cultural Comparison
Intermittent: 9 units
Courses offered under this repeatable title will transcend the focus on one area or nation or language by engaging in cultural comparison. This course makes full use of the variety of faculty specializations in the department and Dietrich College to broaden students' perspectives and help them gain an understanding of the divergences and convergences of world cultures. This course and all source materials will be in English. Past titles have included The Great Divergence Debate in Chinese Economic History. SPRING 2017:

82-231 Intermediate Chinese I
Fall and Spring: 12 units
This course is the continuation of Elementary Chinese II (82-132). At the intermediate level, students will continue to improve the basic skills of listening, speaking, reading and writing with the goal of becoming more proficient in daily communication needs. In addition to an ongoing review of basic grammar, a greater variety of expressions and complicated sentence structures will be taught so that students can carry on more sophisticated daily conversations on various topics related to every day life. While equal emphasis will still be on both Pinyin and characters, students will be encouraged to use more and more Chinese characters with the help of Pinyin for communication. In-class and extracurricular activities related to the broad spectrum of Chinese culture will be organized to facilitate language learning using knowledge of the cultural background of the language. Regular homework, quizzes, tests, presentations, essays, and class participation are mandatory (four in-class hours per week). A student with prior experience in Chinese must take the placement exam.
Prerequisites: 82-134 or 82-132 or 82-135

82-232 Intermediate Chinese II
Fall and Spring: 12 units
This is the second semester of Intermediate Chinese. Its primary goals are to expand students' vocabulary and knowledge of grammar of the Chinese language by learning more new words, expressions, and sentence patterns needed for everyday communication and by consolidating their knowledge through oral and written practice in and out of class. In this course, students will participate in classroom discussions in Mandarin Chinese on various topics concerning everyday life and write short paragraphs on those topics using Chinese characters. Different aspects of Chinese culture will also be introduced during the whole semester through multimedia, lectures, and discussions. Regular homework, quizzes, tests, presentations, and class participation are mandatory (four in-class hours per week). A student with prior experience in Chinese must take the placement exam.
Prerequisite: 82-231

82-234 Topics in Chinese History
Intermittent: 9 units
In fewer than three decades, the People's Republic of China has transformed itself from an underdeveloped and reclusive state to become the world's next probable superpower. Divided roughly into three sections, this course examines: 1) the miraculous economic development that made China's rise possible; 2) the political system that allowed the Chinese Communist Party to rule over that rise; 3) China's rising global stature and its implications for the rest of the world. In combination these sections allow us to understand how China's rise happened and what it means for the future of the entire globe. Issues addressed include: economic development, inequality, cyber-security and internet censorship, Intellectual Property Protection, China's influence in Africa, China's military capability, and the Beijing Consensus. The goal of this course is to prepare students for a world where China is increasingly important, but also to ask how China got to where it is today, and where it is going as chances are highly likely that students in most any area of study will be influenced by China's future. This course and all source materials will be in English. No knowledge of Chinese is required.

82-235 Fables, Legends and Stories from Ancient Chinese Civilization
Spring: 9 units
This course is designed for intermediate level students who would like to focus on improving their reading and writing skills in Mandarin Chinese. One major course goal is to teach students to read in Chinese with fluency and proficiency within a format of rich cultural content by expanding their vocabulary and building up their knowledge of socio-cultural influences on Chinese language use. Readings will include traditional fables, mini-stories, and articles on the lifestyle and social changes in ancient and modern China. Discussion will be one major class activity, however students will also be expected to develop long-term retention and control of the knowledge acquired through reading and writing assignments.
Prerequisites: 82-231 or 82-135

82-236 Intensive Chinese Language & Culture: Intermediate Level
Spring
No course description provided.

82-238 Topics in Chinese Culture
Intermittent: 9 units
Courses offered under this repeatable title will focus on aspects of modern and contemporary Chinese culture, including, for example, literature, the arts, theater and music, and gender studies. Through the critical analysis of original sources in translation, film, as well as outstanding works of scholarship, students will gain a deeper understanding of important developments in modern and contemporary China and will learn how to locate and evaluate sources of knowledge about China for future study. This course and all source materials will be in English. No knowledge of Chinese is required. Past titles have included Gender & Sexuality in China: Tradition and Transformation. F18: Gender & Sexuality in China: Tradition and Transformation Over the past 100 years, Chinese women and men have seen tremendous changes in their social and private lives as China underwent wars, revolutions, market reform and opening up. The study of gender and sexuality provides a unique opportunity to explore how Chinese social/ private life has been transformed through economic development and social revolution in China. The course begins with a background discussion of Chinese traditions in the field of gender and sexuality, and covers the period from the beginning of the 20th century to the present. It aims to help student explore the answers to questions on the cultural expectations behind the idea of "man", "woman" and "sex" and the role the government p has played in regulating intimacy/sex/gender in different historical periods of China. Discussions will also be conducted on the changes in Chinese people's gender/sexuality experiences in contemporary to help students develop a deeper understanding of the sexual revolution in China, and changing conceptions of gender/sexuality identity under Confucianism, Western Imperialism, socialism and globalization. Course materials include articles, books, as well as films.

82-241 Intermediate Spanish I
Fall and Spring: 9 units
Intermediate Spanish I is the first part of a two-semester course sequence (82-241, 82-242) designed to familiarize students with the cultures and perspectives of the Spanish-speaking world. Students will develop self-expression across a range of culturally significant topics, improving their speaking, listening, reading, and writing skills while working with longer passages of language in context through reading, writing and listening/viewing (e.g. tv series, movies, short novels, plays) and frequently working in groups and pairs, and utilizing technologies that enhance learning opportunities and promote skill development. The course provides extracurricular opportunities to interact with members of the Spanish-speaking community.
Prerequisites: 82-142 or 82-144

82-242 Intermediate Spanish II
Fall and Spring: 9 units
Intermediate Spanish II is the second part of a two-semester course sequence (82-241, 82-242) designed to familiarize students with the cultures and perspectives of the Spanish-speaking world. Students will develop self-expression across a range of culturally significant topics, improving their speaking, listening, reading, and writing skills while working with longer passages of language in context through reading, writing and listening/viewing (e.g. tv series, movies, short novels, plays) and frequently working in groups and pairs, and utilizing technologies that enhance learning opportunities and promote skill development. The course provides extracurricular opportunities to interact with members of the Spanish-speaking community.
Prerequisites: 82-243 or 82-241

82-245 New Directions in Hispanic Studies
Intermittent: 9 units
FALL 2019: Death, Dope, Drag and Doctors in 20th and 21st Century Spanish Film "Even today, I've no idea what the truth is, or what I did with it." ¿ Luis Buñuel, My Last Sigh Spanish film is known for its quirkiness, irreverence and, as referenced by the inimitable Luis Buñuel, contemplation of truth. This course will enter into that discourse by analyzing films from 20th and 21st century Spain. While no prior knowledge of Spanish language, culture nor history are required, interest in cultural exploration and critical thinking are necessary. Film analysis will form part of the crux of the course, as we will examine cinematography, sound, script, and music. Some questions that might arise may include - How does the film portray emotion? How does the film reflect cultural nuance? The class will be student-centered, and thus highly interactive. It is also a goal of this course to stimulate analytical thinking, and to promote the close readings of texts directed by argumentation and well-structured insights. "

82-247 The Hispanic World: History, Culture and Globalization
Intermittent: 9 units
This course examines the histories, cultures, and current socio-political and economic concerns of the Hispanic world including Spain, Latin America, and transnational Hispanic communities around the world. The course provides a historical foundation in order to understand the impact of various historical events on the Hispanic world today such as the Arab conquest, the colonization of Latin America, independence movements, revolutions, dictatorships, democratization, and globalization. We will examine current concerns of the Hispanic world such as democratization processes, trade, economic crisis, and migration that have shaped its languages, cultures, politics, and economies. These topics will be explored through readings, films, music, classroom visits, field trips, and exploration of the Spanish language. The course is intended to lead to a greater knowledge and an increased appreciation of the cultural and historical roots, past and current life-styles, and languages of the peoples of the Hispanic world. (The language of instruction is English.)

82-248 Topics in Social Change
Fall and Spring: 9 units
FALL 2019: Arts, Media and Social Change: The Arts in Revolution ¿ Cuba and Nicaragua. This course will examine the Cuban and Nicaraguan Revolutions and their relationships to artistic production in a larger socio-political context, considering the complex dynamic of both fomenting creative expression, while also (on occasion) stifling its content. 2019 marks 60 years since the Cuban Revolution, touted as the victory of a tiny island over US imperialism, and 40 years since the triumph of the Sandinistas in Nicaragua - both cases garnering broad international attention due to their importance in Cold War political agendas and the subsequent interplay of US-Soviet relationships in the US' "backyard". While quite different, the Cuban and Nicaraguan Revolutions shared an inherent understanding of the value of capturing the public imaginary and support through the use of the arts to promote their messages and as such, invested significant resources in the promotion of creative production. This course will interrogate the relationships between political and artistic movements, examining for example the formation of ICAIC (Instituto Cubano del Arte e Industria Cinematográficos) in Cuba and the mural movement in Nicaragua. Once these political movements had triumphed, how did artists negotiate the institutionalization of revolution? How did the role of prominent cultural workers like Tomas Gutierrez Alea (Cuba) and Ernesto Cardenal (Nicaragua) evolve as these revolutions aged? We will also question the dynamic between artists whose works express discontent and the State - what was/is the space for dissent? How do artists of newer generations create space for different types of expression that diverge from what early revolutionary moments considered to be transformative? Decades later with deeply entrenched governments, what now is the relationship between the arts and socio-political change?

82-249 Hispanic Language & Cultures for the Professions
Fall and Spring: 9 units
FALL 2019: This course focuses on building proficiency in Spanish-language communicative skills and cultural awareness for business contexts in the very diverse Spanish-speaking world, one with over 437 million speakers worldwide. Students will be introduced to a variety of contexts in the Spanish-speaking world of global business and finance through multimodal materials, e.g., newspapers, film, advertisements, and other relevant texts. By examining different scenarios such as job interviews, international trade, and workplace environments, students will build knowledge of vocabulary and develop a real-world understanding of appropriate linguistic, cultural, and discipline-specific practices.
Prerequisite: 82-241

82-253 Korean Culture Through Film
Intermittent: 9 units
South Korean cinema became one of the most vibrant local film industries at the end of the last century, attracting great attention from both the public and scholars, not only at home but abroad as well. Intriguingly, its renaissance involves a strong tendency to revisit and reassess a variety of historical traumas from the last century, which makes it an important venue for discussing the evolution of modern Korean society and culture. This course thus explores works of acclaimed filmmakers such as Im Kown-taek, Park Kwang-su, Jang Sun-woo, Hong Sang-soo, Lee Chang-dong, Park Chan-wook, Bong Joon-ho, Kim Ji-woon, etc. to enrich our understanding of social and cultural formations in South Korea over the last century. In examining the voices from the Korean peninsula whose history had remained obscured until recently, this course also aspires to contribute fresh perspectives to broader geopolitical settings such as East Asian and Pacific Rim discourses.
Prerequisite: None

82-254 World of Korea, Then and Now
Intermittent: 9 units
Over the past two decades or so, South Korea has grown to become a major player, not only in East Asia, but also in world politics, economy, and culture. While Korean society thus certainly deserves enough attention as a venue for discussing the changes occurring across the world, its history and culture still remains less known than it should be to the outside world including the U.S. This course thus aims to offer an opportunity to explore the evolution of Korean society and culture over the course of its modern history. By enriching the knowledge of Korean history, it also hopes to help the student gain fresh perspectives on broader contexts such as East Asia and the Pacific Rim. This course covers a broad range of time periods: the colonial era to the present. Yet designed to inspire critical approach rather than just offer sketchy overviews, it is structured around key sociocultural issues such as colonial legacies, the cold war paranoia, dictatorship, democratization, national culture, gender politics, diaspora, globalization, hallyu (k-pop/k-drama), etc. To better serve its objectives, this course also utilizes diverse forms of texts: historical studies, critical essays, literary works, films, TV dramas, and music videos. Prerequisite: None

82-261 Intermediate Italian I
Fall: 9 units
This course begins a two-semester course sequence (82-261, 82-262) for intermediate-level students. At the intermediate level, students will continue to improve listening, speaking, reading and writing skills with the goal of becoming more proficient in daily and extended communication needs. In addition to an ongoing review of basic grammar, a greater variety of grammar, expressions and complicated sentence structures will be taught so that students can carry on more sophisticated conversations on various topics. In-class activities and homework using authentic texts related to the broad spectrum of Italian culture will be used to integrate language learning with content and culture. Regular homework, quizzes, tests, presentations, essays, and class participation are mandatory. A student with prior experience in Italian must take the placement exam.
Prerequisites: 82-162 or 82-163

82-262 Intermediate Italian II
Spring: 9 units
At the intermediate level, students will continue to improve listening, speaking, reading and writing skills with the goal of becoming more proficient in daily and extended communication needs. In addition to an ongoing review of basic grammar, a greater variety of grammar, expressions and complicated sentence structures will be taught so that students can carry on more sophisticated conversations on various topics. In-class activities and homework using authentic texts related to the broad spectrum of Italian culture will be used to integrate language learning with content and culture. Regular homework, quizzes, tests, presentations, essays, and class participation are mandatory. A student with prior experience in Italian must take the placement exam. Instructions for the placement exam are available in Baker Hall 160. Prerequisite: 82-261 or placement
Prerequisite: 82-261

82-263 Intensive Italian Language & Culture: Intermediate Level
Intermittent: 9 units
No course description provided.

82-267 Topics in Italian Language & Culture
Intermittent: 9 units
FALL 2019 Beyond the Mafia and Michelangelo: Italy Unmasked Eclipsed by the consumer obsessions of tourists and the most well-known figures of Italian history, the uniqueness of Italy, offering distinct cultures in the north, central, and south, is rarely understood by outsiders. In this course, students will discover an Italy rich with cultural variants, radically diverse histories, customs, cults, and superstitions, in addition to physical expressions of culture in cooking and clothing, art and architecture. Students will identify and critically analyze diversity within the peninsula and its islands, and expand their awareness and understanding of the role of culture in behavior. Film, documentaries, and readings from epistolary and literary sources will help reveal a more profound Italy, for example, the science of Dulbecco (the Human Genome), the architecture of Trulli conical houses, the religious importance of Pitigliano ('Little Jerusalem'), and the immigration problems of San Marino. Coursework will include class participation, readings, film viewings, and writing. Final projects will be based on interviews and oral histories with the Italo-American community in Bloomfield (Pittsburgh), leading to critical comparisons of that population with Italians in Italy. This course is offered in English.

82-271 Intermediate Japanese I
Fall and Spring: 12 units
This course is the first part of a two-semester course sequence (82-271, 82-272). At the intermediate level, students will continue to improve the basic skills of listening, speaking, reading and writing skills with the goal of becoming more proficient in daily communication needs, and takes an integrated approach to the study of Japanese language and culture, consisting of grammar review, reading, and intensive practice in written and spoken Japanese. Course materials include authentic audiovisual and written texts in addition to the assigned textbooks. Also integrated are cultural explorations through direct interactions with native speakers. Regular homework, quizzes, tests, presentations, essays, and class participation are mandatory (four in-class hours per week). A student with prior experience in Japanese must take the placement exam.
Prerequisite: 82-172

82-272 Intermediate Japanese II
Spring: 12 units
This course is a sequel to Intermediate Japanese I (82-27182-171). At the intermediate level, students will continue to improve the basic skills of listening, speaking, reading and writing skills with the goal of becoming more proficient in daily communication needs, and takes an integrated approach to the study of Japanese language and culture, consisting of grammar review, reading, and intensive practice in written and spoken Japanese. Course materials include authentic audiovisual and written texts in addition to the assigned textbooks. Also integrated are cultural explorations through direct interactions with native speakers. Regular homework, quizzes, tests, presentations, essays, and class participation are mandatory (four in-class hours per week). A student with prior experience in Japanese must take the placement exam. Prerequisite: 82-271 or placement
Prerequisite: 82-271

82-273 Introduction to Japanese Language and Culture
Fall and Spring: 9 units
This course is an introduction to modern Japanese. Given the close link between the Japanese language and culture, the examination of the distinctive characteristics of the Japanese language and its sociocultural context provides important insights into contemporary Japan. This course is taught in English and is intended both for individuals who want to gain a better understanding of modern Japanese society, as well as for students of the Japanese language.

82-276 Intensive Japanese Language & Culture: Intermediate Level
Intermittent
No course description provided.

82-278 Japanese Film and Literature: The Art of Storytelling
Intermittent: 9 units
This course explores how the art of storytelling is in tandem with the vicissitudes of the human condition as illustrated in Japan's variety of fictions, non-fictions, and films in the twentieth and twenty-first centuries. Analyses of each storytelling not only reveal the cultural dynamics behind Japanese modernity, but also invite students to find new insights into Japanese culture and their ways of perceiving our globalized world. What kind of cultural exchanges took place between modern Japan and the West? How are Japan's traditional values transformed in the face of modern technicalization and industrialization, compared to the modernization of other countries? And, in turn, what kind of impact has modern Japanese culture had on today's world? Tackling these questions among others, the course also extends to such issues as the legacy of traditional Japanese culture, the modern Emperor system, World War II experiences, emerging voices of minorities, and popular culture (e.g., anime and subculture). This course is taught in English.

82-279 Anime - Visual Interplay between Japan and the World
All Semesters: 9 units
In contemporary Japanese culture, anime plays a vital role, unfolding a wide range of stories with its distinct modes of visual representation and complementing to other forms of culture (e.g., literature, film, and art). This course explores Japanese anime¿s appeal to the international viewers today, centering around cultural analyses of anime such as the Studio Ghibli production and Cyberpunk. Equally important are to locate the origin of Japanese animation, which is also investigated through the prewar and postwar works of animation in conjunction with related forms such as manga, or comic strips (e.g., Osamu Tezuka¿s works that was initially inspired by Disney) and to discuss the potential of anime as an art form.

82-280 Learning About Language Learning
Fall: 9 units
This seminar focuses on the role of diverse affective, cognitive and social factors in second language learning. All participating students are required to be studying an additional language while taking this seminar. Each class is devoted to discussion of assigned readings as well as to completion of various measures, inventories or questionnaires that assess diverse predictors of second language learning. These data are collected throughout the term, and then analyzed and related to predictions based upon previous research that have been discussed in class. Each student also identifies a "good" or a "poor" second language learner to interview and then report back to the class on the learners' characteristics. Prerequisite: None
Corequisite: Study of a foreign language

82-281 Tutoring for Community Outreach
Intermittent
6-9 units This course enables students to participate in a community outreach program in the Pittsburgh Public Schools with either elementary school, middle school, or high school students, and, depending on the site, foster their studies of Chinese, French, German, Japanese, Spanish or ESL. The elementary school experience will involve regular visits, mentoring, and tutoring at school sites in the East End of Pittsburgh. The middle school experience provides opportunity for tutoring in Japanese, French, or Spanish at Barack Obama Academy of International Studies. The high school or middle school experience invites advanced students, majors, or minors in Chinese, French, German, Japanese, or Spanish to work with language students and teachers at local schools. During the early weeks of the semester, students will meet to arrange their community outreach activities and prepare for their experience. Depending on the number of units to be earned, students will spend a certain number of hours per week engaged in some of the following activities: attending and participating in the individual and group meetings, working in the schools four to six hours per week, reading and preparing for their volunteer activities, keeping a journal of their experiences and responses to course readings, writing a paper or completing a project at the end of the term that reflects experiences. The weekly on-campus class meeting will run 50 minutes. The remaining 30 minutes will be devoted to individual consultations related to school-site activities. The final course grade will be based on the student's participation at the school site and fulfillment of the plan set at the beginning of the semester, participation in weekly on-campus discussions, weekly journal submissions, and final synthesis project.

82-282 Community Service Learning
Intermittent
In this course students of Modern Languages will work in the Pittsburgh community to promote learning of cultures and languages. This work may be done to complement course work in modern languages on campus and involve an experience in one of a variety of community settings, such as a heritage language school, hospital translation center, or neighborhood center. Grade will be based on the student's participation at the outreach site and fulfillment of the plan set at the beginning of the semester.
Prerequisite: Permission of instructor

82-283 Language Diversity & Cultural Identity
Fall and Spring: 9 units
Culture, language, and identity are intimately tied together. Individuals, families, communities, and nations identify themselves in relation to the language or languages they speak. Local, national, and international governmental organizations make choices about the language or languages they recognize and use for political and economic affairs. The United Nations even recognizes language as integral to maintaining the cultural heritage of communities and peoples around the world, and the freedom to choose ones language of expression as a universal human right. In this course, we will explore a variety of questions, advantages, and challenges related to language diversity and cultural identity across the globe. Our main focus will be on contexts of multilingualism that is, contexts in which two or more languages may be used. Adopting a comparative case study approach, we will explore the following themes: (i) The historical underpinnings of language diversity and its consequences for cultural identity today (e.g., migration, colonization, conquest); (ii) How language diversity and cultural identity shapes, and is shaped by, local, regional, national, and international politics; (iii) The relationship between language diversity and language use and visibility in public spaces (i.e., the linguistic landscape); (iv) Relations between linguistic communities (e.g., majority and minority language users) and the sense of belonging to a culture. The course is taught in English. Students who wish to take the course as a Modern Languages major or minor elective will need to complete their final project on a topic relevant to the language they study.

82-284 Multicultural Pittsburgh: A Creative Media Exploration of Cmmnty, Lang & Identit
Fall and Spring: 9 units
Pittsburgh is known for its multicultural landscape and communities. Through this course, students will explore the cultures, identities, languages, and groups that have historically shaped, and are still shaping Pittsburgh. Students will develop digital documentation of the city¿s communities, for example using video, photography, audio podcast augmented AR and immersive VR. Through active learning, students will employ approaches such as testimony, psycho-geography, use map-making and topographical tools, and explore data visualization and 3D imaging. Students will craft their work in a new multimedia space for engagement with global languages and cultures housed in the newly opened Tepper Quad, and at the end of the semester, their work will be on exhibit for the campus community and the wider public. This course will develop your research and fieldwork skills, media creation skills and multicultural literacy. The only pre-requisites are an adventurous spirit and an open approach to creativity. Limited to 12 students.

82-285 Podcasting: Language and Culture Through Storytelling
Fall: 9 units
Do you love stories? Stories told on the radio have always had significant power. For example, the 1938 War of the Worlds broadcast by Orson Welles was so effective that it panicked the entire United States. Today, podcasts such as Serial, This American Life, and The Moth have the same power to tell stories and provide audiences with rich, intimate and immersive audio experiences while often supporting diversity and giving voice to minorities and those under-represented in mainstream media. Owing its rising popularity to the ease and accessibility of production and distribution, there has never been a better time to create and tell stories in audio. In this course students will take on the role of podcast producers, learning while creating a series of podcasts that explore linguistic and cultural landscapes with the goals of educating and entertaining. Possible audio resources include field interviews with native speakers in their own language, allowing student producers to document informants' personal histories and aspects of their life related to culture, multilingualism, or political, social or environmental issues. Students will blend studio recordings with interviews and/or suitable "found" recordings, music, and sound. Coursework will include skill development on audio recording and podcasting, production management, creative thinking, materials sourcing, and giving and receiving constructive feedback from classmates and varied audiences on team and individual projects. The course will be offered in English.

82-286 Understanding Cultural Complexities
Fall and Spring: 9 units
Section A: Haiti: Challenge & Hope: CANCELLED Section B: Service Learning or Poverty Tourism? Exploring Pedagogy & Privilege in Int'l Contexts: We will examine the phenomenon of short-term trips to the developing world, as thousands of people each year travel from the United States to Asia, Africa and Latin America with the goal of "helping" people. Recently, this has been one of the fastest-growing populations of students who go abroad. From church groups, to medical organizations, to student groups, these initiatives propose to build houses, provide medical care, plant trees, and teach children. There is no shortage of projects. What do these short-term engagements do, and who is served? We will explore the ethical questions that arise around the themes of "service" and "engagement", with particular focus on initiatives in Latin America. We will consider to what extent these projects respond appropriately to the cultural contexts. What is the responsibility of participants to ensure the best experience for the communities they visit? Can these initiatives have the impact they propose? Students who have participated or will participate in short-term service trips are encouraged to enroll. Opportunity will be given to study the organizations and locations related to their trips.

82-288 Introduction to Haitian Studies
Intermittent: 9 units
TBA

82-291 Intermediate Russian I
Fall: 12 units
This course is designed for students who have taken two semesters of Russian at Carnegie Mellon or the equivalent. It is offered in the fall only. This course furthers communicative proficiency through intensive practice in written and spoken Russian. Complex grammatical structures and stylistic variations are mastered and extensive vocabulary is acquired. Through reading materials, fictional and non-fictional, acquaintance is made with the basic components of Russian cultural literacy as well as the distinctive cultural aspects of daily Russian life. Attention is directed toward the dynamic interaction of language and culture in order to foster cross-cultural awareness. Attendance is required at three-hourly class meetings per week, as is weekly consultation and conversation practice with a peer language assistant. **"If you would like to take this course, but the current time slot does not work with your schedule please contact the instructor as soon as possible and we may be able to accommodate you**
Prerequisite: 82-192

82-292 Intermediate Russian II
Spring: 12 units
In this second semester of the yearlong intermediate Russian course students will review the basics of Russian grammar, develop listening comprehension, and expand their vocabularies. They will learn to relate simple narratives on familiar topics, express their opinions, ask questions, and speak about hypothetical situations. Students will be able to grasp the main ideas and certain nuances of texts presented in print and visual media as well as conduct straightforward conversations with native speakers. Students will also begin to build their skills in interpreting Russian poetry, literary prose, and film. A student with prior experience in Russian must take the placement exam.
Prerequisite: 82-291

82-293 Russian Cinema: From the Bolshevik Revolution to Putin's Russia
Intermittent: 9 units
"Last night I was in the kingdom of shadows," said the writer Maxim Gorky in 1896 after seeing a film for the first time. "How terrifying to be there!" Early film inspired fear and fascination in its Russian audiences, and before long became a medium of bold aesthetic and philosophical experimentation. This seminar-style course surveys the development of Russian and Soviet film, paying equal attention to the formal evolution of the medium and the circumstances¿historical, cultural, institutional¿that shaped it. We will examine Sergei Eisenstein's and Dziga Vertov's experiments with montage in light of the events of the Bolshevik Revolution and the directors' engagement with Marxism; Georgi Alexandrov's and the Vasiliev brothers' Socialist Realist production against the backdrop of Stalinist censorship; Andrei Tarkovsky's and Kira Muratova's Thaw-era films within the broader context of New Wave Cinema; and the works of contemporary directors, including Aleksei Balabanov, Alexander Sokurov, and Andrey Zvyagintsev, in connection with the shifting social and political landscape of post-Soviet Russia. Besides introducing students to the Russian and Soviet cinematic tradition, this course will hone their skills in close visual analysis. No prior knowledge of Russian language or culture is required. The course is conducted in English, but students will have the option to do work in Russian for three extra course units.

82-294 Topics in Russian Language and Culture
Intermittent: 9 units
SPRING 2019: Topics in Russian Language and Culture: 20th Century Russian Masterpieces. The October Revolution of 1917 had profound effects not only for Russian society, but also for literature and culture. Even before the Revolution, Vladimir Lenin stressed the importance of literature on the hearts and minds of people. After the Revolution, the new Soviet state demanded writers to become, in Stalin's words, engineers of human souls, and proclaimed socialist realism as the only permissible method of creative work in literature. This course focuses on masterpieces of Russian prose and poetry of the 20th century. Readings will include the proletarian writings of Maxim Gorky, the symbolism of Alexander Blok, the futurism and modernism of Vladimir Mayakovsky, as well as works by many other authors. We will discuss such important issues for Russian cultural history as the role of the intelligentsia in the Russian Revolution; the content and method of Russian decadence; symbolism and modernism; and the experience of imprisonment, liberation, and exile that became so important for many writers and poets.

82-296 A Century of Russian Film
Intermittent: 9 units
FALL 2014 This course presents a selection of the dominant works, directors and genres that have defined Russian film-making from its birth to the present. About twenty sub-titled films are viewed and discussed within the context of artistic trends and political events shaping the Russian film industry. Films are screened in class on Mondays. While the primary aim is to acquaint you with Russian film in its cultural context, a secondary purpose is to focus your attention on the aesthetics of film form. This will increase your pleasure in viewing any film, Russian or otherwise. Discussion will be organized around topics such as these: intellectual climate and key issues in national life at the time of a film?s making; a film?s major and minor themes; historical/national/political/social/artistic issues a film raises; how a film affects its viewers? thinking about these themes and issues. The instructor's own experience as a film director will provide further insight into various aspects of film-making and getting a deeper pleasure from viewing film. No knowledge of Russian is required.

82-299 Alternative Break Project (General)
Intermittent
This course provides ML language students and non-ML students enrolled in an Alternative Break student trip project the opportunity to earn credit by engaging in "connected" modes of knowing, by identifying and analyzing a problem, and developing plans for short-term and sustainable solutions, reflecting, and creating and disseminating an informational and interpretive website and print materials about their experience. Students will also bring to bear or gain experience in non-academic skills/talents/interests in areas like photography, image editing, video production, writing, design, website development, sound recording, and art, etc., by doing community service under the auspices of Carnegie Mellon University's Alternative Break program. Students will earn three (3) units for full participation and fulfillment of course requirements. With the approval of the faculty facilitator, an additional three (3) units may be earned by completing an additional assignment. Prerequisite: Permission of instructor

82-300 Language & Society in the Arab World
Fall and Spring: 9 units
Course content varies. Last offered topic: Negotiating Arab Identities & Gender Roles in Film & Literature. This course focuses on the processes of self-definition by Arab men and women in conflict zones in the Middle East and North Africa with relation to national and religious identities, social stratification, sexuality/homosexuality, and gender roles. Students will learn about the social, economic, and political contexts of the films and literary works representing the Maghreb, Egypt, Palestine, Lebanon, Syria, Iraq, the Gulf countries, and Yemen. This course fosters a better understanding of Arab societies and the hybrid identities that negotiate their presence and space within. Students will have the opportunity to engage in a video-conference dialogue with students in the American University in Cairo, Egypt, attend an Arab film during CMU's International Film Festival, and interview native speakers of different Arab countries to further their learning of Arab culture.

82-303 Introduction to French Culture
Fall and Spring: 9 units
Through deep cultural analysis of France and the French, students attempt to discover the French "mentality" or what it means to be French. By studying French history, institutions, regions, literature, and current events, students understand how a cultural identity is developed throughout a country's history. Comparisons between current events and France's cultural and social development from the Renaissance forward explain in part the French mentality and how and why France and the French react to the world as they do. The coursework will develop students skills in writing, reading, speaking, and listening, and improve their control of grammar through class discussions, presentations, and essays. Prerequisite: 82-202 or placement
Prerequisites: 82-204 or 82-202

82-304 The Francophone World
Fall and Spring: 9 units
This course introduces the students of French to several of the francophone regional cultures outside of France, including North and sub-Saharan Africa, Belgium, Switzerland, Quebec, Louisiana, and the French Antilles. The culture commonly associated with the French language is the primarily Christian and Cartesian European tradition. Through this course, students will learn about the socio-political and cultural realities of the Francophone sphere. The course will also explore the multiple synthetic cultural realities which have arisen through the colonial and post-colonial processes of contact between European and non-European cultures, and which are now expressed through the medium of the French language. Students will expand their interpersonal and presentational communication skills in both written and spoken French, improve reading and listening skills through various media so as to analyze content objectively, use appropriate vocabulary and grammar to express critical judgments, synthesize ideas from different source materials, and continue perfecting cultural analysis skills. Assignments will include using accepted academic conventions for research documentation and exposition. Social debates and current events will add a valuable perspective to our study.
Prerequisite: 82-303

82-305 French in its Social Contexts
Fall and Spring: 9 units
S18: This course is designed to introduce students to how the French is used by its speakers to create meaning in a wide variety of contexts, which in terms are influenced by various variables (e.g., the political and historical circumstances within which French has developed and continues to change, social and geographic variables). To explore these issues, we will create interactive multimedia experiences aimed at being deployed on an interactive video wall and/or in augmented reality settings. This course includes a trip to France over Spring Break. If you have experience in French as well as design, film and photography, or computer-science, this is a course for you! Prerequisites: 82-303 and 82-304 or permission of the instructor,
Prerequisites: 82-303 and 82-304

82-311 Advanced Arabic I
Fall: 9 units
This course promotes multiple literacies in an integrated approach to Arabic language and culture studies and builds students' ability to function at the Intermediate High/Advanced Low level in a variety of topics. It also embraces the diglossic nature of Arabic by explicitly integrating the teaching of Arabic regional spoken varieties alongside Modern Standard Arabic. Moreover, the course incorporates Computer and other Technology Assisted Language Learning pedagogies to support student learning inside and outside the classroom. The course is aligned with ACTFL's updated Arabic guidelines that perceive the Arabic language as a continuum in which both the regional spoken varieties and Modern Standard Arabic constitute a whole in terms of usage.
Prerequisite: 82-212

82-312 Advanced Arabic II
Spring: 9 units
The course is the continuation of Advanced Arabic I. It continues promoting multiple literacies in an integrated approach to Arabic language and culture studies and builds students' ability to function at the advanced level in a variety of topics. It also embraces the diglossic nature of Arabic by explicitly integrating the teaching of Arabic regional spoken varieties alongside Modern Standard Arabic. Moreover, the course incorporates technology-assisted language learning pedagogies to enhance student learning inside and outside the classroom. The course also implements ACTFL's Arabic guidelines that recognize Arabic as a continuum in which both the regional spoken varieties and Modern Standard Arabic constitute a whole in terms of language use.
Prerequisite: 82-311

82-313 Topics in Modern Arabic Language, Literature and Culture
Fall: 9 units
This course explores definitions of culture and analyzes the dynamic role of language in culture, and culture in language, with an aim to foster cross-cultural awareness and self-realization while developing proficiency in Arabic. Using an integrated approach to the study of the Arabic language, literature, and culture through close readings of current media sources (press, news, magazines, as appropriate), and literary and cultural readings. Additionally, this course is designed to strengthen listening, speaking, reading and writing, within the context of an evolving Arabic culture.

82-314 Literature of the Arabic-speaking World
Intermittent: 9 units
This repeatable introductory course explores the Arab world through a thematic or conceptual focus. In spring 2018, the theme will be 'Diversity in The Arab Culture'. Coursework will include reading short stories and novels to understand the cultural context that gave rise to specific literary works. Students will also continue to develop their abilities to express their ideas both in speaking and in writing, as well as their listening skills in Modern Standard Arabic. There is no prerequisite for this course but it is expected that your language proficiency in the Arabic language is good. **This is a content course in the Arabic language and not an Arabic language course.**

82-320 Contemporary Society in Germany, Austria and Switzerland
Fall: 9 units
This course offers an introduction to contemporary German culture since 1989. Switzerland and Austria will be frequently included in class discussions but the main focus will be on Germany. In the wake of reunification, constructions of German cultural identity have undergone radical changes. Through encounters with articles, literary texts, popular music, and film students will explore these transformations and examine German culture and (both individual and collective) "identities" after reunification. The class sessions will be organized around several thematic segments, including East/West relations during and after reunification, German media, multiculturalism and minorities, and, finally, a segment on how to navigate the business world in German-speaking countries. The course will be conducted entirely in German and is designed to deepen students' understanding and awareness of issues in contemporary German culture.
Prerequisite: 82-222

82-323 Germany, Austria and Switzerland in the 20th Century
Spring: 9 units
This course advances proficiency in communicative and grammatical skills in the German language and knowledge of German-speaking cultures through the study of important events, trends, and people of the twentieth century in Germany, Austria, and Switzerland. Examples will be drawn from literature, newspapers, television, film and other sources. Students will be expected to complete assignments that demonstrate the ability to express critical judgments in both written and oral form, documented through readings and personal research. The course includes a review of the most troublesome points of German grammar.
Prerequisite: 82-222

82-327 The Emergence of the German Speaking World
Intermittent: 9 units
The Italian literary theorist Franco Moretti has written that "Germany is a sort of Magic Stage, where the symbolic antagonisms of European culture achieve a metaphysical intractability, and clash irreconcilably. It is the center and catalyst of the integrated historical system we call Europe." This course is a general introduction to German culture, German history, and German society, with a focus on Germany's role as center and catalyst of the European system. The course is conducted entirely in German. Its goal is to provide students with a basic level of cultural literacy about the German-speaking world. In the course, we will study major trends from the earliest days of German civilization through the middle ages but with primary emphasis on the 18th, 19th and 20th centuries and with a special focus on problems of national, political and cultural identity. Students coming out of the course should have a broad understanding of the various tensions and problems that have characterized German culture and society for the last two centuries. In addition to broadening students' cultural knowledge about the German-speaking world, this course will continue to emphasize the improvement of students' ability to speak, read, write, and listen to German.
Prerequisites: 82-323 or 82-320 or 82-324

82-331 Advanced Chinese I
Fall and Spring: 9 units
This course is designed for students who have reached the intermediate level of proficiency in the use of Chinese language to develop their language competency in all four skills to a more advanced level. Students will expand explicit knowledge of socio-cultural influences on Chinese language use, and be able to apply the knowledge to conduct culturally appropriate spoken and written communication across various social domains and genres. Topics to be covered in this class will be closely related to some current social issues in China, such as population, youth, love & marriage, and popular culture. Students will also develop a repertoire of strategies and resources to assist their learning so that they will be gradually become autonomous learners who are able to conduct independent learning of the Chinese language, culture, history, and society. Classroom discussions and essay writing will be the major forms of work throughout the semester. Research projects on Chinese culture and society are also a requirement so that students will be able to gain a deeper understanding of the cultural background of the language. With Pinyin for support, students will learn both the traditional and simplified forms of Chinese characters.
Prerequisites: 82-232 or 82-235

82-332 Advanced Chinese II
Fall and Spring: 9 units
A continuation of Advanced Chinese I, this course is designed to improve students' proficiency to function with Chinese in situations beyond their everyday life. Students will continue to learn more complex language phenomena in order to use exposition, explanation, description, and argumentation in Chinese. More sophisticated language phenomena will be introduced to students together with their social and cultural background through texts and multimedia related to various social issues in China today, for example, traffic, education, employment, healthy living, and other human relations as well as economic situations. Classroom discussion and research project presentations will be the major forms of oral practice, and writing practice will mainly focus on essays and group research project papers.
Prerequisite: 82-331

82-333 Introduction to Chinese Language and Culture
Fall and Spring
This course will introduce students to important developments in China's culture and language since the end of the nineteenth century focusing on the interactions between Chinese and Western cultural traditions and the historical, social, and political contexts in which these interactions evolved. The following questions will motivate discussion: What is Chinese culture in the modern world? What is "modern" and what "traditional" Chinese culture? How does high culture interact with folk culture and popular culture? How have education and language policies shaped Chinese cultural identities over the last century? What does it mean to be Chinese in a diaspora context? Secondary readings, primary documents, and video material chosen for analysis will provide students with important insights into the diverse factors that have been shaping contemporary Chinese culture. This course is conducted in English with no requirement of prior knowledge of Chinese language for students who take it for 9 units. Students who take this course towards fulfillment of requirements for the Chinese major or minor must register for 12 units requiring completion of three (3) units of study in Chinese Studies. Prerequisites: To register for 12 units, there is a prerequisite of either 82-232 or 82-235 or placement. There is no prerequisite for students taking the course for 9 units.

82-334 Structure of Chinese
Fall and Spring: 9 units
This is an upper-level Chinese course for students who have completed the requirements for intermediate Chinese with the goal of enabling students to build up a more comprehensive and systematic understanding of the structure of Chinese so as to lay a solid foundation for the further development of their advanced level language proficiency. This course will cover major complicated structural phenomena in Modern Chinese through the study of specially selected sample texts. Special emphasis will be given to high frequent errors and weaknesses on particularly problematic elements and sentence structures that are common among non-native Chinese speakers. After this course, students can expect to have the ability to use Chinese more accurately and naturally in both speaking and writing on sophisticated topics in life. Prerequisite: 82-232 or 82-235 or placement
Prerequisites: 82-235 or 82-232

82-335 Chinese Culture Through Legends and Folktales
Intermittent: 9 units
This is an upper-level Chinese Reading course for students who have reached intermediate level proficiency in Chinese. It is designed to train students to read extensively in Chinese with fluency and proficiency within a context of rich cultural content. Materials used in this class are selected from traditional fables, mini-stories, and articles from newspapers and magazines on the lifestyle and social changes in modern China. While discussion will be one of the major class activities, students are strongly encouraged to profit from opportunities to build their vocabulary and improve their sense of the Chinese language through reading and writing assignments throughout the semester. Prerequisite: 82-232 or 82-235 or placement
Prerequisite: 82-232

82-337 Mandarin Chinese for Oral Communication I
Fall: 9 units
This course is designed for students who have reached intermediate level in reading and writing Chinese, but have little knowledge of Mandarin Chinese pronunciation, as well as those who aim to further improve their speaking in Chinese. Students will be introduced to Pinyin, the phonetic system of Mandarin Chinese, and work to refine and perfect their speaking skills through special attention to different styles, colloquialisms, and dialectal variations of contemporary spoken Mandarin. Course materials will include authentic Chinese TV programs, documentaries, films, recorded materials, and contemporary literary and non-literary texts. Students will be required to participate in intensive speaking activities, such as interviewing native speakers of Chinese, oral presentations, discussions, debates, and special projects. At the end of the course, students are expected to carry on oral communication with native Mandarin speakers in a clearly participatory fashion on topics related to various social issues in Modern China.
Prerequisite: 82-232

82-338 Mandarin Chinese for Oral Communication II
Spring: 9 units
This is an upper-level course focused on the improvement of students' oral communicative competence and self-expression in Chinese. This course is designed for students who have reached intermediate level in reading and writing Chinese, and who would like to promote their oral communicative competence and knowledge of Chinese culture. It is a seminar-type class that relies on active participation from the students. Students will practice various conversational tasks, such as giving presentations, participating in discussions and debates, interviewing, describing, and interpreting. Topics will include current events and cultural trends in the U.S. and China, analysis of Chinese culture and comparisons with other cultures, contemporary Chinese television shows and movies, and other modern issues.
Prerequisites: 82-232 or 82-235

82-339 Business Language & Culture in China I
Fall: 9 units
Designed for students who have had at least two years of Chinese language training, this course enables students to enhance their language proficiency for professional environments and develop an in-depth understanding of the current business culture in China. Substantial authentic materials from newspapers, magazines, TV shows and online sources will be introduced in class to help students interact smoothly with the Chinese business world. Students will also be encouraged to foster creative and independent thinking, which is crucial for survival in today's business world, through a variety of classroom activities such as group discussion/debate, professional interviews, business projects and presentations, and oral/written business reports. Professional language skills (both speaking and writing) as well as social and business etiquette will be introduced and reinforced throughout the course. Sample topics include: China's reform and "opening up", China's market, "Made in China", marketing in China, Chinese business cards and connections, Chinese etiquette at business banquets, consumer psychology in China.
Prerequisites: 82-232 or 82-235

82-340 Business Language & Culture in China II
Spring: 9 units
The goal of this course is to help students improve their language proficiency in professional environments and develop an in-depth understanding of the current business culture in China. Authentic materials from newspapers, magazines, TV shows, and online sources will be introduced in class to help students interact smoothly with the Chinese business world. Students will be encouraged to foster creative and independent thinking skills, which are crucial for survival in today's business world, through a variety of classroom activities such as group discussion/debate, professional interviews, business projects and presentations, and oral/written business reports. Professional language skills (both speaking and writing) as well as social and business etiquette will be introduced and reinforced throughout the course. Sample topics include: appreciation of the Chinese currency RMB, the Chinese perspective of privacy, euphemism in Chinese culture, China's gift-giving culture, how to properly promote yourself in China, the Chinese perspective of wealth management, the Chinese management style. Prerequisite: 82-232 or 82-235 or placement
Prerequisites: 82-331 or 82-339

82-342 Spain: Language and Culture
Fall and Spring: 9 units
This course is part of the post-intermediate, 300-level program that forms the introduction to the major or minor in Hispanic Studies. Students may begin with any one of the three courses at this level or they may be taken concurrently. Spain: Language and Culture focuses on the cultures of Spain, the autonomous regions and the creation of a national identity as a reaction to the multiple ethnicities that have inhabited the peninsula since ancient times. The course advances proficiency in grammatical accuracy, the ability to communicate one's ideas in Spanish, and cultural proficiency. The focus of in-class activities is on written and non-written sources such as history, literature, film, art, and elements of popular culture; the building of reading and writing skills will be complemented by continued oral practice in the form of small and large group discussions and class presentations. Treatment of reading selections is designed to increase students general familiarity with a variety of genres, devices, and discourse types and to build a foundation for the department's more advanced courses in literature, history and culture. The course will be taught in Spanish.
Prerequisites: 82-244 or 82-242

82-343 Latin America Language and Culture
Fall and Spring: 9 units
This course is part of the post-intermediate, 300-level program that forms the introduction to the major or minor in Hispanic Studies. Students may begin with any one of the three courses at this level or they may be taken concurrently. This course will explore Latin American culture and language, focusing on issues of cultural identity. Tracing the historical thread of the construction of Latin American cultural identity we will distinguish 6 periods organized around crisis when the topic of Who we are? becomes a central debate (Larrain 1996). These periods include: the conquest and colonization, the independence and constitution of nation-states, the inter war period and the depression, the 1970s and the military dictatorships and the present globalization stage. These phases in the development of a Latin American cultural identity represent the existence of certain dominant discourses and controversies that are important in understanding Latin American culture (Larrain 1996). The idea is to explore how Latin America imagines itself and constructs a narrative about its origins and development. There are three main questions we will be exploring throughout the course: Where does the discussion about Latin America emerge from?; How does Latin America think of itself?; What does Latin America want to be?. These questions will be explored historically through readings of philosophical and political texts that deal with Latin American identity as well as with literary texts, films and music that represent practices that enact this/ese identity/ies. The course will be taught in Spanish.
Prerequisites: 82-242 or 82-244

82-344 U.S. Latinos: Language and Culture
Fall and Spring: 9 units
This course is part of the post-intermediate, 300-level program that forms the introduction to the major or minor in Hispanic Studies. Students may begin with any one of the three courses at this level or they may be taken concurrently. This course provides an introduction to and analysis of the cultures and histories of U.S. Latinos. The course will trace the historical trajectories of these groups, both those dating back centuries, such as Mexican-Americans and certain Caribbean populations, and those with more recent, quickly growing populations, such as Salvadoran and Honduran immigrants, in an effort to understand how their identities are forged and transformed over time, considering both internal and external perspectives. Our exploration of U.S. Latino history and cultures will compare and contrast the experiences of people from the above-described categories and analyze the dynamic tension amongst them, with other minority groups, and with the mainstream US society. We will examine a wide variety of materials, including texts, film, art, music etc. in order to gain a better understanding of Latino populations in the United States. Ultimately, we seek to question and to understand the complexities of Latinidad in the 21st century U.S. The course will be taught in Spanish.
Prerequisites: 82-242 or 82-244

82-345 Introduction to Hispanic Literary & Cultural Studies
Fall and Spring: 9 units
This advanced-level course is required for the Hispanic Studies major or minor, and should be taken prior to the 400-level courses. The course is transatlantic, incorporating the study of the cultures of Latinos in the US, Latin American and Spain. Topics vary from semester to semester, aiming to provide a thorough understanding of Latin American, Spanish and U.S. cultures in connection to issues such as race, gender, socio-economic class. Students will improve their language use (reading, speaking, writing, and listening). SPRING 2019: The Case of the Hispanic Detective: The development of a specific and idiosyncratic detective genre in Spain and Latin America is considered one of the most important cultural phenomena in the Hispanic World since the second half of the 20th century. This course is a thematic introduction to the cultural production of the transatlantic, Hispanic world (Spain and the Americas) through the lens of the Hispanic detective genre as presented in texts, film, music, and other arts. We will be using detective fiction as a tool to increase linguistic and cultural proficiency, while also addressing a selection of theoretical readings in order to gain knowledge about the development of the genre, often comparing it to the Anglo- and Francophone models. More importantly, we will use these texts as a means to inquire about the crucial roles played by language and discourse, politics, religion, and economic factors in the constant shaping and reshaping of the histories and cultures of the Hispanic world; likewise, these texts will be used to explore relevant and current issues such as socioeconomic, racial, and gender inequalities, immigration and exile, etc. Materials will include classic literary texts by Borges, Ocampo, Taibo II, Piglia, and Vázquez Montalbán, among others, alongside notable and more recent examples of the genre in various formats.
Prerequisites: 82-342 and 82-343

82-355 Tpcs in Hispanic Std: Beyond the Film Screen: The Hispanic World Through Film
Intermittent: 9 units
This course is offered only at Carnegie Mellon's campus in Qatar. The purpose of this course is to explore Hispanic culture and history through contemporary films in Spanish. Undoubtedly, films are a rich source of meaningful cultural information that can provide the audience with an understanding of a countrys culture (history, politics, social problems, etc.) through their discussion and analysis. Movies not only represent reality, but they do it from a particular position. The images produced in films are charged with political interests that reproduce or challenge established beliefs and views. Films offer different representations of reality as well as different ways of relating to it (Achugar, 2008). We will view and analyze a selected group of films portraying four main issues in Hispanic history and society: memory and oblivion, immigration and exile, marginalized identities throughout history, and the Hispanic world in globalization. An understanding of the socio-political context that these films aim to portray through in-depth reading, analysis, discussion, and investigation will provide a thorough understanding of the complexities of various historic events, and opportunities and challenges faced by the Hispanic world. Throughout the semester, we will practice the four language skills (listening, speaking, reading, and writing) as we continue to build on vocabulary and review grammar points based on the films viewed, the texts read, and the topics discussed. The course is conducted in Spanish and has a prerequisite of 82-242 or equivalent.
Prerequisite: 82-242

82-361 Italian Language and Culture I
Fall: 9 units
This is a course in Italian culture and language with a streamlined review of grammar. The course deals with the social, political, economic, demographic, and cultural issues of contemporary Italy. At the same time links are drawn between past and present, evidencing the importance of tradition and history in Italian society.
Prerequisite: 82-262

82-362 Italian Language and Culture II
Spring: 9 units
This is a course in Italian culture and language with a streamlined review of grammar. The course deals with the social, political, economic, demographic, and cultural issues of contemporary Italy. At the same time links are drawn between past and present, evidencing the importance of tradition and history in Italian society. A student with prior experience in Italian must take the Italian placement exam. SPRING 2018: This course traces the development of Italian film from the 1900's silent films to the 21st Century. We will follow a trajectory beginning with the epic tradition of Pastrones Cabiria (1914) and Carmine Gallone's Scipio Africans of the Fascist Regime, and continue with study of the Telefoni Bianchi (Art Deco) films of the 30s, neorealism of post-war Italy, the commedia all italiana (Italian style comedy (1950-1970), the humor of Paolo Virzì, the intellectual and artistic concerns of Nanni Moretti, and conclude with Sorrentino's, Il Divo. Students will continue to build their skills in listening, speaking, reading and writing Italian while developing their appreciation of the impact of Italian Film as a cultural and artistic force. The assignments and learning activities which accompany each film provide opportunities for discussion, research, reflection and conversation. The course places emphasis on the historical and cultural situations presented in the films, to help students broaden their background on the history, customs, and geographical representations of Italy. The class will be conducted in Italian.
Prerequisite: 82-262

82-363 Intensive Italian Language & Culture: Advanced Level
Intermittent
No course description provided.

82-371 Advanced Japanese I
Fall: 9 units
This course emphasizes the acquisition of advanced level of communicative language proficiency by immersing students in authentic cultural explorations. The curriculum includes authentic reading texts, multimedia, interviews with native speakers, and viewing and summarizing Japanese films that depict current Japanese society and cultural trends. The course also provides an individualized learning environment throughout the term in improving students' language skills and cultural proficiency. Students may pick a topic of personal interest for their term project thesis. A student with prior experience in Japanese must take the placement exam.
Prerequisite: 82-272

82-372 Advanced Japanese II
Spring: 9 units
This course continues to further improve the acquisition of advanced level communicative language proficiency by immersing students in authentic cultural explorations. The curriculum includes authentic reading texts, multimedia, interviews with native speakers, and viewing and summarizing Japanese films that depict current Japanese society and cultural trends. The course also provides an individualized learning environment throughout the term in improving students' language skills and cultural proficiency. Students may pick a topic of personal interest for their term project thesis. A student with prior experience in Japanese must take the placement exam.
Prerequisite: 82-371

82-373 Structure of the Japanese Language
Fall: 9 units
This course examines the basic Japanese grammar covered in elementary and intermediate Japanese courses by comparison with English and aids students in systematizing their knowledge of Japanese and in deepening their understanding of Japanese culture (i.e., cultural ways of thinking underlying Japanese verbal behaviors). After a brief discussion of the overall typological differences between the two languages and an initial training to analyze them cross-linguistically, it deals with specific areas of grammar that exhibit pervasive structural and semantic differences and serve as exercises for cross-linguistic analysis. On the basis of the discussions and exercises in class, students gather and analyze relevant Japanese data for their project, which facilitates their understanding of the grammar points and cultural ways of thinking in question, and develops their analytical skills. This course is taught in Japanese. A student with prior experience in Japanese must take the placement exam.
Prerequisite: 82-272

82-374 Technical Japanese
Spring: 9 units
This course seeks to (1) introduce students to technical Japanese or Japanese language used in the field of science and technology, (2) acquaint them with current issues in Japan involving science and technology, and (3) deepen their understanding of the science and technology culture of Japan. It draws on various sources of information such as books, newspapers, video clips, and TV news to familiarize students with current issues in Japan related to science and technology. Through understanding those issues, the course enables them to acquire necessary knowledge of technical Japanese and Japanese cultural perspectives on science and technology. It also requires them to work on an individual project to form and express their own thoughts and opinions on a science and technology issue of personal interest. This course is taught in Japanese. A student with prior experience in Japanese must take the placement exam.
Prerequisite: 82-272

82-376 Intensive Japanese Language & Culture: Advanced Level
Intermittent
tba

82-380 Independent Study in Second Language Acquisition
Spring
An opportunity for students who wish to pursue independent supervised study in second language acquisition (SLA). In conjunction with a faculty member, students will arrange a program of study to explore aspects of SLA. Prerequisite: Permission of the Instructor.

82-383 Second Language Acquisition: Theories and Research
Fall: 9 units
This course provides an introduction to research and theories in Second Language Acquisition (SLA). Processes that underlie the learning and use of second languages are examined from four perspectives: 1) as linguistic knowledge, 2) as a cognitive skill, 3) as a personality-meditated process, and 4) a socio-culturally mediated process. Factors examined include: age-related differences, the influence of the first language, the role played by innate (universal) principles, the role of memory processes, attitudes, motivation, personality and cognitive styles, and formal versus naturalistic learning contexts. Issues that arise from the course readings are investigated through practical experience in applying theoretical knowledge to small-scale empirical research projects. Students are also provided with opportunities to consider the relevance of these issues to their own language learning experiences.
Prerequisite: 82-280

82-385 Language Across the University
Fall and Spring
Language credit may be attached to any course, independent study, or project unit for which a student receives content-area academic credit. The program is available at the discretion of the responsible content-area faculty, who should be sufficiently skilled in the chosen language to be able to evaluate the technical content of a student's work. The student, content-area faculty and language faculty negotiate a plan for the semester's work, designed to consume approximately three hours per week for three units of academic credit. The course may be repeated on multiple occasions.
Prerequisites: Intermediate level language proficiency or above and permission of a content-area faculty member and the Department of Modern Languages

82-388 Understanding Second Language Fluency
Fall: 9 units
This course examines differences and similarities in the way literacy is learned and used in diverse languages and cultures. In the first step of examining the cognitive and social consequences of literacy, students will analyze the major characteristics of spoken and written communications. Following that analysis, students will compare literacy practices in a variety of cultural contexts and explore how literacy utilization alters its collective impacts on the users. Finally, through systematic comparisons of literacy education, students will identify the social, cognitive, linguistic factors directly affecting literacy development in different cultural contexts.

82-391 Advanced Russian I - Modern Russia
Intermittent: 9 units
This course seeks to enhance listening-comprehension skills while perfecting the linguistic and stylistic practices of advanced students. Intensive study is made of varied literary, journalistic and colloquial texts in audio-visual and print media. Focus is on rapid vocabulary expansion as well as correction of high frequency syntax errors that persist beyond the intermediate level. Practice with online resources, additional to three class hours per week, is mandatory for the evolution of aural/oral fluency. Written compositions and translations, assigned for homework, are required for the development of grammatical accuracy and stylistic appropriateness. All class discussions are conducted in Russian. Prerequisite or approved equivalent
Prerequisites: 82-292 or 82-399

82-392 Advanced Russian II: Great Short Works
Intermittent: 9 units
A mad copy clerk declares himself the King of Spain. A nightmarish visit to a local museum somehow spirits a Russian refugee back to the Soviet Union. A bespectacled Jewish reporter brutally kills a goose to earn the respect of his Cossack platoon. Although Russian literature is famous for its long 19th-century novels, the absurdities of Russian society were explored no less profoundly in short stories by Gogol, Chekhov, Nabokov, Babel, and many others. This seminar examines the Russian short story as a form particularly suited to revealing the barbarism, hilarity, and ecstasy of human experience. The course aims to advance Russian language learning by expanding students' vocabulary, reinforcing grammatical knowledge, and developing their capacity to speak and write on abstract topics. The readings will be available in English, though students will be encouraged to read the works in Russian. In addition to discussing the texts in Russian, students will complete short weekly homework assignments.
Prerequisite: 82-391

82-394 Russian for Heritage Speakers: Babushkas, Russia & Beyond
All Semesters: 9 units
This course is designed to address the linguistic and cultural learning needs of heritage speakers of Russian, those who grew up hearing and speaking Russian at home but who have had little or no formal study of Russian language, culture, or history. Although heritage speakers of Russian often achieve advanced or near-native listening comprehension skills, they require further training in reading, writing, and speaking. Heritage speakers may also be unfamiliar with important aspects of Russian culturekey events in Russian and Soviet history, well-known cultural phenomena, literary works, films, and so onand have gaps in their knowledge of social norms. Russian for Heritage Speakers aims to fill these gaps through a combination of grammar instruction and student-led close analysis of texts and audiovisual material. The course is organized around five thematic units that allow students to learn about Russian culture while engaging in interpretive, interpersonal, and presentational modes of communication: "Foundations: Truth & Legends," "Revolutions: Political, Cultural, Social," "Student Life: ' ,'" "Russia in the World," and "Individual and Community."
Pre-requisite: Permission of the Instructor.

82-396 The Faust Legend at Home and Abroad
Intermittent
This course introduces students to the basic outlines of the Faust story, and examines its nineteenth- through twenty first-century manifestations in a variety of European, Russian and American novels, plays, films and operas. On the assumption that cultures reveal something distinctive about themselves by the particular way in which they adapt the legend, this course aims to discover how and why these Faustian works of art respond and contribute to the social, political and historical context in which they are produced. On what is the persistent appeal of the Faust legend based? To what needs does it speak? How does the history of its own, continual reemergence affect the meanings it communicates? Prerequisites: None for 9 units; an additional 3 units, requiring permission of the instructor, can be earned for work done in Russian.

82-397 Radical, Heretics, Hackers: Russian Outlaws in History, Literature, and Film
Intermittent
The Russian hacker looms large in the global imagination. He's the cyber outlaw who we imagine can take down the powerful with the click of a finger, sometimes serving as an agent of the Russian government, at other times threatening the state itself. This course will examine the mythology and reality of the Russian hacker by tracing its prehistory, from anarchists in Imperial Russia, to Bolshevik revolutionaries, to dissident artists of the Soviet Union, and finally to contemporary heretics such as Pussy Riot and Edward Snowden. The course will culminate in a student-led symposium on the sociocultural role of the Russian hacker. This course follows a seminar format. Students will be required to critically analyze literature, film, and historical documents. They will work on written exercises that prepare them to write a research paper to be presented at the symposium. This is a 9-unit course. For those proficient in Russian, however, a total of 12 units can be earned by conducting some portion of the work in Russian and meeting outside of class for some additional hours. Details are to be worked out in advance, in consultation with the instructor.

82-399 Special Topics: Russian in Context
Fall and Spring: 9 units
This course is designed for students who have completed four semesters of Russian at Carnegie Mellon or for those who have equivalent Russian skills as demonstrated via placement exam. The course focuses on further development of the linguistic and stylistic practices of advanced students based on cultural analysis of Russian literature. Focus is on rapid vocabulary expansion as well as correction of high frequency syntax errors that persist beyond the intermediate level. Written compositions and translations, assigned for homework, are required for the development of grammatical accuracy and stylistic appropriateness. All class discussions are conducted in Russian. A student with prior experience in Russian must take the placement exam.

82-400 Russian Studies Topics
Fall and Summer: 6 units
(A1)Literary Culture of the 19th Century Russia (6 Units) The purpose of the course is to give students an introduction to the cultural environment of the Imperial Russia through the works of major 19th century Russian writers. We will read and analyze some masterpieces of Russian fiction, including works of Pushkin, Lermontov, Gogol, Turgenev, Dostoevsky, Tolstoy, and Chekhov. Emphasis will be made on how these brilliant classics reflected turbulent history of the 19th century Russia. (A2) Literary Culture of the 20th Century Russia (6 Units) This mini-course focuses on Russian prose and poetry of the early 20th century. Readings will include the "proletarian" writings of Maxim Gorky, "symbolism" of Alexander Blok, "futurism" and "modernism" of Vladimir Mayakovsky as well as works of some other authors. We will discuss such important issues for 20th century Russian Cultural History as the role of intelligentsia in the Russian Revolution, the content and method of Russian decadence, symbolism, and modernism, as well as imprisonment, liberation, and exile that became so important for many writers and poets.

82-411 Topics in Arabic Media
Fall and Spring
Given the development and spread of new and multi-literacies around us today, the course focuses on reading and analyzing Arabic media sources to engage in discussions about current topics in our modern world. Topics of interest include (but are not limited to): Culture, politics, economy, environment, education, and linguistic diversity. While reading and writing will be mainly in Modern Standard Arabic, class discussions will be of a multidialectal and multilingual nature to encourage questioning, analyzing, and conceptualizing topics in various contexts.

82-412 Topics in Arabic Studies
Spring: 9 units
This course is designed for students who have completed Advanced Arabic. Students will study written, audio, and video material taken from well-known Arabic-language media outlets such as Al-Jazeera, BBC Arabic, al-Arabiyya, etc. Linguistically, this course focuses on Modern Standard Arabic (MSA) because the media is one of the main domains in which MSA is significantly utilized in our modern age. Students will utilize reading, writing, and speaking skills to engage actively in class activities such as group discussions, debates, interviews, short presentations, etc. Students will prepare and present a final project in Arabic to share with the class. **The course can be repeated but after consent of instructor.**

82-413 Readings in Islamic History
Fall and Spring: 9 units
This course focuses on Islamic history and enables students to read authentic historical texts in Arabic written three to five centuries ago and to understand the cultural context that gave rise to these texts. Students also will continue to develop their ability to express their ideas both in speaking and in writing and to develop their listening skills in Modern Standard Arabic.

82-415 Topics in French and Francophone Studies
Fall: 9 units
This repeatable course explores target cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. FALL 2019: La France au Moyen Orient
Prerequisites: 82-303 Min. grade C and 82-304 Min. grade C and 82-305 Min. grade C

82-416 Topics in French and Francophone Studies
Spring: 9 units
This repeatable course explores target cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. Spring 2019: Growing up Black or Asian in Contemporary France: Frenchness redefined through the Arts This course will examine the impact of the Post-World War II migrations on 21st-century France's definitions of national identity. Our study will particularly focus on the cultural productions of a new generation of French painters, filmmakers, writers and influencers with roots in sub-Saharan Africa, the Caribbean and Asia. We will investigate the ways in which these works, rooted in hybridity and the celebration of non-French ethnic heritage, interrogate the French republican tradition of a "singular and indivisible" identity. Readings will include Grace Ly's Une Enfance Modèle, Aya Cissoko's N'ba and Julie Hamaïde's Koï. The course will also examine the filmic representations of hybrid identity in works such as Ça reste entre nous (Irène Nam/Grace Ly), YA'R (Brams Koudié) and Mariannes Noires (Niang/Nielsen). Throughout the semester, students will have the opportunity to meet some of the artists and writers whose works we will analyze in class. A the end of the semester, Afro-French visual artist Alexis Peskine will accompany the students in the creation of their final project for the course. Good reading skills in French and a good ability to express oneself both orally and in writing are essential."
Prerequisites: 82-303 and 82-304

82-420 The Crucible of Modernity:Vienna 1900
Intermittent: 9 units
Vienna 1900 was many things: the political center of the Austro-Hungarian Empire; the center of German-language music and theater; the birthplace of Zionism and of psychoanalysis; the home of cafe culture and the waltz; the city of baroque urban palaces and squalid backyard tenements; and the showcase for historicism. And while the story of Vienna's cultural and political turmoil is interesting, it probably would not command our attention today were it not for its role as the birthplace of Modernism. The class explores Vienna before the collapse of the Austro- Hungarian Empire in 1918. We will be looking at a huge and at times confusing canvas, which by necessity includes almost every aspect of culture. From history and politics we will move on through art, architecture, psychoanalysis, literature, music, and philosophy. We will be looking at art nouveau buildings and furniture, reading literature, viewing films, and listening to recordings. Using an enhanced historical map of the city as a digital interface and an interactive learning tool, we will add a crucial visual component to the course and research the connections between urban and architectural space and the intellectual activity that took place in it. You will work in teams with students from other disciplines. You will research networks of intellectual and artistic activities and create 3D models of the spaces, from public squares to cafe interiors, in which these intellectual activities took place. You will create and expand a growing collection of records, photos, archival materials, as well as artwork, music and other media in an effort to reconstruct the dialogue among the arts and the cultural debate of this key moment in the passage to Modernism. No previous knowledge of 3D modeling software is required, software instruction and tutoring will be provided. The language of instruction is English with a German credit option

82-425 Topics in German Literature and Culture
Fall: 9 units
This repeatable course explores the culture of the German-speaking nations through a thematic or conceptual focus. Students critically analyze authentic documents, for example, historical, biographical, and literary texts, as well as film and works of the visual arts while improving and expanding their language skills. FALL 2019: 82-425 Thirty Years Later: The Collapse of East Germany and the Fall of the Berlin Wall This course, conducted entirely in German, observes the thirtieth anniversary of the collapse of the German Democratic Republic (GDR) in the autumn of 1989 and the fall of the Berlin Wall on November 9, 1989. These events in 1989 were followed by German reunification in October of 1990. The revolution in East Germany, the collapse of the GDR, the fall of the Berlin Wall, and German reunification fundamentally transformed Germany, Europe, and the world. The course will take a close look at the events of 1989 and 1990. Course materials will include documentary and fiction films, plays, essays, novels, and articles. A central part of the course will be interviews conducted by the class as a whole and by individual students with eyewitnesses to the events of 1989-1990. These interviews will be recorded and archived, and students will be required to complete a final project that summarizes what they have learned about these momentous events and their significance. Required work includes active participation in class, preparation of all readings, watching all assigned films, taking two tests, completing an eyewitness interview, completing a final project, and leading one class session, together with a partner, in the final weeks of the semester.
Prerequisites: 82-320 or 82-323 or 82-426 or 82-327

82-426 Topics in German Literature and Culture
Spring: 9 units
This repeatable course explores the culture of the German-speaking nations through a thematic or conceptual focus. Students critically analyze authentic documents, for example, historical, biographical, and literary texts, as well as film and works of the visual arts while improving and expanding their language skills. SPRING 2019: "It was the best of times; it was the worst of times." What Charles Dickens said about the French Revolution also applies to Germany between the wars. Germany had taken the first tentative steps toward democracy in its thousand year history, beginning a journey that was soon to end in one of the most repressive political regimes the world has ever seen. But amid the confusion and uncertainty of the Weimar Republic, German literature, film, art, science, philosophy, music, and architecture flourished like never before since the Age of Goethe—only to see many of the nation's intellectuals emigrate to democratic countries after the rise of Nazism. Come and explore Albert Einstein, Sigmund Freud, Max Planck, Bertolt Brecht, Rainer Maria Rilke, Hermann Hesse, Walter Gropius, Albert Speer, Joseph Goebbels, Wassily Kandinsky, Paul Klee, Max Beckmann, Käthe Kollwitz, Otto Dix, George Grosz, Edith Stein, Kurt Weill, Lotte Lenya, Marlene Dietrich, Emil Jannings, and others.
Prerequisites: 82-324 or 82-325 or 82-323

82-427 Nazi and Resistance Culture
Spring: 9 units
SPRING 2019: "It was the best of times; it was the worst of times." What Charles Dickens said about the French Revolution also applies to Germany between the wars. Germany had taken the first tentative steps toward democracy in its thousand year history, beginning a journey that was soon to end in one of the most repressive political regimes the world has ever seen. But amid the confusion and uncertainty of the Weimar Republic, German literature, film, art, science, philosophy, music, and architecture flourished like never before since the Age of Goethe—only to see many of the nation's intellectuals emigrate to democratic countries after the rise of Nazism. Prerequisite: 82-327

82-428 History of German Film
Intermittent: 9 units
This course is a chronological introduction to one of the world's greatest cinema traditions: German cinema. It moves from the silent cinema of the 1910s to the Weimar Republic, when German cinema represented Hollywood's greatest challenger in the international cinema world. It then addresses the cinema of Hitler's so-called "Third Reich," when German cinema dominated European movie theaters, and moves on to the cinema of divided Germany from 1949-1989, when cinema in the socialist east and cinema in the capitalist west developed in very different ways. In the final week of the semester, the course will address German cinema in the post-unification period, which has experienced a revival in popularity and interest. The two historical foci of the semester will be the Weimar Republic, the classic era of German cinema, and the era of the so-called "New German Cinema" of the 1970s and 1980s, when major German directors developed radical new approaches to cinema and critiques of Hollywood. Among the great directors focused on in the course of the semester will be Friedrich Wilhelm Murnau, Fritz Lang, Leni Riefenstahl, Wolfgang Staudte, Werner Herzog, Wim Wenders, and Rainer Werner Fassbinder. No knowledge of the German language is required for this course. Most of the films will be in German with English subtitles. The course will be cross-listed in the departments of Modern Languages, English, and History. Students will be required to attend class, including all film screenings, to actively participate in discussion, to write a term paper on a topic related to German cinema history, and to take two midterm examinations.

82-429 German Reading and Translation Workshop: German in Today's World
Intermittent: 9 units
This course will address issues of translation, mostly from German into English, but to a lesser extent also from English into German. It will focus primarily on texts coming from the spheres of current events, politics, economics, and the cultural sphere, but students will also be encouraged to explore and locate texts based on their own interests and concerns. In order to facilitate well-honed translation, it will be necessary to address points of advanced grammar where the structures of the German and English languages feature not only similarities but also differences. The course will thus also constitute a review of issues in German grammar that English speakers may sometimes find particularly challenging. The language of instruction will be primarily German, and students should be comfortable speaking and listening to German. Students will be required to complete a several translation projects, to locate a number of texts from the contemporary German-speaking world that interest them, and to take a midterm and final examination that will focus on translation, issues of advanced grammar, and cultural content.
Prerequisite: 82-324

82-431 China and the West
Intermittent: 9 units
FALL 2012 This course takes a look at the multifaceted relationship between China and the Western world from Marco Polo's time to the present. The focus will be on how people in China and the West imagined each other in different times of history and in what ways some historical events and figures, as well as concepts and cultural practices are interpreted differently from Chinese and Western perspectives. Students are expected to reach a deeper understanding of the complexities of cultural interactions and their implications for the diverse world in which we now live. The students will read a rich collection of scholarly writings, and the class will be conducted primarily in discussion format. The class is conducted in English and Chinese. Students will complete readings in both English and Chinese. Assessment will be based on participation in the discussion, student presentations, and written assignments (including research papers, book reviews, and translations). Prerequisits: 82-332, or instructor's approval.

82-432 Popular Culture in China
Intermittent: 9 units
This class is a general introduction to various aspects of popular culture in twentieth century and contemporary China. Students will gain a critical understanding of common people's perspectives and experiences with China's revolutionary past and its contemporary global economy through fiction, film, music, newspaper and magazine articles, internet discussion forums, and other forms of visual and written materials. The class is conducted in Chinese, supplemented by occasional scholarly writings in English. Prerequisite: 82-332 or placement
Prerequisite: 82-332

82-433 Topics in Contemporary Culture of China
Fall: 9 units
This repeatable course explores target cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. Prerequisite: 82-332
Prerequisite: 82-332

82-434 Studies in Chinese Traditions
Intermittent: 9 units
Traditional Chinese Thought and Literature through Comic Books Starting from the 1980's, Tsai Chih Chung (a master cartoonist in Taiwan) created a series of comic books illustrating canonical works in traditional Chinese philosophy and literature. The series soon became a great hit both in Taiwan and China, and has since been translated into different languages around the world. While its popularity continues to grow among its readers, its wide circulation also raises questions among scholars and critics of traditional Chinese literature and culture. In this course, students will be asked to read Tsai Chih Chung's comic books and their animated adaptations, the English translations of the Chinese canonical texts of philosophy and literature, and the secondary sources that provide historical and analytical introductions to the texts. While enjoying Tsai's innovative and delightful comic interpretation, students will work in Chinese to consider serious philosophical questions along with the early Chinese thinkers, to learn to savor the aesthetic beauty of traditional Chinese literature, and to prepare to share their ideas and discovery with the rest of the class.
Prerequisite: 82-332

82-436 Introduction to Classical Chinese
Intermittent: 9 units
This course is designed for students who have reached the advanced level of Modern Chinese and would like to promote their knowledge and skills in reading Classical Chinese, a language shaped in the latter half of the first millennium B. C. which still persists as a living medium of expression today. The course aims to introduce students to the basic syntactic patterns of Classical Chinese and the most frequently used Classical Chinese vocabulary. In the course, readings will be representative selections from ancient Chinese texts, chosen for their historical value, beauty, and influence on later writers. With this knowledge and training, students will be sufficiently equipped to read the Chinese Classics and will gain a deeper understanding of the history of Chinese civilization, culture and language. Moreover, knowledge of Classical Chinese will help students read and understand sophisticated modern Chinese texts, which make frequent use of Classical allusions and constructs. Prerequisite: 82-332 or 82-337 or 82-338
Prerequisites: 82-332 or 82-337 or 82-338

82-439 Modern China Through Literature
Intermittent
This repeatable course explores target cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills.

82-440 Studies in Chinese Literature & Culture
Fall: 9 units
This repeatable course explores target cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. SPRING 2019:This is an introductory course on Chinese folk performance traditions. It aims to help students obtain a general understanding of the various Chinese folk performance forms including puppetry, opera, oral storytelling traditions, and temple festival performances. It will also explore the culture of folk performance, dramatic literature and performing arts, their relationship with Chinese local culture and societies, and their national and global impact. Class activities will include lectures, guest speakers, and discussion, as well as presentation of multimedia examples of folk performances. At the end of the course, students are expected to have a better understanding of the nature and scope of the Chinese folk performance traditions and gain some fundamental training that will enable them to carry on related field work and research.
Prerequisite: 82-332

82-441 Studies in Peninsular Literature and Culture
Intermittent: 9 units
This repeatable course explores the cultures of Spain through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. SPRING 2017 This course explores contemporary peninsular texts of corporeal representation - medicalized, personalized, objectified and empowered. In this course, we will explore the Spanish body through the lens of medical humanities and disability studies. The former includes texts created in medical environments and from medical experiences, written by doctors, patients and members of the community. Spain has a rich history of doctor/authors that can provide some level of insight into the narrative of the Spanish medical community. Disability studies, on the other hand, views the body in a non-medical context. Instead of proposing the abnormal body as a medical phenomenon to be studied in a petri dish, these expression of (corpo)reality trace ideas of normalcy as societal constructs. The theme of disability in Spain comes in to play with the wealth of organizations dedicated to disability rights (while also mired in controversy). The texts will come in the form of advocacy pamphlets, novels written by doctors, fictional (and non) depictions of the medical field, illness, etc., painting and sculpture, and films. This course will prompt us to pay attention to the objectification and abjectification of these bodies and consider that through this awareness must also come understanding the body as a text - not an object - but a text that warrants intricate observation. We will analyze these texts in an effort to understanding the constructions of normalcy. In the end, our analysis will be used to create our own texts.
Prerequisite: 82-345

82-443 Spanish Reading and Translation Workshop
Intermittent: 9 units
This course is of interest to advanced Spanish majors and minors as well as other native or heritage speaker non-specialists seeking to develop translation skills from English-Spanish and Spanish-English. It provides students with an introduction to basic concepts, theories, and techniques of translation, and helps them develop a systematic approach to resolving language transference problems. Students will deepen their understanding of Spanish and English as they consider how best to translate structures, words, text, and discourse styles unique to each respective language while simultaneously acquiring a valuable and highly marketable skill. This course is conducted in Spanish. *Prerequisites: 82-345 or permission of instructor.
Prerequisites: 82-342 or 82-343 or 82-344 or 82-345

82-444 The Structure of Spanish
Intermittent: 9 units
This course will provide students with a theoretical framework and analytic tools to investigate how Spanish speakers represent, construct, and transform their social worlds. In particular, the focus is on language as a social practice through which power relations are maintained or challenged. Using a variety of spoken and written texts, the course seeks to analyze to explore the discourse-semantic and lexico-grammatical features that Spanish users deploy to make meanings and negotiate understandings. This analysis will later be interpreted from an interdisciplinary perspective drawing on social theory and history. FALL 2017: This course is an advanced introduction-in Spanish-to contemporary "print," digital and visual media from North, Central & South America, and the Caribbean, and how "information" and "opinion" produce, disseminate, and communicate specific messages. We will review and analyze the rhetorical and visual toolse.g., style, tone, perspective, purpose, exaggeration, distortion, symbolism, labels, irony, and allusionsthese texts deploy to determine their role in meaning making for readers and viewers. A primary goal for this course is for students to develop and sharpen the skills necessary to determine reliability in information sources, and hone their ability to write and talk about this.
Prerequisite: 82-345

82-445 U.S. Latino Literature
Intermittent: 9 units
This course proposes to problematize socio-political and historico-cultural issues concerning U.S. Latinos and Hispanic immigrants in the United States. This will involve the analysis and application of assimilation, transculturation and bilingualism theory, and rhetorical/translational problematics of the material under examination. Also of interest will be an ongoing class discussion of Latinos/Hispanics in history, the media, entertainment, politics, and education. Students will consider the question of the "borders," geographical, political and societal, that may or do exist between U.S. mainstream society, Latinos and Hispanic immigrants, and strategies employed by hyphenated-Americans for overcoming, subverting or undermining this situation. Materials for the course will include literature, film, essays, and music by and about Latinos and Hispanics in the United States. FALL 2016: Mapping Dreams and Nightmares: Transfronteriza Aesthetics on the US-Mexico Border This course will focus on the US-Mexico border, with particular emphasis on visual representations of the border from both the US and Mexico, and on the unique, vibrant fronteriza cultures that result in the space betwixt and between. The course will emphasize key moments and events in the history of the border, including for example the Mexican Revolution, the creation of the border patrol in the 1920s, the Bracero program, Operation Wetback, the Chicano movement, Operation Gatekeeper, and will consider how visual and textual representations have responded to and been conditioned by the political and economic relationship between the US and Mexico, particularly in the wake of neoliberal policies. We will draw on a wide variety of materials, including film, video, visual arts, performance, border theory, and literary and journalistic texts.
Prerequisite: 82-345

82-448 Topics in Arabic Language, Literature, & Culture
Intermittent: 9 units
This repeatable course explores the Arab world through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. Prerequisite: 82-312
Prerequisite: 82-312

82-450 Advanced Research in Hispanic Language & Culture
Fall and Spring: 9 units
This course permits in-depth, 400-level study in the following courses: 82-342 Spain: Language and Culture, 82-343 Latin America: Language and Culture, and 82-344 U.S. Latinos: Language and Culture. Students will meet with the regularly scheduled 300-level class, read additional texts, and produce research assignments as agreed upon by the instructor and student. The focus is on a deeper understanding and individualized research of the course topics. Prerequisite: Permission of instructor

82-451 Studies in Latin American Literature and Culture
Intermittent: 9 units
This repeatable course explores the cultures of Latin America through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. FALL 2019: Venezuela y Colombia: War, Peace, Migration and Exile Venezuela and Colombia converge around many elements, from a common colonial past to shared geographical regions and cultural customs. However, their societies, politics, and cultural production often have followed divergent paths, leading to a current juncture characterized by both fraternity and adversity. Many of these differences stem from societal and cultural transformations developed during the twentieth century. Over the past few decades, for instance, Colombians have gone from emigrating to Venezuela in search of a peaceful and prosperous future, to hosting thousands of Venezuelan refugees fleeing current economic and political conditions. This course will compare the varied ways in which literary and non-literary sources have represented the transformations, challenges, and hopes stemming from situations of violence, war, peace, migration or exile in these two neighboring countries from the 1800 to the present.Students will use these sources to identify significant historical and cultural trends and agents of change, and ultimately to develop an informed perspective on the current cultural and political landscape of the two countries. Student performance in the course will be assessed using various types of written assignments (online posts, online discussion boards, final paper), in-class discussion, and an oral presentation. The course will be taught in Spanish.
Prerequisite: 82-345

82-455 Topics in Hispanic Studies
Fall: 9 units
This repeatable course explores Spanish-speaking cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. FALL 2018:(Post)Apocalyptic visions are metaphors for the human condition and may often be an expression of political turmoil or social and cultural fears. Their evolution and meaning can be explored and traced to a current complex lexicon pointing to science, technology, globalism, and humankind as catalysts for the end of the world. How are discussions about the end of the world framed in Latin America? What is the relationship between the monstrous & popular fear? What parts of humanity remain when death is rampant and social structures have broken down? How can these visions address social and environmental changes, and the possible future human outcomes of these changes? In pursuit of answers to these questions, the course will be an exploration of written and visual narratives used to contain and explain threats pertaining to Latin America and/or created from within its diffuse borders, with an emphasis on texts produced after the second half of the 20th century. We will examine how different kinds of Spanish-language Latin American mediafrom literature to film, from the Internet to news coverage, from art to comic bookshave looked to the past, seen into the present, and envisioned the future in framing discussions and representations of (post)apocalyptic events and of threats in the post-human world. Contemporary reviews and short historical, critical, and theoretical readings will serve to supplement and provide context for primary texts. The class will be taught entirely in Spanish. *Prerequisites: 82-345 or permission of instructor.
Prerequisite: 82-345

82-456 Topics in Hispanic Studies
Spring: 9 units
This repeatable course explores Spanish-speaking cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. SPRING 2017: Southern Cone Dictatorships in the Movies (1984-2016) This course explores the Southern Cone dictatorships during the period of the Cold War through their representation in films. The military-civilian dictatorships of the 1970s in Argentina, Chile and Uruguay were a period of State terrorism. This violent period resulted in thousands of disappeared people, political prisoners and exiles. These experiences have had a lasting impact in the new democracies. There is still a debate over how to address violations of human rights and how to make sense of the past, so that these events don't happen again. There has been a rich production of movies focusing on this historical period that serves as a document of how the struggles over how to come to terms with a traumatic past have been dealt with by different countries. These films also provide a glimpse of how popular culture serves as a vehicle to construct a social memory of recent history. Through films new generations that did not experience these traumatic events learns about what happened and what it means for particular social actors. We will analyze films from Argentina, Chile and Uruguay in order to better understand how these countries have dealt with a contested past. The course will provide students with historical background, theoretical frameworks and analytic tools to approach these cultural productions as documents and discourses about the recent dictatorships.
Prerequisite: 82-345

82-473 Topics in Japanese Studies
Fall: 9 units
This repeatable course explores target cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, cultural, social, historical, biographical, filmic, artistic, literary, musical, linguistic, and theoretical perspectives, while improving and expanding their language skills. FALL 2018: Youth Culture Japanese society is currently confronted with a massive array of social and cultural anomalies among its youth. In the culture, which values and emphasizes conformity, the phenomenon is utterly unprecedented. Accordingly, in this course, we will first explore the defining features of these anomalies by examining how Japanese youth are portrayed in modern day fictions and films. We will then scrutinize the extent to which these portrayals actually reflect real lives of young Japanese by analyzing newspaper articles and essays commenting on the social issues surrounding them. Finally, we will take a close look at the dramatic social changes, over the past three decades, to trace their long-term impacts as a significant factor contributing to the emergence of the new culture, particularly with respect to the changing youth behaviors. F17:The Evolution of Japan's Urban Culture This course analyzes various aspects of Japan's urban culture, the evolution of which has centered around Tokyo, focusing on such topics as the Taisho modernism during 1912-1926, the post-WWII Americanization of Japanese culture and society, the culture surrounding the Bubble Economy during 1980-1995, and the popular culture that has continued to thrive on a global scale, through fictions, non-fictions, films, and multimedia. Taught in Japanese.
Prerequisite: 82-372

82-474 Topics in Japanese Studies
Spring: 9 units
This repeatable course explores target cultures through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, cultural, social, historical, biographical, filmic, artistic, literary, musical, linguistic, and theoretical perspectives, while improving and expanding their language skills. SPRING 2019: Japanese Language and Culture from a Pragmatics Perspective This course deals with topics such as enryo-sasshi, indirectness and politeness in Japanese culture and communication from a pragmatics perspective and provides cultural and linguistic analysis training by using pragmatic concepts. Pragmatics is a sub-field of linguistics that deals with language use in social communication. This course introduces students to basic concepts of pragmatics, including context and co-text, speech acts, conversational implicature, indirectness, and politeness theory, with the aim of understanding them in Japanese language. A variety of Japanese texts and media sources are brought to the class for students to analyze how pragmatics is in place in everyday social interaction and to help them consider cultural background and norms behind the social acts. The course invites active and critical participation in the exploration of Japanese language and culture through pragmatics, as well as other closely related issues including intercultural communication, sociolinguistic variation, and linguistic ideology.
Prerequisites: 82-372 or 82-373

82-480 Social and Cognitive Aspects of Bilingualism
Intermittent: 9 units
This course introduces students to the nature and extent of bilingualism in individuals and diverse communities in the US and abroad, with an emphasis on the social, historical and political forces that shape the language varieties and abilities of bilinguals. There is also a brief exploration of the psycholinguistic features that characterize bilingual individuals. It also addresses the challenges and opportunities that bilingualism posses for multilingual societies and individuals. Students will develop their knowledge and critical analysis skills of bilingualism through readings, group discussions, field projects and a research paper. Prerequisite: 82-180 or 82-280 or 82-382 or 82-384 or permission of instructor
Prerequisites: 82-180 or 82-280 or 82-382 or 82-384

82-483 Topics in Modern Languages
Intermittent
This course introduces students to research methodology as it applies to language learning and language teaching through an examination of different approaches currently used in Second Language Acquisition (SLA) research ranging from experimental studies to case studies. The goal is to develop an ability to critically evaluate, design and implement sound SLA research. Prerequisite: None

82-489 Service Learning in the Community
Intermittent
This is a community-based research (CBR) course for advanced students who wish to bridge service and action research. The course provides an experiential component that allows students to use their second language and culture skills while acquiring or honing their research skills. CBR helps bridge the gap between university and community life to facilitate the development of life-long learning habits and humanistic citizenship. ML students and faculty will jointly design and execute ways in which to 'give back' to the community being studied, which will be chosen based upon the language, culture and/or history of a specific community. Students in this course may participate in historical, ethnographic and cultural research; ethnographic fieldwork; problem solving activities around a particular issue the community is facing; discover how to best identify a particular linguistic/cultural community and document, interpret, preserve and disseminate its history and culture. Class activities may include group, pair and independent reading and research; group and pair travel; group, pair and one-on-one interaction with community members; public presentations; photography, filming, scanning; webpage and document design; and different kinds of writing. Prerequisite: Completion of all 300-level coursework, or an approved equivalent, or permission of instructor

82-492 The Historical Imagination in Nineteenth-Century Russian Literature
Intermittent
Pushkin, Gogol, Lermontov, Turgenev, Dostoevsky and Tolstoy all ruminated upon their nation's historical destiny. This course aims to describe the role played by imagination in these authors' efforts to wreak from Russia's past a vision of her future. Emphasis is placed upon the figurative operations of language that allow narrative to function as a guidepost to a collective mission and a map of the individual's location within the projected historical scheme. Lecture and discussion formats are combined at each class meeting. Written papers, oral presentations, and participation in discussions are required. Prerequisites: None for 9 units; an additional 3 units, requiring permission of the instructor, can be earned for work done in Russian.

82-495 Topics in Applied Second Language Acquisition
Intermittent: 9 units
SPRING 2016: Section A:Teaching Chinese as a Foreign Language This course aims to expose students to current professional practices and common situations related to teaching Chinese as a Foreign Language (CFL). It will provide an overview of CFL research, teaching and learning with demonstrations of CFL pedagogical issues, applications and solutions. It is intended to help students become familiar with specific CFL issues concerning the special characteristics of the Chinese language, including tones, a character-based writing system, and special Chinese grammatical structures. Students will be able to apply course material to their CFL teaching and research, and feel more comfortable and adaptable in their CFL professional careers. Section B: Issues in TESOL In this course, students will receive a broad overview of current topics that will introduce them to the pedagogic and sociocultural issues that Teachers of English to Speakers of Other Languages (TESOL) instructors encounter in classrooms today, in a variety of contexts. Students will be required to familiarize themselves with and be prepared to address issues in TESOL classrooms. These issues include but are not limited to methodology, teacher education, the role of culture and intercultural communication, and specific challenges in diverse settings, such as modifying course content to focus on academic language. The course will be conducted as a seminar with students completing readings outside class time and discussing the topics and perspectives during class time. Students will engage in reflection through class discussions and electronic discussion forums. The main assignments for the course will be case histories of diverse populations of students who are found in TESOL classrooms, and a final research paper. Students will gain in-depth knowledge of the state of the art in TESOL today.

82-499 Alternative Break Projec (Language Specific)
Intermittent
This course provides advanced ML language students and non-ML students enrolled in an Alternative Break student trip project the opportunity to earn credit by engaging in "connected" modes of knowing, by identifying and analyzing a problem, and developing plans for short-term and sustainable solutions, reflecting, and creating and disseminating an informational and interpretive website and print materials about their experience. Students will also bring to bear or gain experience in non-academic skills/talents/ interests in areas like photography, image editing, video production, writing, design, website development, sound recording, and art, etc., by doing community service under the auspices of Carnegie Mellon University's Alternative Break program. Students will earn three (3) units for full participation and fulfillment of course requirements. With the approval of the faculty facilitator, an additional three (3) units may be earned by completing an additional assignment.

82-501 Special Topics in French & Francophone Studies
Fall
Restricted to language majors who wish to go beyond the regular course offerings in French and Francophone Studies involving group or individual study in a subject area approved by the instructor.

82-502 Special Topics in French & Francophone Studies
Spring
Restricted to language majors who wish to go beyond the regular course offerings in French and Francophone Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course

82-505 Undergraduate Internship
Intermittent
Approved upper-class language majors may receive credit in connection with work experience related to language learning and language use outside of the classroom setting. As a rule, this experience takes the form of work involving language use or research related to language study at off-campus sites or in the Department. Work or research must be done using the language of study. For off-campus internships, there must be an on-site supervisor appointed to collaborate with the faculty advisor in the final evaluation of the student's work and progress. The student will be responsible for three written reports evaluating the non-classroom experience with the language of study and several other criteria. Students must obtain prior approval for proposed work. Prerequisites: Permission of target faculty member and the Modern Languages internship advisor

82-506 Hispanic Studies Internship
Fall and Spring
Pre-approved, advanced Hispanic Studies majors may receive credit in connection with volunteer or paid work experience (usually in Pittsburgh) in which they primarily or significantly use their target language outside the traditional classroom setting. As a rule, this experience takes the form of work involving language use or research at off-campus sites or in the Department. Work or research must be done using the language of study. For off-campus internships, there must be an on-site supervisor available to collaborate with the faculty advisor in the ongoing and final evaluation of the student's work and progress. Students will be required to write and submit reflexive projects, as determined by the faculty advisor, that evaluate the non-classroom experience in the context of the language- and cultural-learning experience and several other criteria that show how the internship connects back to the student's academic or professional education. Prerequisite: Students must be advanced Hispanic Studies majors and obtain prior permission for the proposed work from a Hispanic Studies advisor and/or the Modern Languages internship advisor.

82-511 Special Topics in Arabic Studies
Fall: 9 units
This repeatable course explores the Arabic language and culture through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills.

82-512 Special Topics: Arabic Language & Culture
Spring
This repeatable course explores the Arabic language and culture through a thematic or conceptual focus. Students critically analyze authentic documents through, for example, historical, biographical, filmic, artistic, literary, musical, and theoretical perspectives, while improving and expanding their language skills. Prerequisite: 82-411 or placement.

82-521 Special Topics: German Studies
Fall
Restricted to language majors who wish to go beyond the regular course offerings in German Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course

82-522 Special Topics: German Studies
Spring
Restricted to language majors who wish to go beyond the regular course offerings in German Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course
Prerequisites: 82-427 or 82-428 or 82-438 or 82-437 or 82-436 or 82-435 or 82-431 or 82-429 or 82-430

82-531 Special Topics in Chinese Studies
Fall
Restricted to language majors who wish to go beyond the regular course offerings in Chinese Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of instructor and a 400-level course
Prerequisites: 82-436 Min. grade C or 82-434 Min. grade C or 82-433 Min. grade C or 82-440 Min. grade C

82-532 Special Topics in Chinese Studies
Spring
Restricted to language majors who wish to go beyond the regular course offerings in Chinese Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of instructor and a 400-level course

82-533 Cultural Topics in Chinese Studies
Fall: 9 units
F18: Visions of China: Modern Chinese Society and Culture through Documentary Films and New Media People who study China often cherish a secret desire to discover the "real China," which they believe could have been revealed through close examination its different forms of representations, such as history, arts, literature, news reports, or films. While the existence of this so-called "reality" and its ultimate discovery are still very much in question, there are indeed some forms, in which China is presented or represented in a much less embellished, dramatized, stereotyped, albeit no less complex and intriguing way. By way of watching, analyzing and discussing a variety of documentary films and TV shows made with a documentary touch, this course encourages students to develop in-depth knowledge of modern Chinese society and culture in the closest proximity to its bare "reality." The course will use a thematic approach to cover different social and cultural issues that China is facing nowadays, including the harmony/conflicts between human and nature, the social/economic gap between city and countryside, the rise of the second generation of the nouveau riche, a humanitarian tale from the AIDS village, the life of foreigners in Chinese society, and so on. Secondary readings in English and Chinese about these social and cultural issues will be provided. All classroom discussions and course projects will be given or conducted in Chinese and/or English. Students are expected to have excellent Chinese listening and speaking skills and very good writing and reading skills, in order to fully grasp the content of this course.To promote intercultural communications, the course welcomes and invites participation of native Chinese speakers and cross-cultural peer learning.
Prerequisites: 82-433 Min. grade C and 82-434 Min. grade C

82-541 Special Topics: Hispanic Studies
Fall
Restricted to language majors who wish to go beyond the regular course offerings in Hispanic Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course

82-542 Special Topics in Hispanic Studies
Spring
Restricted to language majors who wish to go beyond the regular course offerings in Hispanic Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course

82-561 Special Topics: Italian Studies
Fall
Restricted to language majors who wish to go beyond the regular course offerings in Italian Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course

82-562 Special Topics: Italian Studies
Spring
Restricted to language majors who wish to go beyond the regular course offerings in Italian Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course

82-571 Special Topics in Japanese Studies
Fall
Restricted to language majors who wish to go beyond the regular course offerings in Japanese Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course

82-572 Special Topics in Japanese Studies
Spring
Restricted to language majors who wish to go beyond the regular course offerings in Japanese Studies involving group or individual study in a subject area approved by the instructor. Prerequisites: Permission of the instructor and a 400-level course

82-580 Senior Seminar in Modern Languages
Spring: 3 units
This mini-seminar for majors in Modern Languages focuses on general issues in second language learning. It provides an integrative and culminating experience for students as they complete their studies. The course includes consideration of language learning and language maintenance, the role of second languages in American life, issues of linguistic and cultural diversity in the United States today and discussions of multiculturalism throughout the world. The goal of the seminar is for students to reflect upon their language learning experience and to discuss the role that a second language plays in their own lives and in American society today. Corequisite: Open only to Modern Languages majors

82-585 Topics in Second Language Acquisition
Intermittent: 9 units
This repeatable course promotes inquiry into issues related to second language acquisition, for example, use of technology in language learning, language variation, code-switching, pragmatics, sociocultural theory. Students will engage in research and project work and employ qualitative and/or quantitative research methodology and analytical and/or empirical methods to illuminate and understand the acquisition, use, and maintenance of second languages. Prerequisite: Permission of instructor SPRING 2016 Section B: East Asian Psycholinguistics Our understanding of cognitive processes and mechanisms underlying language has primarily come from studies of European languages. However, languages such as Chinese, Japanese and Korean offer profound implications for the acquisition, representation, and processing of language, due to their differences from most European languages. Topics include first and second language acquisition, spoken word recognition, reading, language disorders, and the relationships between language, culture, and cognition. This course serves to prepare students for more advanced studies of East Asian languages, experimental linguistics, and linguistic theory.

82-591 Modern Languages Honors Thesis
Fall: 9 units
Modern Languages majors with outstanding academic records and intellectual promise will be given the opportunity to undertake original research under the direction of an individual faculty member. Students and faculty select the research topics. Prerequisites: Senior standing; a 3.5 QPA in one's language major; a 3.25 QPA overall; permission of the Department Head and approved entry into the College's Honors Program

82-592 Modern Languages Honors Thesis
Spring: 9 units
Modern Languages majors with outstanding academic records and intellectual promise will be given the opportunity to undertake original research under the direction of an individual faculty member. Students and faculty select the research topics. Prerequisites: Senior standing; a 3.5 QPA in one's language major; a 3.25 QPA overall; permission of the Department Head and approved entry into the College's Honors Program

82-599 Russian Studies Thesis
Intermittent
The Russian Studies thesis, as described for the Russian Studies major, is required of all Russian Studies majors and consists of researching and writing a thesis employing both Russian-language and English-language sources, and generally completed during the senior year. Work is done individually under the guidance of a Russian Studies advisor.

Department of Philosophy

David Danks, Department Head

Location: Baker Hall 161
www.cmu.edu/dietrich/philosophy

The Department of Philosophy was founded in 1985 and reflects the tradition of philosophy as a central discipline in the humanities. The department has achieved an international reputation through the acclaimed research of its members and its innovative educational programs, not only in traditional topics such as ethics, philosophy of mind, logic, and theory of knowledge, but in such contemporary and applied areas as automated theorem proving, machine learning, the foundations of statistics, causal discovery, forward learning theory, game and decision theory, conflict resolution, and business ethics.

Philosophy thrives through contact with other disciplines. Interdisciplinary work, a traditional strength of the Carnegie Mellon community, is vital to the department and is reflected in the courses we offer, many of which incorporate substantive material from a range of other disciplines. Some courses are actually team-taught with professors from other departments and schools around the university.

Our programs are designed to develop our students' analytical sophistication and their practical and theoretical skills in specializations outside the department (see the sample curricula below). The department welcomes and, indeed, encourages minors and additional majors from other disciplines who are interested in reflecting on the foundation of their own subjects. The department offers two different undergraduate major programs, and jointly sponsors two interdepartmental majors: Ethics, History, and Public Policy (with the Department of History), and Linguistics (with English, Modern Languages, and Psychology):

- the B.A. or B.S. in Ethics, History, and Public Policy (interdisciplinary major with Department of History)
- the B.S. in Logic and Computation
- the B.A. in Philosophy
- the B.A. in Linguistics (interdisciplinary major with Departments of English, Modern Languages, and Psychology)

The major in Logic and Computation is perhaps the most non-traditional of the department's majors. It offers students a firm background in computer science, together with a solid grounding in logic, philosophy, and mathematics. This reflects the department's commitment to the use of formal, analytic methods in addressing philosophical issues. A flexible system of electives allows students to focus their efforts in any of a wide range of disciplines, from engineering to the fine arts. As a capstone to the program, students engage in original research in their senior year, and write a thesis under the direction of an advisor.

The department also sponsors four minor programs:

- the minor in Ethics
- the minor in Linguistics
- the minor in Logic and Computation
- the minor in Philosophy

Finally, the department offers two master's programs directly extending the departmental majors. Both programs are coordinated with and build on the undergraduate programs, so that majors can complete the requirements for the master's degree in one additional year:

- the M.S. in Logic and Computation
- the M.A. in Philosophy

Students who choose the appropriate specialized track in the Logic and Computation major (namely, sample 2 of the Curricula listed below) can be admitted to the M.S. program in Language and Information Technology offered by the School of Computer Science. To complete the discussion of departmental programs, it should be mentioned that the department sponsors as part of the Program in Pure and Applied Logic (offered jointly with the Departments of Computer Science and Mathematics) a Ph.D. in Logic, Computation, and Methodology.

The Major in Ethics, History, and Public Policy

Alex John London, *Director*
Location: Baker Hall 150A
ajlondon@andrew.cmu.edu
www.cmu.edu/dietrich/ehpp

The B.A./B.S. in Ethics, History, and Public Policy is an interdepartmental major offered jointly by the Departments of History and Philosophy. It prepares students for leadership positions by providing them with a rigorous, interdisciplinary humanistic and social-scientific education. It also serves as an excellent springboard for graduate study in a wide variety of disciplines such as law, public policy, ethics, and advocacy. The program focuses equally on the historical understanding of how modern-day problems have evolved, and the importance of developing clear criteria for ethical decision-making. The capstone project course provides students with the opportunity to engage with real-world public policy challenges using the methods, theories, and knowledge that they have gained through the major. Offered jointly by the departments of History and Philosophy, the B.A./B.S. in EHPP encourages specialization, internship experiences, and research in a wide range of policy areas.

Curriculum

Students graduating with a primary major in Ethics, History, and Public Policy may elect to receive either a Bachelor of Arts or a Bachelor of Science Degree (additional requirements apply; see below). Basic requirements include 120 units encompassing 9 units in Economics, 36 units in History, 36 units in Philosophy, 27 units of elective courses, and a 12-unit senior capstone course. This program may also be taken as an additional (e.g., second) major. All courses toward the major must be taken for a letter grade, and 79-300 must be passed with a grade of "C" or better. Students can double count any course for the major with another major or minor, with the exception of Social and Political History, for which a student can double count a maximum of two courses.

I. Foundations of Public Policy 9 units

Choose one 9-unit course from the list below.

73-102	Principles of Microeconomics	9
84-104	Decision Processes in American Political Institutions	9
84-110	Foundations of Political Economy	9

II. History Core 36 units

Choose one 9-unit course from each category below:

Policy History (9 units)

79-300	Guns in American History: Culture, Violence, and Politics	9

U.S. History (9 units)

79-240	Development of American Culture	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-249	20th & 21st Century U.S. History	9
79-320	Women, Politics, and Protest	9

Non-U.S. History (9 units)

79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-205	20th Century Europe	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9

79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-237	Comparative Slavery	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-264	Tibet and China: History and Propaganda	6
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-307	Religion and Politics in the Middle East	9

History Elective (9 units)

Take at least 9 additional units in the History Department with course number 79-200 or above. The following courses may not count: 79-400, 79-420, 79-449, 79-491, 79-505, 79-506.

III. Philosophy Core — 36 units

Choose one 9-unit course from each category below. No more than 9 units at the 100 level may be counted toward the Philosophy Core.

Ethics (9 units)

80-130	Introduction to Ethics	9
80-330	Ethical Theory	9

Political Philosophy (9 units)

80-135	Introduction to Political Philosophy	9
80-335	Social and Political Philosophy	9

Foundations of Social Science (9 units)

80-221	Philosophy of Social Science	9
80-321	Causation, Law, and Social Policy	9
80-324	Philosophy of Economics	9

Applied Philosophy (9 units)

80-136	Social Structure, Public Policy & Ethics	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-249	AI, Society, and Humanity	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

IV. Senior Capstone Project Course — 12 units

79-449	EHPP Project Course [cross-listed]	12
80-449	EHPP Project Course	12

The Ethics, History and Public Policy Project Course is required for the Ethics, History and Public Policy major and is taken in the fall semester of the senior year. In this capstone course, Ethics, History and Public Policy majors carry out a collaborative research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis. The students develop an original research report based on both archival and contemporary policy analysis and they present their results to a client organization in the community.

V. Elective Courses — 27 units

Choose any three courses (at least 27 units) from any category or categories shown below. Substitution of elective courses that cohere with a student's interest or concentration may be allowed after consultation with and approval from the Director.

Engineering and Public Policy (some courses have prerequisites; see EPP catalog listing)

19-424	Energy and the Environment	9

Business

70-311	Organizational Behavior	9
70-321	Negotiation and Conflict Resolution	9
70-332	Business, Society and Ethics	9
70-364	Business Law	9
70-365	International Trade and International Law	9
70-430	International Management	9

Economics (some courses have prerequisities; see Economics catalog listing)

73-352	Public Economics	9
73-359	Benefit-Cost Analysis	9
73-365	Firms, Market Structures, and Strategy	9
73-372	International Money and Finance	9
73-408	Law and Economics	9
73-476	American Economic History	9

English

76-492	Rhetoric of Public Policy	9

History

Courses from the EHPP History Core (above) may be taken as electives only if they are not being used to fulfill the core requirement. Double counting is not permitted.

79-206	Crime and Punishment in Early Modern Europe	9
79-228	The Civil Rights Movement and the World	9
79-233	The United States and the Middle East since 1945	9
79-234	Technology and Society	9
79-242	African American History: Reconstruction to the Present	9
79-247	African Americans, Imprisonment, and the Carceral State	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-298	Mobile Phones & Social Media in Development & Human Rights: A Critical Appraisal	6
79-299	From Newton to the Nuclear Bomb: History of Science, 1750-1950	9
79-301	History of Surveillance: From the Plantation to Data Capitalism	6
79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
79-303	Pittsburgh and the Transformation of Modern Urban America	6
79-305	Moneyball Nation: Data in American Life	9
79-310	Modern U. S. Business History: 1870 to the Present	9
79-315	Thirsty Planet: The Politics of Water in Global Perspective	9
79-320	Women, Politics, and Protest	9
79-322	Stalin and the Great Terror	9
79-325	U.S. Gay and Lesbian History	6
79-330	Medicine and Society	9
79-331	Body Politics: Women and Health in America	9
79-336	Oil & Water: Middle East Perspectives	6
79-338	History of Education in America	9
79-339	Juvenile Delinquency & Film: From Soul of Youth (1920) to West Side Story (1961)	6
79-340	Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)	6
79-342	Introduction to Science and Technology Studies	9
79-343	Education, Democracy, and Civil Rights	9
79-349	United States and the Holocaust	6
79-370	Disasters in American History (2):Epidemics & Fires	6
79-371	African American Urban History	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
79-397	Environmental Crises and the City	6

Philosophy

Courses from the EHPP Philosophy Core (above) may be taken as electives only if they are not being used to fulfill the core requirement. Double counting is not permitted.

80-256	Modern Moral Philosophy	9

80-305	Choices, Decisions, and Games	9
80-405	Game Theory	9

Institute for Politics and Strategy

84-310	International Political Economy	9
84-380	Grand Strategy in the United States	9
84-393	Legislative Decision Making: US Congress	6
84-402	Judicial Politics and Behavior	6

Social and Decision Sciences

88-223	Decision Analysis	12
88-281	Topics in Law: 1st Amendment	9
88-444	Public Policy and Regulation	9

VI. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Director of EHPP to accept equivalent courses as substitutions.

21-257	Models and Methods for Optimization	9
36-202	Statistics & Data Science Methods	9
or 36-208	Regression Analysis	
or 70-208	Regression Analysis	
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
70-257	Optimization for Business	9
80-305	Choices, Decisions, and Games	9
80-405	Game Theory	9
84-265	Political Science Research Methods	9
88-251	Empirical Research Methods	9
88-221	Analytical Foundations of Public Policy	9
88-223	Decision Analysis	12
88-300	Programming and Data Analysis for Social Scientists	9

Additional Major

The B.A./B.S. in Ethics, History, and Public Policy may be scheduled as an additional major in consultation with the Director of Ethics, History, and Public Policy, Professor Alex John London, ajlondon@andrew.cmu.edu.

Ethics, History, and Public Policy Sample Curriculum

Junior Year		Senior Year	
Fall	**Spring**	**Fall**	**Spring**
Core requirement in Economics	Core requirement in History or Philosophy	Capstone Course	EHPP Elective Course
Core requirement in History or Philosophy	Core requirement in History or Philosophy	EHPP Elective Course	Second Course (open)
Core requirement in History or Philosophy	Core requirement in History or Philosophy	EHPP Elective Course	Third Course (open)
Core requirement in History or Philosophy	Core requirement in History or Philosophy	Fourth Course (open)	Fourth Course (open)
Core requirement in History or Philosophy	Fifth Course (open)	Fifth Course (open)	Fifth Course (open)

The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be. Students may enter the EHPP major, and begin major course requirements, as early as the start of the sophomore year, or even in the first year. Students should consult their advisor when planning their program.

The Major in Linguistics

Tom Werner, *Director*
Location: Baker Hall 155F
twerner@andrew.cmu.edu
www.cmu.edu/dietrich/linguistics

Linguistics is the study of human language, and it encompasses a broad spectrum of research questions, approaches and methodologies. Some linguists are concerned with the cognitive aspects of language learning, production and comprehension; some are concerned with language as a social and cultural phenomenon; others engage in the analysis of linguistic form and meaning, some from a functional and others from a formal perspective. There are also computational approaches to linguistics with both applied and theoretical goals.

The major in Linguistics reflects the multidisciplinary character of the field and of the Linguistics faculty here at Carnegie Mellon, offering a program which provides students with the fundamental tools of linguistic analysis while maintaining a focus on the human context in which language is learned and used. The major is available as either a primary major or an additional major. It is an ideal choice for students with a general interest in their own or other languages, and combines well thematically with studies in any of the departments represented in the major.

Curriculum

The Linguistics primary major requires a total of 12 courses plus a senior thesis. The Linguistics additional major requires at total of 13 courses. This includes 2 semesters of language study for all majors. At least three courses (not including specific language courses) must be at the 300-level or higher. All courses counted towards the major must be taken for a letter grade and passed with a grade of "C" or above. Students may double count any course for the major simultaneously with another major or minor.

Linguistics Core (36 units)

Complete the following requirements.

80-180	Nature of Language	9
80-282	Phonetics and Phonology I	9
80-280	Linguistic Analysis	9
or 80-285	Natural Language Syntax	
80-381	Meaning in Language	9
or 80-383	Language in Use	

Extended Core (27 units)

Choose three courses (27 units) from Extended Core and/or additional courses from Linguistics Core.

80-283	It Matters How You Say It	9
80-284	Invented Languages	9
80-286	Words and Word Formation: Introduction to Morphology	9
80-287	Language Variation and Change	9
80-288	Intonation: Transcription and Analysis	9
80-382	Phonetics and Phonology II	9
80-384	Linguistics of Turkic Languages	9
80-385	Linguistics of Germanic Languages	9
80-388	Linguistic Typology: Diversity and Universals	9

Electives

Primary majors choose **three** additional electives (27 or more units). Additional majors choose **four** additional electives (36 or more units). *Primary majors see thesis requirement below.*

These can be **additional courses from the Core or Extended Core courses listed above**, **the electives list below**, or any other course which is approved by the Director as a linguistics elective. Listed below are the additional electives taught on a regular basis. **Additional appropriate courses** are offered irregularly or on a one-off basis. The Director will provide students with a list of possible electives each semester, and will assist students in selecting electives which are consistent with their goals and interests.

Philosophy

80-380	Philosophy of Language	9
80-484	Language and Thought	9

English		
76-318	Communicating in the Global Marketplace	9
76-325	Intertextuality	9
76-385	Introduction to Discourse Analysis	9
76-386	Language & Culture	9
76-389	Rhetorical Grammar	9

Modern Languages		
82-283	Language Diversity & Cultural Identity	9
82-305	French in its Social Contexts	9
82-373	Structure of the Japanese Language	9
82-383	Second Language Acquisition: Theories and Research	9
82-585	Topics in Second Language Acquisition	9

Psychology		
85-354	Infant Language Development	9
85-421	Language and Thought	9

Language Technologies Institute		
11-411	Natural Language Processing	12
11-423	ConLanging: Lrng. Ling. & Lang Tech via Constru Artif. Lang.	12
11-492	Speech Processing	12
11-661	Language and Statistics	12
11-722	Grammar Formalisms	12

Language Requirement

Students must successfully complete two semesters of consecutive language courses. (Note that students may not 'test out' of this requirement. However, language courses taken at other institutions or as part of a study abroad program will typically substitute for a semester of language study.)

Senior Thesis [primary majors only]

Primary majors must complete a senior thesis (a workload equivalent to a 12-unit course) during their senior year. Topics must be approved by an advisor, who will work with the student and guide the thesis project. Students are responsible for identifying their topic and securing their thesis advisor. Students should work with the director of the major to begin the process of identifying their thesis topic and advisor during the fall of their senior year at the latest. Students will be required to submit a written proposal of their thesis project, signed by their thesis faculty advisor, before the end of the second week of classes in which the thesis is being completed.

Note

- All 11-xxx courses have significant Computer Science prerequisites. Interested students should check with the course instructor before registering.

The Major in Logic and Computation

Joel Smith, *Director*
Location: Baker Hall 161C
joelms@cmu.edu
www.cmu.edu/dietrich/philosophy/undergraduate/logic-and-computation

The Logic and Computation curriculum takes advantage of the preparation provided by the Dietrich College General Education Program in mathematics, philosophy, psychology, and statistics. It is flexible in that it permits students to focus on any of a number of areas including (but not limited to):

- computer science;
- language and information technology;
- artificial intelligence and cognitive science;
- logic and the foundations of mathematics;
- methodology and philosophy of science.

Students in the program take a common core of courses in logic, methodology, and computer science, together with an associated seminar in their senior year. The individual focus is achieved by selecting a sequence of four advanced and closely related courses. It is in this area of focus (or specialization) that students write their senior thesis under the supervision of a faculty member. A number of sample curricula are presented below.

The resulting education in logic, analytic philosophy, mathematics, statistics, and computer science enables students to pursue professional careers or graduate study. The analytic and communication skills developed in the major support a wide range of career choices, including those among the fields of technology, business, and law. Fields of graduate study for which students are well prepared include, for example, computer science, cognitive science, philosophy, logic, and linguistics.

Students who are interested in pursuing this major, or who are pursuing it already, should take note of the Cognitive Science major in the Department of Psychology. That major is so closely related that it is not difficult to pursue it as an additional major, and it provides an intellectually exciting complement.

Curriculum

Logic and Computation is a B.S. degree. In their freshman and sophomore years, students are expected to take three courses that provide preparation in computer science, mathematics, and statistics: 15-112 Fundamentals of Programming and Computer Science, 21-127 Concepts of Mathematics, 36-201 Statistical Reasoning and Practice (or 36-200 Reasoning with Data). 80-211 Logic and Mathematical Inquiry is part of the major's Core Requirements, but should be taken no later than the spring of the sophomore year. This also applies to the computer science sequence 15-122 and 15-150.

NOTE: Students should complete the prerequisites before their junior year. It is strongly recommended that students take 80-211 Logic and Mathematical Inquiry no later than the spring of their sophomore year and, if possible, also 15-122 and 15-150. However, with suitable planning and advice from the program director, it is possible to complete the program in two years, beginning in the junior year.

The course requirements for the major consist of seven core courses (including the Senior Thesis) and four electives. The core courses provide comprehensive background in logic, computability, and analytic philosophy. 80-310 Formal Logic and 80-150 Nature of Reason must be taken no later than the fall of the junior year. Four advanced electives are chosen in the area of focus, and should support independent research towards fulfilling the senior thesis requirement. In their senior year, students engage in original research under the supervision of a faculty advisor in 80-595 Senior Thesis (a workload equivalent of 12 units). Students are responsible for identifying a thesis topic and securing a faculty advisor prior to the start of the semester in which they plan to complete the thesis. Students should work with the program director during their junior year to begin the process of identifying their topic and potential advisors.

All courses, if taken at CMU, must be taken for a letter grade and passed with a grade of "C" or above. Students may double count any course for the major with another major or minor.

Prerequisites		29 units
15-112	Fundamentals of Programming and Computer Science	12
21-127	Concepts of Mathematics	10
36-200	Reasoning with Data	9

Logic and Computation Core		69–71 units
80-150	Nature of Reason	9
80-211	Logic and Mathematical Inquiry	9
80-310	Formal Logic	9
80-311	Undecidability and Incompleteness	9
15-122	Principles of Imperative Computation	10
15-150	Principles of Functional Programming	10
80-595	Senior Thesis	Var.

Logic and Computation Electives 36 units

Bearing in mind prerequisites, Logic and Computation majors must complete four advanced courses in areas that use logical and computational tools, such as philosophy, computer science, linguistics, mathematical logic, psychology, or statistics. The sequence of courses, mostly at the 300-level, must be selected in consultation with the program director.

Sample Curricula

Here are five samples of Logic and Computation curricula (beyond the core courses), each reflecting a different emphasis.

Sample 1.
A student interested in Computer Science might take the following courses:

80-315	Modal Logic	9
80-413	Category Theory	9
15-312	Foundations of Programming Languages	12
15-317	Constructive Logic	9

Sample 2.
A student interested in Language and Information Technology might take the following courses:

80-280	Linguistic Analysis	9
80-281	Language and Thought	9
80-381	Meaning in Language	9
80-383	Language in Use	9
80-580	Seminar on the Philosophy of Language	9

Sample 3.
A student interested in Artificial Intelligence and Cognitive Science might take the following courses:

80-314	Causal Discovery, Statistics, and Machine Learning	9
80-315	Modal Logic	9
80-411	Proof Theory	9
85-412	Cognitive Modeling	9

Sample 4.
A student interested in Logic and the Foundations of Mathematics might consider the following courses:

80-254	Analytic Philosophy	9
80-312	Mathematical Revolutions	9
80-411	Proof Theory	9
80-413	Category Theory	9

Sample 5.
A student interested in Methodology might consider the following courses:

80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-321	Causation, Law, and Social Policy	9
36-309	Experimental Design for Behavioral & Social Sciences	9

Logic and Computation Degree Requirements (minimum)	**360 units**

Logic and Computation as a Second Major

The Logic and Computation major is also suitable as a second major for students in Dietrich College or for students in other colleges within the university. Non-Dietrich students interested in an additional major in Logic and Computation need to take only those courses in the Dietrich College General Education Program that are prerequisites to courses required in the major; all other Dietrich College General Education requirements are waived for these students. Depending on the student's background, the requirements of the second major in Logic and Computation can be fulfilled with as few as five additional courses. The Philosophy Department does not limit the number of courses that can be counted for other majors and minors around the university.

The M.S. Program in Logic and Computation

The Department of Philosophy also offers a graduate M.S. degree in Logic and Computation, which culminates with the writing of a master's thesis. It is ordinarily a two-year program, but students in the Logic and Computation major are able to complete the additional requirements in one year. Interested students are invited to contact the department for further information and to apply to the program in their senior year. Details can be found on the department's website: www.cmu.edu/dietrich/philosophy.

The Major in Philosophy

Joel Smith, *Director*
Location: Baker Hall 161C
joelms@cmu.edu
www.cmu.edu/dietrich/philosophy/undergraduate/philosophy

The Major in Philosophy is intended to be flexible and to facilitate additional majors in other fields (including majors with a strong professional focus). It provides students with a broad humanities education and sharpens their analytical skills. We encourage, but do not require, students to choose a thematic concentration through their electives. Sample curricula emphasizing Pre-Law, Metaphysics and Epistemology, Ethics and Social Philosophy, and Philosophy of Mind are suggested below. However, alternative emphases can be proposed and approved by the Director. The Major in Philosophy is a B.A. degree.

Curriculum

In addition to the general education requirements for the student's college, Philosophy primary majors and additional majors must complete 80-100 Introduction to Philosophy and nine Philosophy courses in the Areas listed below. The 80-100 requirement must be fulfilled before the first semester of the junior year. Only two of the remaining nine courses may be at the 100-level, and two of the nine courses must be at the 300-level or higher. All ten courses, if taken at CMU, must be taken for a letter grade and passed with a grade of "C" or above. Courses from other universities, as well as an 80-100 skills test, may be substituted with permission of the Director. Students are to choose one course out of each of the Areas 1-4, two courses out of Area 5, and may freely select three courses in Area 6. Students may double count any course for the major with another major or minor. As per the requirement of Dietrich College, a student's Freshman Seminar course may not count toward the fulfillment of the major requirements.

Introduction to Philosophy — 9 units

80-100	Introduction to Philosophy	9

Area 1: Values and Normative Theory — 9 units

One of the following:

80-130	Introduction to Ethics	9
80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-248	Engineering Ethics	9
80-249	AI, Society, and Humanity	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-430	Ethics and Medical Research	9
80-447	Global Justice	9

Area 2: Philosophy of Mind/Language/Metaphysics — 9 units

One of the following:

80-180	Nature of Language	9
80-270	Philosophy of Mind	9
80-271	Philosophy and Psychology	9
80-276	Philosophy of Religion	9
80-280	Linguistic Analysis	9
80-281	Language and Thought	9
80-282	Phonetics and Phonology I	9
80-283	It Matters How You Say It	9
80-284	Invented Languages	9
80-286	Words and Word Formation: Introduction to Morphology	9
80-288	Intonation: Transcription and Analysis	9
80-371	Philosophy of Perception	9
80-380	Philosophy of Language	9
80-381	Meaning in Language	9
80-382	Phonetics and Phonology II	9
80-383	Language in Use	9
80-384	Linguistics of Turkic Languages	9
80-385	Linguistics of Germanic Languages	9
80-388	Linguistic Typology: Diversity and Universals	9
80-580	Seminar on the Philosophy of Language	9

Area 3: Logic/Philosophy of Mathematics — 9 units

One of the following:

80-210	Logic and Proofs	9
80-211	Logic and Mathematical Inquiry	9
80-214	Computing, AI, and Philosophy	9
80-310	Formal Logic	9
80-311	Undecidability and Incompleteness	9
80-312	Mathematical Revolutions	9
80-314	Causal Discovery, Statistics, and Machine Learning	9
80-315	Modal Logic	9
80-411	Proof Theory	9
80-413	Category Theory	9
80-419	Interactive Theorem Proving	9
80-513	Seminar on Philosophy of Mathematics	9
80-514	Categorical Logic	9

Area 4: Epistemology — 9 units

One of the following:

80-150	Nature of Reason	9
80-201	Knowledge and Justified Belief	9
80-208	Critical Thinking	9
80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-222	Measurement and Methodology	9
80-223	Causality and Probability	9
80-224	Race, Gender and Science	9
80-226	Revolutions in Science	9
80-305	Choices, Decisions, and Games	9
80-321	Causation, Law, and Social Policy	9
80-322	Philosophy of Physics	9
80-323	Philosophy of Biology	9
80-324	Philosophy of Economics	9
80-327	Philosophy of Neuroscience	9
80-405	Game Theory	9
80-515	Seminar on the Foundations of Statistics	9
80-516	Causality and Learning	Var.
80-520	Seminar on Philosophy Science	9
80-521	Seminar on Formal Epistemology	9

Area 5: History of Philosophy — 18 units

Two of the following:

80-150	Nature of Reason	9
80-226	Revolutions in Science	9
80-250	Ancient Philosophy	9
80-251	Modern Philosophy	9
80-252	Kant	9
80-253	Continental Philosophy	9
80-254	Analytic Philosophy	9
80-255	Pragmatism	9
80-256	Modern Moral Philosophy	9
80-257	Nietzsche	9
80-261	Experience, Reason, and Truth	9
80-263	Approaching Chinese Philosophy: Basic Texts and Implications	9
80-358	Hume	9
80-362	Russell	9
80-363	19th Century Foundations of Science	9

Area 6: Elective — 27 units

Three other philosophy courses, or appropriate courses from other departments, with the permission of the Director.

Sample Curricula

Here are four sample curricula, reflecting different emphases.

1. For an emphasis on Law & Social Policy, a student might take:

Area 1		
80-335	Social and Political Philosophy	9
Area 2		
80-180	Nature of Language	9
Area 3		
80-211	Logic and Mathematical Inquiry	9
Area 4		
80-208	Critical Thinking	9
Area 5		
80-150	Nature of Reason	9
80-250	Ancient Philosophy	9
Area 6		
80-321	Causation, Law, and Social Policy	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

2. For an emphasis on Philosophy of Science, a student might take:

Area 1		
80-136	Social Structure, Public Policy & Ethics	9
Area 2		
80-371	Philosophy of Perception	9
Area 3		
80-211	Logic and Mathematical Inquiry	9
Area 4		
80-220	Philosophy of Science	9
or 80-221	Philosophy of Social Science	
Area 5		
80-250	Ancient Philosophy	9
80-226	Revolutions in Science	9
Area 6		
80-150	Nature of Reason	9
80-221	Philosophy of Social Science	9
80-322	Philosophy of Physics	9
80-323	Philosophy of Biology	9

3. For an emphasis on Ethics and Social Philosophy, a student might take:

Area 1		
Area 2		
80-276	Philosophy of Religion	9
Area 3		
80-110	Nature of Mathematical Reasoning	9
Area 4		
80-221	Philosophy of Social Science	9
or 80-321	Causation, Law, and Social Policy	
Area 5		
80-250	Ancient Philosophy	9
Area 6		
80-321	Causation, Law, and Social Policy	9

4. For an emphasis on Philosophy of Mind, a student might take:

Area 1		
80-130	Introduction to Ethics	9
Area 2		
80-270	Philosophy of Mind	9
Area 3		
80-211	Logic and Mathematical Inquiry	9
Area 4		
80-201	Knowledge and Justified Belief	9
Area 5		
80-251	Modern Philosophy	9
Area 6		
80-257	Nietzsche	9
80-371	Philosophy of Perception	9
80-521	Seminar on Formal Epistemology	Var.

Additional Major

Students who want an additional major in Philosophy must fulfill the same departmental requirements as primary majors in Philosophy. Students can double count any course for the major with another major or minor.

The M.A. Program in Philosophy

The Department of Philosophy also offers a graduate M.A. degree in Philosophy, which culminates with the writing of a master's thesis. It is ordinarily a two-year program, but students in the Philosophy major are able to complete the additional requirements in one year. Interested students are invited to visit the department's homepage (http://www.cmu.edu/dietrich/philosophy) for further information.

Philosophy Department Minors

All majors in the Department allow for minors; in addition, there is a Minor in Ethics and an interdepartmental minor in Linguistics. The requirements are again designed to be flexible and to allow students to tailor courses to their special interests, while providing some breadth.

The Minor in Ethics

With the explosive growth of science and technology have come both new possibilities and new problems. Developments in medicine, in biology, in chemistry, in nuclear engineering or in computer science all have costs as well as benefits, and they present us with many hard choices. Some of the hardest of these new problems are moral problems.

The Philosophy Department's Minor in Ethics introduces students to central ethical concepts and theories proposed and defended by the great philosophers of the past; it provides an understanding of how these theories and concepts can be applied to practical problems. This background in ethical theory and its applications should help students to respond more sensitively and appropriately to the new and unavoidable ethical problems that technologies, businesses, unions, and branches of government must face.

Curriculum

Ethics minors must complete five philosophy courses in the areas listed below. All five required courses, if taken at CMU, must be taken for a letter grade and passed with a grade of a "C" or above, except 80-294 Ethics Internship / Practicum, which may be taken pass/fail.

Ethics Core Courses — 27 units

Complete three courses from any of the following areas with at least two courses at the 200-level or higher.

80-130	Introduction to Ethics	9
80-135	Introduction to Political Philosophy	9
80-136	Social Structure, Public Policy & Ethics	9
80-241	Ethical Judgments in Professional Life	9
80-242	Conflict and Dispute Resolution *	9
80-243	Ethics of Leadership *	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-248	Engineering Ethics	9
80-249	AI, Society, and Humanity	9
80-330	Ethical Theory	9
80-335	Social and Political Philosophy	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-430	Ethics and Medical Research	9
80-431	Meta-ethics	9
80-447	Global Justice	9

Ethics Electives — 18 units

Complete two courses at the 200-level or higher. These courses may be additional courses from Ethics Core list above. Other applicable philosophy courses include the following: 80-294 or 80-495

Appropriate courses in ethics from other departments may count with the permission of the faculty advisors for this minor.

*Courses typically only offered on the CMU-Q campus.

The Minor in Linguistics

The Interdepartmental Minor in Linguistics is jointly sponsored with the departments of English, Modern Languages, and Psychology. It synthesizes the linguistics related offerings in these departments and provides students with an academic experience that reflects both the interdisciplinary character of the subject and its cross-departmental representation in Dietrich College. Students who wish to receive a minor in Linguistics must complete six courses: the introductory linguistics course; two fundamental skills courses; and three additional electives. All courses counted towards the minor must be taken for a letter grade and passed with a grade of "C" or above.

Introductory Course — 9 units

80-180	Nature of Language	9

Fundamental Skills — 18 units

Take **one** course from **two** of the following core subject areas:

Sounds		
80-282	Phonetics and Phonology I	9
Structure		
76-389	Rhetorical Grammar	9
80-280	Linguistic Analysis	9
80-285	Natural Language Syntax	9
Meaning		
80-381	Meaning in Language	9
80-383	Language in Use	9
76-385	Introduction to Discourse Analysis	9
or 76-484	Discourse Analysis	

Electives — 27 units

Take three additional linguistics courses. These can be additional courses from the Fundamental Skills categories above, or any other course that is approved by the Director as a Linguistics elective. For electives taught on a regular basis, see the courses listed as Breadth or Electives in the Undergraduate Catalog for the Linguistics major.

The Minor in Logic and Computation

The Minor in Logic and Computation provides students with general course work in logic, the theory of computation, and philosophy. Students must complete six courses, among them the following three core courses.

Logic and Computation Core Courses — 27 units

80-150	Nature of Reason	9
80-211	Logic and Mathematical Inquiry	9
or 80-210	Logic and Proofs	
80-310	Formal Logic	9
or 80-311	Undecidability and Incompleteness	

Logic and Computation Electives — 27 unts

Students must take two courses in the Philosophy Department at the 300-level or higher, in subjects related to logic and computation, and an additional course at the 300-level or higher in an area that uses logical and computational tools, such as philosophy, computer science, linguistics, mathematics, psychology, or statistics. The choice of electives must be approved by the program director.

The Minor in Philosophy

The Minor in Philosophy allows students to complement their primary majors with a broad philosophical grounding.

Logic/Methodology Requirements — 9 units

Complete one course:		Units
80-110	Nature of Mathematical Reasoning	9
80-210	Logic and Proofs	9

80-211	Logic and Mathematical Inquiry	9
80-214	Computing, AI, and Philosophy	9
80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-222	Measurement and Methodology	9
80-223	Causality and Probability	9
80-226	Revolutions in Science	9
80-310	Formal Logic	9
80-311	Undecidability and Incompleteness	9
80-312	Mathematical Revolutions	9
80-314	Causal Discovery, Statistics, and Machine Learning	9
80-315	Modal Logic	9
80-321	Causation, Law, and Social Policy	9
80-322	Philosophy of Physics	9
80-323	Philosophy of Biology	9
80-324	Philosophy of Economics	9
80-411	Proof Theory	9
80-413	Category Theory	9
80-513	Seminar on Philosophy of Mathematics	9
80-514	Categorical Logic	9
80-515	Seminar on the Foundations of Statistics	9
80-516	Causality and Learning	Var.
80-520	Seminar on Philosophy Science	9
80-521	Seminar on Formal Epistemology	Var.

History of Philosophy Requirements 18 units

Complete two courses:		Units
80-150	Nature of Reason	9
80-226	Revolutions in Science	9
80-250	Ancient Philosophy	9
80-251	Modern Philosophy	9
80-252	Kant	9
80-253	Continental Philosophy	9
80-254	Analytic Philosophy	9
80-255	Pragmatism	9
80-256	Modern Moral Philosophy	9
80-257	Nietzsche	9
80-261	Experience, Reason, and Truth	9
80-263	Approaching Chinese Philosophy: Basic Texts and Implications	9
80-358	Hume	9
80-362	Russell	9
80-363	19th Century Foundations of Science	9

Philosophy Electives 18 units

Complete 18 units in the Philosophy department at the 200-level or higher.

The Honors Program

The Dietrich College Senior Honors Program provides recognition of outstanding performance by students majoring in Philosophy, Logic and Computation or Ethics, History, and Public Policy. Students have the opportunity to develop their skills and to apply their knowledge through completion of an honors thesis in their senior year. By completing the thesis, students earn 18 units of credit and qualify for graduation with College Honors. To qualify for the honors program, students must maintain a quality point average of at least 3.50 in the major and 3.25 overall, and be invited by the department to become a participant.

Undergraduate Research Fellows

Qualified upper level undergraduates, preferably majors in one of the Philosophy Department's programs, may apply to serve in their junior or senior years as fellows in the Laboratory for Symbolic and Educational Computing (LSEC). Applications are reviewed in the fall. Visit LSEC from the Department's website at www.cmu.edu/dietrich/philosophy/research/lsec/fellowships.html, or contact Professors Joseph Ramsey or Wilfried Seig for additional information.

Faculty

JEREMY AVIGAD, Professor of Philosophy – Ph.D., University of California, Berkeley; Carnegie Mellon, 1996–

STEVEN AWODEY, Professor of Philosophy – Ph.D., University of Chicago; Carnegie Mellon, 1997–

ADAM BJORNDAHL, Assistant Professor of Philosophy – Ph.D., Cornell University; Carnegie Mellon, 2014–

SIMON CULLEN, Assistant Teaching Professor of Philosophy – Ph.D., Princeton University ; Carnegie Mellon, 2018–

DAVID DANKS, L.L. Thurstone Professor of Philosophy & Psychology, Department Head – Ph.D., University of California, San Diego; Carnegie Mellon, 2003–

B. R. GEORGE, Assistant Professor of Philosophy – Ph.D., University of California, Los Angeles; Carnegie Mellon, 2014–

MARALEE HARRELL, Teaching Professor of Philosophy – Ph.D., University of California, San Diego; Carnegie Mellon, 2003–

KEVIN T. KELLY, Professor of Philosophy – Ph.D., University of Pittsburgh; Carnegie Mellon, 1985–

ALEX JOHN LONDON, Clara L. West Professor of Ethics and Philosophy – Ph.D., University of Virginia; Carnegie Mellon, 2000–

RICHARD SCHEINES, Professor of Philosophy, Bess Family Dean's Chair of the Dietrich College of Humanities and Social Sciences – Ph.D., University of Pittsburgh; Carnegie Mellon, 1987–

TEDDY I. SEIDENFELD, Herbert A. Simon Professor of Philosophy and Statistics – Ph.D., Columbia University; Carnegie Mellon, 1985–

WILFRIED SIEG, Patrick Suppes Professor of Philosophy – Ph.D., Stanford University; Carnegie Mellon, 1985–

MANDY SIMONS, Professor of Philosophy – Ph.D., Cornell University; Carnegie Mellon, 1998–

JOEL SMITH, Distinguished Career Teaching Professor of Philosophy – Ph.D., University of Pittsburgh; Carnegie Mellon, 2000–

PETER L. SPIRTES, Professor of Philosophy – Ph.D., University of Pittsburgh; Carnegie Mellon, 1987–

DANIELLE WENNER, Assistant Professor of Philosophy – Ph.D., Rice University; Carnegie Mellon, 2013–

THOMAS WERNER, Assistant Teaching Professor of Philosophy – Ph.D., Rutgers University; Carnegie Mellon, 2003–

KUN ZHANG, Assistant Professor of Philosophy – Ph.D., The Chinese University of Hong Kong; Carnegie Mellon, 2015–

KEVIN ZOLLMAN, Associate Professor of Philosophy – Ph.D., University of California, Irvine; Carnegie Mellon, 2009–

Special Faculty

CHRISTINA BJORNDAHL, Teaching Instructor – Ph.D. Candidate, Cornell University; Carnegie Mellon, 2014–

DERRICK GRAY, Teaching Instructor – Ph.D., Rice University; Carnegie Mellon, 2013–

JOSEPH RAMSEY, Director of Research Computing – Ph.D., University of California, San Diego; Carnegie Mellon, 2006–

PATRICK WALSH, Assistant Teaching Professor of Philosophy, Carnegie Mellon-Qatar – Ph.D., Carnegie Mellon; Carnegie Mellon, 2019–

Affiliated Faculty

WAYNE WU, Associate Professor and Associate Director of CNBC – Ph.D., University of California, Berkeley; Carnegie Mellon, 2010–

Emeriti Faculty

ROBERT CAVALIER, Teaching Professor (Emeritus) – Ph.D., Duquesne University; Carnegie Mellon, 1987–

CLARK GLYMOUR, Alumni University Professor of Philosophy (Emeritus) – Ph.D., Indiana University; Carnegie Mellon, 1984–

DANA S. SCOTT, Hillman University Professor of Mathematical Logic, Computer Science and Philosophy (Emeritus) – Ph.D., Princeton University; Carnegie Mellon, 1981–

Department of Philosophy Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

80-100 Introduction to Philosophy
All Semesters: 9 units
In this introductory course we will explore three major areas of Philosophy: Ethics, Metaphysics, and Epistemology. Accordingly the course is divided into three sections. In each section we will read primary sources and discuss some of the main philosophic problems associated with that area. These will include: moral problems (Ethics), problems rising from the debates about free-will, personal identity or intelligence (Metaphysics), and inquiries about the scope and limits of human knowledge (Epistemology). We will then introduce some theories designed to solve such problems, and try to understand the strengths and weaknesses of these theories. We will apply different techniques and theories to issues that we might encounter in the real world. We will use class discussions, homeworks and papers to learn skills for evaluating arguments. These skills include: how to present a philosophic argument, what are the assumptions that justify it, what are its weaknesses and its strengths, whether such weaknesses can be resolved and, if they cannot be resolved, why.

80-110 Nature of Mathematical Reasoning
Intermittent: 9 units
This course focuses on understanding the principles and problems at the root of mathematical reasoning; it is not a course on any specific mathematical theory, like linear algebra or topology. We will explore the foundations of mathematics, both in terms of their historical origin and their modern purpose as a base for the study of mathematics. Then we will see how problems which seem to have no intuitive solution look simple after being put in the right mathematical form, but also consider the limitations this type of approach. We will treat such issues as they arise both in applied fields (policy decision-making, physics, computer science) and as more recreational, speculative and abstract (Conway's game of life, the works of Escher, music). The course is aimed for students at the freshman and sophomore level who do not necessarily intend to pursue a mathematically intense major.

80-130 Introduction to Ethics
Intermittent: 9 units
Philosophical ethics, or moral philosophy, covers a lot of ground. It asks and tries to answer questions like: What's good in life? What matters? What should I (and others) do? How should I (and others) act? What kinds of things out there must be treated ethically? Do we have moral duties to (at least some) non-human animals? Is morality subjective? Are there actually any objective moral truths? Morally speaking, what (if anything) is the difference between killing someone, and simply letting them die? In trying to answer these questions (and others), we'll engage in some wonderfully weird thought experiments, class discussions, smaller group discussions, debates, etc. We'll study and critique several moral theories which try to explain and help guide our moral judgments, and we'll try to apply these theories to real-life moral controversies. Past classes covered topics including drug prohibition, abortion, euthanasia, and physician-assisted suicide. This is an introductory philosophy class, so you'll be learning how to read, critique, do, and write philosophy generally, not just ethics. Considerable time and effort, both in lectures and in recitations, will be spent helping you learn to recognize and evaluate philosophical arguments, as well as empowering you to create, improve, and defend your own arguments in class assignments.

80-135 Introduction to Political Philosophy
Intermittent: 9 units
As an introductory course, we will seek to trace out the historical and philosophical dimensions of the polis from its origins in Ancient Greece to its current manifestation in present-day society. Special emphasis will be placed on the concept and practice of "democracy." We'll begin with the history of political philosophy from Plato and Aristotle (two of the early critics of democracy) to the modern period and the arguments in support of "republicanism" as found in the Federalist Papers (Madison, Jay, Hamilton). These historical moments cast light on the philosophy behind the development of the US constitution. Following Ketcham, we'll discuss the debate between the "ancients and moderns," enlightenment ideas regarding liberty and equality as well as the distinction between private rights and public goods. After presenting some fundamental justifications for democracy and our current models of democratic governance, we'll study the basic political frameworks of our day through a thorough-going analytic analysis of the writings and arguments of recent and contemporary political philosophers such as John Rawls, Ronald Dworkin, Robert Nozick, Charles Talyor, Michael Sandel, and Annette Baier. The course will end with a discussion of the theory and practice of deliberative democracy and a chance for students to engage in this model of democracy through the activities of an ersatz "deliberative poll."

80-136 Social Structure, Public Policy & Ethics
Intermittent: 9 units
The course will consider ethical questions surrounding social structure and public policy. It will analyze the role of political institutions and individual citizens in dealing with some of the greatest challenges facing our world: Global health crises, the spread of (and threats to) democracy worldwide, and world poverty. Some of the questions we will consider include: Are developed countries obligated to ameliorate poverty by providing foreign aid? What is democratic governance, and what do democratic representatives owe to their constituents? Should wealthy nations and corporations assist in the fight against life-threatening diseases worldwide? The course uses ethical and political theory, case studies, and empirical evidence to consider these questions.

80-150 Nature of Reason
Intermittent: 9 units
This course offers an intellectual history of philosophical views regarding the nature of human reasoning in mathematics and the sciences, from ancient to modern times. The first part of the course traces the search for deductive methods for obtaining certain knowledge, starting with Aristotle and Euclid, and continuing through the Middle Ages and late Renaissance thought, to the work of Boole and Frege in the nineteenth century. The second part of the course considers the history of skepticism about empirical knowledge, covering Plato, Sextus Empiricus, Descartes, Pascal, and Hume, along with replies to skepticism in the works of Bayes and Kant. The third part of the course discusses theories of the nature of mind, culminating in the computational conception of mind that underlies contemporary cognitive science.

80-180 Nature of Language
Fall and Spring: 9 units
Language is used to talk about the world or to describe it, but how do we go about describing language itself? Linguistics is the name given to the science of language, whose task it is to give such a description. The discipline of linguistics has developed novel tools for describing and analyzing language over the last two hundred years and in this course we learn what these tools are and practice applying them. Sub-areas of linguistics which we study include phonetics (the study of speech sounds), phonology (the study of sound systems), morphology (the study of parts of words), and syntax (the study of combinations of words). Beyond this, we look at changes in language over time, and we consider the puzzle of linguistic meaning. The methods of linguistics are useful in the study of particular languages and in the study of language generally, so this course is useful for students of foreign languages as well as those interested in going on to study language acquisition, psycholinguistics, sociolinguistics, philosophy of language, and computer modeling of language.

80-201 Knowledge and Justified Belief
Intermittent: 9 units
What does it mean to have knowledge? How do we know things, and what can be known? These are some of the central questions in the discipline of epistemology ("the theory of knowledge"). The answers to these questions are not as obvious as some casual thought may suggest. If you think the senses provide us with knowledge, how will you know when your senses deceive you? If you think knowledge is gained through reasoning, where will you start reasoning? This course investigates these questions, focusing on both classic questions and treatments and more recent work in the field of social epistemology. There are no prerequisites, but students may find previous experience with philosophical reasoning to be helpful. Students both with and without such experience are encouraged to take the class.

80-208 Critical Thinking
Intermittent: 9 units
This course is an introduction to practical reasoning. The course will contain an elementary introduction to concepts important for reasoning and decision making, such as validity, probability, and utilities. Students will extensively practice critically analyzing and evaluating a wide variety of arguments found in newspapers, magazines, and elementary accounts of scientific reasoning. In order to help students develop the skills to analyze and evaluate arguments, the course will introduce several software packages recently developed at CMU that help students diagram arguments and causal reasoning; these packages have been shown to improve students critical reasoning skills. In addition, students will learn about a wide variety of statistical, logical, psychological, and causal fallacies that are used to mislead people.

80-210 Logic and Proofs
All Semesters: 9 units
This web-based course introduces students to central issues in logic and develops their ability for constructing and refuting arguments. It addresses the question: How can one analyze the structure of rational discourse or, more specifically, the logical structure of argumentation? An answer to this question requires: (i) uncovering the logical form of statements; (ii) defining the correctness of logical steps; (iii) formulating inference rules for the logical forms; (iv) designing strategies for argumentation with the inference rules. The course takes these steps for both sentential and quantificational logic. Presentation: The material is presented on-line, though some exercises must be done with pen and paper. Additional reading of historical and philosophical character complements the systematic on-line presentation. Weekly small discussion meetings with collaborative reviews, substantive discussions and critical reflections supplement the on-line material.

80-211 Logic and Mathematical Inquiry
Intermittent: 9 units
Since ancient times, mathematical arguments have served as a paradigm for rational inquiry. This course studies the structure of such arguments and their applications. We will study foundational mathematical concepts and informal proofs, as they appear in everyday mathematics. At the same time, in parallel, we will study mathematical logic, which provides formal symbolic languages for mathematics. The course will make use of a computational "proof assistant" to develop fully rigorous, machine-checked proofs. This course prepares students to take the 310-311 series on the fundamental (in)completeness and (un)decidability theorems of modern logic.

80-214 Computing, AI, and Philosophy
Intermittent: 9 units
The aim of the course is to give an interdisciplinary introduction to computation, artificial intelligence, and philosophical questions regarding them. It will also include historical and sociological issues concerning these topics as well as their representation in the arts. The course does not require a background in mathematics, computer science or philosophy.

80-220 Philosophy of Science
Intermittent: 9 units
In this course, we will examine some historical case studies (e.g., the Copernican revolution in astronomy) against which we will assess views pertaining to the significance, justification, and production of scientific knowledge. For example, should scientific theories be understood literally or as computational devices for deriving new predictions? How can universal conclusions ever be justified by a finite data set? Does explanation contribute to a theory's confirmation by the evidence? Does science aim to find the truth? Is probability in the world or only in our minds? Is explanation a matter of finding causes or are causes whatever it is that explains? Is scientific rationality objective or culture-relative?

80-221 Philosophy of Social Science
Spring: 9 units
This course will explore various philosophical issues germane to social science. The central question of the course asks whether we can use traditional scientific tools to understand social phenomena, e.g. wars and religions, in the same way that we use them to understand natural phenomena, e.g. gases, lasers and planetary orbits. Some of the more specific questions we address: Because humans possess free will and act with intentions while light rays and planets in motion do not, are we forced to use logically different species of explanations in the two cases? How can we explain social institutions that depend upon cooperation? Whereas natural scientists actively conduct experiments, social scientists can often only collect statistical data. Does this difference prevent social scientists from inferring causal relations? Is our understanding of social phenomena always value laden?

80-222 Measurement and Methodology
Spring: 9 units
This is intended as an introduction to the theory of measurement. How are units chosen? Under what conditions do qualitative relationships determine quantitative ones? We shall investigate theories of extensive measurement, with and without error. Applications will be taken from the natural and social sciences. Prerequisites: None specifically; however, students should have background in elementary logic and be comfortable with taking mathematical approaches to conceptual problems.

80-223 Causality and Probability
Intermittent: 9 units
Does smoking cause cancer? What causes global warming? Would World War II happen if World War I had never happened? In our daily life and science, people often attempt to answer such causal questions, and probability theory, as a mathematical model of uncertainty, serves as a fundamental tool. This course explores the history of causality and probability and the basic methodologies for causal inference and statistical analysis. In particular, we will study what causality is, how it is related to and different from correlation, the relationship between causality and regression, the benefit of using causal knowledge, the classical ways to find causal relations, when it is possible to achieve so from purely observational data, and machine learning methods for discovering causal structure.

80-224 Race, Gender and Science
Intermittent: 9 units
In this course, we will focus on the interplay between science, technology, & medicine, on the one hand, and race & gender on the other. Taking up a series of controversial issues and cases from the past and the present, we will consider the implications of developments in the life sciences for politics, social identity, and cultural belonging. In our readings and discussions, we will examine the roles of science, technology, and medicine in defining and redefining race and gender; the ways in which cultural beliefs about race and gender have influenced scientific research and the development of knowledge; and the efforts by individuals and social movements to challenge scientific institutions and assert new claims about identity, difference, and inequality.

80-226 Revolutions in Science
Intermittent: 9 units
Science is an ever-changing enterprise. Most scientific advances, though significant, occur within a stable framework of accepted theories and data. A few episodes of change in the history of science involve discarding and replacing fundamental theories of the world. These are often accompanied by significant changes in the vocabulary in which those theories are expressed, the tools used by scientists, the phenomena on which scientists focus, and the kinds of explanations they consider acceptable. A very small number of these episodes change the way humanity views its ability to know the natural world and its place in universe. The latter two kinds of change in science have often been called "scientific revolutions." We will focus on three such radical transformations: The "Copernican Revolution" (or "the Scientific Revolution") of the 16th and 17th centuries, the Darwinian revolution of the 19th century, and the quantum revolution of the late 19th and 20th centuries. This course has two intertwined components: history of science and philosophy of science. In the historical component, we will examine in some detail the three major scientific revolutions. The philosophical components will help us understanding the reasoning involved in scientific theory change. This course does not required detailed knowledge of any of the sciences used in examples of revolutionary change.

80-241 Ethical Judgments in Professional Life
Intermittent: 9 units
This is a multimedia, hybrid course that examines the numerous ethical issues, problems and dilemmas that confront professionals in such areas as medicine, law, engineering, the media, government and the natural and social sciences. As a hybrid course, it includes educational materials in video streaming format, an audio CD, an electronic discussion board and web-based "guided inquiries" that students navigate and complete. Topics discussed include: Responsibility in the professions, obligations to clients, conflicts of interest, Whistleblowing, codes of ethics and ethics in engineering, medicine, law, media, computer science and business among others. This course meets one day a week and employs a case study discussion format during class.

80-242 Conflict and Dispute Resolution
Intermittent: 9 units
Conflict is an intractable feature of human life, whether occurring between family members, friends, coworkers, political organizations, nations, and even within oneself. You must then be prepared to negotiate with others to get your job done, to advance your career, and even to maintain meaningful personal relationships with your family and friends. The purpose of this course is to help prepare you for these negotiations. In particular, in this course, you will reflect on your current approaches to conflict, study the nature of conflict and why it tends to escalate, and develop your own skills for principled negotiation. Throughout the course you will also participate in negotiation simulations exercising your powers of communication and persuasion while practicing conflict resolution tactics. My goal is that you finish this course a more reflective and effective negotiator, better prepared to handle the conflicts you will inevitably face.

80-243 Ethics of Leadership
Intermittent: 9 units
From business operations to international affairs, leadership concerns the use of power or influence to coordinate a group towards common purpose. However, leadership also requires the acceptance of responsibilities not shared with the other group's members. Given their distinctive role and responsibilities, leaders must be prepared to face a unique host of moral problems and dilemmas. In this course, we will pursue the question of what makes a morally good leader, as opposed to a merely effective one. To that end, we will critically examine various competing theories of leadership while considering the moral challenges that arise when power, self-interest, justice, and the collective good collide.

80-244 Environmental Ethics
Intermittent: 9 units
In this class, we'll try to figure out what obligations we might have to the natural environment and the non-human living beings within it, as well as what justice requires of us in our use of natural resources given the needs of other human beings. Among other things, we'll spend considerable time on animal ethics: What moral obligations do we have to non-human animals? Is it morally OK to eat them? Does a dog count (morally speaking) as much as a human? Does a factory-farm chicken count as much as a wild endangered tiger? Then, given that many of the most pressing environmental problems¿like climate change¿are collective action problems, we'll consider why these problems are so sticky, what obligations we have as individuals in dealing with these problems, and what a just collective solution might look like. To that end, we'll examine the processes fueling climate change, we'll look at who is responsible for these processes, and we'll try to determine whether any current proposal to deal with climate change is an effective, just response to the problem.

80-245 Medical Ethics
Fall: 9 units
This course provides an introduction to core ethical issues in health care, medical research, and public policy. Topics include: the moral responsibilities of health care providers to patients and various third parties such as the government or insurance companies, the status of health as a social good, and questions of individual liberty and social responsibility at the ends of life including issues such as abortion, physician assisted suicide, and the definition of death. We will also examine specific ethical issues in the conduct of medical research and look at the impact of technological innovation on our notions of health, disease, life, death, and the family. If time permits, we may also discuss issues related to genetics and cloning. While the course engages such substantive ethical issues it also attempts to sharpen students' skills in practical reasoning through argument analysis, analogical reasoning, and the application of theory and principles to particular cases.

80-246 Moral Psychology
Intermittent: 9 units
Moral psychology is the study of how we think about morality, make moral judgments, and behave in moral situations. This has important implications for how we should think about morality, make moral judgments, and behave in moral situations. In this course we will examine empirical research on moral thinking and behavior by psychologists, neuroscientists, economists, and philosophers and discuss the implications this research has for issues in ethics. We will address questions such as: What motivates our moral behavior? Do we ever act altruistically or do we only do the right thing because it's somehow in our own interest? Is it even possible to tell what people's real motivations are? How do we make moral judgments and decisions? What roles do reason, intuition, and emotion play in our moral judgments? What role should they play? What role should a person's beliefs, desires, and intentions play in our judgments of how blameworthy the person is or of how much punishment he or she deserves? What role should the outcomes of the person's actions play in our judgments of him or her? Should we hold people responsible for things that are not entirely under their control?

80-248 Engineering Ethics
Fall: 9 units
This course provides an introduction to core ethical issues in engineering research and practice. Topics include: the moral responsibilities of engineers to clients and various third parties such as the government or insurance companies, conflicts of interest, whistleblowing, codes of ethics, and the status of engineering projects as social goods. While the course engages such substantive ethical issues it also attempts to sharpen students' skills in practical reasoning through argument analysis, analogical reasoning, and the application of theory and principles to particular cases. This course meets two days a week and employs a case study discussion format during class.

80-249 AI, Society, and Humanity
Intermittent: 9 units
AI and robotic technologies are rapidly developing and spreading, with corresponding social and human impacts & opportunities. Understanding these potential risks and benefits requires a multidisciplinary approach, drawing from ethics, philosophy, psychology, sociology, economics, and more. These diverse perspectives can help us to ensure that new technologies support and advance human and social values & interests. In this course, we will study relevant disciplinary methods & frameworks through a series of case studies of current or near-future AI and robotic technologies. We will learn to apply those techniques to analyze and understand the challenges & opportunities presented by novel technology.

80-250 Ancient Philosophy
Intermittent: 9 units
This course will cover Ancient Greek philosophy from the pre-Socratics to the later Hellenistic writers. We will prepare the background for Socrates and Plato by tracing the various historical and intellectual movements that led up to and through the flourishing and downfall of Periclean Athens. A study of Socrates (as represented in Aristophanes' comedy and Plato's early dialogues) will lead to an in-depth reading of Plato's Gorgias, Symposium and sections of the Republic. We will approach Aristotle through his 'practical philosophy' as presented in the Nicomachean Ethics. The final sections will discuss the Epicurean, Skeptic, and Stoic movements as well as the work of Cicero. Excerpts from other works of Plato and Aristotle as well as Martha Nussbaum's recent work on Aristotle and Hellenistic philosophy will accompany selected parts of the course.

80-251 Modern Philosophy
Intermittent: 9 units
Descartes' project to doubt all received knowledge and begin from scratch marked the beginning of an intellectual upheaval, helping to launch what is now called the Modern period of philosophical thought; the Western world is today the heir of modernism. Locke, Leibniz, Hume, and Kant are several of the most important figures of this period. We will examine works of these thinkers, exploring both the new sorts of questions that these philosophers raised and their new methods of doing philosophy, which together mark a fundamental break with the traditions that preceded them. We will devote special attention to the new theories of knowledge they proposed and to their works in ethics and political philosophy. The philosophical revolution of the 17th and 18th centuries occurred during a time of great scientific progress and political upheaval in Europe; as part of our course we will consider the relation of certain of these developments to the new questions and methods of the modern philosophers and to their works in ethics and political philosophy.

80-252 Kant
Intermittent: 9 units
Immanuel Kant's 'Critical philosophy' may be seen as the result of his attempts to determine the sources of human knowledge, and to find metaphysical foundations for Newton's mechanics. This course will involve readings in Kant's /Critique of Pure Reason/ and other texts. Emphasis will be placed on understanding Kant's thought in the context of contemporary intellectual developments and on his theory of human cognition.

80-253 Continental Philosophy
Intermittent: 9 units
This course provides students with an overview of key movements in European Philosophy. The historical background covers Descartes, Kant, Kierkegaard, and Nietzsche. The central tenets of phenomenology and existentialism (e.g., intentionality, Being-in-the-World, Bad Faith) will be discussed in the context of selected works from Husserl, Heidegger, Sartre and Merleau-Ponty. The course will conclude with the background for and current work of Habermas.

80-254 Analytic Philosophy
Intermittent: 9 units
This course examines the revolutionary impact of philosophy at the turn of the 20th century on contemporary thought and progress. By the 1920s some scientists and philosophers became hopeful that the end of the long tradition of philosophical deadlock was finally within reach. Buoyed in particular by Einstein's theory of relativity and the invention of modern logic, they created a new kind of philosophy with the goal of applying logical and empirical methods to philosophical problems. This new approach led to new puzzles and paradoxes, along with a focus on the age old question of what can be known and what is meaningful. The modern fields of linguistics, cognitive science, and information and computer sciences all owe a debt to these sources, as does of course contemporary philosophy. Our quest will be to understand both what authors like Frege, Russell, and the Vienna Circle were up to in the first place, and how their work contributed to the world we live in today.

80-255 Pragmatism
Intermittent: 9 units
American Pragmatism represents an energetic attempt to bridge the divergent cultures of science and the humanities. The movement's founder, C.S. Peirce, was trained in chemistry and worked as a physicist, but he was also deeply concerned with the contemporary philosophical portrayal of science, which distinguished sharply between theoretical knowledge and practice. Peirce responded by constructing a comprehensive philosophy emphasizing the scientific importance of community, fallibility, and action. Pragmatism was also developed and vigorously popularized by William James, who aspired to be a painter and ended up as an acknowledged founder of modern empirical psychology. James extended Peirce's position by defending the role of values in even the purest of empirical sciences. John Dewey, who is also well-known for his role in education, interpreted science as an evolving social system and developed a theory of aesthetics based on what we now call the psychology of problem solving. The pragmatists made and continue to make lasting contributions to modern statistics, logic, and social science and their emphases on community, fallibility, action, and value in science are still of primary importance in philosophy and in the ongoing dialogue between the scientific and humanistic cultures.

80-256 Modern Moral Philosophy
Intermittent: 9 units
This course will follow moral theory through the modern era (roughly 1600-1900), with special emphasis on the works of Hobbes, Hume, and Kant, as well as the development of utilitarianism. Since moral theorizing was only one part of these thinkers? larger systems of philosophy, it cannot be fully separated from questions of metaphysics and epistemology (e.g. free will, determinism, materialism, etc.), and we'll spend some time situating their ethical thought within their larger projects. In doing so, we'll also examine these theories within the context of the rapidly changing social, political, and scientific landscape of the modern period.

80-257 Nietzsche
Intermittent: 9 units
During his life in the late 19th-century, Friedrich Nietzsche was a relatively obscure German philosopher. Since his death, however, he has become deeply influential and well-known, and was a source of inspiration for many important 20th-century thinkers. Despite this popularity, Nietzsche's philosophy remains relatively mysterious, and often misunderstood. Much of his writing consisted of aphorisms, rather than more traditional prose and arguments, and many of his positions seem to contradict one another. This course will cover a broad range of Nietzsche's writings, focusing on such central concepts as the will to power, eternal recurrence, and the oft-misunderstood Ubermensch ("overman"). Throughout, we will focus on developing a consistent interpretation of an enigmatic philosopher whose views have been mischaracterized and misappropriated throughout the past century.

80-261 Experience, Reason, and Truth
Intermittent: 9 units
A central issue in Western philosophy has been whether reason or experience (or some of both?) provides the foundations for human knowledge. This course explores that question by looking at various "empiricist" vs. "rationalist" debates from the 17th century to the present day. We will focus on the problems encountered in trying to give an adequate account of the our knowledge of the external world, the structure of our minds, and the nature and limitations of human knowledge. The scope of our investigation will extend to the nature of mathematical knowledge, to "thought experiments" in both science and philosophy, and to "nativism" vs. "empiricism" issues in contemporary cognitive science and moral theory. The course has two main goals: (1) to study key metaphysical and epistemological issues surrounding the nature of human knowledge and (2) to help improve our analytical and critical skills by extracting and evaluating various relevant philosophical arguments.

80-263 Approaching Chinese Philosophy: Basic Texts and Implications
Intermittent: 9 units
This course focuses on ancient texts of Chinese philosophy, which have had a foundational role in Chinese society and culture. We will look at original texts from the Chinese classics, including the I Ching (Book of Changes) and the Tao Te Ching (basic treatise on Taoism). We will consider the role and place of science and explanation in Chinese society. We will also discuss the difficulty of translation from one language to another or from the writings of one era into another. The course will seek to connect the ancient literature and practice with modern perspectives on science, metaphysics, mind/body dualism, and causation. We will take the ancient texts in their original form as points of departure for our exploration. No prior knowledge of the Chinese language is assumed. The course is relevant for cultural and language studies, as well as studies in history and philosophy of science.

80-270 Philosophy of Mind
Intermittent: 9 units
The mind poses one of the greatest challenges to understanding how the world works. What is a mind? What is consciousness? What is sensing? What is agency? How are these facets of subjectivity related to the objective, physical world? In this course, we tackle these challenging questions with a philosophical approach that highlights analysis and argument, though we will also bring in relevant empirical understanding of the mind and brain to enrich our discussion (a complementary course, Philosophy and Psychology, is taught in alternate years where the empirical issues are the focus with enrichment from philosophy). A central practical aim of this course is to promote development of analytical skills through practice engaging with arguments.

80-271 Philosophy and Psychology
Intermittent: 9 units
This course has two parts. First, we will look at basic concepts used in psychology (and cognitive science broadly) through the lens of philosophy including: representation, computation, information, explanation, modularity, attention, automaticity and control. Having some concrete proposals about these ideas will allow us to formulate psychological claims more concretely. Second, we will reverse course and look at traditional philosophical problems through the lens of psychology focusing on three topics: consciousness, agency, and perception. Specifically: what is consciousness, what is it to be an agent, what is it to perceive?

80-275 Metaphysics
Intermittent: 9 units
The topical agenda of this course will vary. Typical topics include the problem of personal identity, the nature of human freedom, the nature of the self, the nature of reality and being, the nature of causality, and the question of whether solutions to such problems can be given. Classical as well as contemporary philosophic texts will be studied. For Spring 2011: Issues we will consider, in no particular order, include: Do properties exist? Why should you think there is an external world? What is a number? Why should you think other people have mental states? What are natural kinds? What constitutes the identity of things through time? What constitutes the identity of persons through time? What does determinism mean? Is there freedom of the will? What is possibility? What is necessity? Are there other possible worlds? When does one event cause another, and what does that mean? What could a deity be, and should you think there is one?

80-276 Philosophy of Religion
Intermittent: 9 units
While many interesting questions about religion are belief-specific, we will strive in this course to keep a global perspective. We will begin by considering a concept at the center of Western religion — God — as it presents itself in various traditions. We will then move to consider major Eastern religions, with a focus on their influence on philosophical thought. In both of these studies, we will emphasize the relationship between language and religion. We will conclude the course by considering commonalities between Eastern and Western religious thought. The student should leave the course with 1) the tools to consider religious text and rhetoric philosophically, and 2) a sharpened idea of what 'religion' is (though this might differ from my own!).

80-280 Linguistic Analysis
Intermittent: 9 units
At one level, language is constituted by nothing but sounds, or marks on paper. How can such physical objects be used to create or transmit meaning? The answer assumed in this course is that objects with specific physical features are assigned symbolic or linguistic values on the basis of those features. By the juxtaposition of such objects (phonemes or graphemes), larger symbolic objects are created (morphemes). Morphemes have the special property that they can be associated in a consistent way with meanings. In a progressive fashion, words are built from morphemes, phrases from words, and sentences from phrases. Sentences have different moods, and these moods correspond to their function with respect to the encoding and transmission of information. Indicative sentences carry information, interrogative sentences request information, imperative sentences demand action, conditional and modal sentences present alternative possibilities, and so on. The goal of this course is to investigate the structure of the linguistic entities by which these communicative functions are realized. Building on material taught in Nature of Language, we look in detail at the morphology and syntax of human languages, paying special attention to cross-linguistic variety.
Prerequisite: 80-180

80-281 Language and Thought
Intermittent: 9 units
The goal of this course is to provide students with the opportunity to creatively explore some difficult questions about the relationship between language and thought, questions such as: How does the human capacity to use language relate to the human capacity to think? Does the language that a person speaks affect the way she thinks? If meaning is in the head, how can we succeed in communicating with each other? How is our ability to reason related to our ability to successfully communicate? None of these questions have definite answers; throughout the course, we will draw on work in philosophy, psychology and linguistics to try to understand some of the possible answers that might be entertained. Students in the course should be prepared for extensive reading, writing and peer discussion assignments.

80-282 Phonetics and Phonology I
Fall: 9 units
This course aims to provide students with practical tools for the study of speech sounds. The acoustic properties of sounds are examined using spectrograms and other devices, with emphasis on vowels and sonorant consonants. Following this, basic phonological notions are covered, tracing their development in the twentieth century up through optimality theory. In optimality theory, contrast and allophonic variation are explained in terms of an input-output device which selects the most harmonic candidate still faithful to phonemes in the input. The course should be relevant not only to linguistics students, but to students of language generally, with applications to sociolinguistics, child language development, speech recognition technologies, and the study of foreign languages.
Prerequisite: 80-180

80-283 It Matters How You Say It
Intermittent: 9 units
Why do languages give us multiple ways to say the same thing? Given that in English we can say "My dog ate my homework," why do we sometimes prefer "My homework got eaten by my dog"? Why do we sometimes choose to refer to someone with just a pronoun ("he"), and sometimes choose their full name ("Charles Dickens")? What's the difference between telling someone: "This expensive coffee is tasteless," or telling them: "This tasteless coffee was expensive"? This course is about the choices that languages give us for conveying a particular message, and the communicative effects of those choices. We will see that it is both the words you use and the way you put them together that determines the total communicative effect of your utterance. While the course will focus on English, students will have an opportunity to work on another language of interest in their final project.

80-284 Invented Languages
Intermittent: 9 units
Language is normally something that develops and and changes organically within human communities, without much in the way of organized design or invention. Over the centuries, however, many have succumbed to what J. R. R. Tolkien called the "secret vice" of language creation. The purposes of these invented languages have been diverse. Some, like Tolkien's Elvish languages, Okrand's Klingon, and Peterson's Dothaki and Trigedasleng have been designed for artistic or entertainment purposes: they have set out to be "natural" languages within fictional worlds. Others, like Zamenhof's Esperanto, Brown's Loglan, and Elgin's Láadan have tried to address perceived inadequacies of the natural languages that their creators saw in the world around them. The of study language invention is thus both the study of a distinctive art form, and an exploration of the history of how people have thought about language in different ages and societies. In this course, we will explore the linguistic considerations involved in language invention, and the linguistic lessons of the history of invented languages, with a particular emphasis on applying these insights to our own language invention projects. Over the course of the semester, students will be expected to develop invent their own languages, and to complete various shorter assignments to supplement relevant ideas and skills. This course does not assume any background in linguistics, and is intended to accommodate both newcomers and advanced students.

80-285 Natural Language Syntax
Fall: 9 units
This course is intended to provide an introduction to the methods of syntactic analysis, and to some major themes of contemporary syntactic theory, following up on syntactic concepts introduced in 80180, Nature of Language. A primary theme of the course is the structural constituency of a sentence, and the course will address some of the following questions. What are syntactic constituents? Do all aspects of syntax manipulate the same kinds of structural units, or do different grammatical processes rest on incompatible notions of constituency? How do other syntactic relations connect with constituent structure? To the extent that there is mismatch between different notions of syntactic structure, how can it be reconciled within a theory of grammar? These questions are engaged in through the diagnostics and techniques of modern syntactic analysis and argumentation. Those tools will allow us to explore the striking ways in which syntactic theory unifies diverse grammatical phenomena in terms of a common notion of phrase structure. The course complements 80280, Linguistic Analysis, building on but not presupposing syntactic analyses developed in that class.

80-286 Words and Word Formation: Introduction to Morphology
Intermittent: 9 units
How many words do you know? Is 'gonna' one word or two? How many meanings does 'unlockable' have? If someone can be 'inept', why can't they be 'ept'? In this course we study the lingusitics of words and word formation, known as morphology. We begin by asking what a word is, about the internal structure of words, and how new words are formed. Throughout, we will consider these questions from a cross-linguistic perspective, looking at morphological data from a wide range of languages. We will also consider how morphology interacts with other subfields of linguistics, including phonology, syntax and semantics. Finally, we will survey morphological questions from the perspectives of language acquisition, psychology, and cognitive science.
Prerequisite: 80-180

80-287 Language Variation and Change
Intermittent: 9 units
This course explores language variation across space and time. Our experience of language is full of direct and indirect evidence of language change and variation, and of the ways that these interact and intersect with other historical and social phenomena. How do languages change over time, and what kinds of factors influence this change? How do we determine whether, say, Farsi and Nepali (or Farsi and English) were at some point in the past the same language, before different changes took them in different directions? If they are, how do we investigate what that past language might have sounded like? What are the sources of variation within and between languages, and how can we investigate the nature of this variation? How can an understanding of language change help us to make sense of language variation, and how can an understanding of language variation help us to make sense of language change? How do issues of social status and political power affect language variation and change? What happens when languages come into contact? How can linguistic theory inform the study of variation and change, and what insights can the study of these phenomena contribute to linguistic theory? This course is intended to provide students with the tools to begin to explore and address these kinds of questions.
Prerequisite: 80-180

80-288 Intonation: Transcription and Analysis
Intermittent: 9 units
Intonation is the melody of speech: how a speaker's pitch changes over the course of an utterance, along with the placement of emphasis, or sentence-level stress. Intonation and stress contribute to the interpretation of utterances in multiple ways. For example, the questions "Did BOB go to the store?" and "Did Bob go to the STORE?" contain the same words, but request different information. Similarly, whether the sentence "Bob went to the store" is interpreted as a statement or as a question, and whether as expressing certainty or uncertainty on the part of the speaker, depends on its intonation. Features of intonation can also convey information about the speaker's attitudes and affect: sarcasm and irony, for example, may be signaled by intonation. The goal of this course is two-fold. First, students will learn about the phonetic correlates of intonation and stress, and learn how to analyze intonation as a system of high and low tones, using the intonation transcription system ToBI. This will enable students to accurately describe the intonation pattern of an utterance. Second, students will learn how intonation is used to convey semantic and pragmatic information. The course will focus primarily on English, but other languages will be explored to serve as a basis of comparison. There is no prerequisite, and no familiarity with either phonetics or semantics is assumed. The course will be of interest to students interested in learning some of the intricacies of face-to-face linguistic communication. Students in the departments of English, Modern Languages, Language Technology, Human-Computer Interaction, and Psychology will find material relevant to their major topics. The course serves as an elective for the Linguistics Major, and is a natural companion to other courses on the expression of linguistic meaning: Meaning in Language, Language in Use, and Syntax and Discourse.

80-292 Learning Science Principles
Spring: 12 units
The ability to learn - that is, to change and adapt to one's environment - is one of the hallmarks of intelligence, whether in humans, animals, or machines. In this course, we will examine the nature, components, and significance of learning in many different manifestations, with a particular focus on the fundamental concepts that underlie the ways in which we understand the concept of learning in different disciplines. This course will thus focus more on concepts and foundations, rather than technical aspects of learning, whether mathematical, experimental, or computational. This course will be almost entirely project-based: you will work in groups (with students from different backgrounds) to identify opportunities for learning media, and then develop designs that appropriately address those opportunities. In the course of developing these media designs, you will learn, and come to understand, concepts and principles of learning from different disciplines. The emphasis throughout will be on careful conceptualization, description, and design of the learning through and about media. This course will work in tandem with 05-292 Learning Media Methods. To waive an IDeATe portal course requirement, students should have prior project-based coursework in design, social science research methods, or interactive prototyping experience.

80-294 Ethics Internship / Practicum
Intermittent: 9 units
Internship

80-296 Impacts of AI: AI and Intelligence
Fall and Spring: 3 units
AI and robotic technologies are rapidly developing and spreading, with corresponding social and human impacts & opportunities. In this course, we will consider the impacts of AI and ethical issues of advancing technologies. This Micro course will run between 5-6 weeks. The instructor will fly into Doha for a short period of face-to-face classes, centered around a Saturday. Enrolled students should expect two 90-minute face-to-face classes during the week before or after this Saturday date, as well as four 90-minute evening (6-7:30 pm) video classes over the duration of the Micro course (typically two before the campus visit, and two after, although instructors can change this). Specific dates will be confirmed in the syllabus closer to fall semester.

80-297 Impacts of AI: AI and Ethics
Fall and Spring: 3 units
AI and robotic technologies are rapidly developing and spreading, with corresponding social and human impacts & opportunities. In this course, we will consider the impacts of AI and what it means to be human. This Micro course will run between 5-6 weeks. The instructor will fly into Doha for a short period of face-to-face classes, centered around a Saturday. Enrolled students should expect two 90-minute face-to-face classes during the week before or after this Saturday date, as well as four 90-minute evening (6-7:30 pm) video classes over the duration of the Micro course (typically two before the campus visit, and two after, although instructors can change this). Specific dates will be confirmed in the syllabus closer to fall semester.

80-298 Impacts of AI: AI and Society
Fall and Spring: 3 units
AI and robotic technologies are rapidly developing and spreading, with corresponding social and human impacts & opportunities. In this course, we will consider the societal impacts of AI. This Micro course will run between 5-6 weeks. The instructor will fly into Doha for a short period of face-to-face classes, centered around a Saturday. Enrolled students should expect two 90-minute face-to-face classes during the week before or after this Saturday date, as well as four 90-minute evening (6-7:30 pm) video classes over the duration of the Micro course (typically two before the campus visit, and two after, although instructors can change this). Specific dates will be confirmed in the syllabus closer to fall semester.

80-305 Choices, Decisions, and Games
Intermittent: 9 units
This course is an introduction to formal models of choice and decision-making. We begin by examining choice under certainty, developing both qualitative and quantitative models of preference. We then expand our analysis to take into account uncertainty, focusing on the von Neumann-Morgenstern theory of expected utility and Savage's classic axioms. Empirical challenges to models are emphasized throughout, in response to which we will consider a variety of alternative representations of uncertainty (e.g., Dempster-Shafer belief functions, non-unique probability measures) and preference (e.g., framing effects, prospect theory).

80-310 Formal Logic
Fall: 9 units
Among the most significant developments in modern logic is the formal analysis of the notions of provability and logical consequence for the logic of relations and quantification, known as first-order logic. These notions are related by the soundness and completeness theorems: a logical formula is provable if and only if it is true under every interpretation. This course provides a formal specification of the syntax and semantics of first-order logic and then proves the soundness and completeness theorems. Other topics may include: basic model theory, intuitionistic, modal, and higher-order logics.
Prerequisites: 15-251 or 21-127 or 80-211 or 80-210

80-311 Undecidability and Incompleteness
Spring: 9 units
U & I focuses on two fundamental results: the undecidability of logic (established by Alonzo Church and Alan Turing) and the incompleteness of mathematical theories (discovered by Kurt Gödel). The proofs of these results require a novel metamathematical perspective, but also striking logical concepts and fascinating mathematical techniques. In this course, the theorems are not just formulated but actually proved. We begin with the axiomatic development of elementary set theory that allows, at the same time, the formal representation of informal mathematics like number theory. With this basis, one can show that syntactic notions concerning set theory are representable in the very theory. It is then easy to prove that set theory is incomplete. To show that logic is undecidable, the crucial concept of computation is introduced via Turing machines. The two concepts - proof and computation - are fundamental for mathematics, computer science and, in particular, artificial intelligence. The undecidability and incompleteness results are among the most significant contributions of modern logic to the foundations of mathematics. They provide also the beginnings of a deeper understanding of mental processes in cognitive science and, thus, of the human mind. To understand the latter connections, we will read about and discuss historical as well as philosophical aspects of the subject.
Prerequisites: 15-251 Min. grade C or 21-300 Min. grade C or 80-210 Min. grade B or 80-310 Min. grade C or 80-211 Min. grade C

80-312 Mathematical Revolutions
Intermittent: 9 units
Mathematics is a central part of our intellectual experience. It is connected to sophisticated philosophical perspectives, say, in the work of Plato, Descartes, Leibniz, Kant, as well as in contemporary analytic philosophy; it is equally connected to fundamental views in the sciences, say, in the work of Ptolemy, Galileo, Newton, Einstein, as well as in contemporary cosmology. The common view that mathematics - if not directly "static", is evolving in a linear fashion - does not withstand historical scrutiny. Indeed, there are many dramatic conceptual changes concerning the very nature and object of mathematics. We examine three episodes in the relatively recent past that reflect radical transformations of the subject. They are closely associated with three mathematicians in whose work those revolutionary changes come to the fore most poignantly. The three episodes are framed by a discussion, at the beginning, of the axiomatic method and, at the end, of contemporary computational models of mathematical thinking. The episodes fall within the period from 1854 to 1954, but have deep roots in the past. The first episode deals with the shift from geometry to arithmetic as the foundational discipline for mathematics. The accompanying change in the methodological perspective is expressed in Hilbert's Foundations of Geometry, the center of the second episode. When joined with contemporaneous logical developments, that perspective underlies the formalization of mathematics. Gödel's incompleteness theorems imposed theoretical limits on that work. However, given Turing's analysis of computations, the question remains, how much of mathematical reasoning can be accomplished by computing machines. Completing a full circle, we incorporate central features of the axiomatic method into computational models of mathematical thinking.

Course Website: https://goo.gl/0fMpQQ

80-314 Causal Discovery, Statistics, and Machine Learning
Intermittent: 9 units
Statistics and Machine Learning have made tremendous strides in recent years in solving a wide variety of regression and classifiction problems. However, causal discovery problems (i.e. discovery of which variables are affected by a given variable that undergoes change due to an external intervention, either man-made or natural, and to what extent other variables are affected by such a change) are distinct and more difficult problems. Causal discovery problems arise not only in scientific contexts (e.g. discovering which genes regulate which other genes) but also in some machine learning contexts (e.g. transfer learning problems). This course will (i) describe how causal discovery problems differs from regression and classification problems in goals, methods, and fundamental assumptions, (ii) descibe recent advances in modifying machine learning and statistical algorithms to deal with causal discovery problems involving such difficulties as latent confounders, measurement error, selection bias, etc., and (iii) what the outstanding problems in causal discovery are and future directions the field might take. Students should have taken at least one course in statistics or machine learning, or obtain the permission of the instructor.

80-315 Modal Logic
Fall: 9 units
This course is an introduction to mathematical modal logic and its applications in philosophy, computer science, linguistics, and economics. We begin with a rigorous development of propositional modal logic: the basic language, interpretation in relational structures, axiom systems, proofs, and validity. We prove soundness and completeness of various systems using the canonical model method, study model equivalences and expressivity results, establish the finite model property, and discuss decidability and basic complexity results. We also consider topological semantics as an alternative to relational semantics, and investigate the connection between the two. Finally, we introduce modal predicate logic, incorporating first-order quantification into the system. In the latter part of the course we turn our attention to more specialized logical systems and their applications, as determined by the interests of the class. Topics may include: epistemic and doxastic logics, multi-agent systems and the notion of common knowledge (with applications to game theory), deontic logics, logics for reasoning about counterfactuals, temporal and dynamic logics, public announcement logic, justification logic, and others.Some mathematical experience/maturity (e.g., 15251 or 21127 or 80211 or 80210 or 80212), or permission of the instructor.
Prerequisites: 21-127 or 80-212 or 80-210 or 80-211 or 15-251

80-317 Introduction to Ramsey Theory
Intermittent: 6 units
While working on the decision problem for first order logic, Frank Ramsey [1930] developed a combinatorial approach that now bears his name. For one example of his idea, imagine that we construct an undirected graph on K-many nodes, connecting each pair of nodes with edges of one of two colors, red or blue. How many nodes K3,2 does it take to insure that, no matter how we color the graph, there will be a trio of points each connected by the same color? How large do we need to make K to guarantee a homogeneous subgraph of 3 nodes in 2 colors? K = 5 will not do, as this picture reveals. See image here: https://goo.gl/txagIS A 2-coloring of 5 nodes with no homogeneous subgraph of 3 nodes. In this introduction we will consider some of the fundamental theorems of Ramsey Theory and a family of applications to logic, graph theory, number theory, and ergodic theory.

80-321 Causation, Law, and Social Policy
Intermittent: 9 units
Policy makers face causal questions. For example, does violence on TV cause violence in life, and if so, what policies can we institute that will actually curb it? Does the death penalty actually deter criminals? Do tough drug laws reduce drug use? This course investigates how scientists establish causal claims, and how policy makers and the courts rely on or systematically ignore such science. We examine what causal claims mean and how they connect to statistical data, and we discuss the limits of standard techniques for establishing causal claims. We will consider all of these issues first theoretically, and then in the context of several case studies chosen mostly by the students.
Prerequisite: 36-201

80-322 Philosophy of Physics
Intermittent: 9 units
Philosophical problems in the development of modern physics. Topics include the philosophical significance of Einstein's theory of relativity, interpretations of quantum mechanics, and the relationship between these two theories. Other topics may include the philosophy of space and time, the epistemology of geometry, the significance of modern cosmology, and chaos theory.

80-323 Philosophy of Biology
Intermittent: 9 units
This course will examine a range of foundational problems in evolutionary biology, as well as the implications of evolutionary biology for some basic topics in philosophy. Issues to be discussed include the meanings and roles of a variety of central concepts (such as species, fitness, function and adaptation) and controversies over adaptationism, genetic information, units of selection and the evolutionary explanation of human behavior. This course will be accessible both to philosophers interested in the epistemological and metaphysical status of evolutionary biology, and to biologists interested in better understanding the foundations of their field. Although there are no formal prerequisites for this course, students will be expected to have taken courses in either philosophy or biology.

80-324 Philosophy of Economics
Intermittent: 9 units
The science of economics has come to occupy a central position in contemporary society. Because of this central position in political decision making, economics is intertwined with a number of other philosophical issues surrounding justice, rights, and fairness. The central theme of this course will be on the arguments in favor and against markets as effective solutions to political problems. This issue will allow us to analyze a wide number of foundational issues in economics including the testability of economic claims, the use of "rationality" postulates, the foundation of the right to property, and measuring the success or failure of an economy.

80-327 Philosophy of Neuroscience
Intermittent: 9 units
400 years ago Rene Descartes claimed that the body is a machine manipulated via the pineal gland by a thinking soul with free will. At about the same time, Thomas Hobbes claimed the mind is the product of the brain, and the brain is a calculating device. Most of Descartes view endures to this day in popular belief, but something more like Hobbes opinion has come to dominate science. This historical part of the course will contrast Descartes The Passions of the Soul, with the contemporary scientific view of mind and brain in Patricia Churchlands Touching a Nerve. The course will describe the vision of a materialist, deterministic physiology of mind developed by Helmholtz, Freud and others in the 19th century, and opposition by the most influential psychologist of the time, William James. The main focus of the course will turn on how that scientific perspective has developed in classical and contemporary neuropsychology; on how new kinds of measurement of brain activities do or do not provide understanding of the mechanisms of thought and emotion; on how theories of mental functioning are argued for (or against); and on ethical issues posed by the advance of neuroscience. No philosophical background will be assumed of students. A previous course in neuroscience would be helpful, but is not required.

80-330 Ethical Theory
Spring: 9 units
Every day, even in very subtle ways, we make judgments of value that shape our lives and our conduct. This course will examine four influential attempts at providing a systematic account of the source and nature of moral value, its relationship to other kinds of value, and the practical implications of different answers to these questions. This focus on the fundamental structure of moral value will frequently engage topics such as the nature of the good, subjectivist and objectivist accounts of value, forms of moral naturalism verses attempts at moral constructivism, and will draw on historical as well as more contemporary sources. Particular attention will be paid to articulating the specific sources of disagreement that distinguish competing moral theories in order to facilitate our ability to adjudicate between them on a reasoned basis.

80-335 Social and Political Philosophy
Intermittent: 9 units
Broadly speaking, political philosophers are interested in whether, and to what extent, government use of coercion can be justified, and how social and political institutions should be structured in order to be legitimate. This is an advanced course in social and political philosophy, aimed at providing students with a more in-depth familiarity with classic and contemporary questions both theoretical and applied. The course is topical, and course topics will vary from year to year. Typically 4-5 topics are covered in a term. Previous years' topics have included the nature and value of freedom, social contract theory, racial and epistemic injustice and the nature of white ignorance, the intersecting concepts of justice and equality, structural injustice, responsibility for injustice, and immigration. Students are expected to come away from the course with a strong understanding of some of the major debates in social and political theory as well as the tools to analyze ongoing debates within contemporary US and global politics regarding the appropriate way to organize our social and political reality. This course is primarily conducted as a seminar and is discussion- rather than lecture-based.

80-336 Philosophy of Law
Intermittent: 9 units
In recent years, the U.S. legal system has been beset by claims of overcriminalization, racially discriminatory enforcement, and inadequate or unequal protection of individual civil rights. What should we make of these claims, and what, if anything, would be implied by their truth? In seeking to answer these questions, this course will examine the nature of the law and its enforcement. We will begin by discussing the issue of criminalization and whether the expansion of the criminal law is or is not problematic. From there, we will turn to the more foundational questions of what, precisely, the law is, and what its connection to morality is or should be. Are we obligated to obey the law, and if so, why? Finally, we will ask whether it is possible for the law to remain neutral with regards to morality and politics, and whether the supposed "neutrality" of the law may itself be an instrument of oppression. If the legal system lacks the kind of neutrality that many legal theorists claim for it, what (if anything) does that license us (as citizens) to do?

80-341 Computers, Society and Ethics
Intermittent: 9 units
This course explores many of the social and ethical issues that have emerged in the wake of the significant advances that we have witnessed in computer science and information technology (IT). Computers and communications technologies have had an increasing impact on the whole of society and have raised new and difficult ethical questions. In turn, these ethical issues have spurred the need for a consideration of new policies and regulations. In this new world of IT, some are concerned about the protection of their privacy while others find problems of censorship and, more generally, restrictions on information access to be their main focus as a problematic social issue. This course will address these and other issues such as: questions of free speech, surveillance in the workplace, intellectual property and copyright, information acquisition and ethics and the Internet.

80-344 Management, Environment, and Ethics
Intermittent: 9 units
This course examines and poses answers to the following question: "What are the legitimate environmental responsibilities of organizational managers from the private, public and nonprofit sectors and how can they be best fulfilled?" This query will provide the course with its major theme and framework. But in order to do justice to it, three interrelated areas that are presupposed by this question will need to be explored first. These areas are: 1) applied ethics, 2) management ethics and 3) environmental ethics. The first half of the course will concentrate upon these three areas. The second half of the course will focus upon management and the environment employing the insights gained during the first half. Here students will review and evaluate past and current management practices with respect to the environment, organizational policies dealing with the environment and the role of government in the process of determining environmental responsibilities in management. Environmental concerns on the international level and their impact upon organizational management, the emergence of the "environmental affairs manager" within organizations, balancing environmental responsibilities with other management responsibilities and examples of management responses to the environmental crises will also be examined during this portion of the course.

80-348 Health, Human Rights, and International Development
Fall: 9 units
Approximately 767 million people, or more than 10% of the world's population, live in a condition the World Bank refers to as "extreme poverty". Those who live in extreme poverty frequently lack effective access to proper nutrition, adequate shelter, safe drinking water, and sanitation. As a result, they also bear the greatest burdens of famine and epidemic disease and frequently face social and political conditions of unrest and systematic oppression. This course aims to introduce students to the problem of global public health and its intersection with claims of human rights. We will focus on theoretical accounts of human rights and questions arising from them: What constitutes a human right, and on what basis or bases might the existence of human rights be defended? If human rights exist, whose responsibility is it to see that they are defended/provided/not violated, and why? What is the relationship between health deficits and human rights deficits, and what would a "human right to health" look like? Are global institutions such as the protection of strong intellectual property rights consistent with respect for a human right to health?

80-358 Hume
Intermittent: 9 units
This course will investigate the philosophy of David Hume. We will focus on his philosophical thought expressed in the book A Treatise of Human Nature. Hume was an influential philosopher who wrote on many issues ranging from skepticism, to ethics, to the philosophy of science, and his views continue to be influential today. In this course we will attempt to understand Hume's philosophy on all of these subjects both to better understand his contribution to the philosophy of his day, but also to see what his arguments can contribute to contemporary thought.

80-362 Russell
Intermittent: 9 units
Near the start of the 20th Century, Bertrand Russell helped to create what today we call "Analytic Philosophy." We will study Russell's contributions to this important approach to Philosophy by using his 1912 book, "The Problems of Philosophy" as a springboard to other readings, many of which are found in his collection, "The Basic Writings of Bertrand Russell." The issues we'll cover include several specific challenges in the Theory of Knowledge and Perception, and some of his contributions to Logic and Mathematics. For example, What is the difference between appearance and reality, and can we tell? Also, we'll consider issues that stem from reflecting on our thinking. For example, What constitutes a philosophical question? And we'll review Russell's paradox about the set of all sets, his attempts at a resolution, and how those affect contemporary set theory.

80-363 19th Century Foundations of Science
Intermittent: 9 units
Why do contemporary philosophers of science worry about the relationship between theory and evidence, or what is it for some event to cause another? These issues are not new, but have a rich history in the debates among philosophers and scientists in the 19th and early 20th century. This course will explore the roots of contemporary debates in the works of Mill, Herschel, Whewell, Poincare; Maxwell, Hertz, Duhem, and Mach. We will examine the issues of theories and evidence, scientific realism, the role of models in science, the role of mathematics in science, concepts of space and time, and ascription of causal relationships. The specific direction taken by the class will be determined, in part, by the interests of the students who enroll.

80-371 Philosophy of Perception
Fall: 9 units
This will be a course that covers the philosophy of perception from an empirical perspective. The first third of the course will begin with the problem of perception: how to account for the subjective quality of perception. We will explore theoretical challenges to providing an explanation of this feature (which we can call consciousness) and canvas theories that try to provide explanations. In the last two-thirds of the course, we focus on the science as a way of understanding subjective experience. We look carefully at color perception, olfaction, integration in the senses and the role of attention. This course will be a joint seminar between CMU and Pitt and will be co-taught with students from both campuses attending. It will be an upper level course meeting once a week and a high level of discussion, writing and preparation is expected. While there are no prerequisites, students might be aided by having at least one course in philosophy (preferably philosophy of mind or philosophy and psychology) or coursework in perceptual psychology or neuroscience.

80-380 Philosophy of Language
Intermittent: 9 units
Questions about language, meaning, and communication have a central place in both the history of analytic philosophy and the life of human societies. What do our words mean? What do we do by speaking them? What is the relationship between what our words literally mean and what we use them to communicate? What is it for a statement to be true but misleading? In what sense is it possible to experience a distinctively linguistic injustice? Should philosophers approach ordinary language as a cause of needless confusion, an indispensable source of insight, or both? In what ways is the study of language about the individual mind, in what ways is it about the speaker community? In spring 2020 this course will explore some major themes from the last century's debates in the philosophy meaning and communication, with attention to how these topics connect with social and political questions and with work in feminist philosophy. Students who do not meet the prerequisites but have an interest in the topic are strongly encouraged to reach out to the instructor about exceptions.
Prerequisites: 80-180 and 80-100

80-381 Meaning in Language
Intermittent: 9 units
Human language involves an association between arbitrary signs and meaning. The study of meaning in language, semantics, is a recently developed subfield of linguistics, since it presupposes advances in phonology, morphology, and syntactic structure. In addition, semantics faces the conceptual challenge of saying what meaning is. This course will reflect the history of semantics within linguistic theory and examine solutions to the problem of the definition of meaning. The course begins with the meanings of words and examines how these meanings combine to give the meanings of sentences, based on the notion of truth conditions for indicative sentences. That notion of meaning is then extended to sentences in other moods, and to sentences that do not simply describe how the world is, including sentences which are modal, conditional, or simply fictional. Semantics is a subject that can be developed in a highly formal way, but here it will be presented to make it accessible to students with varied backgrounds and interests. The components of the resulting theory will apply to any human language, and be an important component in the toolkit of any student of language.
Prerequisite: 80-180

80-382 Phonetics and Phonology II
Intermittent: 9 units
This course is a continuation of Phonetics and Phonology I (80-282), and is designed to expand upon the phonetic and phonological skills and knowledge developed in that course. Students will carry out an acoustic study designed by the instructor; the particular topic varies from semester to semester. As co-researchers, students will be involved in all aspects of data collection and analysis. Lessons in phonetics will be designed to train students on the necessary skills and concepts required, including understanding the articulatory and acoustic bases of the phenomenon under investigation, recording techniques, how to take appropriate acoustic measurements, and interpretation of the results. A presentation session will be organized for the end of the semester. In tandem with the acoustic study, a related phonological phenomenon will be investigated throughout the semester. This phenomenon will be explored by using a set of case studies that can be investigated through various phonological and psycholinguistic perspectives. We will cover major developments in phonological theory, including SPE-style features, feature geometry/autosegmental phonology, and Optimality Theory. We will also consider these phenomena in light of more recent approaches to phonological representation, including Exemplar Theory and Articulatory Phonology. Assessment of phonetics will primarily come from the research project and in-class lab work, but will be supplemented with quizzes and a test to ensure that core concepts are acquired. Assessment of phonology will primarily come from problem sets. Students will finish this course with a solid understanding of how to do phonetic research, and an appreciation of how various theoretical frameworks have attempted to account for phonological phenomena.
Prerequisites: 80-282 and 80-180

80-383 Language in Use
Intermittent: 9 units
The meaning of a sentence depends only on the meanings of the words it contains, and how they are put together in a syntactic structure. But the meaning of an utterance "a linguistic expression produced by a speaker in a particular context" depends on both sentence meaning and on features of the context and of the discourse itself. This course focuses on the analysis and description of utterance meaning. We will develop a treatment of context as a linguistically relevant notion and explore how linguistic analysis can be expanded from the domain of the sentence to the domain of connected discourse. In addition, the course will be concerned with the treatment of linguistic items (words and constructions) whose meaning can only properly be characterized in terms that make essential reference to context, to ongoing discourse, or to the speaker.
Prerequisites: 80-100 or 80-180

80-384 Linguistics of Turkic Languages
Intermittent: 9 units
In this course we look at languages from within a single language group, Turkic. Turkic languages are spoken across continental Asia and include such languages as Turkmen, Tatar, Kazakh, Uighur, and Uzbek. In this course we concentrate especially on Yakut (Sakha) and Azerbaijani. Modern Turkish will provide a reference language. We look at various linguistic systems within each language (phonology, morphology, syntax, and writing systems) both to understand each particular language and to see how the languages are related. We consider the impact of diachronic factors on the synchronic study of language. This course can be seen as an extended case-study for applying concepts and analytical strategies from basic linguistics, as taught in Nature of Language, Phonetics and Phonology, Invented Languages, and other relevant courses.
Prerequisite: 80-180

80-385 Linguistics of Germanic Languages
Intermittent: 9 units
The Germanic languages include English, Dutch, Frisian, German, Pennsylvanisch, Afrikaans, Yiddish, Icelandic and the Scandinavian languages, excluding Finnish. The course will serve as an extended case-study for the application of concepts and analytical strategies taught in basic linguistics courses to some of these languages. Specifically, we take a bottom-up approach to Dutch, Frisian, Icelandic, and Danish, starting with raw language material whenever possible, which we progressively analyze in terms of phonetics and phonology, morphology, and syntax. These case studies lead to comparisons between the languages and insight into their development and divergence over time. We follow this hands-on approach with historical and grammatical overviews, touching on some of the outstanding issues in Germanic linguistics. The approach should also help bring out the relevance of diachronic factors in the synchronic study of language, with historical forms of English being open to investigation, as these often reflect patterns found in contemporary Germanic languages.
Prerequisite: 80-180

80-388 Linguistic Typology: Diversity and Universals
Intermittent: 9 units
What is the most common word order? What is the rarest consonant? What kinds of case marking are attested in the world's languages? Which linguistic structures tend to co-occur? What can we learn by looking at the rarity of linguistic structures? These are the kinds of questions central to linguistic typology, the study and classification of languages based on their structural properties. In this course we will look at the variety of linguistic structures attested in several linguistic subfields, including phonology, morphology, syntax, and semantics. Understanding linguistic diversity is closely tied with the search for linguistic universals, since there appear to be some ways in which linguistic structures seem to be limited. But what are the nature of those limits (if they truly exist), and what do they tell us? We will also look at methodological issues that arise in comparing languages and forming meaningful generalizations. Prerequisites: 80-180, and one of 80-280, 80-282, 80-285 or permission of the instructor.
Prerequisites: 80-180 and (80-282 or 80-285 or 80-280)

80-405 Game Theory
Intermittent: 9 units
Game theory is the study of interactive decision-making: making choices in the context of other agents who are also making choices. Famous examples include the "Prisoner's Dilemma" (pitting rational self-interest against the benefits of cooperation), and the "Cournot duopoly" (a basic model of market competition and supply-and-demand). Game theory has been applied to situations as diverse as traffic flow, auctions, the search and competition for scarce resources, and bargaining. This course will develop conceptual and technical facility with the mathematical tools used to model and analyze such situations. We will cover games in strategic and extensive form and games of perfect and imperfect information; we'll also study solution concepts such as Nash equilibrium and rationalizability. Finally, throughout the course we will take the opportunity to actually play several of the games we study to help build intuitions and foster insights into the formal mathematical models we develop.

80-411 Proof Theory
Intermittent: 9 units
An introduction to the general study of deductive systems and their properties. Topics include the natural deduction and sequent calculi; cut-elimination and normalization theorems; metamathematical properties of first-order logic and theories of arithmetic; and conservation theorems.
Prerequisites: 21-300 or 80-310 or 80-311

80-413 Category Theory
Intermittent: 9 units
Category theory is a formal framework devoted to studying the structural relationships between mathematical objects. Developed in the mid-20th century to attack geometrical problems, subsequent progress has revealed deep connections to algebra and logic, as well as to mathematical physics and computer science. The course emphasizes two perspectives. On one hand, we develop the basic theory of categories, regarded as mathematical structures in their own right. At the same time, we will consider the application of these results to concrete examples from logic and algebra. Some familiarity with abstract algebra or logic required.

Course Website: http://www.andrew.cmu.edu/user/jonasf/80-413-713/index.html

80-419 Interactive Theorem Proving
Intermittent: 9 units
Interactive theorem proving involves using computational proof assistants to verify that mathematical proofs are correct, or to verify that hardware and software designs meet their formal specifications. This course uses a new interactive theorem prover, Lean, to explore this new technology and its logical foundations. We will study dependent type theory, a powerful and expressive language for representing mathematical objects, algorithms, and proofs. We will also consider automated methods that can be used in support of formal verification, including propositional, equational, first-order, and higher-order methods, as well as decision procedures for real and integer arithmetic.
Prerequisites: 80-211 or 21-300 or 15-317 or 80-310

Course Website: http://www.andrew.cmu.edu/user/avigad/itp/

80-430 Ethics and Medical Research
Intermittent: 9 units
Ethics & Medical Research: This course covers foundational issues in the ethical evaluation and regulation of research involving human subjects. It begins with a historical overview of the origins of research ethics after World War II as a response to high profile cases of abuse or scandal. This unit covers "classic cases" including the Tuskegee syphilis study, the Willowbrook hepatitis study, the Jewish Chronic Disease Hospital Case, and others. It also covers seminal documents such as the Nuremberg Code, the Belmont Report, and the current federal regulations known as the Common Rule. Against this historical backdrop, the course then examines foundational philosophical issues in human-subjects research including ethical issues in clinical trial design, the concept of equipoise and the use of placebo controls, the requirements of justice in the research context, and the values of privacy and informed consent.

80-431 Meta-ethics
Fall: 9 units
First we will survey of proposals for necessary and sufficient conditions for "x is a morally permissible act". Then we will consider T.S. Scanlon's claim that metaethics is immune from criticism from other subjects. We will then consider moral voting rules—varieties of consequentialism and Scanlon's winner take all method of reasons. We will take up arguments that there are, or are not moral facts, and moral particularism—the doctrine that while there are moral facts, there are no informative true moral generalizations. Finally, we will consider biological accounts of the sources of morality and agency by Binmore, Kitcher, Churchland and others, and there force, if any, against the very idea of normative ethics.

80-447 Global Justice
Intermittent: 9 units
Until recently, the dominant view of international relations has been that the governments and citizens of one country have no moral obligations to those beyond their borders. With the rapid growth in globalization has come a drastic shift in attitudes about our obligations to those with whom we share global institutions of trade but neither legal systems nor national identities. This course aims to introduce students to the problem of global distributive justice in the context of a globalized world, with emphases on both theoretical accounts of justice and the practical implications of those accounts for important current issues. Theoretical topics will include the nature of justice, the sources and limits of our moral obligations, and how and whether those notions of justice extend to global society; while applied topics will include our obligations with regard to the environment, human rights deficits, the status of women, and global economic policy.

80-449 EHPP Project Course
Fall: 12 units
The Ethics, History and Public Policy Project Course is required for the Ethics, History and Public Policy major and is taken in the fall semester of the senior year. In this capstone course, Ethics, History and Public Policy majors carry out a collaborative research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis for a chosen client. The students develop an original research report based on both archival and contemporary policy analysis and they present their results to their client and a review panel.

80-484 Language and Thought
Intermittent: 9 units
The goal of this course is to provide students with the opportunity to creatively explore some difficult questions about the relationship between language and thought, questions such as: How does the human capacity to use language relate to the human capacity to think? Does the language that a person speaks affect the way she thinks? If meaning is in the head, how can we succeed in communicating with each other? How is our ability to reason related to our ability to successfully communicate? None of these questions have definite answers; throughout the course, we will draw on work in philosophy, psychology and linguistics to try to understand some of the possible answers that might be entertained. Students in the course should be prepared for extensive reading, writing and peer discussion assignments.

80-495 Independent Study
Fall and Spring
Independent Study

80-501 Philosophy Senior Honors Thesis I
Fall: 9 units
Philosophy Department majors with outstanding academic records and intellectual promise will be given the opportunity to earn Dietrich College Honors by engaging in original research under the direction of an individual faculty member. Research topics are selected by student. Students must submit a proposal to the Dean's Office for permission.

80-502 Philosophy Senior Honors Thesis II
Spring: 9 units
Philosophy Department majors with outstanding academic records and intellectual promise will be given the opportunity to earn Dietrich College Honors by engaging in original research under the direction of an individual faculty member. Research topics are selected by student. Students must submit a proposal to the Dean's Office for permission.

80-511 Thesis Seminar
Spring: 6 units
This course provides a forum for the presentation and detailed discussion of research done by students, be they undergraduates working on their Senior Thesis or graduate students engaged with their M.S. thesis.

80-513 Seminar on Philosophy of Mathematics
Intermittent: 9 units
The "linguistic turn" in twentieth century philosophy lets us think about mathematics as a collection of linguistic rules and norms that helps us reason effectively and make sense of our experiences. The advent of computational proof assistants, which use stylized languages to convey mathematical content, provides new perspectives on these rules and norms. This seminar will explore ways these formal models of mathematical language and inference can be brought to bear on traditional questions in the philosophy of mathematics.

80-514 Categorical Logic
Intermittent: 9 units
This course focuses on applications of category theory in logic and computer science. A leading idea is functorial semantics, according to which a model of a logical theory is a set-valued functor on a category determined by the theory. This gives rise to a syntax-invariant notion of a theory and introduces many algebraic methods into logic, leading naturally to the universal and other general models that distinguish functorial from classical semantics. Such categorical models occur, for example, in denotational semantics. e.g. treating the lambda-calculus via the theory of cartesian closed categories. Higher-order logic is treated categorically by the theory of topoi. We will also consider the categorical semantics of type theory via locally cartesian closed categories. A prerequisite for this course if familiarity with basic category theory (as treated in the course 80-413/713), but depending on demand the course can start with a quick refresher of the central concepts.

80-515 Seminar on the Foundations of Statistics
Intermittent: 9 units
This decision-theoretic seminar is organized in three parts. 1. In the first we examine Savage's theory of subjective expected utility, primarily chapters 2-5 of his classic book, The Foundations of Statistics. 2. In the second part of the course, we focus on the following issues: 2.1. A comparison of Savage's theory and deFinetti's criteria of coherence. 2.2. Personal vs. group decisions. Topics to include: Arrow's impossibility theorem, consensus, and Savage's position in §7.2 & §13.5 of his book. 2.3. Contemporary theories that highlight violations of the sure-thing principle — violations of Savage's postulate P2. 3. For the third part, we discuss issues related to Indeterministic and/or Imprecise Probability [IP] theory. The seminar explores some of the ongoing research programs falling under IP, mostly as reflected in the Society for Imprecise Probability: Theories and Applications (www.sipta.org).

80-516 Causality and Learning
Fall
Causal connections are usually more informative and helpful than associational information, especially in understanding, control, decision-making, and prediction in changing environments. In the past decades, interesting advances were made in machine learning and statistics for tackling long-standing causality problems, such as how to discover causal knowledge from purely observational data and how to infer the effect of interventions using such data. Furthermore, recently it has been shown that causal information can facilitate understanding and solving various machine learning problems. This course explores how causality is different from and related to association, recent machine learning methods for causal discovery, and why and how the causal perspective helps in machine learning.

80-518 Seminar on Topics in Logic
Intermittent: 9 units
Topic: Introduction to Homotopy Type Theory Homotopy Type Theory (HoTT) is a new field of mathematics that extends Martin-Löf's dependent type theory by the addition of the univalence axiom and higher inductive types. In HoTT we think of types as spaces, dependent types as fibrations, and of the identity types as path spaces. We will see that many spaces that are familiar to topologists can be represented as higher inductive types, and we will develop the basic theorems and constructions in HoTT to reason about them.

80-519 Seminar on Computability: History and Analysis
Spring: 9 units
The history of computability is presented in the context of pertinent developments in mathematics and the sciences, in particular, in astronomy. The analysis of the notion takes seriously normative philosophical considerations, starting with Leibniz and Descartes. Complementary developments in mathematics and logic during the second half of the 19th century led to fundamental issues in logic during the first half of the 20th century. A certain "resolution" of those issues was achieved in the work of Post and, in particular, Turing. The seminar will end with a brief discussion of the abstract notion of "computable dynamical system" and its use in the discussion surrounding the "Church-Turing Thesis".

80-520 Seminar on Philosophy Science
Intermittent: 9 units
In the past 25 years there has been a great deal of research in Machine Learning, Statistics, and Philosophy on inferring graphical causal models from both experimental and non-experimental data, under a variety of different background assumptions. The goals of this course are (i) to give students enough background to be able to read, understand, and contribute to the current literature on topics in the representation, use of, and inferences about causal graphs of various kinds; (ii) to relate the current computer science/statistics literature on causation to the philosophical literature on related topics. The broad topics of the course will be: 1. How to use various kinds of graphs for representation of probabilities, causal models, actual causation, and counterfactuals 2. How to use graphs to answer questions about conditional probabilities, the effects of manipulations, and counterfactuals. 3. Assumptions relating probabilities to causation.

80-521 Seminar on Formal Epistemology
Spring: 9 units
This seminar will focus on dynamic and epistemic logics, with special emphasis on the use of topological tools in such settings. No background in topology is necessary, though some familiarity with modal logic will be very helpful. We will begin with a review of foundational and introductory works and then progress to contemporary research articles. Core topics include public announcement logic, action logic, propositional dynamic logic (for nondeterministic program executions), dynamic topological logic, and evidence models. Additional topics will be chosen based on the interests and suggestions of those in the seminar. The format will be presentation-style: each student will be expected to prepare (in consultation with the professor) and present approximately two papers over the course of the semester.

80-524 Topics in Formal Epistemology: The Topology of Learning
Intermittent: 9 units
When faced with a question concerning learning or scientific method, one habitually reaches for logic and probability theory. But sometimes habits should be questioned. There is increasing awareness, scattered across philosophy, informatics, mathematical statistics, that the the relevant issues are more fundamentally topological. That may sound shocking: what could rubber geometry have to do with learning or inductive inference? The answer is that the set of empirically verifiable propositions over a set of possibilities automatically satisfies the axioms of a topological space over possible worlds. Once that is recognized, there is a systematic translation between topology and familiar concepts and issues in learning, statistics and the the philosophy of science. This seminar will introduce the relevant topological concepts and will explore the methodological correspondences in detail. Topics covered include Hume's problem of induction, the problem of non-refutable theories and paradigm choice, convergence to the truth, simplicity and Ockham's razor, statistical model selection, causal discovery, and computability. The class will place students at the cutting edge of research in this fresh and exciting new area, and will provide them with a high-level, explanatory perspective that unifies much of the detail encountered in standard statistics and machine learning curricula.

80-529 Incommensurability: Ethics and Philosophy of Science
Intermittent: 9 units
Claims that certain things are incommensurable are common in several areas of philosophical discourse. In the philosophy of science, for example, it has been claimed that different scientific theories, or particular claims or terms within these theories, are incommensurable. In ethics, some have argued that different types of values (rights, utility, personal commitments, individual identities) are incommensurable. In many cases, incommensurability is treated as a problem that needs to be surmounted in order for agents to make rational decisions to compare alternative theories or to evaluate acts or policies that implicate different kinds of value. The first part of this course examines what incommensurability is supposed to be, how it supposedly arises in various fields, and what kind of challenge it poses for theories of rationality and rational choice. In the second part of the course we examine theories in which incommensurability is not a problem to be overcome, but a kind of moral requirement in itself. For instance, the injunction at the heart of Kantian ethics not to treat agents (with dignity) like things (with a price) requires that these entities not be brought into certain kinds of comparative relationship. Similar claims seem to be at work in certain liberal political theories (Walzer and Rawls), in views that seek to limit the scope of goods that can be distributed in markets, and in views of science that treat conceptual diversity as an source of important social benefit. A goal of the course is to show how a variety of issues across diverse philosophical contexts have a common structure and how formal work in social choice (e.g., Arrovian impossibility results), and decision theory (e.g., theories of choice that relax the ordering assumption) can help to clarify and resolve important problems.

80-530 Seminar on Ethical Theory
Intermittent
This seminar will focus on classic and contemporary accounts of moral and political autonomy and their application to current topics in ethics, political philosophy, and global justice. We will pay especial attention to the neorepublican notion of freedom as non-domination, how and to what extent this concept interacts with competing conceptions of autonomy, and what can be gained or lost by applying the neorepublican framework to various debates.

80-536 Ethics & Policy of AI
Intermittent: 9 units
AI, robots, and other autonomous technologies are having deep and wide impacts on individuals, communities, and societies. In this seminar, we will examine the ethical & policy dimensions of these novel (autonomous) technologies. We will emphasize analyses of current and near-future systems, grounded in the actual technological details. Students will be expected to have either prior ethics or prior policy familiarity/experience.

80-537 Seminar on Research Ethics: Philosophical Foundations
Intermittent: 9 units
This course covers foundational issues in the ethical evaluation and regulation of research involving human subjects. It begins with a brief overview of the historical origins of research ethics after World War II and the development of the regulatory system for oversight of research with humans in the US. It then examines philosophical questions such as: whether there is a moral imperative to conduct research and, if so, what such an imperative justifies; whether the system of prospective review of research is necessarily paternalistic or whether it can be grounded in alternative norms; how to think about and regulate risk in research; what is the nature and purpose of informed consent and under what conditions can it be waived; and what requirements should be imposed on research sponsored by entities from high-income countries that is carried out in low or middle-income countries. In addition, the course covers ethical issues in clinical trial design, the concept of equipoise, the use of placebo controls, and the requirements of justice in the research context.

80-580 Seminar on the Philosophy of Language
Intermittent: 9 units
Seminar on Coherence The goal of this seminar is to explore models of coherence in the linguistic and cognitive realms, drawing on work in those areas and also in machine learning, Bayesian decision theory, formal epistemology, and other computational frameworks. The model (or models) we will develop will be informed by the effects of coherence constraints in linguistic interpretation and in cognition. In the linguistic realm, interpretation typically involves constructing representations that are richer than the content that is linguistically encoded, and this enrichment is plausibly the result, in part, of the expectation of coherence. This expectation has far reaching effects, including on the assignment of referents to pronouns, the interpretation of definite and indefinite noun phrases, assignment of temporal relations, and the identification of Gricean conversational implicatures. In the cognitive realm, coherence is widely recognized as a factor in various learning & reasoning processes, including conceptual integration, belief adjustment, sequential decision-making, and even less rational processes such as rationalization. In the first part of the seminar, we will develop an understanding of the linguistic and cognitive phenomena relating to coherence in its many manifestations. In the mid-part of the seminar, students will present models and frameworks of coherence from other fields, and examine ways to model various linguistic and cognitive phenomena using these approaches. In the concluding section of the seminar, we will focus on particular linguistic/cognitive phenomena and try to modify the various models to (hopefully) find characterizations and explanations of the diverse phenomena.

80-595 Senior Thesis
Fall and Spring
Philosophy Department majors writing a senior thesis, and are not participating in the Dietrich College Senior Honors Program, are given the opportunity to engage in original research under the direction of an individual faculty member. Research topics are selected by student.

Department of Psychology

Michael Tarr, Department Head

Erik Thiessen, Director of Undergraduate Education in Psychology, Baker Hall 342D

Emilie O'Leary, Undergraduate Coordinator, Baker Hall 339
emilier@andrew.cmu.edu
www.cmu.edu/dietrich/psychology

Can newborn infants perceive the world as we do, or is it just "a blooming buzzing confusion"? Do personality, beliefs and social factors influence health? How do scientists and young children make discoveries, and what abilities make these insights possible? How does brain activity reveal differences in thinking? Can computers think the way people do?

These are some of the questions that psychologists at Carnegie Mellon are trying to answer.

For the student who is majoring in Psychology, Cognitive Science or Neuroscience, studying with faculty who are on the leading edge of research on questions like the above can be a very exciting experience.

The Psychology Department at Carnegie Mellon has long been noted as one of the pioneering Psychology Departments in the world, particularly in such areas as cognitive psychology, cognitive science, social psychology, developmental psychology, cognitive neuroscience, and health psychology. The Psychology Department offers 5 majors: B.A. and B.S. degrees in Psychology, as well as a B.S. degree in Cognitive Science and together with the Department of Biological Sciences, a unified B.S. double major in Psychology and Biological Sciences, and an Intercollege major in Neuroscience.

The Major in Psychology

Psychology is a discipline that embraces both biological and social sciences. It is a science concerned with establishing principles and laws regarding the ways in which people think and behave through the scientific study of human behavior.

The orientation of the Carnegie Mellon Psychology curriculum is toward developing highly skilled and knowledgeable graduates. About half of our graduates go on to graduate or professional school. The remainder seek to expand their problem-oriented analytic skills to qualify themselves for job opportunities beyond those typically open to liberal arts students.

Majors in the department are expected not only to learn about findings already established by psychologists, but also to become proficient in the investigation and analysis of behavior. This includes observing behavior, formulating hypotheses, designing experiments to test these hypotheses, running experiments, performing statistical analysis, and writing reports. The department has many resources for students to use in acquiring these skills. For instance, students interested in child development may be involved in the child development laboratory and observational facilities which are a part of the Carnegie Mellon Children's School which operates under the department's aegis. Students interested in health or clinical psychology might have opportunities to do internships in applied settings, and all Psychology majors have access to extensive computer facilities for data analysis and simulation work. The department also has a state of the art set of undergraduate research laboratories and computer clusters, and through the Scientific Imaging & Brain Research Center, a magnet is in use for conducting brain imaging studies using fMRI.

In addition to formal class work, students are encouraged to participate in research projects where they may register and receive credit for freshmen research experience course 85-198 Research Training: Psychology, 85-506 Readings in Psychology, Fall research experience in 85-507 Research in Psychology or Spring research experience in 85-508 Research in Psychology. In the research in psychology course, the student may work on an ongoing research projects or develop and carry out a new research project with a faculty member. There is university and departmental funding available to help support student-initiated research projects and student travel to present research results at scientific meetings and conferences. In the Readings courses, the student reads extensively on a particular topic. The faculty member and student meet to discuss the readings, and the student writes a paper on the topic selected. The Psychology Department Website (http://www.cmu.edu/dietrich/psychology), provides descriptions of faculty research interests (http://www.cmu.edu/dietrich/psychology/research-areas) that the student can use in determining who should be approached to supervise a particular research or reading project.

Students interested in gaining field work experience via a number of internship opportunities available to them can receive credit through 85-482 Internship in Psychology, 85-480 Internship in Clinical Psychology or 85-484 Practicum in Child Development. Clinical internships are available with a variety of clinical settings including the prestigious Western Psychiatric Institute and Clinic (the teaching hospital of the Department of Psychiatry at the University of Pittsburgh Medical School). During the internship, students get first-hand experience with different clinical populations. Developmental Practicum experience is available in the department-run CMU Children's School (http://www.cmu.edu/dietrich/psychology/centers-and-facilities).

Bachelor of Arts in Psychology

Mathematics — 10-20 units

21-111-21-112	Differential Calculus - Integral Calculus	20
or		
21-120	Differential and Integral Calculus *	10

*Students who place out of 21-120 with AP credit will have successfully completed the calculus requirement

Statistics Sequence — 9 units

36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Experimental Design for Behavioral & Social Sciences - Psychology	

Psychology Surveys — 27 units

85-102	Introduction to Psychology *	9

Survey Courses - Complete Two		Units
85-211	Cognitive Psychology	9
or 85-213	Human Information Processing and Artifical Intelligence	
85-219	Biological Foundations of Behavior	9
85-221	Principles of Child Development	9
85-241	Social Psychology	9
85-251	Personality	9

* Introduction to Psychology cannot be substituted; AP credit does not count towards this requirement

Research Methods — 18 units

Complete two courses.		
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-330	Analytic Research Methods	9
85-340	Research Methods in Social Psychology	9

Advanced Courses — 18 units

Advanced psychology courses exist within four areas (cognitive, cognitive neuroscience, developmental, social and health psychology.) Any advanced content course or seminar in psychology or any psychology course higher than 85-349. Exceptions for the advanced course requirement are: 85-480, 85-482, 85-484, 85-506, 85-507, 85-508, 85-601, 85-602, 66-501, 66-502.

Psychology Breadth, Depth, and Application Electives — 27 Units

Three courses from at least two of the Breadth, Depth and Application Categories. Please Consult the psychology department undergraduate website for approved Breadth Electives.

Depth

Any Psychology course between 85-300-85-499.
Exceptions for the course requirement
are: 85-480, 85-482, 85-484, 85-506, 85-507, 85-508, 85-601, 85-602, 66-501, 66-502.

Application

85-198	Research Training: Psychology	9
85-294	Teaching Assistantship	Var.
85-480	Internship in Clinical Psychology	Var.
85-482	Internship in Psychology	Var.
85-484	Practicum in Child Development	Var.
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
85-601	Senior Thesis	9
85-602	Senior Thesis	9
66-501	H&SS Senior Honors Thesis I	9
66-502	H&SS Senior Honors Thesis II Must receive a B or higher; 9 units min	9

Breadth

Any 200 level Psychology survey course.		
85-261	Abnormal Psychology	9
85-271	Animal Minds	9

or

Choose from a list of courses found outside of the department with departments including Biological Sciences, History, English, HCI, Philosophy, Social Decision Sciences and Statistics. The elective list may change and for the most up to date list please either contact Emilie O'Leary at emilier@andrew.cmu.edu or visit the psychology undergraduate website: www.cmu.edu/dietrich/psychology/undergraduate/current-students/academics.

Computer Science Requirement

15-110	Principles of Computing	10
or 88-300	Programming and Data Analysis for Social Scientists	

Natural Science Requirement (B.A. 18 units of which include 9 units of Gen Ed Science)

The B.A. in psychology requires one course beyond the General Education requirement in natural science.

These courses can be selected from the following areas:

- 03-XXX Biology*
- 09-XXX Chemistry
- 33-XXX Physics

* Given the growing relevance of biology to psychology, it is strongly recommended to take a course in Biological Sciences

Bachelor of Science in Psychology

Mathematics 10-20 units

21-111-21-112	Differential Calculus - Integral Calculus	20

or

21-120	Differential and Integral Calculus *	10

***Students who place out of 21-120 with AP credit will have successfully completed the calculus requirement**

Statistics Sequence 9 units

36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Experimental Design for Behavioral & Social Sciences - Psychology	

Psychology Surveys 27 units

85-102	Introduction to Psychology *	9

Survey Courses - Complete Two		Units
85-211	Cognitive Psychology	9
or 85-213	Human Information Processing and Artifical Intelligence	
85-219	Biological Foundations of Behavior	9
85-221	Principles of Child Development	9
85-241	Social Psychology	9
85-251	Personality	9

* Introduction to Psychology cannot be substituted; AP credit does not count towards this requirement

Research Methods 18 units

Complete two courses.		
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-330	Analytic Research Methods	9
85-340	Research Methods in Social Psychology	9

Advanced Courses 27 units

Advanced psychology courses exist within four areas (cognitive, cognitive neuroscience, developmental, social and health psychology.) Any advanced content course or seminar in psychology or any psychology course higher than 85-349. Exceptions for the advanced course requirement are:85-480,85-482,85-484,85-506,85-507,85-508,85-601,85-602,66-501,66-502.

Psychology Breadth, Depth, and Application Electives 27 Units

Three courses from at least two of the Breadth, Depth and Application Categories. Please Consult the psychology department undergraduate website for approved Breadth Electives.

Depth

Any Psychology course between 85-300–85-499. Exceptions for the course requirement are: 85-480, 85-482, 85-484, 85-506, 85-507, 85-508, 85-601, 85-602, 66-501, 66-502.

Application

85-198	Research Training: Psychology	9
85-294	Teaching Assistantship	Var.
85-480	Internship in Clinical Psychology	Var.
85-482	Internship in Psychology	Var.
85-484	Practicum in Child Development	Var.
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
85-601	Senior Thesis	9
85-602	Senior Thesis	9
66-501	H&SS Senior Honors Thesis I	9
66-502	H&SS Senior Honors Thesis II Must receive a B or higher; 9 units min	9

Breadth

Any 200 level Psychology survey course.		
85-261	Abnormal Psychology	9
85-271	Animal Minds	9

or

Choose from a list of courses found outside of the department with departments including Biological Sciences, History, English, HCI, Philosophy, Social Decision Sciences and Statistics. The elective list may change and for the most up to date list please either contact Emilie O'Leary at emilier@andrew.cmu.edu or visit the psychology undergraduate website: www.cmu.edu/dietrich/psychology/undergraduate/current-students/academics.

Computer Science Requirement 10 units

15-110	Principles of Computing	10
or 88-300	Programming and Data Analysis for Social Scientists	

NATURAL SCIENCE REQUIREMENT (B.S. 27 UNITS OF WHICH INCLUDE 9 UNITS OF GEN ED SCIENCE)

The B.S. in psychology requires two courses beyond the General Education requirement in natural science.

- 03-xxx Biology*
- 09-xxx Chemistry
- 33-xxx Physics

* Given the growing relevance of biology to psychology, it is strongly recommended to take at least one course in Biological Sciences

Additional Major in Psychology

In order to complete an additional major in Psychology, a student must fulfill all of the Psychology major requirements within the department -- in other words, the breadth requirement, computing requirement, three survey courses at the 200-level, two research methods courses, and two advanced courses. These courses must include at least 81 units, plus calculus prerequisites and the 36-200 statistics course or equivalent and 36-309 . In addition, B.S. candidates must take the three-course science requirement and B.A. candidates complete one science course beyond the GenEd requirement.

Concentrations within the Psychology Major

Students who wish to focus their Psychology program on a specific area can do so either by the careful selection of Psychology elective courses focusing on their area of interest or by pursuing one of the following concentrations. Students must obtain a concentration form from the Undergraduate Program Coordinator, Emilie O'Leary, receive approval from their psychology faculty advisor, then returning the signed copy to Emilie in Baker Hall 339. The completion of a concentration will be recognized in the Psychology Graduation Program.

Health-Psychology Concentration

For Psychology majors who wish to have a focus of their study on Health Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the natural science requirement, choose two of the following		Units
03-121	Modern Biology	9
03-132	Basic Science to Modern Medicine	9
03-133	Neurobiology of Disease	9

As part of the psychology breadth requirement:

85-219	Biological Foundations of Behavior	9
85-241	Social Psychology	9

As part of the psychology Research Methods requirements:

85-340	Research Methods in Social Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:

85-442	Health Psychology	9
85-443	Social Factors and Well-Being	9
85-446	Psychology of Gender	9
85-501	Stress, Coping and Well-Being	9
85-362	Seminar on Addiction	9

As part of the Breadth, Depth and Application requirement, at least one of the following

85-480	Internship in Clinical Psychology	9
85-507	Research in Psychology	9
85-508	Research in Psychology	9
85-482	Internship in Psychology	9

or an additional advanced psychology seminar from the list above

Cognitive-Neuroscience Concentration

For Psychology majors who wish to have a focus of their study be on Cognitive Neuroscience, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the natural science requirement, choose two of the following		Units
03-121	Modern Biology	9
03-363	Systems Neuroscience	9
03-366	Biochemistry of the Brain	9

As part of the psychology Breadth requirement:

85-211	Cognitive Psychology	9
85-219	Biological Foundations of Behavior	9

As part of the Research Methods requirement:

85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9

As part of the advanced coursework in psychology requirement, at least two of the following:

85-356	Music and Mind: The Cognitive Neuroscience of Sound	9
85-359	Introduction to Music Cognition Research	9
85-370	Perception	9
85-385	Auditory Perception: Sense of Sound	9
85-406	Autism: Psychological and Neuroscience Perspectives	9
85-407	Neuroscience of Concepts	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-429	Cognitive Brain Imaging	9
85-435	Neural and Cognitive Models of Adaptive Decisions	9

As part of the Breadth, Depth and Application requirement, at least one of the following

85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
88-342	The Neuroscience of Decision Making	9

Or an additional advanced psychology seminar from the list above

Behavior and Developmental Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Behavior and Developmental Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the B.S. science requirement, choose one of the following		Units
03-121	Modern Biology	9
03-364	Developmental Neuroscience	9
03-365	Neural Correlates of Learning and Memory	9

As part of the psychology Breadth requirement:

85-211	Cognitive Psychology	9
85-221	Principles of Child Development	9

As part of the psychology Research Methods Requirement:

85-310	Research Methods in Cognitive Psychology	9
85-320	Research Methods in Developmental Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:

85-350	Psychology of Prejudice	9
85-352	Evolutionary Psychology	9
85-354	Infant Language Development	9
85-363	Attention, Its Development and Disorders	9
85-390	Human Memory	9
85-408	Visual Cognition	9
85-406	Autism: Psychological and Neuroscience Perspectives	9
85-438	Educational Goals, Instruction, and Assessment	9

As part of the Breadth, Depth and Application requirement, at least two of the following

85-294	Teaching Assistantship	Var.
85-484	Practicum in Child Development	Var.
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
76-420	The Cognition of Reading and Writing: Introduction to a Social/Cognitive Process	9
05-418	Design Educational Games	12
57-331	Principles of Education	9

Or an additional advanced psychology seminar from the list above

Cognitive Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Cognitive Psychology and/or Cognitive Modeling, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the B.S. science requirement:		Units
03-121	Modern Biology	9

As part of the psychology Breadth requirement:		
85-211	Cognitive Psychology	9

As part of the psychology Research Methods requirement:		
85-310	Research Methods in Cognitive Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:		
85-356	Music and Mind: The Cognitive Neuroscience of Sound	9
85-359	Introduction to Music Cognition Research	9
85-370	Perception	9
85-385	Auditory Perception: Sense of Sound	9
85-390	Human Memory	9
85-395	Applications of Cognitive Science	9
85-406	Autism: Psychological and Neuroscience Perspectives	9
85-407	Neuroscience of Concepts	9
85-412	Cognitive Modeling	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-421	Language and Thought	9
85-429	Cognitive Brain Imaging	9
85-435	Neural and Cognitive Models of Adaptive Decisions	9

As part of the Breadth, Depth and Application requirement, at least one of the following		
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
76-420	The Cognition of Reading and Writing: Introduction to a Social/Cognitive Process	9
05-391	Designing Human Centered Software	12
05-413	Human Factors	9
80-305	Choices, Decisions, and Games	9
80-380	Philosophy of Language	9
80-484	Language and Thought	9
Or an additional advanced psychology seminar		

Social-Personality Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Social and/or Personality Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the Psychology Breadth requirement:		Units
85-241	Social Psychology	9
85-251	Personality	9

As part of the Psychology Research Methods requirement:		
85-340	Research Methods in Social Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:		
85-350	Psychology of Prejudice	9
85-357	Navigating Race and Identity in America: The Role of Psychology in Racial Intera	9
85-358	Pro-Social Behavior	9
85-375	Crosscultural Psychology	9
85-377	Attitudes and Persuasion	9
85-443	Social Factors and Well-Being	9
85-444	Relationships	9
85-446	Psychology of Gender	9
85-501	Stress, Coping and Well-Being	9

As part of the Breadth, Depth and Application requirement, at least one of the following		
85-507	Research in Psychology	Var.
85-508	Research in Psychology	Var.
85-482	Internship in Psychology	Var.
05-320	Social Web	12
Or an additional advanced psychology seminar from the list above		

Clinical/Counseling Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Clinical/Counseling Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

As part of the Psychology Breadth requirement at least one of the following:		Units
85-241	Social Psychology	9
85-251	Personality	9

Required additional coursework:		
85-261	Abnormal Psychology	9
85-422	Clinical Psychology: Science and Practice	9
85-480	Internship in Clinical Psychology	Var.

As part of the Psychology Research Methods requirements:		
85-340	Research Methods in Social Psychology	9

As part of the advanced coursework in psychology requirement, at least two of the following:		
85-375	Crosscultural Psychology	9
85-377	Attitudes and Persuasion	9
85-406	Autism: Psychological and Neuroscience Perspectives	9
85-414	Cognitive Neuropsychology	9
85-442	Health Psychology	9
85-443	Social Factors and Well-Being	9
85-444	Relationships	9
85-446	Psychology of Gender	9
85-501	Stress, Coping and Well-Being	9

Neuroscience Major

The Psychology Department at Carnegie Mellon University has a major focus on the role of the brain and nervous system in cognition and behavior, including biological approaches involving the health impact that arises from the interaction of behavior with the nervous, endocrine, and immune systems. These interests are manifested in faculty research (http://www.cmu.edu/dietrich/psychology/research-areas), departmental and university centers that operate from or heavily involve the department (e.g., the Center for Cognitive Brain Imaging (http://www.ccbi.cmu.edu), and the Center for the Neural Basis of Cognition (http://www.cnbc.cmu.edu)) as well as undergraduate coursework (http://www.cmu.edu/dietrich/psychology/undergraduate) and graduate coursework.

For undergraduates, there are a number of ways in which students with an interest in these approaches can pursue that interest in an organized fashion. Major requirements for the Bachelor of Science in Neuroscience can be found under Intercollege Programs (http://coursecatalog.web.cmu.edu/servicesandoptions/intercollegeprograms/#bachelorofscienceinneurosciencetext).

Carnegie Mellon University recently launched *BrainHub* – an initiative designed to leverage its core strengths in cognitive science, engineering, and computer science, and our emerging excellence in biological sciences, to harness the technology that helps the world explore brain and behavior. Students will be able to take advantage of exciting opportunities such as lectures hosted on various topics, newly funded CMU campus research projects trying to answer pressing questions in brain science and the many global partnerships with other institutions all with the same motivating goal to enhance and increase research in brain sciences.

Finally, for any interested student, there is a Minor in Cognitive Neuroscience (http://coursecatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/departmentofpsychology/#minortext) available through the Psychology department.

The Major in Cognitive Science

The Psychology Department offers a B.S. degree in Cognitive Science. The field of cognitive science has grown out of increasingly active interaction among psychology, linguistics, artificial intelligence, philosophy, and neuroscience. All of these fields share the goal of understanding intelligence. By combining these diverse perspectives, students of cognitive science are able to understand cognition at a deep level. Because this major is administered by the Psychology Department, it focuses on human cognition and the experimental study of the human mind as illuminated by the techniques of the above disciplines.

Cognitive Science Curriculum

The Cognitive Science major is only offered as a B.S. degree. Candidates should complete before the junior year the two-semester calculus sequence 21-120 /21-256 (or alternatively 21-120/21-122)* and a statistics sequence (36-200 or equivalent and if possible, 36-309). In addition, candidates complete 15-112 Fundamentals of Programming and Computer Science, as their departmental computing course.

Because of the number and sequential nature of required courses, prospective Cognitive Science majors are encouraged to begin course work for the major prior to junior year. In particular, completion of calculus, 36-200, and 85-211 or 85-213 before the junior year will enable students to complete 85-310 and 36-309 and by the Fall semester of their sophomore or junior year and, if interested, to then take advantage of research opportunities in the department.

*The 3-Semester sequence 21-111 /21-112/21-256 may be substituted by students who have already taken 21-111 before deciding on the major.

Computing Prerequisite — 10 units

15-112	Fundamentals of Programming and Computer Science	12

Mathematics — 29-30 units

21-111-21-112	Differential Calculus - Integral Calculus	20

or

21-120	Differential and Integral Calculus *	10
21-127	Concepts of Mathematics	10

*Students who place out of 21-120 will have fulfilled the calculus requirement

.

Statistics Sequence — 18 units

36-200	Reasoning with Data	9
36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Experimental Design for Behavioral & Social Sciences - Psychology	

Computational/Cognitive Modeling Core — 29–31 units

Two of the following:		Units
15-122	Principles of Imperative Computation	10
15-150	Principles of Functional Programming	10
15-251	Great Ideas in Theoretical Computer Science	12

Plus one of the following:		Units
85-412	Cognitive Modeling	9
85-419	Introduction to Parallel Distributed Processing	9
85-435	Neural and Cognitive Models of Adaptive Decisions	9

Cognitive Psychology Core — 27 units

		Units
85-211	Cognitive Psychology	9
or 85-213	Human Information Processing and Artifical Intelligence	
85-310	Research Methods in Cognitive Psychology	9
or 85-314	Cognitive Neuroscience Research Methods	

Plus two of the following (one of which must be 85-3xx or 85-4xx):		Units
85-219	Biological Foundations of Behavior	9
85-359	Introduction to Music Cognition Research	9
85-370	Perception	9
85-390	Human Memory	9
85-395	Applications of Cognitive Science	9
85-408	Visual Cognition	9
85-414	Cognitive Neuropsychology	9
85-421	Language and Thought	9
80-381	Meaning in Language	9
80-310	Formal Logic	9
80-314	Causal Discovery, Statistics, and Machine Learning	9
80-315	Modal Logic	9
80-383	Language in Use	9

Cognitive Science Concentration

(3 courses, concentration approval required)

These three courses are chosen in conjunction with your advisor to form a coherent area of concentration from the course list under "Cognitive Science Concentration" in the current Undergraduate Catalog. Before proceeding with the choice of courses, students must fill out the concentration form, obtained from Emilie O'Leary in Baker Hall 339, with a description of the concentration area and the planned set of three courses. Courses not represented on the list may, with pre-approval of advisor and department, be used to satisfy part of this requirement. **The three courses are not required to be within any single category below but be coherent within the major and the focus may vary across disciplinary boundaries.** Courses taken for the major requirements can not be double counted in the concentration.

Computer Science — 36 units

16-385	Computer Vision	12
15-453	Formal Languages, Automata, and Computability	9
10-601	Introduction to Machine Learning (Master's)	12
05-410	User-Centered Research and Evaluation	12
05-432	Personalized Online Learning	12

Psychology

85-219	Biological Foundations of Behavior	9
85-352	Evolutionary Psychology	9
85-354	Infant Language Development	9
85-370	Perception	9
85-375	Crosscultural Psychology	9
85-380	In Search of Mind: The History of Psychology	9
85-390	Human Memory	9
85-392	Human Expertise	9
85-395	Applications of Cognitive Science	9
85-406	Autism: Psychological and Neuroscience Perspectives	9
85-412	Cognitive Modeling	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-421	Language and Thought	9
85-423	Cognitive Development	9
85-426	Learning in Humans and Machines	9
85-429	Cognitive Brain Imaging	9

Philosophy

80-210	Logic and Proofs	9
80-211	Logic and Mathematical Inquiry	9
80-220	Philosophy of Science	9
80-254	Analytic Philosophy	9
80-255	Pragmatism	9
80-270	Philosophy of Mind	9
80-310	Formal Logic	9
80-311	Undecidability and Incompleteness	9

80-314	Causal Discovery, Statistics, and Machine Learning	9

Linguistics

80-180	Nature of Language	9
80-280	Linguistic Analysis	9
80-281	Language and Thought	9
80-315	Modal Logic	9
76-385	Introduction to Discourse Analysis	9

Decision Sciences

88-302	Behavioral Decision Making	9
88-355	Social Brains: Neural Bases of Social Perception and Cognition	9
88-380	Dynamic Decisions	9
88-388	Psychological Models of Decision Making	9
88-402	Modeling Complex Social Systems	9

Neurosciences

03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
42-202	Physiology	9
15-386	Neural Computation	9
15-883	Computational Models of Neural Systems	12

Science Requirement

The Cognitive Science program requires two additional science courses beyond the college's one course Science General Education requirement.

These can be selected from any one of the following areas.	
03-xxx	Biology *
09-xxx	Chemistry
33-xxx	Physics

* Those interested in a cognitive neuroscience focus are recommended to take biology courses, including if possible, 03-362, or 03-363.

Additional Major in Cognitive Science

In order to complete a double major in Cognitive Science, a student must fulfill the major requirements as listed under the Cognitive Science major. These include the programming requirement (15-112), the Mathematics and Statistics prerequisites, Computational/Cognitive Modeling Core, The Cognitive Psychology Core, the Cognitive Science Concentration Requirement, and the Supplementary Science Requirement. Students will be assigned a department advisor to help plan their program of studies in Cognitive Science.

Unified Double Major in Psychology & Biological Sciences

Veronica Hinman, *Department Head, Biological Sciences*

Michael Tarr, *Department Head, Psychology*

This major is intended to reflect the interdisciplinary nature of current research in the fields of biology and psychology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences.

Note: Students entering from the Dietrich College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students in the Mellon College of Science will earn a Bachelor of Science in Biological Sciences and Psychology.

Depending on a student's home college (DC or MCS), General Education (GenEd) requirements will be different. GenEd requirements for DC (http://coursecatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/#hampssgeneraleducationprogram160) and MCS (http://coursecatalog.web.cmu.edu/melloncollegeofscience) are found on their respective Catalog pages.

Degree Requirements:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	12
03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	General Biology Elective [1]	9
03-3xx	Advanced Biology Elective [1]	18
Total Biology units		78

[1] Please see description and requirements for electives under the B.S. in Biological Sciences section of this Catalog.

Mathematics, Statistics, Physics and Computer Science		Units
21-120	Differential and Integral Calculus	10
21-124	Calculus II for Biologists and Chemists	10
or 21-122	Integration and Approximation	
36-247	Statistics for Lab Sciences	9
or 36-200	Reasoning with Data	
36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Experimental Design for Behavioral & Social Sciences - Psychology	
33-121	Physics I for Science Students [2]	12
or 33-141	Physics I for Engineering Students	
15-110	Principles of Computing	10-12
or 15-112	Fundamentals of Programming and Computer Science	
or 02-201	Programming for Scientists	
99-101	Computing @ Carnegie Mellon	3
Total Science units		63-65

[2] MCS students must also complete 33-122 Physics II for Biological Sciences and Chemistry Students.

Chemistry		Units
09-105	Introduction to Modern Chemistry I	10
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
or 09-219	Modern Organic Chemistry	
09-218	Organic Chemistry II	9
or 09-220	Modern Organic Chemistry II	
09-207	Techniques in Quantitative Analysis	9-12
or 09-221	Laboratory I: Introduction to Chemical Analysis	
09-208	Techniques for Organic Synthesis and Analysis	9-12
or 09-222	Laboratory II: Organic Synthesis and Analysis	
Total Chemistry units		56-62

Psychology Courses		Units
85-102	Introduction to Psychology	9
85-219	Biological Foundations of Behavior	9
85-2xx	Survey Psychology Courses *	18
85-310	Research Methods in Cognitive Psychology	9
or 85-340	Research Methods in Social Psychology	
or 85-320	Research Methods in Developmental Psychology	
or 85-314	Cognitive Neuroscience Research Methods	
or 85-330	Analytic Research Methods	
85-3xx	Advanced Psychology Electives	18
Total Psychology units		63

* Excluding 85-261 Abnormal Psychology

Additional Advanced Elective 9 units

(Choose one of the following courses)		
85-3xx	Advanced Psychology Elective	9
or		
03-3xx	Advanced Biology Elective	9

Additional Laboratory or Research Methods 9-12 units

(Choose one of the following courses)		
03-344	Experimental Biochemistry	12
03-345	Experimental Cell and Developmental Biology	12
03-346	Experimental Neuroscience	12
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-340	Research Methods in Social Psychology	9

Elective Units	Units
Free Electives	33-36
MCS Nontechnical Breadth or DC General Education requirements	36-48
Total Elective units	69-84

Minimum number of units required for degree: 360

Minors in Psychology and Cognitive Neuroscience

Minor in Psychology 72 units

I. Introductory course		
85-102	Introduction to Psychology *	9

*A survey course can be taken in place of 85-102.

II. Area Survey courses

Complete two courses.		
85-211	Cognitive Psychology	9
or 85-213	Human Information Processing and Artifical Intelligence	
85-219	Biological Foundations of Behavior	9
85-221	Principles of Child Development	9
85-241	Social Psychology	9
85-251	Personality	9

III. Statistics		
36-200	Reasoning with Data	9
36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Experimental Design for Behavioral & Social Sciences - Psychology	

27 unitsUpper Level Courses

Complete three courses from categories IV and V, with at least one course from each.

IV. Research Methods Courses * (minimum 9 units)		
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-330	Analytic Research Methods	9
85-340	Research Methods in Social Psychology	9

* Prerequisites for all Research Methods courses: 36-309 and the appropriate survey course.

V. Advanced courses (minimum 9 units)

Advanced psychology courses exist within four areas (cognitive, cognitive neuroscience, developmental, social and health psychology.) Any advanced content course or seminar in psychology or any psychology course higher than 85-350. Exceptions for the advanced course requirement are: 85-480, 85-482, 85-484, 85-484, 85-506, 85-507, 85-508, 85-601, 85-602, 66-501, 66-502.

Minor in Cognitive Neuroscience 63 units

The minor in Cognitive Neuroscience offered by the Department of Psychology is similar to the Neuroscience Minor offered by the Department of Biological Sciences. The differences between the two forms of the minor are determined by one required course, and additionally, by the students' choice of distribution electives. The requirements for the Cognitive Neuroscience Minor include 7 courses: four required courses, and three distribution and elective courses.

Because of the curriculum within this minor may overlap with some degree requirements, no more than 2 courses fulfilling Neuroscience or Cognitive Neuroscience Minor requirements may count towards a student's major or other minor requirements.

Cognitive Neuroscience Curriculum

Required Coursework

03-121	Modern Biology	9
03-363	Systems Neuroscience	9
85-219	Biological Foundations of Behavior	9
85-211	Cognitive Psychology	9
or 85-213	Human Information Processing and Artifical Intelligence	

Distribution Requirements

Three courses, including at least 1 from each of the following categories

Approaches to Cognitive Neuroscience		
85-314	Cognitive Neuroscience Research Methods	9
85-412	Cognitive Modeling	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-429	Cognitive Brain Imaging	9
15-386	Neural Computation	9
15-883	Computational Models of Neural Systems	12
36-746	Statistical Methods for Neuroscience and Psychology	12

Cognitive Neuroscience Electives		
03-133	Neurobiology of Disease	9
03-362	Cellular Neuroscience	9

The Honors Program

The Honors Program provides recognition of outstanding performance by students in the Psychology department. Participation enables students to pursue their own research ideas through completion of an honors thesis. The honors thesis is completed during the senior year. By completing a thesis, the student earns 18 units of credit and qualifies for graduation with "College Honors." To qualify for the Honors Program, the student must maintain a quality point average of at least 3.50 in the major and 3.25 overall. More information on the Honor program can be found here (http://www.cmu.edu/dietrich/undergraduate/programs/shp).

A year long departmental senior thesis course exists (66-501 and 66-502) for students interested in pursuing a sizable research project who do not qualify for the honors program. More information can be obtained by contacting Emilie O'Leary at emilier@andrew.cmu.edu.

Faculty

JOHN R. ANDERSON, Richard King Mellon University Professor of Psychology and Computer Science – Ph.D., Stanford University; Carnegie Mellon, 1978–

MARLENE BEHRMANN, Thomas S. Baker Univ Professor of Psychology and Cognitive Neuroscience – Ph.D., University of Toronto; Carnegie Mellon, 1993–

JESSICA CANTLON, Ronald J. and Mary Ann Zdrojkowski Associate Professor of Developmental Neuroscience – PhD, Duke University; Carnegie Mellon, 2007–

SHARON CARVER, Teaching Professor, Psychology; Associate Dean of Student Affairs, Dietrich College – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1993–

SHELDON COHEN, Robert E. Doherty University Professor of Psychology – Ph.D., New York University; Carnegie Mellon, 1982–

CHANTE COX-BOYD, Associate Teaching Professor – Ph.D., University of North Carolina at Chapel Hill; Carnegie Mellon, 1999–

DAVID CRESWELL, Associate Professor – Ph.D., University of California, Los Angeles; Carnegie Mellon, 2008–

KASEY CRESWELL, Associate Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2012–

BROOKE C. FEENEY, Professor of Psychology – Ph.D., State University of New York at Buffalo; Carnegie Mellon, 2001–

ANNA FISHER, Associate Professor – Ph.D., The Ohio State University; Carnegie Mellon, 2006–

VICKI S. HELGESON, Professor of Psychology – Ph.D., University of Denver; Carnegie Mellon, 1990–

LAURIE HELLER, Teaching Professor – Ph.D., University of Pennsylvania; Carnegie Mellon, 2009–

LORI L. HOLT, Professor of Psychology – Ph.D., University of Wisconsin; Carnegie Mellon, 1999–

MARCEL A. JUST, D. O. Hebb University Professor of Psychology – Ph.D., Stanford University; Carnegie Mellon, 1972–

ROBERTA KLATZKY, Charles J. Queenan Jr., Professor of Psychology – Ph.D., Stanford University; Carnegie Mellon, 1993–

KENNETH R. KOEDINGER, Professor of HCII – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2001–

MARSHA C. LOVETT, Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2000–

BRIAN MACWHINNEY, MacWhinney, Brian Teresa Heinz Professor of Cognitive Psych – Ph.D., University of California, Berkeley; Carnegie Mellon, 1981–

BRADFORD MAHON, Associate Professor – PhD, Harvard University ; Carnegie Mellon, 2009–

KODY MANKE, Assistant Teaching Professor – Ph.D, Standford University; Carnegie Mellon, 2016–

BONNIE NOZARI, Associate Professor – PhD, University of Illinois at Urbana-Champaign; Carnegie Mellon, 2011–

DAVID PLAUT, Professor of Psychology – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1994–

DAVID RAKISON, Associate Professor – D.Phil., University of Sussex; Carnegie Mellon, 2000–

LYNNE M. REDER, Professor of Psychology – Ph.D., University of Michigan; Carnegie Mellon, 1978–

MICHAEL F. SCHEIER, Scheier, Mike Walter van Dyke Bingham Professor of Personality and Health Psychology – Ph.D., University of Texas; Carnegie Mellon, 1975–

MICHAEL TARR, Professor & Dept Head and Kavčić-Moura Professor of Cognitive and Brain Science – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2009–

ERIK D. THIESSEN, Associate Professor, Director of Undergraduate Education in Psychology – Ph.D., University of Wisconsin, Madison; Carnegie Mellon, 2004–

TIMOTHY VERSTYNEN, Associate Professor – Ph.D., University of California, Berkeley ; Carnegie Mellon, 2006–

DAN YUROVSKY, Assistant Professor – PhD, Indiana University; Carnegie Mellon, 2012–

Department of Psychology Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

85-102 Introduction to Psychology
Fall and Summer: 9 units
This course examines major areas of scientific psychology in some depth, the attempt being to develop basic models of our behavior and thought that explain wide areas of our functioning. The primary focus is on the areas of neural and motivational control of behavior, memory and thought, social interaction, and psychological development. Specific topics within these areas include brain function, motivational control systems, learning, cognitive and perceptual information processing, problem solving, obedience and conformity, social interaction, emotion, attitude consistency and change, how our social, cognitive and language functions develop, the importance of childhood to adult functioning, and psychopathology. In addition to the lecture, the course includes a weekly recitation section meeting and weekly short WEB-based laboratory experiences in which students get to perform actual experiments, interpret real data, and experience many psychological phenomena.

85-198 Research Training: Psychology
Fall and Spring: 9 units
See https://www.cmu.edu/dietrich/students/undergraduate/programs/research-training-program.html and click on (forms and guides informational handout page) then click on current freshman-sophmore research training courses for listing of research training course descriptions.

Course Website: https://www.cmu.edu/dietrich/students/undergraduate/programs/research-training-program.html

85-211 Cognitive Psychology
Fall and Spring: 9 units
How do people perceive, learn, remember, and think? This course will consider perception, language, attention, learning, memory, reasoning, and decision making. Experimental findings and formal models will be discussed in each part of the course.

85-213 Human Information Processing and Artifical Intelligence
Fall: 9 units
This class will review various results in cognitive psychology (attention, perception, memory, problem solving, language) and use of artificial intelligence techniques to simulate cognitive processes.
Prerequisites: 15-122 or 15-150

85-219 Biological Foundations of Behavior
Fall: 9 units
This course will provide students with a general introduction to the underlying biological principles and mechanisms which give rise to complex human cognitive, perceptual and emotional behavior. Topics to be covered include: the anatomical structure of nerve cells and how they communicate, properties of brain organization and function, processing in sensory and motor systems, biological characteristics of human cognition, and neural and hormonal influences on health and emotion. This course will focus on how emerging methods and approaches are beginning to make it possible for psychologists, computer scientists, and biologists to gain an integrated understanding of complex behavior.

85-221 Principles of Child Development
Fall and Spring: 9 units
This course is about normal development from conception through adolescence. Topics include physical, perceptual, cognitive, emotional and social development. Students will learn facts about children at various points in development, theories about how development works, and research methods for studying development in infants and children. Students will be encouraged to relate the facts, theories and methods of developmental psychology to everyday problems, social issues and real world concerns.

85-241 Social Psychology
Fall and Spring: 9 units
The focus of this course will be on how peoples behavior, feelings and thoughts are influenced or determined by their social environment. The course will begin with lectures and readings on how social psychologists go about studying social behavior. Next, various topics on which social psychologists have done research will be covered. These topics will include: person perception, prejudice and discrimination, the nature of attitudes and how attitudes are formed and changed, interpersonal attraction, conformity, compliance, altruism, aggression, group behavior, and applications of psychology to problems in health care, law, politics, and the environment. Through readings and lectures on these topics, students will also be exposed to social psychological theories.

85-251 Personality
Intermittent: 9 units
The primary purpose of personality psychology is to understand human uniqueness—how and why it is that one person differs from others, in terms of the ways he or she thinks, feels, and acts. Students in the course will be exposed to several broad theoretical perspectives, each of which attempts to capture and understand the origins and consequences of individual distinctiveness from a slightly different vantage point. Included among these approaches are the dispositional or trait, psychoanalytic, learning, humanistic, and cognitive self regulation perspectives. This is a survey course and is intended to provide students with a broad background of theory and research in the area. Class meetings consist primarily of lecture, but there is some discussion too. Students will be given the opportunity to assess their own personalities during the course. A consistent theme throughout the course is the relationships between aspects of one's personality and physical health. https://www.cmu.edu/dietrich/psychology/pdf/syllabi-2018-spring/85-251%20Scheier%20revised.docx

85-261 Abnormal Psychology
Intermittent: 9 units
The study of psychopathology is not an exact science; nor are there many clear-cut parameters with which to differentiate "normal" and "abnormal" behavior. This course will focus on learning about and understanding the range of behaviors which fall within the province of "abnormal" psychology. Its approach will be descriptive, empirical, theoretical, and conceptual. Students will examine definitions of "abnormality" in a historical and contemporary context, explore issues relevant to diagnosis and patient care, be introduced to various psychological diagnostic categories, and develop an appreciation of the range of empirically-supported treatments for these disorders.

85-271 Animal Minds
All Semesters: 9 units
With intricate cultures, impressive technology, and layered social lives, humans seem to stand apart from their animal kin. However, humans and non-human animals share many aspects of their mental lives, and, upon closer inspection, some animals even reveal cognitive abilities far beyond the capacities of humans. Through comparing and contrasting human and non-human cognition, we can learn about human psychological uniqueness and its evolutionary origins, and fundamental properties of cognitive processes in general

85-281 Introduction to Clinical Psychology
Spring: 9 units
This course is designed to introduce students to a wide variety of concepts in the area of clinical psychology. We will explore clinical psychology in an historical perceptive, ethics related to the practice of psychology, and various theories of psychotherapy (Incluing psychoanalytic, psychodynamic, existential, and cognitive behavioral). Also, we will look at group theories underlying group therapy and family/systems therapy.
Prerequisites: 85-261 or 85-251

85-294 Teaching Assistantship
Intermittent
This course is designed to provide students with an apprenticeship in the practice of teaching through one-on-one interaction with a faculty member in the design, administration, and teaching of a course. The student should have previous coursework in the topic domain of the course to ensure that they have the basic skills and background necessary to contribute to the course. The Teaching Assistantship will be supervised by a faculty member, and should result in a concrete, measurable contribution to a course (such as the design of assignments or exams) and/or a reflection on the practical and pedagogical considerations of course design (such as a paper). It is the student's responsibility to make independent arrangement for independent course study courses with individual faculty members. This should be done the semester before a student wishes to register for one of these courses. The course may be taken for any number of units up to 9, depending on the amount of work done.

85-309 Experimental Design for Behavioral & Social Sciences - Psychology
Spring: 9 units
tba

85-310 Research Methods in Cognitive Psychology
Fall and Spring: 9 units
This is a course in which students develop the research skills associated with cognitive psychology and cognitive science. Students learn how to design and conduct experiments, and analyze and interpret the data they collect. The course covers a variety of experimental designs, e.g., factorial, Latin Squares. Analyses of response times, qualitative data, and signal detection are also covered. Cognitive modeling will also be discussed. Topics include mental imagery, memory, and perception. The class format consists of lectures, discussions and student presentations.
Prerequisites: (36-309 and 85-211) or (36-309 and 85-213) or (85-211 and 36-202)

85-314 Cognitive Neuroscience Research Methods
Intermittent: 9 units
This is a hands-on laboratory course designed to foster basic skills in the empirical approaches used in cognitive neuroscience research. Students will learn how to evaluate which cognitive neuroscience method is best suited to a research question, basic experimental design and analysis, and how to formally present empirical results. The course will focus on functional MRI, but will also cover structural MRI (diffusion imaging) and EEG, and survey various other methods. Students will work with actual datasets using the current software used by cognitive neuroscience researchers. You must have taken 36-309 previously, as well as one of the following: 85-310, 85-320, 85-330, 85-340, 09-207, or 03-124. A background in basic neurobiology, such as 85-219, and comfort with using research software such as SPSS as well as basic programming are encouraged but not required.
Prerequisites: 36-309 and (85-219 or 85-211)

85-320 Research Methods in Developmental Psychology
Fall and Spring: 9 units
This is a laboratory course, in which the student will have direct experience working with children, as well as writing research reports and designing and critiquing research in child development. The purpose of the course is to develop research expertise that will assist the student both in carrying out research and in evaluating the research of others. Special emphasis will be given to the unique methodological problems associated with the study of development. Students must be sure they are also available to attend the Children's School during specific blocks in addition to the class meeting times. Either MW 8:30-10:30am, TR 8:30-10:30am, MW 12:30-2:15pm or MW 12:30-2:15pm.
Prerequisites: 85-221 and 36-309

85-330 Analytic Research Methods
Intermittent: 9 units
This class will teach students how to apply six major non-experimental research methods used in analytic behavioral analysis. Protocol Analysis. This method is used to study patterns and changes in problem-solving and their matches to theoretical models, including computational models. Corpus Analysis. This method is used to isolate patterns of behavioral and communication usage and change, as revealed through the study of the world-wide web and large computerized databases such as CHILDES, TalkBank, or the British National Corpus. Tools here include text searches and data-mining. Conversation Analysis. This is a microanalytic method used to examine sequencing, repair, and orientation in closely transcribed recordings of spoken interactions, as made available through systems such as the CABank database, as well as recorded programs on YouTube and elsewhere. Coding Systems. This approach seeks to capture interactional and behavioral structures in writing, teaching, interview, and other interactions. Here, there will be a special emphasis on the coding of instructional interactions. Gesture Analysis. This microanalytic method seeks to track patterns in gestural and nonverbal communication, often in association with spoken messages. Profile Analysis. This approach studies differences across learners at various ages and ability levels and group differences involving aphasia, autism, stuttering, dementia, and other individual differences. Students will work with data already available from previous studies, and will also learn to collect their own new datasets. Although the data being examined have been generated through naturalistic processes, they can be analyzed quantitatively using time-series analyses, non-parametric statistics, error matrices, and neural network simulations. In these various analyses, we will also consider how behavioral patterns are shape
Prerequisites: 85-320 or 85-340 or 85-310

85-340 Research Methods in Social Psychology
Fall and Spring: 9 units
This course is designed to provide students with the necessary knowledge to evaluate research, make transitions between theory and the operations that test the theory, and to design and carry out original research. Topics will include the nature of proof and causal inference, manipulation of indepen-dent variables, measurement of dependent variables, questionnaire design, experimental ,and quasi-experimental, design and ethical issues involved in doing research. Survey, observational and experimental techniques as applied in both field and laboratory settings will be covered. Students will be expected to criticize completed research. They are also expected to design measures and complete their own original studies. During the course of the semester students will also be expected to design and carry out an original research project as well.
Prerequisites: (85-251 and 36-309) or (36-309 and 85-241) or (36-202 and 85-251) or (85-241 and 36-202)

85-341 Team Dynamics and Leadership
Spring: 9 units
Much of the work in groups and organizations consists of communication. You communicate to get information that will be the basis of decisions, to provide a vision for the people who work for and with you, to coordinate activity, and to sell yourself and your work. The goal of this course is to identify sources of communication problems within an organization and ways to overcome them. To do this requires that we know how communication normally works, what parts are difficult, and how to fix it when it goes wrong. The focus of this course is on providing you with a broad understanding of the way communication operates within dyads, work groups, and organizations. This course is not a practicum in public speaking or writing, although you will get some experience writing, speaking, and managing impressions. Rather the intent is to give you theoretical and empirical underpinnings for the communication you will undoubtedly do when you return to work. Readings come from both the research and the managerial literatures. Among the topics considered are managerial communication, persuasion and conformity, self presentation and person perception, social networks. Cases and group projects give you an opportunity to apply what you've learned.
Prerequisites: 36-201 or 70-207 or 36-247 or 36-225 or 36-207 or 36-217 or 36-220

85-345 Meaning in Mind and Brain
Intermittent: 9 units
What does it mean to say that an object, word, event or sentence means something? What is the nature of semantic representations that are activated in the brain during comprehension, and how are they related to perceptual, linguistic, mnemonic and motor representations? How do these representations emerge over the course of development, and how can they be selectively impaired by brain damage? This course examines these and related questions by drawing on findings from a broad range of methodologies, including developmental studies of young children, behavioral studies of adults, neuropsychological studies of brain-damaged patients, neurophysiology and functional brain imaging, and computational modeling. The course will take a seminar format in which students read, present and discuss the current literature.
Prerequisites: 85-213 or 85-211 or 85-219

85-350 Psychology of Prejudice
Spring: 9 units
This course is devoted to the study of both traditional and more modern forms of prejudice and discrimination and the psychological processes that can arise from categorizations and stereotyping. The class provides an overview of the cognitive and emotional underpinnings of prejudice and discrimination as it pertains to many forms of inequality. The psychological theories underlying these behaviors will be examined as well as their impact on the lives of stigmatized individuals. Its goal is to examine a number of social differences and understand how prejudice can impact many areas of society. In addition to the traditional forms of prejudice based on such things as race, gender and age; other inequalities that result from less traditional groupings such as social class, appearance, and disability and will be explored. Research on issues of social identity, intergroup relations and the reduction of prejudice will be examined through readings and class activities.
Prerequisite: 85-241

85-352 Evolutionary Psychology
Intermittent: 9 units
This course will cover both the fundamentals of evolutionary psychology, including the theories of natural and sexual selection, with the overarching aim of providing an overview of the field at an advanced level. We will examine the relevance of evolutionary thinking to a range of psychological phenomena including problems of survival, long-term mating strategies, short-term sexual strategies, parenting, kinship, cooperative alliances, aggression and warfare, conflict between the sexes, and prestige, status, and social dominance. We will also examine evolutionary approaches to sensation and perception, development, consciousness, cognition, language, and abnormal behavior. Juniors and Seniors only or permission of instructor. Pre req: 85-102, 85-211, 85-221, 85-241 or 85-251
Prerequisites: 85-251 or 85-241 or 85-221 or 85-102 or 85-211

85-353 Mindfulness: Science and Practice
Intermittent: 9 units
This course will focus on blending first-person experience with mindfulness practices (including mindfulness meditation) and learning about the scientific research on mindfulness. Students will engage in guided mindfulness exercises, develop a daily mindfulness practice, and try out different mindfulness training traditions. In addition, much of this course will be focused on applying a critical eye to the theory, measures, mechanisms, and effects of mindfulness (and mindfulness training interventions) across multiple domains cognition, social processes, behavior, biological mechanisms, and health. As such, this will be a small seminar course focused developing first-person experiences of mindfulness and on discussing the debates and opportunities related to the emerging science of mindfulness.
Prerequisites: 85-314 or 85-340 or 85-310 or 85-320

85-354 Infant Language Development
Intermittent: 9 units
While adults struggle to learn languages, almost all infants acquire language with seemingly little effort. This course examines infants' learning abilities and language milestones with a focus on several different theoretical accounts of language development, and the way empirical data can be used to assess those theories. The course is reading intensive, and evaluation will be based on both written assignments and oral participation.
Prerequisite: 85-221

85-356 Music and Mind: The Cognitive Neuroscience of Sound
Intermittent: 9 units
This course will take a multidisciplinary approach to understand the neural systems that contribute to auditory perception and cognition, using music and speech as domains of inquiry. Students will master topics in acoustics, psychophysics, cognitive psychology, cognitive development, neurophysiology, and neuropsychology. The early part of the course will provide students with a common foundation in acoustics, signal processing, and auditory neuroscience. Later in the semester, the focus will turn to developing analytical skills through critical evaluation of primary-source experimental literature. Hands-on laboratories and homework sets in sound manipulation and experimentation also will constitute a means of learning about auditory cognitive neuroscience. Throughout, the focus will be upon understanding general cognitive and perceptual challenges in perceiving and producing complex sounds like speech and music. Topics may include biological vs. cultural influences, development in infancy, perception versus production, time perception, effects of experience on perceptual processing, comparative studies of animals, attention, development of expertise, effects of brain damage, and emotional expression. Topics will be addressed from the perspective of cognitive neuroscience, in that we will attempt to understand the neural processes that give rise to auditory perception and cognition.
Prerequisites: (85-370 or 85-211 or 85-219) and (85-310 or 85-340 or 85-320)

85-357 Navigating Race and Identity in America: The Role of Psychology in Racial Intera
Intermittent: 9 units
How have social institutions and historical factors led to the belief systems and stereotypes that shape how race is experienced in American society, and how do these belief systems affect the way individuals within racial groups come to view and define themselves? This course will serve as an introduction to how people's psychologyhow they think, feel, and actshapes their experience of race and identity in America. After a brief discussion about the structural and systemic origins of the racial status quo, we will examine the way that individuals navigate the social and racial landscape of modern-day America. Complementing courses that take sociological approaches to race in America, this course will focus on how individuals' perceptions and thoughts about the world affect how they interpret and respond to social situations. For example, the course will address: how stereotypes about one's race or identity can cause individuals to feel threatened, and can undermine health, feelings of belonging, and academic performance how an individual's concerns about the thoughts and beliefs of others can radically affect identity formation, particularly during adolescence how individuals have to navigate multiple cultural identities, especially as minority group members contending with mainstream ideas that differ from their own how majority group members (e.g., Whites) view their role in racial systems, and how they deal with concerns about being or appearing prejudiced how interventions can use social psychological concepts to mitigate negative outcomes of racial inequality We will then use our understanding of these concepts to examine and consider different racial situations thoughout American society and to understand how individuals navigate and experience race and identity. Throughout the course, we will watch films, read literature, and analyze music and art that reflect the experience of race and identity.

85-358 Pro-Social Behavior
Fall: 9 units
This course is an advanced seminar that focuses on social psychological research involving the examination of pro-social behavior. A heavy emphasis will be placed on classic research on helping (which investigates how, when, and why we help strangers), as well as the wide body of literature on social support (which investigates how we help, and seek help from, those who are closer to us). Research on both help-seeking and help-provision will be covered, as well as the implications of this type of pro-social behavior for relationships and health. The course also will cover research on other types of pro-social behavior such as empathy, altruism, forgiveness, and cooperation. This is an advanced seminar in which you will be expected to read original research articles and chapters on assigned topics and come to class prepared to discuss the material. Readings will consist of theoretical and empirical articles from psychology journals and related sources. Additional course requirements will involve short, weekly writing assignments, student presentations of research articles, and a written research proposal. Over the course of the semester, students will design and carry out a small-scale, original investigation on a topic of interest.

85-359 Introduction to Music Cognition Research
Intermittent: 9 units
This course explores the roles of cognitive processes in the experience of music with a focus on carrying out a collaborative laboratory project in order to understand first-hand the challenges of the experimental study of music. In readings, lectures, discussions, and demonstrations we will become acquainted with the relevant psychological theories of perception, memory and learning, and review and critically analyze selected experimental findings on the psychology of music. We will examine the use of psychological principles (e.g. Gestalt laws of perception, limitations on working memory, categorical perception, chunking, schemas, modularity) to explain musical phenomena. The emphasis will be on applying an experimental approach to music perception and cognition, but we will also consider ongoing debates about larger issues (such as music¿s adaptive value to the human species, and the determinants of musical taste).
Prerequisite: either Harmony 1 or Intro to Cognitive Psychology.
Prerequisites: 57-149 or 85-211 or 57-152

85-362 Seminar on Addiction
Intermittent: 9 units
This seminar will explore various topics central to the study of drug addiction, with a primary emphasis on psychological and neurobiological theories of drug addiction. We will also discuss research and clinical techniques related to the assessment, diagnosis, and treatment of substance use disorders and related problems. Emphasis will be on alcohol and tobacco, but other drugs will be discussed as well. The main course objective is to provide a unifying model for understanding the fundamental aspects of addiction.
Prerequisites: 85-320 or 85-340 or 85-314 or 85-310

85-363 Attention, Its Development and Disorders
Intermittent: 9 units
TThis seminar will discuss a broad range of topics pertaining to the study of human attention, including: theoretical frameworks and biological foundations of human attention; interrelationship between attention and other aspects of cognition (such as perception, memory, and executive functions); development of attention in infancy and childhood; biological and psychological foundations of attention disorders. Students will be expected to read original research articles, lead and participate in class discussions, and complete a term paper.
Prerequisites: 85-221 or 85-211

85-370 Perception
Fall: 9 units
Perception, broadly defined, is the construction of a representation of the external world for purposes of thinking and acting. Although we often think of perception as the processing of inputs to the sense organs, the world conveyed by the senses is ambiguous, and cognitive and sensory systems interact to interpret it. In this course, we will examine the sensory-level mechanisms involved in perception by various sensory modalities, including vision, audition, and touch. We will learn how sensory coding interacts with top-down processing based on context and prior knowledge and how perception changes with learning and development. We will look at methods of psychophysics, neuroscience, and cognitive psychology. The goals include not only imparting basic knowledge about perception but also providing new insights into everyday experiences.

85-375 Crosscultural Psychology
Intermittent: 9 units
Human beings share a common genetic inheritance, but our cultural institutions differ in a bewildering variety of ways. This course explores the many different cultural expressions of basic human cognitive and social abilities and needs, We will look at cultural variations in child rearing, mother-child attachment, language socialization, categorization, reasoning, problem-solving, architecture, music, politics, warfare, food-gathering, sex roles, mental disorders, and altered states of consciousness, all with the goal of understanding how the shape of social systems and symbolic expression reflects the economic and adaptive needs of the culture and its people. Among the approaches to these phenomena we will consider are symbolic interaction, cognitive anthropology, dialectic materialism, and modern ethnology.
Prerequisites: 85-198 or 85-261 or 85-251 or 85-100 or 85-102 or 85-211 or 85-219 or 85-221 or 85-241

85-377 Attitudes and Persuasion
Intermittent: 9 units
This advanced undergraduate course will focus on the topic of attitude change and how various persuasive techniques are used to shape human response. The dynamics of propaganda and what makes the techniques effective on social and consumer decisions will be addressed. The primary goals of the course are to 1) understand the dynamics of attitude change; 2) explore the mechanism by which attitude change techniques operate and 3) examine relevant theories and research in persuasion. Examples of topics covered include the origins of attitudes, how attitudes influence judgments, social power and attitude change, and how individual decisions are influenced by the mass media. Classic and contemporary research in the area of persuasion will be examined in the form of course readings and assignments.
Prerequisite: 85-241

85-380 In Search of Mind: The History of Psychology
Intermittent: 9 units
This course will focus on three aspects of the origin and growth of experimen-tal psychology. The first is the prehistory of psychology, where the connection of the discipline to the development of modern science, and in particular, its origins in philosophy and physiology, is examined. The second focus of the course is on the different approaches and attempts to define the field that have contested for dominance during much of the life of the discipline. The final major focus of the course is on the modern period (roughly the last forty years) where the influences that brought about the modern counter-revolution in psychology will be examined, and where some conjecture about likely future directions will occur. Two prior courses in psychology.

85-385 Auditory Perception: Sense of Sound
Intermittent: 9 units
This course explores how our sense of hearing allows us to interact with the world. Students will learn about basic principles of sound, spatial sound, sound quality, hearing impairment, auditory perception, interactions with other modalities, and auditory cognition. Topics may also include musical acoustics, basic auditory physiology, sound-semantic associations, acoustic analysis, and sound-making gestures. We will consider not only simple laboratory-generated signals, but also more complex sounds such as those in our everyday environment, as well music and speech. Students will gain some in-class experience with generating sounds and analytic listening. After students reach a sophisticated level of understanding of the auditory fundamentals, they will apply their knowledge to the study of several current issues in auditory research.
Prerequisites: 85-211 or 85-102

85-390 Human Memory
Intermittent: 9 units
Without memory, people would barely be able to function: we could not be able to communication because we would not be able to remember meanings or words, nor what anyone said to us; we could have no friends because everyone would be a stranger (no memory of meeting anyone); we could have no sense of self because we could not remember anything about ourselves either; we could not predict anything about the future because we would have no recollections of the past; we would not know how to get around, because we would have no knowledge of the environment. This course will discuss issues related to memory at all levels: the sensory registers, i.e., how we perceive things; working or short-term memory; long-term memory or our knowledge base. We will discuss the differences between procedural/skill knowledge, and declarative/fact knowledge. The topics of memory monitoring, feeling and knowing, spread of activation within memory (priming), implicit memory, and amnesia will also be covered.
Prerequisites: 85-213 or 85-340 or 85-211

85-391 Psychology of Sleep
Intermittent: 9 units
This course is ONLY offered at Carnegie Mellon in Qatar. This course is an advanced seminar that focuses on the biology, psychology, and social factors of sleep and dreaming. The course will go over the history behind the scientific study of sleep, as well as the cultural and psychological underpinnings of dreaming. Students will also delve into the neuroscience and abnormal psychology of sleep. Emphasis will be placed on reading, presenting and analyzing empirical research articles. Students will also be required to fill out sleep logs and a dream diary, culminating in a final research paper analyzing their semester long sleep patterns and dreams based on research discussed in class.
Prerequisites: 85-102 and 85-211

85-392 Human Expertise
Intermittent: 9 units
The process of becoming an expert involves many changes, some quantitative and some qualitative. This course will provide an up-to-date account of the theory and data concerning the development of expertise. Questions addressed include the following. What does it take to become an expert? Are experts born or made? Is the process of acquiring expertise common across different domains from music to sports to science? Research studied in the course will employ a variety of methodologies, from case studies to protocol analysis to computational modeling.
Prerequisites: 85-213 or 85-211

85-395 Applications of Cognitive Science
Spring: 9 units
The famous psychologist George Miller once said that Psychology should "give itself away." The goal of this course is to look at cases where we have done so — or at least tried. The course focuses on applications that are sufficiently advanced as to have made an impact outside of the research field per se. That impact can take the form of a product, a change in practice, or a legal statute. The application should have a theoretical base, as contrasted, say, with pure measurement research as in ergonomics. Examples of applications are virtual reality (in vision, hearing, and touch), cognitive tutors based on models of cognitive processing, phonologically based reading programs, latent semantic analysis applications to writing assessment, and measurses of consumers' implicit attitudes. The course will use a case-study approach that considers a set of applications in detail, while building a general understanding of what it means to move research into the applied setting. The questions to be considered include: What makes a body of theoretically based research applicable? What is the pathway from laboratory to practice? What are the barriers - economic, legal, entrenched belief or practice? The format will emphasize analysis and discussion by students.

85-406 Autism: Psychological and Neuroscience Perspectives
Fall: 9 units
Autism is a disorder that affects many cognitive and social processes, sparing some facets of thought while strongly impacting others. This seminar will examine the scientific research that has illuminated the nature of autism, focusing on its cognitive and biological aspects. For example, language, perception, and theory of mind are affected in autism. The readings will include a few short books and many primary journal articles. The readings will deal primarily with autism in people whose IQ's are in the normal range (high functioning autism). Seminar members will be expected to regularly enter to class discussions and make presentations based on the readings. The seminar will examine various domains of thinking and various biological underpinnings of brain function, to converge on the most recent scientific consensus on the biological and psychological characterization of autism. There will be a special focus on brain imaging studies of autism, including both structural (MRI) imaging of brain morphology and functional (fMRI and PET) imaging of brain activation during the performance of various tasks.
Prerequisites: 85-213 or 85-219 or 85-355 or 85-429 or 85-211

85-407 Neuroscience of Concepts
Intermittent: 9 units
Conceptual knowledge underpins all aspects of everyday experience, from language, to thinking, to recognizing familiar objects, people and places. This seminar will survey major theories and findings about how the brain represents 'meaning.' The course will emphasize research using neuropsychological methods in brain-damaged patients and functional neuroimaging in healthy participants. Students will read primary empirical and theoretical review articles to develop an understanding of both classic findings and recent discoveries about how the human brain represents meaning.
Prerequisites: (85-219 or 85-211) and (36-200 or 36-201)

85-408 Visual Cognition
Intermittent: 9 units
Recognizing an object, face or word is a complex process which is mastered with little effort by humans. This course adopts a three-pronged approach, drawing on psychological, neural and computational models to explore a range of topics including early vision, visual attention, face recognition, reading, object recognition, and visual imagery. The course will take a seminar format.
Prerequisites: 85-213 or 85-219 or 85-211

85-412 Cognitive Modeling
Spring: 9 units
This course will be concerned with modeling of agent behavior in a range of applications from laboratory experiments on human cognition, high-performance simulations such as flight simulators, and video game environments like Unreal Tournament. The first half of the course will teach a high-level modeling language for simulating human perception, cognition, and action. The second half of the course will be a project in which students develop a simulated agent or agents for the application of their choice.
Prerequisites: 15-150 or 15-210 or 15-251 or 15-122

85-414 Cognitive Neuropsychology
Spring: 9 units
This course will review what has been learned of the neural bases of cognition through studies of brain-damaged patients as well as newer techniques such as brain stimulation mapping, regional metabolic and blood flow imaging, and attempt to relate these clinical and physiological data to theories of the mind cast in information-processing terms. The course will be organized into units corresponding to the traditionally-defined subfields of cognitive psychology such as perception, memory and language. In each area, we will ask: To what extent do the neurological phenomena make contact with the available cognitive theories? When they do, what are their implications for these theories (i.e., Can we confirm or disconfirm particular cognitive theories using neurological data?)? When they do not, what does this tell us about the parses of the mind imposed by the theories and methodologies of cognitive psychology and neuropsychology?
Prerequisites: 85-211 or 85-219

85-418 Contributions of Psychological Research to Education
Intermittent: 9 units
The main goal of this course is for students to learn about what psychological research has to say regarding how to improve education. We will examine basic principles arising out of cognitive and developmental psychology that can inform educational practice; application of these principles to reading, writing, and mathematics; and policy issues, including ones involving universal preschool education, the Common Core State Standards, and whether college inculcates critical thinking skills.

85-419 Introduction to Parallel Distributed Processing
Spring: 9 units
This course provides an overview of Parallel-Distributed-Processing/neural-network models of perception, memory, language, knowledge representation, and learning. The course consists of lectures describing the theory behind the models as well as their implementation, and their application to specific empirical domains. Students get hands-on experience developing and running simulation models.
Prerequisites: 21-120 or 21-124 or 21-115 or 21-111 or 21-112

85-421 Language and Thought
Intermittent: 9 units
This course allows the student to explore ways in which the mind shapes language and language shapes the mind. Why are humans the only species with a full linguistic system? Some of the questions to be explored are: What kinds of mental abilities allow the child to learn language? What are the cognitive abilities needed to support the production and comprehension of sentences in real time? How do these abilities differ between people? Are there universal limits on the ways in which languages differ? Where do these limitations come from cognition in general or the specific language facility? Why is it so hard to learn a second language? Are there important links between language change and cultural change that point to links between language and culture?
Prerequisites: 85-211 or 85-213 or 80-150 or 80-180

85-422 Clinical Psychology: Science and Practice
Intermittent: 9 units
In this course, students will be exposed to the science and practice of clinical psychology, with a particular emphasis on the synergistic relationship between clinical psychological research and clinical practice. We will focus on the four major activities that clinical psychologists engage in (research, assessment, diagnosis, and psychotherapy). Students will learn about the clinical characteristics of major psychological disorders and the empirically-validated treatments available for these conditions. We will make frequent use of research findings and the scientific method to evaluate and understand concepts in clinical psychology. Critical thinking will be emphasized as we explore the scientific strengths and limitations of various treatments for psychological disorders. This course is designed to be a smaller seminar course for juniors and seniors considering graduate school in clinical psychology.
Prerequisites: 85-320 or 85-314 or 85-310 or 85-340 or 85-261

85-423 Cognitive Development
Intermittent: 9 units
The general goals of this course are that students become familiar with the basic phenomena and the leading theories of cognitive development, and that they learn to critically evaluate research in the area. Piagetian and information processing approaches will be discussed and contrasted. The focus will be upon the development of childrens information processing capacity and the effect that differences in capacities have upon the childs ability to interact with the environment in problem solving and learning situations.
Prerequisite: 85-221

85-424 Hemispheric Specialization: Why, How and What?
Intermittent: 9 units
The brain is divided into two hemispheres, raising a host of questions about brain organization, hemispheric specialization and laterality. Despite all the research devoted to these questions, our understanding of the behavioral significance and neural basis of laterality remains limited. This course will address the questions of "why", "how" and "what". We will review the latest data and empirical results but will also develop a coherent theoretical perspective, moving from molecular, genetic and evolutionary considerations to cognitive and clinical factors in the understanding of one of the most fascinating phenomena in neuroscience, neuropsychology, psychiatry, neurology, and cognitive sciences. In addition to tackling a major text in the field (The Two Halves of the Brain Edited by Hugdahl and Westerhausen), we will read the latest papers in the field. The class will be almost entirely discussion-based and students will be responsible for doing the readings ahead of time and being prepared for the discussion.
Prerequisites: 85-221 or 85-241 or 85-251

85-425 Child Psychopathology and Treatment
Intermittent: 9 units
The first half of this course will focus on understanding the etiology and epidemiology of child and adolescent psychopathology. Special emphasis will be placed on conditions that are first diagnosed during childhood (e.g., ADHD, Autism, Eating Disorders) as well as understanding how child and adult psychopathology differ. The second half of this course will focus on treatment interventions for youth with psychopathology. Students will learn about how interventions for adults with psychopathology are altered to be developmentally appropriate for children, and methods of intervention commonly used with children but less so with adults(e.g., family therapy, play therapy). For students who have completed abnormal psychology and the psychology breadth requirement but not the other course pre-requisite, 85102, please see Theresa Kurutz to register for this course in BH 343.
Prerequisites: 85-261 and 85-102

85-426 Learning in Humans and Machines
Spring: 9 units
This course explores how probabilistic methods can help to explain cognition and to develop intelligent machines. The applications discussed include perception, language, memory, categorization, reasoning, decision-making, and motor control.
Prerequisite: 15-112

85-429 Cognitive Brain Imaging
Spring: 9 units
This seminar will examine how the brain executes higher level cognitive processes, such as problem-solving, language comprehension, and visual thinking. The topic will be addressed by examining what recent brain imaging studies can tell us about these various kinds of thinking. This new scientific approach has the potential of providing important information about how the brain thinks, indicating not only what parts perform what function, but also how the activity of different parts of the brain are organized to perform some thinking task, and how various neurological diseases (e.g. aphasia, Alzheimer's) affect brain activity. A variety of different types of thinking will be examined, including short-term working memory storage and computation, problem solving, language comprehension, visual thinking. Several different technologies for measuring brain activity (e.g. PET and functional MRI and also some PET imaging) will be considered, attempting to relate brain physiology to cognitive functioning. The course will examine brain imaging in normal subjects and in people with various kinds of brain damage.
Prerequisites: 85-412 or 85-414 or 85-213 or 85-211 or 85-419

85-435 Neural and Cognitive Models of Adaptive Decisions
Intermittent: 9 units
Humans and other mammals exhibit a high degree of control when selecting actions in noisy contexts, quickly adapting to unexpected outcomes in order to better exploit opportunities arising in the future. This course will explore both the cognitive and neurobiological systems of adaptive decision-making, through a mixture of readings, lectures, and hands-on modeling projects (in Python and Matlab).
Prerequisites: (85-211 or 85-213) and (21-120 or 21-115 or 21-111)

85-438 Educational Goals, Instruction, and Assessment
Fall: 9 units
This course will meet in TQ 1308 The aim of this course is to teach students how to develop educational goals based on a detailed task analysis of the knowledge, skills, and dispositions required for mastery of a particular aspect of a domain. Goals for early childhood, elementary, middle school, and high school will be discussed and related to the state and national standards. A comprehensive understanding of student achievement will be developed. The importance of matching the instructional program and its assessment to goals will be discussed and demonstrated. Assessment that focuses on covering the full range of specified goals will be studied along with diverse approaches for valid assessment. Other topics include making instructional material choices, funding, classroom management, ethics, and relation to system-level policies. Assignments will emphasize linking goals - instruction assessment. A term project will consist of an in-depth study of one central unit in a discipline or grade level. This course will meet in TQ 1308

85-442 Health Psychology
Intermittent: 9 units
This course is concerned with how behavior and psychological states influence the development of and recovery from disease. The class provides an overview of existing psychological and epidemiological data on the relationship between behavior and disease and addresses the issue of how behavior, emotion and cognition can influence the disease processes. Topics include: measures and concepts, stress and disease, stress and coping, personal control, helplessness and disease, social support and health, reactivity to stress, behavior and hypertension, coronary heart disease, infectious diseases and immune function, and the effectiveness of behavioral interventions in health. Only Juniors and Seniors will be admitted into the course and instructor permission is required.

85-443 Social Factors and Well-Being
Intermittent: 9 units
This course will focus on the role that our social environment plays in our feelings of well-being and in the maintenance of our mental and physical health. Topics to be discussed include marriage, widowhood, loneliness, social support, social participation, social aspects of personality (e.g., social anxiety, extraversion, agreeableness, and hostility), social stressors (betrayal and conflict), discrimination, and socioeconomic status. We will consider how each social factor develops, the extent to which we can alter it or its effects on our lives, and how it influences our overall well-being. Only Juniors and Seniors will be admitted into the course and instructor permission is required.

85-444 Relationships
Fall: 9 units
The primary goal of this course is to introduce you to social psychological theory and research on the topic of relationships. Although a variety of relationship phenomena will be discussed, a heavy emphasis will be placed on research that addresses fundamental processes in close relationships. The coverage of material will include a review of historical roots and classic approaches to the scientific study of relationships, as well as exciting new research and theory on particular subtopics. The majority of class time is spent discussing and evaluating recent research. Special emphasis also is given to learning and critically evaluating the methodological tools that are used to study close relationships. This is an advanced seminar in which students will be expected to read original research articles and chapters on assigned topics and come to class prepared to discuss the material. Readings will consist of theoretical and empirical articles from psychology journals and related sources. Additional course requirements will involve short, weekly writing assignments, student presentations of research articles, and a written research proposal. Over the course of the semester, students will design and carry out a small-scale, original investigation on a relationships topic of interest.

85-446 Psychology of Gender
Spring: 9 units
This course is devoted to the investigation of psychological gender rather than biological sex. That is, sex differences will be explored from a social psychological (e.g., socialization) perspective. Implications of both male gender role and female gender role in the areas of relationships and health will be the course focus.
Prerequisites: 85-241 or 85-251

85-480 Internship in Clinical Psychology
All Semesters
This course allows students to gain applied clinical experience in a mental health setting. Students will work alongside psychology professionals at designated field placements. This course is designed to help students apply and expand their knowledge of clinical psychology and to develop appropriate professional work standards. Students will spend the majority of their time (8 hours per week) in an applied clinical setting, with a one hour per week supervision meeting with Dr. Kasey Creswell. Students must be currently enrolled in 85-422 (Clinical Psychology: Science and Practice) or have already taken this course. Instructor permission is required. Please contact Dr. Kasey Creswell if you are interested in enrolling at kasey@andrew.cmu.edu.

85-481 Seminar in Intervention
Intermittent: 9 units
This course is an introduction to the therapeutic process. Students will be introduced to a variety of therapeutic approaches and techniques (e.g. Solution-Focused, Cognitive, Client Centered, etc.) and will have the opportunity to learn the basic skills associated with each (e.g. Cognitive Restructuring, Mirroring, Empathic Highlighting, etc.). Instruction will entail a mix of discussion and demonstration, and there will be a heavy emphasis on in-class practice of these skills.
Prerequisites: (85-261 and 85-251) or (85-281 and 85-261) or (85-281 and 85-251)

85-482 Internship in Psychology
Fall and Spring
The Internship in Psychology is designed to enable students to gain experience in professional settings related to their studies in Psychology and earn credit for the intellectual work involved. It is the students responsibility to locate an internship site and on-site supervisor, as well as to identify a CMU faculty sponsor.

85-484 Practicum in Child Development
Fall and Spring
This guided field experience is designed to help students deepen their understanding of developmental psychology by assisting in a preschool or kindergarten classroom and discussing the ways that their experiences relate to the theories they have learned previously and to new readings. Each student will individually schedule a consistent 6 hours per week helping in a Children's School classroom (preferably 2 or 3 chunks of time). Classroom duties will include working one-on-one and with small groups of students as they do puzzles, art projects, dramatic play, etc., as well as helping with snack, playground supervision, classroom cleanup, and storytime. Each student will be expected to keep a journal 1) relating general experiences to developmental theories and 2) documenting the development of a particular child during the semester. All students will meet for a 1 hour weekly discussion with the director. Discussion topics and related readings will be selected collaboratively, based on issues/questions raised by the group's observations and discussions. This course is typically 9 units, but may be negotiable between 3 and 9.
Prerequisite: 85-221

85-501 Stress, Coping and Well-Being
Intermittent: 9 units
This course will examine basic processes and theory about stress and coping from a psychological perspective. The first part of the course will explore topics related to the psychobiology of stress, stress measurement, and links between stress and health. The second part of the course will explore topics on mechanisms and theoretical perspectives on coping with stress. This will include a consideration of topics such as emotion regulation, self-regulation, coping with traumatic events, alternative medicine approaches, and resilience factors. This class is a small, upper level seminar that will consist of some lecture and extensive class discussion. Active class participation is required.
Prerequisites: 85-310 or 85-320 or 85-340

85-505 Readings In Psychology
All Semesters
As the name implies, the emphasis in the Reading course is on reading articles and books in some specified area. The students work in the course must lead to the production of a written paper which will be read by the instructor directing the readings. Often the reading is related to a research project which the student may wish to conduct. Readings courses have also been used to give students an opportunity to receive instruction in areas which are not included elsewhere in our course listing. The course may be taken for any number of units up to 9, depending upon the amount of work to be done.

85-506 Readings in Psychology
Fall and Spring
As the name implies, the emphasis in the reading course is on reading articles and books in some specified area. The students work in the course must lead to the production of a written paper which will be read by a psychology faculty instructor directing the readings. Often the reading is related to a research project which the student may wish to conduct. Reading courses have also been used to give students an opportunity to receive instruction in areas which are not included elsewhere in our course listing. The course may be taken for any number of units up to 9, depending upon the amount of work to be done. This course is special permission and can only be added in consultation with a psychology faculty member and registered by the Undergraduate administrator, Emilie O'Leary emilier@andrew.cmu.edu.

85-507 Research in Psychology
Fall
This course may include field study, applied work, or laboratory research. The student should have previous training in the basic research skills that will be used in his/her project, especially statistical methods and experimental design. Independent Research Projects will be supervised by a faculty member and must result in a written paper. It is the students responsibility to make arrangements for independent study courses with individual faculty members. This should be done the semester before a student wishes to register for one of these courses. The course may be taken for any number of units up to 12, depending upon the amount of work to be done. Please contact the CMU psychology faculty member you wish to work with to get approval to enroll then email Emilie Rendulic at emilier@andrew.cmu.edu in order to be registered for the course.

85-508 Research in Psychology
Spring
This course may include field study, applied work, or laboratory research. The student should have previous training in the basic research skills that will be used in his/her project, especially statistical methods and experimental design. Independent Research Projects will be supervised by a faculty member and must result in a written paper. It is the students responsibility to make arrangements for independent study courses with individual faculty members. This should be done the semester before a student wishes to register for one of these courses. The course may be taken for any number of units up to 12, depending upon the amount of work to be done.

85-601 Senior Thesis
Fall: 9 units
This course is intended for senior Psychology or Cognitive Science majors who wish to conduct a research project under the direction of a faculty advisor. The project topic is to be selected jointly by the student and the advisor. The project will culminate in a senior paper which will be presented to the Department Head at the end of Fall Semester. Prerequisite: Grade of B or better in a previous research course required to enter, grade of B or better in first semester of senior thesis course required to complete, and permission of instructor. A formal proposal is required in the first semester. This course differs from the Honors Thesis sequence (66-501,502) in that it does not require Honors standing in HSS (i.e., there are no QPA requirements). This course differs from Research in Psychology (85-507,508) in that the student's original contribution to the research is expected to be more substantial, and in that a final written report of the project is to be presented to the Department.

85-602 Senior Thesis
Spring: 9 units
This course is intended for senior Psychology or Cognitive Science majors who wish to conduct a research project under the direction of a faculty advisor. The project topic is to be selected jointly by the student and the advisor. The project will culminate in a senior paper which will be presented to the Department Head at the end of Fall Semester. Prerequisite: Grade of B or better in a previous research course required to enter, grade of B or better in first semester of senior thesis course required to complete, and permission of instructor. A formal proposal is required in the first semester. This course differs from the Honors Thesis sequence (66-501,602) in that it does not require Honors standing in HSS (i.e., there are no QPA requirements). This course differs from Research in Psychology (85-507,508) in that the student's original contribution to the research is expected to be more substantial, and in that a final written report of the project is to be presented to the Department.

85-730 Analytic Research Methods
Intermittent: 12 units
This class will teach students how to apply six major non-experimental research methods used in analytic behavioral analysis. Protocol Analysis. This method is used to study patterns and changes in problem-solving and their matches to theoretical models, including computational models. Corpus Analysis. This method is used to isolate patterns of behavioral and communication usage and change, as revealed through the study of the world-wide web and large computerized databases such as CHILDES, TalkBank, or the British National Corpus. Tools here include text searches and data-mining. Conversation Analysis. This is a microanalytic method used to examine sequencing, repair, and orientation in closely transcribed recordings of spoken interactions, as made available through systems such as the CABank database, as well as recorded programs on YouTube and elsewhere. Coding Systems. This approach seeks to capture interactional and behavioral structures in writing, teaching, interview, and other interactions. Here, there will be a special emphasis on the coding of instructional interactions. Gesture Analysis. This microanalytic method seeks to track patterns in gestural and nonverbal communication, often in association with spoken messages. Profile Analysis. This approach studies differences across learners at various ages and ability levels and group differences involving aphasia, autism, stuttering, dementia, and other individual differences. Students will work with data already available from previous studies, and will also learn to collect their own new datasets. Although the data being examined have been generated through naturalistic processes, they can be analyzed quantitatively using time-series analyses, non-parametric statistics, error matrices, and neural network simulations. In these various analyses, we will also consider how behavioral patterns are shape

85-753 Mindfulness: Science and Practice
Intermittent
This course will focus on blending first-person experience with mindfulness practices (including mindfulness meditation) and learning about the scientific research on mindfulness. Students will engage in guided mindfulness exercises, develop a daily mindfulness practice, and try out different mindfulness training traditions. In addition, much of this course will be focused on applying a critical eye to the theory, measures, mechanisms, and effects of mindfulness (and mindfulness training interventions) across multiple domains cognition, social processes, behavior, biological mechanisms, and health. As such, this will be a small seminar course focused developing first-person experiences of mindfulness and on discussing the debates and opportunities related to the emerging science of mindfulness.

85-762 Seminar on Addiction
Fall: 9 units
This seminar will explore various topics central to the study of drug addiction, with a primary emphasis on psychological and neurobiological theories of drug addiction. We will also discuss research and clinical techniques related to the assessment, diagnosis, and treatment of substance use disorders and related problems. Emphasis will be on alcohol and tobacco, but other drugs will be discussed as well. The main course objective is to provide a unifying model for understanding the fundamental aspects of addiction.

85-765 Cognitive Neuroscience
Intermittent
This course will cover fundamental findings and approaches in cognitive neuroscience, with the goal of providing an overview of the field at an advanced level. Topics will include high-level vison, spatial cognition, working memory, long-term memory, learning, language, executive control, and emotion. Each topic will be approached from a variety of methodological directions, for example, computational modeling, cognitive assessment in brain-damaged humans, non-invasive brain monitoring in humans, and single-neuron recording in animals. Lectures will alternate with sessions in seminar format. Prerequisites: Graduate standing or two upper-level psychology courses from the areas of developmental psychology, cognitive psychology, computational modeling of intelligence, neuropsychology or neuroscience.

85-851 Personality and Health
Intermittent
The general purpose of this course is to examine possible connections between personality and physical well-being. Material will be presented at the outset of the semester that is designed to enable students to understand more fully how psychologists think about the concept of personality (what it is and what it does for us), how it is assessed, and how personality and health psychologists do research on the topic. As the semester progresses, we will explore and discuss research that links certain aspects of personality to health, illness, and mortality. The list of personality characteristics to be considered includes (but is not necessarily limited to) optimism/pessimism, conscientiousness, hostility, trait positive and negative affect, life purpose, and chronic goal adjustment strategies. As time permits, select person variables will also be considered, e.g., the impact of depressive mood on health. Class time will be largely taken by discussion of original research papers. Different sets of students will be responsible for leading these discussions. Grades will be based on a combination of class participation, quality of paper presentations, and performance on a final research paper.

Department of Social and Decision Sciences

Location: Porter Hall 208
www.cmu.edu/dietrich/sds

The Department of Social and Decision Sciences is a multidisciplinary department that offers undergraduate programs that seamlessly combine frontier knowledge in the social sciences with the practical skills needed to excel in key decision making roles in the public, private, and non-profit sectors and in advanced graduate studies. Our students learn how to combine intellectual ideals with the realities of human and organizational behavior and to apply these lessons across a wide variety of endeavors, ranging from government service to leadership positions in the information economy.

The department offers undergraduate majors in Behavioral Economics, Policy and Organizations, in Decision Science, and in Policy and Management. The core courses leverage our strength in decision analysis, decision making, empirical research, and policy analysis. In addition to completing this core, students also specialize in their major area through a set of required and elective courses.

Our faculty is committed to the academic success and growth of our students and many of our undergraduates work with faculty on research projects and internships. The directors of the majors are easily accessible and encourage students to talk with them about their curriculum, progress, and available opportunities. Our academic advisors are committed to working with each individual student to help them create, clarify, and meet their goals.

The Department of Social and Decision Sciences has a long history of creating innovative and prescient undergraduate programs that combine key ideas from across the social sciences into cohesive majors that allow our graduates to excel in their chosen professions or in the pursuit of advanced studies. Our emphasis on the theory and practice of individual and social decision making linked with our high-quality, multidisciplinary social science faculty, provides a solid foundation from which graduates can embrace a variety of future paths.

The Major in Behavioral Economics, Policy and Organizations

Saurabh Bhargava, *Faculty Director*
Location: Porter Hall 319F
DS-advisor@andrew.cmu.edu

Lizzy Stoyle, *Academic Advisor*
Location: Porter Hall 208G
estoyle@andrew.cmu.edu

The field of Behavioral Economics (BE) integrates perspectives from Economics and Psychology to better understand how people make consequential decisions and to leverage this understanding to improve the design of the policies, programs, and institutions that govern such behavior. The last several years has witnessed an explosion of interest in BE among governments and organizations, around the world, including here in the United States. On the policy front, this has led to the formation of government "nudge" units charged with applying BE principles to policy areas such as education, criminal justice, taxation, social benefit programs, consumer protection, and unemployment. Organizations have also aggressively sought to apply BE to encourage employee productivity, improve employee health and financial wellness, reshape managerial and hiring decisions, and to better understand and engage consumers.

The faculty in the Department of Social and Decision Sciences (SDS) has long stood at the forefront of research and teaching in BE. Our faculty has developed a reputation for working closely with governments and firms to help apply BE to address a range of issues such as predatory lending and consumer protection, bias among institutional investors, employee reward and incentive programs, behavioral barriers to retirement savings, participation in social service programs, medical adherence, pre-trial detainment of defendants, and gender and racial inequality in the workplace.

The new major of BEPO-- the first of its kind among US undergraduate institutions--was designed to uniquely train students to study the behavior of individuals and organizations from the perspective of both Economics and Psychology. The major emphasizes the practical promise of BE to solve problems of importance to policymakers and organizations by directly exposing students to the expertise and experiences of SDS faculty and through the largest selection of BE courses of any university in the world. Towards this end, students will learn to collect original data, design field and laboratory experiments, analyze data and draw causal inferences, and develop interventions to improve economic outcomes and decisions. The core requirements include courses in economics, psychology, BE, and quantitative methods including experimental design and econometrics. Students who complete the major will be well positioned to enter the private sector in a role involving data or people analytics, marketing, corporate strategy, or human resources, or to enter a wide range of graduate degree programs.

Prerequisites

All Behavioral Economics, Policy and Organizations majors must complete mathematics and statistics prerequisites (see below), by the end of the sophomore year.

Mathematics Prerequisite		Units
21-111-21-112	Differential Calculus - Integral Calculus	10-20
or 21-120	Differential and Integral Calculus	

Statistics Prerequisite		Units
36-200	Reasoning with Data	9

Curriculum

The core curriculum in Behavioral Economics, Policy and Organizations consists of three quantitative courses, two Economic courses, two Psychology courses, two Behavioral Economics courses, and one project course.

Quantitative Method Courses		Units
36-202	Statistics & Data Science Methods	9
88-251	Empirical Research Methods	9
88-252	Causal Inference in the Field	9
		27

Economics Courses		Units
73-102	Principles of Microeconomics	9
73-160	Foundations of Microeconomics: Applications and Theory	9
or 73-230	Intermediate Microeconomics	
		18

Psychology Courses		Units
88-120	Reason, Passion and Cognition *	9
88-302	Behavioral Decision Making	9
		18

* 88-120 Should be taken in the freshman or sophomore year.

Behavioral Economics Courses		Units
88-360	Behavioral Economics	9
88-367	Behavioral Economics in the Wild	9
		18

Senior Project Course		Units
88-453	Behavioral Economics, Policy, and Organizations Capstone	9
		9

ELECTIVES **36 units**

Complete at least 36 units from the following categories. Students MUST take one elective from each of the three categories. The fourth elective may be chosen from any of the categories. Note that not all elective courses are offered every year.

Economics**		Units
73-328	Health Economics	12
73-348	Behavioral Economics ***	9

73-408	Law and Economics	9
73-476	American Economic History	9

** Students can petition that any 73-3XX or 73-4XX courses be counted as an economic elective course. Consult the Academic Advisor for more information.

*** Can ONLY count as either an Economics OR Behavioral Economics elective course. It cannot be counted in both categories.

Behavioral Economics		Units
73-348	Behavioral Economics ***	9
88-255	Strategic Decision Making: Cooperation and Competition in Social Interactions	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-406	Behavioral Economics in Organizations	9
88-409	Behavioral Economics Perspectives on Ethical Issues	9

*** Can ONLY count as either an Economics OR Behavioral Economics elective course. It cannot be counted in both categories.

Psychology		Units
70-311	Organizational Behavior	9
70-385	Consumer Behavior	9
85-350	Psychology of Prejudice	9
85-352	Evolutionary Psychology	9
85-358	Pro-Social Behavior	9
85-375	Crosscultural Psychology	9
85-377	Attitudes and Persuasion	9
85-442	Health Psychology	9
85-446	Psychology of Gender	9
88-230	Human Intelligence and Human Stupidity	9
88-342	The Neuroscience of Decision Making	9
88-372	Social and Emotional Brain	9
88-380	Dynamic Decisions	9
88-388	Psychological Models of Decision Making	9
88-418	Domestic Negotiation	9
88-419	International Negotiation	9
88-435	Decision Science and Policy	9

Note: Some courses have additional prerequisites.

Free Elective		Units
Counts IN PLACE OF the fourth elective from any category		
88-275	Bubbles: Data Science for Human Minds	9
88-300	Programming and Data Analysis for Social Scientists	9

Behavioral Economics, Policy and Organizations, B.A. Sample Curriculum

Freshman		Sophomore

* Should be taken as the first course in Behavioral Economics, Policy and Organizations sequence. It is intended for students in their first or second year and is offered in Fall semesters. It may be taken as late as the junior year.

** 73-160 is intended for students in their first or second year; it is offered in Spring semesters. It may be taken as late as the junior year. Additionally, 73-230 Intermediate Microeconomics can serve as a substitute for 73-160 Foundations of Microeconomics: Applications and Theory.

*** Senior Honors Thesis may be substituted in the Spring term for 88-453 Behavioral Economics, Policy, and Organizations Capstone, which is only offered in the Fall term.

This is presented as a recommended plan for completing major requirements. The major can be completed in as few as two years (not that it must be), but students may not have time for other opportunities such as additional majors or study abroad. Students may declare their major as early as the third week of the spring semester in the freshman year. Students who are planning to attend the Washington Semester Program, to study abroad, to apply for the Heinz Accelerated Masters Program, or to pursue an additional major/minor may have a very different curriculum map and should consult early – and often – with the Behavioral Economics, Policy and Organizations Academic Advisor.

Additional Major

Students who elect Behavioral Economics, Policy and Organizations as an additional major must fulfill all of the requirements of the Behavioral Economics, Policy and Organizations major.

Students pursuing Decision Science with an additional major in Behavioral Economics, Policy and Organizations may only count 36-202 , 73-102, 88-120, 88-251 and 88-302 toward the completion of both majors.

Students pursuing Policy and Management with an additional major in Behavioral Economics. Policy and Organizations may only count 36-202, 73-102 and 88-251 toward the completion of both majors.

Additional majors cannot count menu electives toward simultaneously fulfilling more than one major or minor. Students who are interested in an additional major in Behavioral Economics, Policy and Organizations should see the Academic Advisor of the Behavioral Economics, Policy and Organizations program.

The Major in Decision Science

Gretchen Chapman, *Faculty Director*
Location: Porter Hall 219F
DS-advisor@andrew.cmu.edu

Connie Angermeier and Lizzy Stoyle, *Academic Advisors*
Location: Porter Hall 208A and 208G
cla2@andrew.cmu.edu, estoyle@andrew.cmu.edu

The interdisciplinary field of Decision Science seeks to understand and improve the judgment and decision making of individuals, groups, and organizations. Qualified graduates can continue to PhD programs in Decision Science or related fields (e.g., psychology, business), pursue professional degrees (e.g., MBA, MD, JD, MPH), or take professional positions in business, government, consulting, or the non-profit sector. Students work with faculty and the Academic Advisor to tailor their education to their personal needs and interest.

Carnegie Mellon is one of the leading centers for the study of Decision Science - and offers the only undergraduate major that integrates analytical and behavioral approaches to decision making. Our faculty are involved in applying Decision Science in a wide variety of areas, allowing them to share practical experiences with students. These applications include medical decision making (e.g., conveying the costs and benefits of treatment options), legal decision making (e.g., reducing the effects of hindsight bias on attributions of responsibility for accidents), risk management (e.g., assessing and communicating the risks of climate change), marketing (e.g., understanding the effects of inter-temporal choice on purchasing decisions), and business (e.g., identifying unrecognized conflicts of interest).

Decision Science is grounded in theories and methods drawn from psychology, economics, philosophy, statistics, and management science. Courses in the major cover the three aspects of decision science: (a) normative analysis, creating formal models of choice; (b) descriptive research, studying how cognitive, emotional, social, and institutional factors affect judgment and choice, and (c) prescriptive interventions, seeking to improve judgment and decision making. In addition to gaining a broad education in the principles of judgment and decision making, Decision Science majors gain broadly applicable skills in research design and analysis. They also have the chance to think about and discuss decision making in many different areas.

The core courses present fundamental theories and results from the study of decision making, along with their application to real-world problems. They introduce students to methods for collecting and analyzing behavioral data. For example, students learn to conduct surveys (e.g., uncovering consumer or managerial preferences), design experiments (e.g., evaluating theories, comparing ways of presenting information), and evaluate the effectiveness of interventions.

The elective courses provide students with additional knowledge in areas of decision making that meet their personal, intellectual, and career goals. These courses are organized into six clusters: biological and behavioral aspects of decision making, managerial and organizational aspects, philosophical and ethical perspectives, economic and statistical methods, public policy, and research methods. Students can concentrate in one area or spread their studies across them. In addition to coursework, the department offers research opportunities for interested and qualified students. Participating in research helps students to extend their mastery of decision science, discover whether a research career is right for them, and get to know faculty and graduate students better.

Prerequisites

All Decision Science majors must complete mathematics, statistics, and analytic methods prerequisites (see below), by the end of the sophomore year.

Mathematics Prerequisite		Units
21-111-21-112	Differential Calculus - Integral Calculus	10-20
or 21-120	Differential and Integral Calculus	

Statistics Prerequisite		Units
36-200	Reasoning with Data	9

Students must take one course from the following set (or an approved alternative). Students may not count a course used to fulfill the Mathematics Prerequisite as also filling the Analytic Methods Prerequisite.

Analytic Methods Prerequisite		Units
21-122	Integration and Approximation	10
21-256	Multivariate Analysis	9
21-257	Models and Methods for Optimization	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-401	Modern Regression	9
36-410	Introduction to Probability Modeling	9
80-210	Logic and Proofs	9
80-211	Logic and Mathematical Inquiry	9
80-223	Causality and Probability	9
80-315	Modal Logic	9
88-252	Causal Inference in the Field	9

Curriculum

The core curriculum in Decision Science consists of two courses in empirical research methods and five courses providing the theoretical perspectives of Decision Science**.**

Theoretical Perspectives		Units
73-102	Principles of Microeconomics	9
85-102	Introduction to Psychology	9
88-120	Reason, Passion and Cognition *	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9
		48

* 88-120 should be taken in the freshman or sophomore year.

Research Methods		Units
36-202	Statistics & Data Science Methods	9
88-251	Empirical Research Methods	9
		18

Electives 45 units

Complete at least 45 units of courses from the following categories. The selected courses may be from one category or from any combination. Note that not all elective courses are offered every year.

At least three of these courses (27 units) must be Department of Social and Decision Sciences courses (88-xxx).

1. Biological and Behavioral Aspects of Decision Making		Units
85-350	Psychology of Prejudice	9
85-352	Evolutionary Psychology	9
85-375	Crosscultural Psychology	9
85-377	Attitudes and Persuasion	9
85-444	Relationships	9
85-442	Health Psychology	9
85-446	Psychology of Gender	9
88-230	Human Intelligence and Human Stupidity	9
88-342	The Neuroscience of Decision Making	9
88-355	Social Brains: Neural Bases of Social Perception and Cognition	9
88-360	Behavioral Economics	9
88-365	Behavioral Economics and Public Policy	9
88-380	Dynamic Decisions	9

2. Managerial and Organization Aspects of Decision Making		
70-311	Organizational Behavior	9
70-381	Marketing I	9
70-460	Mathematical Models for Consulting	9
88-150	Managing Decisions	9
88-221	Analytical Foundations of Public Policy	9
88-406	Behavioral Economics in Organizations	9
88-418	Domestic Negotiation	9
88-419	International Negotiation	9
88-444	Public Policy and Regulation	9
88-451	Policy Analysis Senior Project	12
or 88-452	Policy Analysis Senior Project	

3. Philosophical and Ethical Perspectives on Decision Making		Units
70-332	Business, Society and Ethics	9
80-208	Critical Thinking	9
80-221	Philosophy of Social Science	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-249	AI, Society, and Humanity	9
80-271	Philosophy and Psychology	9
80-305	Choices, Decisions, and Games	9
80-321	Causation, Law, and Social Policy	9
80-324	Philosophy of Economics	9
88-275	Bubbles: Data Science for Human Minds	9
88-409	Behavioral Economics Perspectives on Ethical Issues	9

4. Economic and Statistical Methods for Decision Science		Units
70-374	Data Mining & Business Analytics	9
70-455	Modern Data Management	9
70-460	Mathematical Models for Consulting	9
73-265	Economics and Data Science	9
73-347	Game Theory for Economists	9
80-405	Game Theory	9
88-255	Strategic Decision Making: Cooperation and Competition in Social Interactions	9
88-300	Programming and Data Analysis for Social Scientists	9

88-360	Behavioral Economics	9
88-367	Behavioral Economics in the Wild	9

5. Decision Science and Public Policy

84-364	Comparative Presidential Behavior: Leadership, Personality, and Decision Making	9
84-369	Decision Science for International Relations	9
88-221	Analytical Foundations of Public Policy	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-405	Risk Perception and Communication	9
88-444	Public Policy and Regulation	9
88-451	Policy Analysis Senior Project	12
or 88-452	Policy Analysis Senior Project	

6. Research Methods for Decision Science		Units
36-303	Sampling, Survey and Society	9
70-460	Mathematical Models for Consulting	9
85-310	Research Methods in Cognitive Psychology	9
88-252	Causal Inference in the Field	9
88-402	Modeling Complex Social Systems	9
88-435	Decision Science and Policy	9

Note: Some courses have additional prerequisites.

* 88-120 should be taken as the first course in the Decision Science sequence. It is intended for students in their first or second year; it is offered in Fall and Spring semesters. It may be taken as late as the junior year.

This is presented as a recommended plan for completing major requirements. The major can be completed in as few as two years (not that it must be), but students may not have time for other opportunities such as additional majors or study abroad. Students may declare their major as early as the third week of the spring semester in the freshman year. Students who are planning to attend the Washington Semester Program, to study abroad, to apply for the Heinz Accelerated Masters Program, or to pursue an additional major/minor may have a very different curriculum map and should consult early – and often – with the Decision Science Academic Advisor.

Students are encouraged to consider the Washington Semester Program as part of their education. Suitable courses will be considered as fulfilling requirements of electives in the major. Please send the course syllabus, along with a note explaining how the course addresses fundamental aspects of decision science in one of the six elective categories.

Additional Major in Decision Science

Students who elect Decision Science as an additional major must fulfill all of the requirements of the Decision Science major.

Students pursuing Behavioral Economics, Policy and Organizations with an additional major in Decision Science may only count 36-202, 73-102, 88-120, 88-251 and 88-302 toward the completion of both majors.

Students pursuing Policy and Management with an additional major in Decision Science and may only count 36-202, 73-102, 88-223, and 88-251 toward the completion of both majors.

Additional majors cannot count menu electives toward simultaneously fulfilling more than one major or minor. Students who are interested in an additional major in Decision Science should see the Academic Advisor of the Decision Science program.

The Major in Policy and Management

Christina Fong, *Faculty Director*
Location: Porter Hall 223I
P-and-M-advisor@andrew.cmu.edu

Connie Angermeier, *Senior Academic Advisor*
Location: Porter Hall 208A
cla2@andrew.cmu.edu

The Policy and Management major prepares students for key decision-making and management roles in government, non-profit organizations, and business. The major emphasizes analytical approaches to decision making, practical management skills, and empirical techniques necessary for graduates to excel in the public and private sectors. The multidisciplinary curriculum merges frontier knowledge on the ideals of decision making, policy, and data analysis, as well as the realities of individual behavior within various institutional settings that must be confronted if high-quality outcomes are to be attained.

The major is comprised of three required core areas taken by all Policy and Management majors, a capstone course, plus one of four concentration areas to be chosen by the student.

The three core areas are as follows:

The *Policy Core* gives students applied economic training and policy analysis experience. Students will gain an analytical understanding of some of the biggest domestic and global economic policy challenges, and gain an appreciation of the economic analysis of complex decisions, as well as the trade-off between economic and political-based decision making.

The *Management Core* focuses on real-world applications of decision making. Students will develop an understanding of effective negotiation strategies and tactics, and identify the barriers and the psychological factors that may prevent decision-makers from reaching wise agreements. The courses provide systematic methods for dealing with the complexities that make decisions difficult, ranging from incorporating issues of risk and uncertainty in decision making to dealing with choices that have mutually conflicting objectives. For example, a business or government agency may need to decide on a policy for mitigating the uncertain impacts of air pollution while simultaneously trying to minimize the costs of such a policy on manufacturing. A firm might want to consider the uncertain reductions in security dangers from alternative policies to protect against terrorism.

The *Empirical Core* focuses on key methods for collecting and analyzing data that are needed to make informed decisions. Students learn to use interviews, surveys, experiments, and econometric methods to enhance their ability to test existing, and design new, policies. Students will create statistical models to address questions asked in conceptual, computational, and data-driven investigations.

The required *Capstone* course gives students hands-on experience in a policy-related area. Students work in teams to apply the research and analytical methods learned in their other courses to a real-world problem.

Finally, the *four concentration areas* consist of four courses chosen by the student, in coordination with the Academic Advisor. The concentrations emphasize different aspects of decision making within the major:
(1) Analytics, (2) Policy, (3) Management, and (4) Law. Each of the concentration areas draws upon the research and teaching strength of the Department of Social and Decision Sciences. Additionally, select courses from other areas in the University have been identified and approved as fulfilling elective requirements within the concentrations. More detail will be found in the concentration areas below.

The Policy and Management major provides an excellent combination of theoretical and practical skills for students who intend to seek managerial positions. Because of its strong analytic orientation, it is also an excellent major for those who intend to go on to professional school programs in law, business, or public policy. It is also an appropriate choice for students pursuing graduate degrees in economics, political science, or decision science. One such graduate option is the accelerated master's program offered by the H. J. Heinz III School of Public Policy and Management, in which a student earns both a B.S. in Policy and Management and a M.S. in Public Policy and Management in five years.

Prerequisites

All Policy and Management majors must complete mathematics and statistics prerequisites (see below), by the end of the sophomore year.

Mathematics Prerequisite		Units
21-111-21-112	Differential Calculus - Integral Calculus	10-20
or 21-120	Differential and Integral Calculus	

Statistics Prerequisite		Units
36-200	Reasoning with Data	9

Curriculum

Policy Core		Units
73-102	Principles of Microeconomics	9
88-221	Analytical Foundations of Public Policy	9
		18

Management Core		Units
88-150	Managing Decisions	9
88-223	Decision Analysis	12
88-418	Domestic Negotiation	9
or 88-419	International Negotiation	
		30

Empirical Core		Units
36-202	Statistics & Data Science Methods	9
88-251	Empirical Research Methods	9
88-252	Causal Inference in the Field	9
or 88-275	Bubbles: Data Science for Human Minds	
		27

Capstone		
88-451	Policy Analysis Senior Project	12
or 88-452	Policy Analysis Senior Project	

Concentration 36 units

Complete at least 36 units (a minimum of four courses) from the following concentrations of courses. Students are required to declare a concentration before their graduating semester, but are not required to choose a concentration when they initially declare (typically in the freshman or sophomore year). In fact, students are encouraged to take many of the core classes before making their concentration selection so that they can make a well-informed decision.

1. Analytics Concentration (minimum four total courses)		Units
Programming (one course)		9
88-300	Programming and Data Analysis for Social Scientists	9
Analytics/Empirical electives (select any two courses)		18
88-252	Causal Inference in the Field (if not taken in Empirical Core)	9
88-275	Bubbles: Data Science for Human Minds (if not taken in Empirical Core)	9
88-402	Modeling Complex Social Systems	9
21-257	Models and Methods for Optimization	9
36-303	Sampling, Survey and Society	9
36-315	Statistical Graphics and Visualization	9
70-374	Data Mining & Business Analytics	9
70-455	Modern Data Management	9
70-460	Mathematical Models for Consulting	9
80-321	Causation, Law, and Social Policy	9
90-834	Health Care Geographical Information Systems *	12
Analytics concentration breadth elective (select one course from any of the other three concentrations; must be 88xxx)		9

* other Heinz courses are also approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration

2. Policy Concentration (minimum four total courses)		Units
Students select four courses; two of the four must be 88xxx)		
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-367	Behavioral Economics in the Wild	9
88-411	Rise of the Asian Economies	9
88-435	Decision Science and Policy	9
88-444	Public Policy and Regulation	9
36-303	Sampling, Survey and Society	9
19-402	Telecommunications Technology and Policy for the Internet Age	12
19-421	Emerging Energy Policies	9
19-443	Climate Change Science and Adaptation	9
19-639	Policies of the Internet	12
73-328	Health Economics	12
79-342	Introduction to Science and Technology Studies	9
80-244	Environmental Ethics	9
80-324	Philosophy of Economics	9
80-341	Computers, Society and Ethics	9
84-310	International Political Economy	9
84-362	Diplomacy and Statecraft	9
84-389	Terrorism and Insurgency	9
90-798	Systems Thinking for Environmental Policy & Planning *	12

* other Heinz courses are also approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration

3. Management Concentration (minimum four total courses)		Units
Students select four courses; two of the four must be 88xxx)		
88-341	Team Dynamics and Leadership	9
88-406	Behavioral Economics in Organizations	9
88-411	Rise of the Asian Economies	9
88-418	Domestic Negotiation (if not taken in Management Core)	9
88-419	International Negotiation (if not taken in Management Core)	9
70-311	Organizational Behavior	9
70-332	Business, Society and Ethics	9
70-342	Managing Across Cultures	9
70-371	Operations Management	9
70-381	Marketing I	9
70-430	International Management	9
80-344	Management, Environment, and Ethics	9

4. Law Concentration (minimum four total courses)		Units
Students select four courses; one of the four must be 88xxx)		
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9
70-364	Business Law	9
70-365	International Trade and International Law	9
73-408	Law and Economics	9
80-321	Causation, Law, and Social Policy	9
80-447	Global Justice	9
84-313	International Organizations and Law	9
84-373	Emerging Technologies and the Law	9

NOTE: Some courses have additional prerequisites.

Students may consider the CMU Washington Semester Program or study abroad in this semester	Students may consider the CMU Washington Semester Program or study abroad in this semester		

This is presented as a recommended plan for completing major requirements. Students may declare their major as early as the third week of the spring semester in the freshman year. Students who are planning to attend the Washington Semester Program, to study abroad, to apply for the Heinz Accelerated Masters Program, or to pursue an additional major/minor may have a very different curriculum map and should consult early – and often – with the Policy and Management Academic Advisor.

Students are encouraged to consider the Washington Semester Program as part of their education. Suitable courses may be considered as fulfilling requirements of concentration electives in the major. Please discuss course selections with the Academic Advisor during the application phase to the program.

Additional Major

Students who elect Policy and Management as an additional major must fulfill all of the requirements of the Policy and Management major. For additional majors in Policy and Management, courses taken as concentration electives may not count toward the student's primary major or other program.

Students pursuing Behavioral Economics, Policy, and Organizations with an additional major in Policy and Management may only count 36-202 , 73-102, and 88-251 (and 88-252, if taken in Empirical Core) toward the completion of both majors.

Students pursuing Decision Science with an additional major in Policy and Management may only count 36-202 , 73-102, 88-223 , and 88-251 toward the completion of both majors.

Additional majors cannot count menu electives toward simultaneously fulfilling more than one major or minor. Students who are interested in an additional major in Policy and Management should see the Academic Advisor of the Policy and Management program.

The Minor in Decision Science

Gretchen Chapman, *Faculty Director*
Location: Porter Hall 219F
DS-advisor@andrew.cmu.edu

Connie Angermeier and Lizzy Stoyle, *Academic Advisors*
Location: Porter Hall 208A and 208G
cla2@andrew.cmu.edu, estoyle@andrew.cmu.edu

The minor in Decision Science provides students with a selective survey of disciplinary perspectives. The courses present descriptive and normative approaches to judgment and decision making, as well as some application of theories and results to real-world problems. Students who elect Decision Science as a minor must complete the four core courses (below) and two electives from the elective set (below).

Students may double-count one course with another major/minor.

Curriculum — 54 units

Core Courses — 36 units

73-102	Principles of Microeconomics	9
88-120	Reason, Passion and Cognition	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9

Elective Courses — 18 units

Complete two courses from the following categories. At least one of the courses (9 units) must be a Social and Decision Sciences course (88-xxx).

1. Biological and Behavioral Aspects of Decision Making		Units
85-350	Psychology of Prejudice	9
85-352	Evolutionary Psychology	9
85-375	Crosscultural Psychology	9
85-377	Attitudes and Persuasion	9
85-442	Health Psychology	9
85-444	Relationships	9
85-446	Psychology of Gender	9
88-230	Human Intelligence and Human Stupidity	9
88-342	The Neuroscience of Decision Making	9
88-355	Social Brains: Neural Bases of Social Perception and Cognition	9
88-360	Behavioral Economics	9
88-365	Behavioral Economics and Public Policy	9
88-380	Dynamic Decisions	9

2. Managerial and Organizational Aspects of Decision Making		Units
70-311	Organizational Behavior	9
70-381	Marketing I	9
70-460	Mathematical Models for Consulting	9
88-150	Managing Decisions	9
88-221	Analytical Foundations of Public Policy	9
88-406	Behavioral Economics in Organizations	9
88-418	Domestic Negotiation	9
88-419	International Negotiation	9
88-444	Public Policy and Regulation	9
88-451	Policy Analysis Senior Project	12
or 88-452	Policy Analysis Senior Project	

3. Philosophical and Ethical Perspectives on Decision Making		Units
70-332	Business, Society and Ethics	9
80-208	Critical Thinking	9
80-221	Philosophy of Social Science	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-249	AI, Society, and Humanity	9
80-271	Philosophy and Psychology	9
80-305	Choices, Decisions, and Games	9
80-321	Causation, Law, and Social Policy	9
80-324	Philosophy of Economics	9
88-275	Bubbles: Data Science for Human Minds	9
88-409	Behavioral Economics Perspectives on Ethical Issues	9

4. Economic and Statistical Methods for Decision Science		Units
70-374	Data Mining & Business Analytics	9
70-455	Modern Data Management	9
70-460	Mathematical Models for Consulting	9
73-265	Economics and Data Science	9
73-347	Game Theory for Economists	9
80-405	Game Theory	9
88-255	Strategic Decision Making: Cooperation and Competition in Social Interactions	9
88-300	Programming and Data Analysis for Social Scientists	9
88-360	Behavioral Economics	9
88-367	Behavioral Economics in the Wild	9

5. Decision Science and Public Policy		Units
84-364	Comparative Presidential Behavior: Leadership, Personality, and Decision Making	9
84-369	Decision Science for International Relations	9
88-221	Analytical Foundations of Public Policy	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-405	Risk Perception and Communication	9
88-444	Public Policy and Regulation	9
88-451	Policy Analysis Senior Project	12
or 88-452	Policy Analysis Senior Project	

6. Research Methods for Decision Science		Units
36-303	Sampling, Survey and Society	9
70-460	Mathematical Models for Consulting	9
85-310	Research Methods in Cognitive Psychology	9
88-252	Causal Inference in the Field	9
88-402	Modeling Complex Social Systems	9
88-435	Decision Science and Policy	9

Note: Some courses have additional prerequisites

The Minor in Policy and Management

Christina Fong, *Faculty Director*
Location: Porter Hall 223I
P-and-M-advisor@andrew.cmu.edu

Connie Angermeier, *Senior Academic Advisor*
Location: Porter Hall 208A
cla2@andrew.cmu.edu

Regardless of major, many Carnegie Mellon graduates will face analytical and managerial challenges and responsibilities in their professional lives. Whether these are in their area of expertise or in more general settings, these roles will to some degree require assumption of the responsibility for directing the work of others. The Policy and Management minor is intended for students who expect to need these management concepts and skills.

At most, one course may be double-counted with another major or minor.

Curriculum — 54 units

Required Courses — 36 units

73-102	Principles of Microeconomics	9
88-150	Managing Decisions	9
88-221	Analytical Foundations of Public Policy	9
88-223	Decision Analysis	12

18 unitsElectives

Complete two courses (at least 18 units) from any of the concentrations (Analytics, Policy, Management, and Law). **Courses do not need to be taken from the same concentration.** The courses are listed by their concentration categories as a way to guide students. At least one of the courses (9 units) must be a Social and Decision Sciences course (88-xxx).

Analytics Concentration		
88-252	Causal Inference in the Field	9
88-275	Bubbles: Data Science for Human Minds	9
88-300	Programming and Data Analysis for Social Scientists	9
88-402	Modeling Complex Social Systems	9
21-257	Models and Methods for Optimization	9
36-303	Sampling, Survey and Society	9
36-315	Statistical Graphics and Visualization	9
70-374	Data Mining & Business Analytics	9
70-455	Modern Data Management	9
70-460	Mathematical Models for Consulting	9
80-321	Causation, Law, and Social Policy	9
90-834	Health Care Geographical Information Systems *	12

* other Heinz courses are also approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration

Policy Concentration		Units
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-367	Behavioral Economics in the Wild	9
88-411	Rise of the Asian Economies	9
88-435	Decision Science and Policy	9
88-444	Public Policy and Regulation	9
36-303	Sampling, Survey and Society	9
19-402	Telecommunications Technology and Policy for the Internet Age	12
19-421	Emerging Energy Policies	9
19-443	Climate Change Science and Adaptation	9
19-639	Policies of the Internet	12
73-328	Health Economics	12
79-342	Introduction to Science and Technology Studies	9
80-244	Environmental Ethics	9
80-324	Philosophy of Economics	9
80-341	Computers, Society and Ethics	9
84-310	International Political Economy	9
84-362	Diplomacy and Statecraft	9
84-389	Terrorism and Insurgency	9
90-798	Systems Thinking for Environmental Policy & Planning *	12

* other Heinz courses are also approved. Please talk with the P&M advisor for information about getting approval for Heinz course registration

Management Concentration		Units
88-341	Team Dynamics and Leadership	9
88-406	Behavioral Economics in Organizations	9
88-411	Rise of the Asian Economies	9
88-418	Domestic Negotiation	9
88-419	International Negotiation	9
70-311	Organizational Behavior	9
70-332	Business, Society and Ethics	9
70-342	Managing Across Cultures	9
70-371	Operations Management	9
70-381	Marketing I	9

70-430	International Management	9
80-344	Management, Environment, and Ethics	9

Law Concentration		Units
88-281	Topics in Law: 1st Amendment	9
88-284	Topics of Law: The Bill of Rights	9
70-364	Business Law	9
70-365	International Trade and International Law	9
73-408	Law and Economics	9
80-321	Causation, Law, and Social Policy	9
80-447	Global Justice	9
84-313	International Organizations and Law	9
84-373	Emerging Technologies and the Law	9

Faculty

LINDA BABCOCK, James Mellon Walton Professor of Economics and Department Head – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 1988–

SAURABH BHARGAVA, Associate Professor of Economics – Ph.D., University of California, Berkeley; Carnegie Mellon, 2012–

STEPHEN BROOMELL, Associate Professor of Quantitative Psychology – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 2011–

GRETCHEN CHAPMAN , Professor of Psychology – Ph.D., University of Pennsylvania ; Carnegie Mellon, 2017–

SIMON DEDEO, Assistant Professor of Social and Decision Sciences – Ph.D., Princeton University; Carnegie Mellon, 2017–

JULIE DOWNS, Associate Professor of Psychology – Ph.D., Princeton University; Carnegie Mellon, 1995–

PAUL S. FISCHBECK, Professor of Social and Decision Sciences and Engineering and Public Policy – Ph.D., Stanford University; Carnegie Mellon, 1990–

CHRISTINA FONG, Senior Research Scientist – Ph.D., University of Massachusetts, Amherst; Carnegie Mellon, 2001–

RUSSELL GOLMAN, Associate Professor of Behavioral Economics and Decision Science – Ph.D., The University of Michigan; Carnegie Mellon, 2010–

CLEOTILDE GONZALEZ, Research Professor of Information and Decision Sciences – Ph.D., Texas Tech University; Carnegie Mellon, 2000–

KAREEM HAGGAG, Assistant Professor of Economics – Ph.D., University of Chicago; Carnegie Mellon, 2017–

ALEX IMAS, Associate Professor of Economics – Ph.D., University of California, San Diego; Carnegie Mellon, 2014–

MARK S. KAMLET, University Professor of Economics and Public Policy and Provost Emeritus – Ph.D., University of California, Berkeley; Carnegie Mellon, 1978–

GEORGE F. LOEWENSTEIN, Herbert A. Simon University Professor of Economics and Psychology – Ph.D., Yale University; Carnegie Mellon, 1990–

JOHN H. MILLER, Professor of Economics and Social Science – Ph.D., The University of Michigan; Carnegie Mellon, 1989–

DANEIL OPPENHEIMER, Professor of Psychology – Ph.D., Stanford University; Carnegie Mellon, 2017–

SILVIA SACCARDO, Assistant Professor of Economics – Ph.D., University of California, San Diego; Carnegie Mellon, 2016–

Affiliated Faculty

LINDA ARGOTE, David and Barbara Kirr Professor of Organizational Behavior – Ph.D., University of Michigan; Carnegie Mellon, 1979–

LEE BRANSTETTER, Professor of Economics – Ph.D., Harvard University; Carnegie Mellon, 2006–

KATHLEEN M. CARLEY, Professor of Sociology – Ph.D., Harvard University; Carnegie Mellon, 1984–

ROSALIND CHOW, Associate Professor of Organizational Behavior and Theory – Ph.D., Stanford University; Carnegie Mellon, 2008–

TAYA COHEN, Associate Professor of Organizational Behavior and Theory and Carnegie Bosch Junior Faculty Chair – Ph.D., University of North Carolina at Chapel Hill; Carnegie Mellon, 2008–

DENNIS N. EPPLE, Professor of Economics – Ph.D., Princeton University; Carnegie Mellon, 1974–

JEFFREY GALAK, Associate Professor of Marketing – Ph.D., New York University; Carnegie Mellon, 2009–

JOSEPH B. KADANE, Leonard J. Savage University Professor of Statistics and Social Science – Ph.D., Stanford University; Carnegie Mellon, 1969–

SARAH B. KIESLER, Professor – Ph.D., The Ohio State University; Carnegie Mellon, 1979–

DAVID M. KRACKHARDT, Professor of Organizations and Public Policy – Ph.D., University of California, Irvine; Carnegie Mellon, 1991–

ROBERT E. KRAUT, Hebert A. Simon Professor of Human Computer Interaction – Ph.D., Yale University; Carnegie Mellon, 1993–

CHRIS OLIVOLA, Assistant Professor of Marketing – Ph.D., Princeton University; Carnegie Mellon, 2013–

JOEL TARR, Richard S. Caliguiri University Professor of History and Policy – Ph.D., Northwestern University; Carnegie Mellon, 1967–

Emeriti Faculty

DAVID A. HOUNSHELL, David M. Roderick Professor of Technology and Social Change – Ph.D., University of Delaware; Carnegie Mellon, 1991–

WILLIAM R. KEECH, Professor of Political Economy – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 1997–

Adjunct Faculty

MARY JO MILLER – J.D., Duquesne University; Carnegie Mellon, 1999–

Research and Teaching Faculty

LINDA MOYA, Assistant Teaching Professor in Psychology – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2016–

MARK PATTERSON, Assistant Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2019–

Department of Social and Decision Sciences Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

88-120 Reason, Passion and Cognition
Fall: 9 units
This course will introduce students to major concepts and theories in the social and decision sciences, focusing in particular on how cognition and emotion shape judgment and choice. We will address such questions as: In what ways do emotions influence judgments and choices? What are some common mistakes in judgment and decision making? Can information shape our choices even if we do not consciously recognize the information? Throughout the course, the emphasis will be on understanding: (1) basic theories and research findings of decision science and psychology, and (2) the relevance of research findings to everyday life.

88-125 Freshman Seminar: Forecasting Uncertainty
Intermittent: 9 units
Whenever you make a plan, you have to think about the future. Sometimes you know a lot, sometimes you know very little, and sometimes you know very little but think you know a lot. Amazingly, the same types of errors that you make every day are made by policymakers planning multi-billion dollar options. In this course, we will explore these errors and methods for reducing them. Examples will be drawn from many hot topics including climate change, health care, and government regulation.

88-126 Freshman Seminar: Modeling Complex Systems
Intermittent: 9 units
Most of the major issues confronting humanity—-such as climate change, financial collapse, ecosystem survival, terrorism, and disease epidemics —-are the result of complex systems where the interactions of the pieces of the system create a whole that is rather different than any of its parts. Unfortunately, traditional scientific methods that focus on reducing systems to their parts and then analyzing each part provide little insight into such systems. This seminar explores the behavior of complex systems as well as how to model and understand them using both traditional tools and computer-based approaches.

88-150 Managing Decisions
Fall: 9 units
This course will introduce the major concepts behind "good" decision making. Future employers will pay handsomely for decisions that are well thought out, defendable, and understandable. Being able to organize decision processes in a way that will achieve these goals is not trivial. Biases brought on by emotions and heuristic shortcuts often jeopardize the quality of a decision. Multiple levels of "good" decision making will be investigated ranging from life choices to national climate policies. Techniques that account for uncertainty and time preferences will be introduced.

88-198 Research Training: Social and Decision Sciences
Fall and Spring
This course is part of a set of 100-level courses offered by H&SS departments as independent studies for second-semester freshmen, and first- or second-semester sophomores, in the College. In general, these courses are designed to give students some real research experience through work on a faculty project or lab in ways that might stimulate and nurture subsequent interest in research participation. Faculty and students devise a personal and regular-ized meeting and task schedule. Each Research Training course is worth 9 units, which generally means a minimum for students of about 9 work-hours per week. These courses are offered only as electives; i.e., they cannot be applied toward a college or major requirement, although the units do count toward graduation as elective units. Additional details (including a roster and descriptions of Research Training Courses available in any given semester) are available in the H&SS Academic Advisory Center. Prerequisites/ restrictions: for H&SS students only; only for second-semester freshmen, or first- or second-semester sophomores; minimum cumulative QPA of 3.0 (at the time of registration) required for approved entry; additional prerequisites (e.g., language proficiency) may arise out of the particular demands of the research project in question.

88-200 SDS Colloquium
Spring: 3 units
The SDS Colloquium is an opportunity for students to gather and discuss topics related to the various opportunities available both during the undergraduate career and after graduation. Students will explore various areas such as academic planning, personal and professional values, and professional communication/communication skills. Co-curricular experiences such as; study abroad, research, internship/career planning and goal setting, and graduate school are among the topics to be presented. Students will have the opportunity to talk with SDS advisors, faculty, and alumni as well as with other professionals from around the University. Sophomore or junior standing is required.

88-221 Analytical Foundations of Public Policy
Spring: 9 units
In this course, students will achieve an analytical understanding of some of the most pressing policy challenges of our day. The focus of the course lies in the interaction between markets and government. The course will first introduce analytical foundations of how markets, voting and governments work, and important shortcomings of each. The course will briefly touch on a comparative cross-national perspective on the balance between markets and government pursued in different countries. The second part of the course focuses on a substantive understanding of current policy issues, including health care, inequality, economic conditions of the politically pivotal middle class, resource constraints, globalization, technological change, and the role of all of these topics in political debates, and voter demands. A pre-requisite for this course is 73-102 Principles of Microeconomics.
Prerequisites: 73-100 or 73-102 or 88-220

88-223 Decision Analysis
Spring: 12 units
This course offers practical guidance about how to make better decisions and teaches students how to use modeling to do decision analysis. We analyze decisions involving uncertainty, risk, and time delay. In addition to methods of decision analysis, the course will also emphasize sensitivity analysis and communication of recommendations.
Prerequisites: 36-200 or 36-225 or 36-247 or 36-217 or 36-200 or 70-207 or 36-211 or 36-201 or 36-207

88-230 Human Intelligence and Human Stupidity
Fall: 9 units
By some standards, humans are an incredibly intelligent species. We have set foot on the moon, split the atom, and produced extraordinary works of art and literature (including the complete works of Shakespeare, which, despite theoretical accounts to the contrary, no amount of monkeys on typewriters has ever been able to duplicate). And yet. we are also the species that has brought about the Darwin Awards, spent $125 million sending a probe to Mars which was unable to function because engineers failed to convert inches to centimeters, and produced cringe-worthy works of art and literature (including the 1964 movie "Santa Claus Conquers the Martians" which no amount of monkeys on typewriters would ever want to duplicate.). What is intelligence and how does it vary across individuals and over our lifespans? What are we good at, and what are we bad at, and why? Are there things that that make us dumber? Are there things we can do to make ourselves smarter? How should what we know about the range of human intellectual abilities guide policy, education, law, medicine, and business; what implications does this have regarding the tasks/jobs that humans should be doing and the tasks/jobs that machines ought to do? Using cutting edge research from psychology and decision science, this course will explore the strange contradiction that defines the human experience: How are we simultaneously so smart and so dumb?

88-251 Empirical Research Methods
Fall: 9 units
This course teaches students how to evaluate and conduct original research regarding human behavior, whether it be in economic, social, or political settings. The course gives students practical experience in many of the most commonly used research techniques, including surveys, experiments, and quasi-experimental analysis. Although the course focuses primarily on the relationship between formulating research questions and implementing the appropriate methods to answer them, students can expect regularly to apply the statistical techniques learned in the course prerequisites, including regression.
Prerequisites: 36-200 or 36-247 or 36-207 or 36-201

88-252 Causal Inference in the Field
Spring: 9 units
Causal questions are pervasive in the social and behavioral sciences, and empirical researchers often use regression analysis as a tool for tackling such questions. This course focuses on the scientific problem of analyzing causal hypotheses in real-world settings, not on the mathematical details of regression. After clearly distinguishing prediction from causation, we discuss how to represent causal hypotheses and how to use regressions to analyze both predictive and causal hypotheses. Using in-class data exercises throughout, we will examine how to move from an interesting but somewhat vague question about the world (e.g., do police discriminate based on race and gender, do NFL athletes choke under high pressure, does parenthood improve happiness) to a clear statistical model that, when estimated, meaningfully addresses the question asked. The course emphasizes causal analysis as the main research goal and multivariate linear regression as the main statistical tool. After mastering basic techniques, we will introduce students to more advanced econometric approaches such as panel regressions and instrumental variables to deal with trickier settings in which causal inference is more challenging (e.g., do more guns lead to more violence?). In keeping with the hands-on philosophy of the course, a central focus of the semester will be a group research paper/presentation where students will have the opportunity to formulate and empirically test a research question of their choosing. Students will learn how to find, clean, and analyze a new dataset, and then concisely communicate their findings in the form of a scientific paper (and accompanying presentation). The research project makes this course excellent preparation for any student who hopes to ultimately write an undergraduate thesis.
Prerequisites: 36-201 or 36-207 or 70-207 or 36-200

88-255 Strategic Decision Making: Cooperation and Competition in Social Interactions
Fall: 9 units
When should a person cooperate and when should a person be selfish in an ongoing social interaction? How can a business establish strategic partnerships when it comes to creating a pie and at the same time battle with competitors when it comes to dividing up the pie? Strategic decision making requires a framework to think through the implications of cooperation and of competition. This course gives you a systematic approach to understanding how people, firms, or countries interact with one another to achieve their own goals. In this course students will learn to apply behavioral strategic principles to analyze strategic situations arising in business, politics, international relations, domestic policy, organizational management, and everyday life. Our focus will be on practical applicability rather than abstract theorizing. Readings will focus on real-life stories accompanied by a full analysis of the principles involved. The class will be organized as a seminar, centered around discussion, not lecture. Students will also be placed in the role of strategist in occasional simulations in class.

88-257 Experimental Economics
Intermittent: 9 units
This course will focus on the experimental literature studying decision-making and strategic interactions. We will explore both seminal and ongoing experimental work on risk, time and social preferences, as well as how these preferences are affected by emotions and other visceral factors. The course will focus on laboratory experiments. The last section of the class will focus on the use of experiments to test economic theory (both standard and behavioral). The class is meant to be interactive, and students will have many opportunities to critically discuss existing experimental research, as well as to present their own research ideas.

88-275 Bubbles: Data Science for Human Minds
Fall: 9 units
Open discussions turn into echo chambers; optimistic traders pump good money into bad stocks; we fail to see, or sympathize, beyond the limits our culture, upbringing, or education prescribe. These bubbles — information bubbles, market bubbles, social bubbles — drive us to ask some of the most basic questions in the social sciences: Why do we believe the things we do? Where do our ideas come from, and how can we measure the consequences of their conjecture, spread, and evolution? How can we design systems to make us better thinkers? In this introduction to the "big data" study of human behavior, we'll learn some key concepts and simple computational tools for studying how people gain and share information, with a focus on what they say and write. And we'll apply these tools to social behaviors from the writing of Harry Potter fan fiction to online trolling, to science, markets, and liberal democracy itself. The class will include conceptual, computational, and data-driven investigations; students in social science, humanities, engineering and the sciences are equally welcome. At the end of this course, students will be able to build models for how people think and talk to each other, to see how thinking and talking work in both the past and present, and to imagine, and even design, systems that might help us think, and talk, together more effectively in the future. Pre-requisites: willingness and initiative to work with real-world data.

88-281 Topics in Law: 1st Amendment
Fall: 9 units
In their firm desire to perfect the new Constitution, which defined and limited the powers and roles of their new government, the founding fathers insisted on explicit statements that would protect the rights of the new nation's citizens. Indeed, the protection of these essential rights in many ways drove and defined their successful rebellion from Britain. This impulse resulted in ten amendments to the Constitution, which we have come to know as the Bill of Rights. The very first (and arguably considered at the time as the most essential) of these was the First Amendment, which we sometimes call the "free speech" amendment to the Constitution. This amendment guarantees every U.S. citizen five freedoms: freedom of religion, speech, press, peaceable assembly, and the freedom to petition the government for redress of grievances. This course examines the historical and philosophical roots of this key constitutional amendment, how it has been fleshed out and defined over time through case law, and the bases of some more recent critics of this amendments and current interpretations.

88-284 Topics of Law: The Bill of Rights
Spring: 9 units
This course examines the history and place of the Bill of Rights in our nation's constitutional framework. It focuses on the historical origins of the U.S. Constitution, of each of the first ten amendments to the Constitution (that we refer to as the "Bill of Rights"), how the meanings and interpretations of these have evolved over time, and what they mean to us today. Each article of the Bill of Rights will be examined in terms of its original intentions, and then through cases that have challenged and been interpreted through the Bill's articles.

88-300 Programming and Data Analysis for Social Scientists
Spring: 9 units
This course provides a first introduction to the statistical programming language R, and is designed primarily with social science majors in mind. Students will develop skills in all facets of the data analysis pipeline, from installing and loading packages and reading in files to data cleaning, munging, visualization and modeling. We welcome students who will be coding for the first time!
Prerequisites: 36-200 or 36-201

88-302 Behavioral Decision Making
Fall and Spring: 9 units
Behavioral decision making is the study of how people make decisions, in terms that can eventually help them to make better decisions. It draws together research from psychology, economics, political science, and management, among other fields. It has applications that range from managing potentially hazardous technologies, to involving patients more fully in the choice of medical procedures, to the design of computer-interactive systems. The course covers behavioral theories of probabilistic inference, intuitive prediction, preference, and decision making. Topics include heuristics and biases in inference and prediction, risk perceptions and attitudes, strategies for combining information from different sources and dealing with conflicting objectives, and the roles of group and emotional processes in decision making. The course emphasizes the mutually reinforcing relationship between theory and application.
Prerequisites: (36-225 or 36-201 or 36-211 or 36-207 or 36-200 or 70-207 or 36-217 or 36-220 or 36-247) and 88-120

88-341 Team Dynamics and Leadership
Fall: 9 units
Much of the work in groups and organizations consists of communication. You communicate to get information that will be the basis of decisions, to provide a vision for the people who work for and with you, to coordinate activity, and to sell yourself and your work. The goal of this course is to identify sources of communication problems within an organization and ways to overcome them. To do this requires that we know how communication normally works, what parts are difficult, and how to fix it when it goes wrong. The focus of this course is on providing you with a broad understanding of the way communication operates within dyads, work groups, and organizations. This course is not a practicum in public speaking or writing, although you will get some experience writing, speaking and managing impressions. Rather the intent is to give you theoretical and empirical underpinnings for the communication you will undoubtedly do when you return to work. Readings come from both the research and the managerial literatures. Among the topics considered are managerial communication, persuasion and conformity, self presentation and person perception, social networks. Cases and group projects give you an opportunity to apply what you've learned.
Prerequisites: 36-207 or 36-200 or 36-217 or 36-225 or 36-220 or 36-201 or 36-247 or 70-207

88-342 The Neuroscience of Decision Making
Intermittent: 9 units
Because we are human, feelings provide the basis for reason and rational decision-making. Consider for example, that brain-damaged patients left devoid of emotion struggle to make the most elementary decisions: while they are able layout the pros and cons of a decision, but they are unable to make the final choice. This course will discuss seminal discoveries in affective neuroscience underlying decision-making.
Prerequisites: 88-120 or 85-211

88-355 Social Brains: Neural Bases of Social Perception and Cognition
Intermittent: 9 units
By some accounts, the large expansion of the human brain evolved due to the complex demands of dealing with social others?competing or cooperating with them, deceiving or empathizing with them, understanding or misjudging them. This discussion-based seminar surveys the emerging field of social cognitive neuroscience and its multi-level approach to understanding the brain in its social context. We will review current theories and methods guiding the field and recent research examining the neural bases of social processes, including: theory of mind, empathy, emotion, morality, among others. We will also discuss broader questions that apply to the specific topics that the course covers, including: What are appropriate levels of description for the target phenomena? How can different disciplines in neuroscience and the social sciences contribute to social neuroscience research? What can we learn from animals? behavior about human social cognition? Do neural systems exist that are specialized for social cognition, or do the systems that participate in social cognition have more general cognitive functions?
Prerequisites: 85-355 or 88-251 or 85-310 or 85-340

88-360 Behavioral Economics
Spring: 9 units
This course introduces students to behavioral economics, an emerging subfield of economics that incorporates insights from psychology and other social sciences into economics. We will examine evidence on how human behavior systematically departs from the standard assumptions of economics, and then investigate attempts by behavioral economists to improve economic analyses.
Prerequisites: (21-112 or 21-120) and (88-220 or 73-102 or 73-100)

88-365 Behavioral Economics and Public Policy
Fall: 9 units
Economics has up to now been the social science that has been most broadly and deeply involved in public policy. With its rational choice perspective, the economic perspective has tended to favor certain types of policies namely those that enhance the efficiency of market mechanisms and lower the cost of information. In this course we will spend the first several classes reviewing the assumptions, implications for public policy and limitations of the rational choice perspective. The remainder of the course will then be devoted to examining different public policy issues, including saving, health care, crime and drug abuse, through the competing lenses of traditional and behavioral economics.
Prerequisites: 73-102 or 88-220 or 73-100

88-366 Behavioral Economics of Poverty and Development
Intermittent: 9 units
This course will introduce students to the study of economic development and poverty alleviation, with a special focus on recent insights from the intersection of psychology and economics. We will primarily focus on the health, microfinance, agriculture, and education sectors in developing countries. The course will have a methodological component largely centered on using experiments to evaluate interventions and policies that apply to households, small firms, and farms. While we will cover standard economic approaches, we will give extra attention to how a behavioral lens can help in both understanding development issues (e.g. barriers to household risk management) and in designing effective interventions (e.g. the timing of fertilizer sales).
Prerequisites: (73-102 or 88-220 or 73-100) and 36-202

88-367 Behavioral Economics in the Wild
Spring: 9 units
Behavioral Economics is a sub-field of economics that, relying on insights from psychology and decision-making, aspires to describe actual behavior with greater empirical accuracy and psychological realism than that implied by the standard neoclassical model. In this course, we will investigate the success of this approach in explaining ostensible anomalies in the "wild" such as under-savings for retirement, over-consumption of unhealthy food, extreme aversion to losses among investors, workers, and home-owners, the over-confidence of corporate CEOs and NFL general managers, and the influence of emotions on domestic violence, stock market activity, and risk-taking. We will first document and review the underlying theory for three conceptual departures from the standard model -non-standard preferences (e.g., present-bias, reference dependence), non-standard beliefs (e.g., overconfidence, gambler''s fallacy), and non-standard decision-making (e.g., heuristics, emotions, framing effects)-and then quickly move to assess the evidence for these claims in field settings. We will additionally explore how markets respond to behavioral biases, and discuss recent research in behavioral policy with an emphasis on policies aimed at increasing savings, improving food choice, and heightening program take-up and compliance. The course will be paper-centric and we will review a variety of popular empirical methods from field experiments to quasi-experimental approaches (e.g., estimation through regression-based panel analyses, difference-in-differences, and instrumental variables). Student evaluation will be based on performance on problem sets, an exam, as well as a short class presentation of an empirical paper of choice.
Prerequisite: 36-202

88-372 Social and Emotional Brain
Intermittent: 9 units
This course provides an introductory survey of the methods and findings in social and affective neuroscience. Half the course is lecture style and covers the basics of neuroanatomy, neurochemistry, and neuroendocrine systems, as well as a survey of relevant neuroscience methods (neuroimaging, neuropsychological, psychophysiological, transcranial magnetic stimulation, etc.). The other half of the course is more like a seminar, where each week we will discuss a couple seminal empirical papers from the scientific literature. Topics include interpersonal relationships, prosocial behavior, aggression, prejudice, emotion regulation, stress, etc.
Prerequisite: 85-211

88-380 Dynamic Decisions
Intermittent: 9 units
Decisions we make every day may range from simple and routine to novel and highly complex. For example, decisions while driving (judging the distance to the front car, the speed, the directions, and making choices accordingly) seem effortless and routine after some experience, while triaging patients in an emergency room under scarce resources may be quite overwhelming for everyone. Both types of decisions however, have something in common: they are made in the presence of change and in the absence of explicit information of probabilities, possible alternatives, and outcomes. Our decisions in such situations are the result from the interaction between the dynamic environmental demands and our cognitive processes. In this course you will learn how decisions are made in different dynamic situations and how our cognitive processes (e.g., attention, experience, risk tendencies, and other factors) influence the way those decisions are made. Students will be introduced to different aspects of decision processes by analyzing the sources of error in complex problems, such as cases of accidents and disasters (natural or man-made), in multiple disciplines (e.g., aviation, management, military strategy, and others). The course will also use simulation-based representations of dynamic decision making situations (e.g., microworlds) to illustrate relevant cognitive processes needed for learning, adaptation and choice. Finally, students will learn how to construct mathematical/computational models of dynamic systems, be able to interpret simulation results and to explore scenarios regarding effects of variables in the models and the predictions that the models can make.
Prerequisites: (88-120 or 88-230 or 85-211 or 85-213 or 85-241 or 85-102) and (36-200 or 36-201)

88-388 Psychological Models of Decision Making
Intermittent: 9 units
This course provides an introduction to several techniques and theories for modeling psychological processes and decision making. The topics covered include: signal detection theory, individual decision modeling, and multidimensional scaling. The course will include an introduction to the theory behind the models as well as "hands on" computational applications of the models with data. The topics covered in this course can be used in a variety of applied settings-ranging from medical and public policy to marketing and psychological research-to produce simplified representations of seemingly complex phenomena.
Prerequisites: (36-200 or 36-201) and (21-120 or 21-112)

88-398 Independent Study
Fall and Spring
Students conduct independent academic study under the supervision of a Social & Decision Sciences faculty member. Students who wish to engage in an independent study should seek out a faculty member whose interests are appropriate to the topic. Students must also complete an "Independent Study/Research for Credit" form, available from the SDS Coordinator of Student Programs in Porter 208A. Prerequisite: Permission of a faculty sponsor.

88-399 Undergraduate Research
Fall and Spring
Students conduct research under the supervision of a Social & Decision Sciences faculty member. Students who wish to engage in research should seek out a faculty member whose interests are appropriate to the research. Prerequisite: Students must also complete an "Independent Study/Research for Credit" form, available from the SDS Coordinator of Student Programs in Porter 208A. Permission of a faculty sponsor.

88-402 Modeling Complex Social Systems
9 units
Many of the biggest challenges facing modern societies—-maintaining global political and financial stability, protecting against terrorist acts, cooperating to solve collective problems such as climate change or corruption—-are complex. They are not simply complicated; they arise as interacting agents create various feedbacks that result in, often unintentional, emergent phenomena. Confronting these challenges requires an understanding of the properties of complex systems. In this course, we will provide an overview of complex systems theory and concepts. You will learn the fundamental properties of complex adaptive systems and how to apply these insights to a variety of key social science problems. We will introduce and analyze computational and mathematical models, as well as qualitative models, so you should have some familiarity with basic probability and algebra. We will explore topics such as inequality, networks, information spread, community formation, the evolution of cooperation, and the stabilization of financial markets. We will cross traditional disciplinary boundaries and venture into economics, political science, sociology, finance, cognitive science, computer science, physics, statistics, and mathematics as needed. Students will be expected to think critically about how to apply modeling insights to the real world, taking account of the social, political, and economic implications of proposed policies. They will express their ideas in class discussions, presentations, and written reports. The course will culminate with students engaging in a research project to model a complex social system of their choice.
Prerequisites: 36-207 or 36-201 or 70-207 or 36-247 or 36-225 or 36-217 or 36-220

88-405 Risk Perception and Communication
9 units
Throughout their lives, people make decisions about risks that may potentially affect their health, safety, finances, use of technology, and effects on the environment. This course will review the risk perception and communication literature, focusing on theoretical and methodological issues as well as practical implications for educators, public health officials, engineers, economists, and other experts who aim to teach people about risks. We will discuss how to design surveys to increase our understanding of the problems people face when making decisions about specific risks, and how to design communication materials that help people to improve their decisions. We will highlight examples and applications taken from multiple disciplines, including health psychology, adolescent decision making, environmental science, and engineering.
Prerequisites: 36-247 or 70-207 or 36-225 or 36-220 or 36-217 or 36-207 or 36-201

88-406 Behavioral Economics in Organizations
Fall: 9 units
Non-profit organizations and businesses are increasingly incorporating insights from behavioral economics and other behavioral sciences into their strategies. This course provides an overview of psychological and economic factors that affect the choices and behavior of individuals within organizations. The course will review empirical research on applications of behavioral insights to a wide range of organizational areas including product pricing, marketing, designing incentives schemes, motivating employees, fundraising, and behavior change. In-class exercises and group projects will supplement the lectures and provide students with hands-on experience in designing solutions to organizations challenges based on behavioral insights. The course emphasizes experimentation as a primary tool for informing organizations decision-making and accurately measuring the effectiveness of behavioral interventions.
Prerequisites: 88-220 or 73-100 or 73-102

88-409 Behavioral Economics Perspectives on Ethical Issues
Intermittent: 9 units
tba

88-411 Rise of the Asian Economies
Intermittent: 9 units
For most of the past quarter century, no region of the world has been more economically dynamic than Asia. This course is designed to provide students with the essential knowledge necessary to evaluate opportunities and risks in Asia. The course will use analytical tools drawn from economics and finance, business cases, and guest lectures to focus on the key strengths that sustained economic growth in East Asia for decades, the weaknesses that undermined that growth in the late 1990s, and what lies ahead. The course will also examine Indian economic growth since the early 1980s, and compare India's experience with that of the East Asian economies. A special focus will be placed on recent developments in India and China and the prospects for continued growth in those countries over the next decade.
Prerequisites: 88-220 or 73-150 or 73-102 or 73-100

88-415 Global Competitiveness: Firms Nations, and Technological Change
Fall: 9 units
Global Competitiveness introduces students to the fundamental principles surrounding global competitiveness and technological change in the 21st century. The course is broken into three sections. The first section introduces students to competing economic, sociological, and political science theories on the structures supporting technological change. The second section presents the contemporary literature on technological change. The concluding section leverages lessons from the preceding two sections to evaluate national innovation systems, and the factors that lead to national comparative advantage. Students should leave the class able to reflect competently on what the existing literature tells us about the factors influencing global technology competitiveness, and on how modern changes in the structures supporting innovation as well as technology itself may be changing the rules of the game for firms and for nations. The course is open to undergraduate juniors and seniors.

88-418 Domestic Negotiation
Fall: 9 units
Negotiation is the art and science of securing an agreement between two or more interdependent parties. Decision-makers use negotiation to reach agreements with co-workers, bosses, clients, subordinates, firms, family and friends. Hence, the ability to negotiate effectively is a critical skill. In this course, students will develop a systematic and insightful approach to negotiation. Students will learn to analyze the features of the negotiation environment, develop an understanding of effective negotiation strategies and tactics, and identify the barriers and the psychological factors that may prevent decision-makers from reaching wise agreements. Considerable emphasis will be placed on negotiation exercises and role-playing. In-class discussions and lectures will supplement the exercises. This course will focus on negotiations in a wide variety of context: public policy negotiations, business negotiations, salary negotiations, and inter-personal negotiations.

88-419 International Negotiation
Fall: 9 units
Negotiation is a process in which two or more parties undertake a process to resolve conflicting interests. Decision makers use negotiation in a variety of circumstances to reach agreements among countries, among employers and employees, among firms, and among family and friends. International section: The objective of this course is to understand the process of negotiations and how the structure of the negotiation environment affects the outcomes achieved. Students will learn to analyze the features of the negotiation environment, develop an understanding of effective negotiation strategies, and identify the barriers to reaching wise agreements. This course will focus on negotiations in primarily international contexts.

88-435 Decision Science and Policy
Spring: 9 units
Research in the social sciences has extensively investigated how decision makers behave when they encounter many different and difficult decision scenarios. This course serves as an introduction to how relevant research from decision and social sciences can be applied to policy questions encountered by governments (intelligence and policy analysts) and private industry (business strategists and information officers). Topics of operations research, game theory, signal detection theory, and decision theory (heuristics and biases) will be discussed with respect to the application of these theories to improve the performance of individuals and groups within these organizations.

88-444 Public Policy and Regulation
Intermittent: 9 units
Regulations are a significant policy tool of government. How society and the economy will react to new regulations can be hard to predict. Unintended side effects sometimes occur resulting in costs exceeding estimates and/or benefits never being realized. This course will review the basics of regulatory policy and using historical examples, will explore the reasons why past regulations have succeeded and failed. The second half of the course will involve 2-3 detailed case studies. Quantitative methods will be used to evaluate several pending regulations for real-world clients from both government and industry perspectives.

88-451 Policy Analysis Senior Project
Spring: 12 units
Students in this course apply the research and analytical methods learned in their other courses to a real-world problem. Students decide how to structure the problem, divide into teams responsible for its different parts, identify and analyze relevant literature, collect data, synthesize their results, and present their conclusions in oral and written form to a review panel of individuals concerned with the problem. Faculty members help them along the way. Performance is based on students' contribution to the process and substance of the class, as observed by the faculty and by their fellow students. One or two such projects is offered every term. A complete list of previous topics is available from the department. Course is open only to seniors in SDS.

88-452 Policy Analysis Senior Project
Fall: 12 units
Students in this course apply the research and analytical methods learned in their other courses to a real-world problem. Students decide how to structure the problem, divide into teams responsible for its different parts, identify and analyze relevant literature, collect data, synthesize their results, and present their conclusions in oral and written form to a review panel of individuals concerned with the problem. Faculty members help them along the way. Performance is based on students' contribution to the process and substance of the class, as observed by the faculty and by their fellow students. One or two such projects is offered every term. A complete list of previous topics is available from the department. Course is open only to seniors in SDS.

88-453 Behavioral Economics, Policy, and Organizations Capstone
Spring: 9 units
The Capstone in Behavioral Economics, Policy, and Organizations will work to apply the theories, concepts, and statistical techniques mastered in prior courses to an applied project. Students will work closely both in teams and individually with the instructor on a project that will address a problem posed by an organization or government that behavioral economics can help to solve. Students will work to structure the problem, design an intervention or study, collect and analyze the data, and make recommendations for implementation. Students will manage the project and drive interactions with the client organization.

88-499 Advanced Undergraduate Research
Fall and Spring
Students conduct research at an advanced level under the supervision of a Social & Decision Sciences faculty member. Students who wish to engage in advanced research should seek out a faculty member whose interests are appropriate to the research. Students must also complete an "Independent Study/Research for Credit" form, available from the SDS Coordinator of Student Programs in Porter 208A. Prerequisite: Permission of a faculty sponsor.

88-505 Undergraduate Internship
All Semesters
An internship is an approved and monitored work experience than can be related to an academic field of study through active reflection and specific learning goals. Students must work at least 10 hours per week for the semester at the internship. Additionally, students will also keep in regular contact with a faculty member in Social and Decision Sciences, who will assign and evaluate academic work. Internships are available for 1-9 units, depending on the type and amount of academic work produced. Students are responsible for finding their own internships and faculty sponsors, although assistance is available in the department.

Department of Statistics and Data Science

Christopher R. Genovese, Department Head

Rebecca Nugent, Director of Undergraduate Studies

Samantha Nielsen, Lead Academic Advisor

Glenn Clune, Academic Advisor

Email: statadvising@stat.cmu.edu
Location: Baker Hall 132
www.stat.cmu.edu/

Overview

Uncertainty is inescapable: randomness, measurement error, deception, and incomplete or missing information complicate all our lives. Statistics is the science and art of making predictions and decisions in the face of uncertainty. Statistical issues are central to big questions in public policy, law, medicine, industry, computing, technology, finance, and science. Indeed, the tools of Statistics apply to problems in almost every area of human activity where data are collected.

Statisticians must master diverse skills in computing, mathematics, decision making, forecasting, interpretation of complicated data, and design of meaningful comparisons. Moreover, statisticians must learn to collaborate effectively with people in other fields and, in the process, to understand the substance of these other fields. For all these reasons, Statistics students are highly sought-after in the marketplace.

Recent Statistics majors at Carnegie Mellon have taken jobs at leading companies in many fields, including the National Economic Research Association, Boeing, Morgan Stanley, Deloitte, Rosetta Marketing Group, Nielsen, Proctor and Gamble, Accenture, and Goldman Sachs. Other students have taken research positions at the National Security Agency, the U.S. Census Bureau, and the Science and Technology Policy Institute or worked for Teach for America. Many of our students have also gone on to graduate study at some of the top programs in the country including Carnegie Mellon, the Wharton School at the University of Pennsylvania, Johns Hopkins, University of Michigan, Stanford University, Harvard University, Duke University, Emory University, Yale University, Columbia University, and Georgia Tech.

The Department and Faculty

The Department of Statistics and Data Science at Carnegie Mellon University is world-renowned for its contributions to statistical theory and practice. Research in the department runs the gamut from pure mathematics to the hottest frontiers of science. Current research projects are helping make fundamental advances in neuroscience, cosmology, public policy, finance, and genetics.

The faculty members are recognized around the world for their expertise and have garnered many prestigious awards and honors. (For example, three members of the faculty have been awarded the COPSS medal, the highest honor given by professional statistical societies.) At the same time, the faculty is firmly dedicated to undergraduate education. The entire faculty, junior and senior, teach courses at all levels. The faculty are accessible and are committed to involving undergraduates in research.

The Department augments all these strengths with a friendly, energetic working environment and exceptional computing resources. Talented graduate students join the department from around the world, and add a unique dimension to the department's intellectual life. Faculty, graduate students, and undergraduates interact regularly.

How to Take Part

There are many ways to get involved in Statistics at Carnegie Mellon:

- The Bachelor of Science in Statistics in the Dietrich College of Humanities and Social Sciences (DC) is a broad-based, flexible program that helps you master both the theory and practice of Statistics. The program can be tailored to prepare you for later graduate study in Statistics or to complement your interests in almost any field, including Psychology, Physics, Biology, History, Business, Information Systems, and Computer Science.
- The Minor (or Additional Major) in Statistics is a useful complement to a (primary) major in another Department or College. Almost every field of inquiry must grapple with statistical problems, and the tools of statistical theory and data analysis you will develop in the Statistics minor (or Additional Major) will give you a critical edge.
- The Bachelor of Science in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. Jointly administered by the Department of Statistics and Data Science and the Undergraduate Economics Program, the major's curriculum provides students with a solid foundation in the theories and methods of both fields. (See Dietrich College Interdepartmental Majors as well later in this section)
- The Bachelor of Science in Statistics and Machine Learning is a program housed in the Department of Statistics and Data Science and is jointly administered with the Department of Machine Learning. In this major students take courses focused on skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. The program is geared toward students interested in statistical computation, data science, and "big data" problems.
- The Statistics Concentration and the Operations Research and Statistics Concentration in the Mathematical Sciences Major (see Department of Mathematical Sciences) are administered by the Department of Mathematical Sciences with input from the Department of Statistics and Data Science.
- There are several ongoing exciting research projects in the Department of Statistics and Data Science, and the department enthusiastically seeks to involve undergraduates in this work. Both majors and non-majors are welcome.
- Non-majors are eligible to take most of our courses, and indeed, they are required to do so by many programs on campus. Such courses offer one way to learn more about the Department of Statistics and Data Science and the field in general.

Curriculum

Statistics consists of two intertwined threads of inquiry: Statistical Theory and Data Analysis. The former uses probability theory to build and analyze mathematical models of data in order to devise methods for making effective predictions and decisions in the face of uncertainty. The latter involves techniques for extracting insights from complicated data, designs for accurate measurement and comparison, and methods for checking the validity of theoretical assumptions. Statistical Theory informs Data Analysis and vice versa. The Department of Statistics and Data Science curriculum follows both of these threads and helps the student develop the complementary skills required.

Throughout the sections of this catalog, we describe the requirements for the Major in Statistics and the different categories within our basic curriculum, followed by the requirements for the Major in Economics and Statistics, the Major in Statistics and Machine Learning, and the Minor in Statistics.

Note: We recommend that you use the information provided below as a general guideline, and then schedule a meeting with a Statistics Undergraduate Advisor (statadvising@stat.cmu.edu) to discuss the requirements in more detail, and build a program that is tailored to your strengths and interests.

B.S. in Statistics

Glenn Clune, Academic Advisor
Peter Freeman, Faculty Advisor
Location: Baker Hall 132
statadvising@stat.cmu.edu

Students in the Bachelor of Science program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. The requirements for the Major in Statistics are detailed below and are organized by categories #1-#7.

Curriculum

1. Mathematical Foundations (Prerequisites) 29–39 units

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics.

Calculus*:

Complete one of the following three sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Differential Calculus	10
21-112	Integral Calculus	10
and one of the following		
21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Sequence 2

21-120	Differential and Integral Calculus	10
and one of the following		
21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Notes:

- Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

Linear Algebra:**

Complete *one* of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	10
21-242	Matrix Theory	10

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Data Analysis: 36–45 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfy the DC College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the College. (Note: A score of 4 or 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). Other courses emphasize examples in business (36-207), engineering and architecture (36-220), and the laboratory sciences (36-247).

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data	9
36/70-207	Probability and Statistics for Business Applications	9
36-220	Engineering Statistics and Quality Control	9
36-247	Statistics for Lab Sciences	9

Note: Students who enter the program with 36-225 or 36-226 should discuss options with an advisor. Any 36-300 or 36-400 level course in Data Analysis that does not satisfy any other requirement for a Statistics Major and Minor may be counted as a Statistical Elective.

Intermediate*

Choose *one* of the following courses:

36-202	Statistics & Data Science Methods **	9
36/70-208	Regression Analysis	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-290	Introduction to Statistical Research Methodology	9
*Or extra data analysis course in Statistics		
** Must take prior to 36-401		

Advanced

Choose *one* of the following courses:

36-303	Sampling, Survey and Society	9
36-315	Statistical Graphics and Visualization	9
36-311	Statistical Analysis of Networks	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9
and take the following two courses:		
36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

Students can also take a second 36-46x (see section #5).

Sequence 2 (For students beginning later in their college career)

Advanced

Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

3. Probability Theory and Statistical Theory: 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses:

36-225	Introduction to Probability Theory **	9
and one of the following two courses:		
36-226	Introduction to Statistical Inference	9
36-326	Mathematical Statistics (Honors)	9

**It is possible to substitute 36-217, 36-218, or 21-325 for 36-225. (36-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll),and 21-325 is a rigorous probability theory course offered by the Department of Mathematics.)

Comment:

(i) In order meet the prerequisite requirements for the major, a grade of C or better is required in 36-225, 36-226 and 36-401. In particular, a grade of C or higher is required in order to be able to continue in the major.

4. Statistical Computing: 9 units

36-350	Statistical Computing *	9

*In rare circumstances, a higher level *Statistical Computing* course, approved by your Statistics advisor, may be used as a substitute.

5. Special Topics 9 units

The Department of Statistics and Data Science offers advanced courses that focus on specific statistical applications or advanced statistical methods. These courses are numbered 36-46x (36-461, 36-462, etc.). Two of these courses will be offered every year, one per semester. Past topics included Statistical Learning, Data Mining, Statistics and the Law, Bayesian Statistics, Nonparametric Statistics, Statistical Genetics, Multilevel and Hierarchical Models, and Statistical Methods in Epidemiology. The objective of the course is to expose students to important topics in statistics and/or interesting applications which are not part of the standard undergraduate curriculum.

To satisfy the Special Topics requirement choose *one* of the **36-46x** courses (which are 9 units).

Note: All 36-46x courses require 36-401 as a prerequisite or corequisite.

6. Statistical Elective: 9–10 units

Students are required to take one elective which can be within or outside the Department of Statistics and Data Science. **Courses within Statistics** can be any 300 or 400 level course (that is not used to satisfy any other requirement for the statistics major).

The following is a partial list of **courses outside Statistics** that qualify as electives as they provide intellectual infrastructure that will advance the student's understanding of statistics and its applications. Other courses may qualify as well; consult with the Statistics Undergraduate Advisor.

15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
15-121	Introduction to Data Structures	10
15-122	Principles of Imperative Computation	10
10-301	Introduction to Machine Learning	12
10-315	Introduction to Machine Learning (Undergrad)	12
15-388	Practical Data Science	9
21-127	Concepts of Mathematics	10
21-260	Differential Equations	9
21-292	Operations Research I	9
21-301	Combinatorics	9
21-355	Principles of Real Analysis I	9
80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-310	Formal Logic	9
85-310	Research Methods in Cognitive Psychology	9
85-320	Research Methods in Developmental Psychology	9
85-340	Research Methods in Social Psychology	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9

Note: Additional prerequisites are required for some of these courses. Students should carefully check the course descriptions to determine if additional prerequisites are necessary.

7. Tracks*:

Self-Defined Concentration Area (with advisor's approval) 36 units

The power of Statistics, and much of the fun, is that it can be applied to answer such a wide variety of questions in so many different fields. A critical part of statistical practice is understanding the questions being asked so that appropriate methods of analysis can be used. Hence, a critical part of statistical training is to gain experience applying the abstract tools to real problems.

The Concentration Area is a set of four related courses outside of Statistics that prepares the student to deal with statistical aspects of problems that arise in another field. These courses are usually drawn from a *single* discipline of interest to the student and must be approved by the Statistics Undergraduate Advisor. While these courses are not in Statistics, the concentration area must compliment the overall Statistics degree.

For example, students intending to pursue careers in the health or biomedical sciences could take further courses in Biology or Chemistry, or students intending to pursue graduate work in Statistics could take further courses in advanced Mathematics.

The concentration area can be fulfilled with a minor or additional major, but not *all* minors and additional majors fulfill this requirement. Please make sure to consult the Undergraduate Statistics Advisor *prior* to pursuing courses for the concentration area. Once the concentration area is approved, any changes made to the previously agreed upon coursework requires re-approval by the Undergraduate Advisor.

Concentration Approval Process

- Submit the below materials to the Undergraduate Statistics Advisor
  - List of possible coursework to fulfill the concentration*
  - 150-200 word essay describing how the proposed courses complement the Statistics degree.

* These courses can be amended later, but must be re-approved by the Statistics Undergraduate Advisor if amended.

* Note: The concentration/track requirement is only for students whose *primary* major is statistics and have no other additional major or minor. The requirement does not apply for students who pursue an *additional* major in statistics.

Mathematical Statistics Track 46–52 units

21-127	Concepts of Mathematics	10
21-355	Principles of Real Analysis I	9
36-410	Introduction to Probability Modeling	9

And *two* of the following:

36-700	Probability and Mathematical Statistics	12
or 36-705	Intermediate Statistics	
21-228	Discrete Mathematics	9
21-257	Models and Methods for Optimization	9
21-292	Operations Research I	9
21-301	Combinatorics	9
21-356	Principles of Real Analysis II	9

Statistics and Neuroscience Track 45–54 units

85-211	Cognitive Psychology	9
85-219	Biological Foundations of Behavior	9

And three electives (at least one from Methodology and Analysis and at least one from Neuroscientific Background):

Methodology and Analysis

36-700	Probability and Mathematical Statistics	12
or 36-705	Intermediate Statistics	
10-301	Introduction to Machine Learning	12
18-290	Signals and Systems	12
85-314	Cognitive Neuroscience Research Methods	9
42/86-631	Neural Data Analysis	9

Neuroscience Background

03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
15-386	Neural Computation	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9

Total Number of Units for the Major:	**146-185***
Total Number of Units for the Degree:	**360**

* Note: This number can vary depending on the calculus sequence and on the concentration area a student takes. In addition this number includes the 36 units of the “Concentration Area” category which may not be required (see category 7 above for details).

Recommendations

Students in the College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 by the end of their Freshman year.

The linear algebra requirement is a prerequisite for the course 36-401. It is therefore essential to complete this requirement during your junior year at the latest.

Recommendations for Prospective PhD Students

Students interested in pursuing a PhD in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to pursue the **Mathematical Statistics Track**.

Additional Major in Statistics

Students who elect Statistics as a second or third major must fulfill all Statistics degree requirements except for the Concentration Area requirement. Majors in many other programs would naturally complement a Statistics Major, including Tepper's undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least five statistics courses that do not count for their primary major. If students do not have at least five, they typically take additional advanced data analysis electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a Major in Statistics.

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department Statistics does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Research

One goal of the Statistics program is to give students experience with statistical research. The department gives students research experience through various courses focused on real world experiences and application. There is a variety of research projects in the department as well, and students who would like to pursue working on a project with faculty will need to contact that faculty directly to discuss that possibility.

Before graduation, students are encouraged to participate in a research project under faculty supervision. Students mostly do this through projects in specific courses, such as 36-290, 36-303, 36-490, and/or 36-497. Students can also pursue an independent study, or a summer research position.

Qualified students are also encouraged to participate in an advanced research project through 36-490 Undergraduate Research or 36-497 Corporate Capstone Project. Note that both of these courses require an application. Students who maintain a quality point average of 3.25 overall may also apply to participate in the Dietrich College Senior Honors Program (http://coursecatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/#collegeservicesandprograms).

Sample Programs

The following sample programs illustrate three (of many) ways to satisfy the requirements of the Statistics Major. However, keep in mind that the program is flexible enough to support *many* other possible schedules and to emphasize a wide variety of interests.

The first schedule uses calculus sequence 1.

The second schedule is an example of the case when a student enters the program through 36-225 and 36-226 (and therefore skips the beginning data analysis sequence). This schedule has more emphasis on statistical theory and probability.

The third schedule is an example of the Mathematical Statistics track.

In these schedules, C.A. refers to Concentration Area courses.

Schedule 1

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
36-200 Reasoning with Data	36-202 Statistics & Data Science Methods	21-256 Multivariate Analysis	21-240 Matrix Algebra with Applications
21-111 Differential Calculus	21-112 Integral Calculus	C.A.	

Junior		Senior	
Fall	**Spring**	**Fall**	**Spring**

B.S. in Economics and Statistics

Samantha Nielsen, *Statistics & Data Science Lead Academic Advisor*
Kathleen Conway, *Economics Senior Academic Advisor*
Rebecca Nugent and Edward Kennedy, *Faculty Advisors*
Carol Goldburg, Executive Director, *Undergraduate Economics Program*

Statistics & Data Science Location: Baker Hall 132
statadvising@stat.cmu.edu

Economics Location: Tepper 2400
econprog@andrew.cmu.edu

The B.S. in Economics and Statistics is jointly advised by the Department of Statistics and Data Science and the Undergraduate Economics Program.

The Major in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. With joint curriculum from the Department of Statistics and Data Science and the Undergraduate Economics Program, the major provides students with a solid foundation in the theories and methods of both fields. Students in this major are trained to advance the understanding of economic issues through the analysis, synthesis and reporting of data using the advanced empirical research methods of statistics and econometrics. Graduates are well positioned for admission to competitive graduate programs, including those in statistics, economics and management, as well as for employment in positions requiring strong analytic and conceptual skills - especially those in economics, finance, education, and public policy.

All economics courses counting towards an economics degree must be completed with a grade of "C" or higher.

The requirements for the B.S. in Economics and Statistics are the following:

I. Prerequisites 38-39 units

1. Mathematical Foundations 38-39 units

Calculus

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Note: Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

Note: Taking/having credit for both 21-111 and 21-112 is equivalent to 21-120. The Mathematical Foundations total is then 48-49 units. The Economics and Statistics major would then total 201-211 units.

Linear Algebra

One of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	10
21-242	Matrix Theory	10

Note: 21-241 and 21-242 are intended only for students with a very strong mathematical background.

II. Foundations 18-36 units

2. Economics Foundations 18 units

73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9

3. Statistical Foundations 9-18 units

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data	9
36/70-207	Probability and Statistics for Business Applications	9
36-220	Engineering Statistics and Quality Control	9
36-247	Statistics for Lab Sciences	9

Note: Students who enter the program with 36-225 or 36-226 should discuss options with an advisor. Any 36-300 or 36-400 level course in Data Analysis that does not satisfy any other requirement for the Economics and Statistics Major may be counted as a Statistical Elective.

Intermediate*

Choose *one* of the following courses:

36-202	Statistics & Data Science Methods **	9
36-208	Regression Analysis	9
36-290	Introduction to Statistical Research Methodology	9
36-309	Experimental Design for Behavioral & Social Sciences	9

* Or extra data analysis course in Statistics
** Must take prior to 36-401 Modern Regression.

Advanced
Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Sequence 2 (For students beginning later in their college career)

Advanced
Choose *three* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

III. Disciplinary Core 126 units

1. Economics Core 45 units

73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9
73-270	Professional Communication for Economists	9
73-265	Economics and Data Science	9
73-274	Econometrics I	9
73-374	Econometrics II	9

2. Statistics Core 36 units

36-225	Introduction to Probability Theory *#	9

and *one* of the following two courses:

36-226	Introduction to Statistical Inference *	9
36-326	Mathematical Statistics (Honors) *	9

and *both* of the following two courses:

36-401	Modern Regression *	9
36-402	Advanced Methods for Data Analysis	9

*In order meet the prerequisite requirements for the major, a grade of C or better is required in 36-225 (or equivalents), 36-226 or 36-326 and 36-401.

#It is possible to substitute 36-217, 36-218, or 21-325 for 36-225 36-225 36-22536-225. (36-225 36-225 36-22536-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll), and 21-325 21-325 21-32521-325 is a rigorous Probability Theory course offered by the Department of Mathematics.)

3. Computing 9 units

36-350	Statistical Computing *	9

*In rare circumstances, a higher level *Statistical* Computing course, approved by your Statistics advisor, may be used as a substitute.

4. Advanced Electives 36 units

Students must take two advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-374) and two (or three - depending on previous coursework, see Section 3) advanced Statistics elective courses (numbered 36-303, 36-311, 36-315, 36-46x, 36-490, or 36-497).

Students pursuing a degree in Economics and Statistics also have the option of earning a concentration area (https://www.cmu.edu/tepper/programs/undergraduate-economics/curriculum/concentrations) by completing a set of interconnected electives. While a concentration area is not required for this degree, it is an additional option that allows students to explore a group of aligned topics and/or develop a specialized and advanced skill set appropriate for a desired career path. The electives required for this degree may count towards your concentration area. To fulfill a concentration, students must take four courses from the designated set of electives. Please make sure to consult an advisor when choosing these courses.

Total number of units for the major	**191-201 units**
Total number of units for the degree	**360 units**

Professional Development

Students are strongly encouraged to take advantage of professional development opportunities and/or coursework. One option is 73-210 Economics Colloquium I, a fall-only course that provides information about careers in Economics, job search strategies, and research opportunities. The Department of Statistics and Data Science also offers a series of workshops pertaining to resume preparation, graduate school applications, careers in the field, among other topics. Students should also take advantage of the Career and Professional Development Center.

Additional Major in Economics and Statistics

Students who elect Economics and Statistics as a second or third major must fulfill all Economics and Statistics degree requirements. Majors in many other programs would naturally complement an Economics and Statistics Major, including Tepper's undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Economics and three Statistics) that do not count for their primary major. If students do not have at least six, they typically take additional advanced data analysis or economics electives, depending on where the double counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a Major in Economics and Statistics.

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Economics and Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Economics and Statistics.

Sample Program

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	36-202 Statistics & Data Science Methods	36-225 Introduction to Probability Theory	21-240 Matrix Algebra with Applications
36-200 Reasoning with Data	21-256 Multivariate Analysis	73-230 Intermediate Microeconomics	36-226 Introduction to Statistical Inference
73-102 Principles of Microeconomics	73-103 Principles of Macroeconomics	73-210 Economics Colloquium I *not required	73-240 Intermediate Macroeconomics
73-060 Economics: BaseCamp *not required	-----		73-274 Econometrics I
-----	-----	73-265 Economics and Data Science	-----

Junior		Senior	
Fall	**Spring**	**Fall**	**Spring**
36-350 Statistical Computing	36-402 Advanced Methods for Data Analysis	Statistics Elective	Economics Elective
36-401 Modern Regression	73-270 Professional Communication for Economists	Economics Elective	Statistics Elective
73-374 Econometrics II	-----	-----	-----
-----	-----	-----	-----
-----		-----	-----

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Prospective PhD students might add 21-127 fall of sophomore year, replace 21-240 with 21-241, add 21-260 in spring of junior year and 21-355 in fall of senior year.

B.S. in Statistics and Machine Learning

Samantha Nielsen, *Academic Advisor*
Ryan Tibshirani and Ann Lee, *Faculty Advisors*
Location: Baker Hall 132
statadvising@stat.cmu.edu

Students in the Statistics and Machine Learning program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics and Machine Learning majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. This program is geared towards students interested in statistical computation, data science, or “Big Data” problems. The requirements for the Major in Statistics and Machine Learning are detailed below and are organized by categories.

Curriculum

1. Mathematical Foundations (Prerequisites) 49–59 units

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics and Machine Learning.

Calculus*:

Complete one of the following sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Differential Calculus	10
21-112	Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Sequence 2

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Notes:

- Passing the Mathematical Sciences 21-120 assessment test is an acceptable alternative to completing 21-120

Integration and Approximation

21-122	Integration and Approximation	10

Linear Algebra**:

Complete *one* of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	10
21-242	Matrix Theory	10

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

Mathematical Theory:

21-127	Concepts of Mathematics	10

2. Data Analysis 45–54 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfy the Dietrich College Core Requirement in Statistical Reasoning. One of these courses is therefore recommended for students in the College. (Note: A score of 4 or 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). Other courses emphasize examples in business (36-207), engineering and architecture (36-220), and the laboratory sciences (36-247).

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1

Beginning*

Choose one of the following courses:

36-200	Reasoning with Data	9
36/70-207	Probability and Statistics for Business Applications	9
36-220	Engineering Statistics and Quality Control	9
36-247	Statistics for Lab Sciences	9

Note: Students who enter the program with 36-225 or 36-226 should discuss options with an advisor. Any 36-300 or 36-400 level course in Data Analysis that does not satisfy any other requirement for a Statistics Major and Minor may be counted as a Statistical Elective.

Intermediate*

Choose *one* of the following courses:

36-202	Statistics & Data Science Methods **	9
36/70-208	Regression Analysis	9
36-309	Experimental Design for Behavioral & Social Sciences	9
36-290	Introduction to Statistical Research Methodology	9
*Or extra data analysis course in Statistics		
**Must take prior to 36-401		

Advanced

Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Special Topics rotate and new ones are regularly added.

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

Sequence 2

Advanced

Choose *three* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

All Special Topics are not offered every semester, and new special topics are regularly added.

and take the following *two* courses:

36-401	Modern Regression	9
36-402	Advanced Methods for Data Analysis	9

3. Probability Theory and Statistical Theory 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following *two* courses**:

36-225	Introduction to Probability Theory	9
36-226	Introduction to Statistical Inference	9
or 36-326	Mathematical Statistics (Honors)	

**It is possible to substitute 36-217 , 36-218, or 21-325 for 36-225 . (36-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll), and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.) 36-326 Mathematical Statistics (Honors) can be substituted for 36-226 Introduction to Statistical Inference and is considered an honors course.

Comments:

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-225 , 36-226 and 36-401.

4. Statistical Computing 9 units

36-350	Statistical Computing *	9

*In rare circumstances, a higher level *Statistical* Computing course, approved by your Statistics advisor, may be used as a substitute.

5. Machine Learning/Computer Science 46-48 units

Statistical modeling in practice nearly always requires computation in one way or another. Computational algorithms are sometimes treated as “black-boxes”, whose innards the statistician need not pay attention to. But this attitude is becoming less and less prevalent, and today there is much to be gained from a strong working knowledge of computational tools. Understanding the strengths and weaknesses of various methods allows the data analyst to select the right tool for the job; understanding how they can be adapted to work in new settings greatly extends the realm of problems that he/she can solve. While all Majors in Statistics are given solid grounding in computation, extensive computational training is really what sets the Major in Statistics and Machine Learning apart.

15-112	Fundamentals of Programming and Computer Science	12
15-122	Principles of Imperative Computation	10
15-351	Algorithms and Advanced Data Structures	12
10-301	Introduction to Machine Learning	12
or 10-315	Introduction to Machine Learning (Undergrad)	

and take *one* of the following Machine Learning Advanced Electives:

10-405	Machine Learning with Large Datasets (Undergraduate)	12
10-605	Machine Learning with Large Datasets	12
10-703	Deep Reinforcement Learning & Control	12
10-707	Topics in Deep Learning	12
11-411	Natural Language Processing	12
11-441	Machine Learning for Text Mining	9
11-661	Language and Statistics	12
15-381	Artificial Intelligence: Representation and Problem Solving	9
15-386	Neural Computation	9
15-387	Computational Perception	9
16-311	Introduction to Robotics	12
16-385	Computer Vision	12
16-720	Computer Vision	12
11-761	Language and Statistics	12
*PhD level ML course as approved by Statistics advisor		
** Independent research with an ML faculty member		

Total number of units for the major	**176–198 units**
Total number of units for the degree	**360 units**

Recommendations

Students in the Dietrich College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 Reasoning with Data by the end of their Freshman year.

The linear algebra requirement is a prerequisite for the course 36-401 . It is therefore essential to complete this requirement during your junior year at the latest!

Recommendations for Prospective PhD Students

Students interested in pursuing a PhD in Statistics or Machine Learning (or related programs) after completing their undergraduate degree are strongly recommended to take additional Mathematics courses. They should see a faculty advisor as soon as possible. Students should consider 36-326 Mathematical Statistics (Honors) as an alternative to 36-226 . Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students interested in PhD programs should consider taking 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory instead. Additional courses to consider are 21-228 Discrete Mathematics, 21-260 Differential Equations, 21-341 Linear Algebra, 21-355 Principles of Real Analysis I, and 21-356 Principles of Real Analysis II.

Additional experience in programming and computational modeling is also recommended. Students should consider taking more than one course from the list of Machine Learning electives provided under the Computing section.

Additional Major in Statistics and Machine Learning

Students who elect Statistics and Machine Learning as a second or third major must fulfill *all* degree requirements.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Computer Science/Machine Learning and three Statistics) that do not count for their primary major. If students do not have at least six, they typically take additional advanced data analysis or ML electives, depending on where the double counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a Major in Statistics and Machine Learning.

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics and Machine Learning major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics and Machine Learning.

Sample Programs

The following sample program illustrates one way to satisfy the requirements of the Statistics and Machine Learning program. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule). Sample program 1 is for students who have not satisfied the basic calculus requirements. Sample program 2 is for students who have satisfied the basic calculus requirements and choose option 2 for their data analysis courses (see section #2)

Schedule 1

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
36-200 Reasoning with Data	36-202 Statistics & Data Science Methods	36-225 Introduction to Probability Theory	36-226 Introduction to Statistical Inference
21-120 Differential and Integral Calculus	21-256 Multivariate Analysis	21-122 Integration and Approximation	21-241 Matrices and Linear Transformations
15-112 Fundamentals of Programming and Computer Science	15-112 Fundamentals of Programming and Computer Science	21-127 Concepts of Mathematics	15-122 Principles of Imperative Computation
-----*	-----	-----	-----
-----	-----	-----	-----

Junior		Senior	
Fall	**Spring**	**Fall**	**Spring**
36-401 Modern Regression	36-402 Advanced Methods for Data Analysis	10-301 Introduction to Machine Learning	ML Elective
36-350 Statistical Computing	15-351 Algorithms and Advanced Data Structures	Stat Elective	Stat Elective
-----	-----	-----	-----
-----	-----	-----	-----
-----	-----	-----	-----

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Schedule 2

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
21-256 Multivariate Analysis	21-127 Concepts of Mathematics	36-225 Introduction to Probability Theory	36-226 Introduction to Statistical Inference
15-112 Fundamentals of Programming and Computer Science	-----	15-122 Principles of Imperative Computation	21-241 Matrices and Linear Transformations
-----*	-----	-----	Stat Elective
-----	-----	-----	-----
-----		-----	-----

Junior		Senior	
Fall	**Spring**	**Fall**	**Spring**
36-350 Statistical Computing	36-402 Advanced Methods for Data Analysis	10-301 Introduction to Machine Learning	ML Elective
36-401 Modern Regression	15-351 Algorithms and Advanced Data Structures	Stat Elective	Stat Elective
-----	-----	-----	-----
-----	-----	-----	-----
-----	-----	-----	-----

*In each semester, "-----" represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

The Minor in Statistics

Glenn Clune, *Academic Advisor*
Peter Freeman, *Faculty Advisor*
Location: Baker Hall 132M
statadvising@stat.cmu.edu

The Minor in Statistics develops skills that complement major study in other disciplines. The program helps the student master the basics of statistical theory and advanced techniques in data analysis. This is a good choice for deepening understanding of statistical ideas and for strengthening research skills.

In order to get a minor in Statistics a student must satisfy all of the following requirements:

1. Mathematical Foundations (Prerequisites) 29–39 units

Calculus:*:

Complete *one* of the following two sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1

21-111	Differential Calculus	10
21-112	Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Sequence 2

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Note: Other sequences are possible, and require approval from the undergraduate advisor.

Note: Passing the Mathematical Sciences 21-120 assessment test if an acceptable alternative to completing 21-120.

Linear Algebra:

Complete *one* of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	10
21-242	Matrix Theory	10

*It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be complete before taking 36-401 Modern Regression or 36-46X Special Topics.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Data Analysis 36 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfy the DC College Core Requirement in Statistical Reasoning. One of these courses is therefore recommended for students in the College. (Note: A score of 4 or 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). Other courses emphasize examples in business (36-207), engineering and architecture (36-220), and the laboratory sciences (36-247).

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning Data Analysis*

Choose *one* of the following courses:

36-200	Reasoning with Data	9
36/70-207	Probability and Statistics for Business Applications	9

36-220	Engineering Statistics and Quality Control	9
36-247	Statistics for Lab Sciences	9

*Or extra data analysis course in Statistics

Note: Students who enter the program with 36-225 or 36-226 should discuss options with an advisor. Any 36-300 or 36-400 level course in Data Analysis that does not satisfy any other requirement for a Statistics Major and Minor may be counted as a Statistical Elective.

Intermediate Data Analysis*

Choose *one* of the following courses:

36-202	Statistics & Data Science Methods **	9
36/70-208	Regression Analysis	9
36-290	Introduction to Statistical Research Methodology	9
36-309	Experimental Design for Behavioral & Social Sciences	9

*Or extra data analysis course in Statistics

**Must take prior to 36-401

Advanced Data Analysis and Methodology

Take the following course:

36-401	Modern Regression	9

and *one* of the following courses:

36-402	Advanced Methods for Data Analysis	9
36-410	Introduction to Probability Modeling	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-465	Special Topics: An Introduction to Bayesian Inference	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Special Topics rotate and new ones are regularly added.

Sequence 2 (For students beginning later in their college career)

Advanced Data Analysis and Methodology

Take the following course:

36-401	Modern Regression	9

and take *two* of the following courses (one of which must be 400-level):

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-402	Advanced Methods for Data Analysis	9
36-410	Introduction to Probability Modeling	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-465	Special Topics: An Introduction to Bayesian Inference	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Special Topics rotate and new ones are regularly added.

3. Probability Theory and Statistical Theory 18 units

To satisfy the theory requirement take the following *two* courses:

36-225	Introduction to Probability Theory	9
36-226	Introduction to Statistical Inference	9
or 36-326	Mathematical Statistics (Honors)	

**It is possible to substitute 36-217 , 36-218 or 21-325 for 36-225 . (36-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll), and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.) 36-326 Mathematical Statistics (Honors) can be substituted for 36-226 Introduction to Statistical Inference and is considered an honors course.

Comments:

(i) In order to be a Major or a Minor in good standing, a grade of at least a C is required in 36-225 , 36-226 and 36-401. In particular, a grade of C or higher is required in order to be able to continue in the major.

Total number of units required for the minor	**83 Units**

Double Counting

With respect to double-counting courses, it is departmental policy that students must have at least three statistics courses (36-xxx) that do not count for their primary major. If students do not have at least three, they need to take additional advanced electives.

Sample Programs for the Minor

The following two sample programs illustrates two (of many) ways to satisfy the requirements of the Statistics Minor. Keep in mind that the program is flexible and can support many other possible schedules.

The first schedule uses calculus sequence 1, and 36-202to satisfy the intermediate data analysis requirement. The second schedule is an example of the case when a student enters the Minor through 36-225 and 36-226 (and therefore skips the beginning data analysis course). The schedule uses calculus sequence 2, and an advanced data analysis elective (to replace the beginning data analysis course).

Schedule 1

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
21-111 Differential Calculus	21-112 Integral Calculus	36-202 Statistics & Data Science Methods	21-240 Matrix Algebra with Applications
36-200 Reasoning with Data		21-256 Multivariate Analysis	

Junior		Senior	
Fall	**Spring**	**Fall**	**Spring**
36-225 Introduction to Probability Theory	36-226 Introduction to Statistical Inference	36-401 Modern Regression	36-402 Advanced Methods for Data Analysis

Schedule 2

Freshman		Sophomore	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	21-256 Multivariate Analysis	36-225 Introduction to Probability Theory	36-226 Introduction to Statistical Inference

Junior		Senior	
Fall	**Spring**	**Fall**	**Spring**
21-240 Matrix Algebra with Applications	Advanced Data Analysis Elective	36-401 Modern Regression	36-462 Special Topics: Data Mining

Substitutions and Waivers

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and

Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

However, the Statistics Director of Undergraduate Studies will provide advice and information to the student's advisor about the viability of a proposed substitution. Students should make available as much information as possible concerning proposed substitutions. Students seeking waivers may be asked to demonstrate mastery of the material.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Statistics Majors and Minors seeking substitutions or waivers should speak to the Academic Advisor in Statistics.

Faculty

ZACHARY BRANSON, Assistant Teaching Professor – M.S. in Statistics, Harvard University; Carnegie Mellon, 2019–

DAVID CHOI, Assistant Professor of Statistics and Information Systems – Ph.D., Stanford University; Carnegie Mellon, 2004–

Department of Statistics and Data Science Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

36-200 Reasoning with Data
Fall and Spring: 9 units
This course is an introduction to learning how to make statistical decisions and "reason with data". The approach will emphasize thinking through an empirical problem from beginning to end and using statistical tools to look for evidence for/against an explicit argument/hypothesis. Types of data will include continuous and categorical variables, images, text, networks, and repeated measures over time. Applications will largely drawn from interdisciplinary case studies spanning the humanities, social sciences, and related fields. Methodological topics will include basic exploratory data analysis, elementary probability, hypothesis tests, and empirical research methods. There is no calculus or programming requirement. There will be one weekly computer lab for additional hands-on practice using an interactive software platform that allows student-driven inquiry. Not open to students who have received credit for 36-201, 36-207/70-207, 36-220, 36-247, 36-225, or any upper level course in Statistics This course is the credit-equivalent to 36-201 and will be honored appropriately as a pre-requisite for downstream Statistics courses. As such, this course is not currently open to students who have received credit for 36-201, 36/70-207, 36-220, 36-247, or any 300- or 400-level Statistics course.

36-201 Statistical Reasoning and Practice
Intermittent: 9 units
This course will introduce students to the basic concepts, logic, and issues involved in statistical reasoning, as well as basic statistical methods used to analyze data and evaluate studies. The major topics to be covered include methods for exploratory data analysis, an introduction to research methods, elementary probability, and methods for statistical inference. The objectives of this course are to help students develop a critical approach to the evaluation of study designs, data and results, and to develop skills in the application of basic statistical methods in empirical research. An important feature of the course will be the use of the computer to facilitate the understanding of important statistical ideas and for the implementation of data analysis. In addition to three lectures a week, students will attend a computer lab once a week. Examples will be drawn from areas of applications of particular interest to H&SS students. Not open to students who have received credit for 36-207/70-207, 36-220, 36-225, 36-625, or 36-247.

Course Website: http://www.stat.cmu.edu/academics/courselist

36-202 Statistics & Data Science Methods
Spring: 9 units
This course builds on the principles and methods of statistical reasoning developed in 36-200 (or its equivalents). The course covers simple and multiple regression, analysis of variance methods and logistic regression. Other topics may include non-parametric methods and probability models, as time permits. The objectives of this course is to develop the skills of applying the basic principles and methods that underlie statistical practice and empirical research. In addition to three lectures a week, students attend a computer lab once week for "hands-on" practice of the material covered in lecture. Not open to students who have received credit for: 36-208/70-208, 36-309. Students who have completed 36-401 prior to or concurrent with 36-202 will not receive credit for 36-202.
Prerequisites: 36-201 or 36-200 or 36-247 or 70-207 or 36-220 or 36-207

Course Website: http://www.stat.cmu.edu/academics/courselist

36-207 Probability and Statistics for Business Applications
Spring: 9 units
This is the first half of a year long sequence in basic statistical methods that are used in business and management. Topics include exploratory and descriptive techniques, probability theory, statistical inference in simple settings, basic categorical analysis, and statistical methods for quality control. Not open to students who have received credit for 36-201, 36-220, 36-625, or 36-247. Cross-listed as 70-207.
Prerequisites: 21-121 or 21-120 or 21-112

Course Website: http://www.stat.cmu.edu/academics/courselist

36-208 Regression Analysis
Spring: 9 units
This is the second half of a year long sequence in basic statistical methods that are used in business and management. Topics include time series, regression and forecasting. In addition to two lectures a week, students will attend a computer lab once a week. Not open to students who have received credit for 36-202, 36-626. Cross-listed as 70-208. Students who have completed 36-401 prior to 36-208 will not receive credit for 36-208.
Prerequisites: (21-112 or 21-120) and (36-201 or 70-207 or 36-247 or 36-207 or 36-220) and (73-102 or 73-100)

Course Website: http://www.stat.cmu.edu/academics/courselist

36-217 Probability Theory and Random Processes
All Semesters: 9 units
This course provides an introduction to probability theory. It is designed for students in electrical and computer engineering. Topics include elementary probability theory, conditional probability and independence, random variables, distribution functions, joint and conditional distributions, limit theorems, and an introduction to random processes. Some elementary ideas in spectral analysis and information theory will be given. A grade of C or better is required in order to use this course as a pre-requisite for 36-226 and 36-410. Not open to students who have received credit for 36-225, or 36-625.
Prerequisites: 21-259 or 21-256 or 21-123 or 21-122 or 21-112

Course Website: http://www.stat.cmu.edu/academics/courselist

36-218 Probability Theory for Computer Scientists
All Semesters: 9 units
Probability theory is the mathematical foundation for the study of both statistics and of random systems. This course is an intensive introduction to probability,from the foundations and mechanics to its application in statistical methods and modeling of random processes. Special topics and many examples are drawn from areas and problems that are of interest to computer scientists and that should prepare computer science students for the probabilistic and statistical ideas they encounter in downstream courses and research. A grade of C or better is required in order to use this course as a pre-requisite for 36-226, 36-326, and 36-410. Not open to students who have received credit for 36-225, 21-325, or 36-700. If you hold a Statistics primary/additional major or minor you will be required to complete 36-226. For those who do not have a major or minor in Statistics, and receive at least a B in 36-218, you will be eligible to move directly onto 36-401.
Prerequisites: 21-259 or 21-112 or 21-122 or 21-123 or 21-256

Course Website: http://www.stat.cmu.edu/academics/courselist

36-220 Engineering Statistics and Quality Control
All Semesters: 9 units
This is a course in introductory statistics for engineers with emphasis on modern product improvement techniques. Besides exploratory data analysis, basic probability, distribution theory and statistical inference, special topics include experimental design, regression, control charts and acceptance sampling. Not open to students who have received credit for 36-201, 36-207/70-207, 36-226, 36-626, or 36-247, except when AP credit is awarded for 36-201.
Prerequisites: 21-112 or 21-120 or 21-121

Course Website: http://www.stat.cmu.edu/academics/courselist

36-225 Introduction to Probability Theory
Fall: 9 units
This course is the first half of a year long course which provides an introduction to probability and mathematical statistics for students in economics, mathematics and statistics. The use of probability theory is illustrated with examples drawn from engineering, the sciences, and management. Topics include elementary probability theory, conditional probability and independence, random variables, distribution functions, joint and conditional distributions, law of large numbers, and the central limit theorem. A grade of C or better is required in order to advance to 36-226, 36-326, and 36-410. Not open to students who have received credit for 36-217, 36-218, 21-325, 36-700.

Course Website: http://www.stat.cmu.edu/academics/courselist

36-226 Introduction to Statistical Inference
Spring: 9 units
This course is the second half of a year long course in probability and mathematical statistics. Topics include maximum likelihood estimation, confidence intervals, and hypothesis testing. If time permits there will also be a discussion of linear regression and the analysis of variance. A grade of C or better is required in order to advance to 36-401, 36-402 or any 36-46x course. Not open to students who have received credit for 36-626.
Prerequisites: 15-359 Min. grade C or 36-225 Min. grade C or 36-217 Min. grade C or 21-325 Min. grade C or 36-218 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist

36-247 Statistics for Lab Sciences
Spring: 9 units
This course is a single-semester comprehensive introduction to statistical analysis of data for students in biology and chemistry. Topics include exploratory data analysis, elements of computer programming for statistics, basic concepts of probability, statistical inference, and curve fitting. In addition to two lectures, students attend a computer lab each week. Not open to students who have received credit for 36-201, 36-207/70-207, 36-220, or 36-226.
Prerequisites: 21-112 or 21-120 or 21-121

36-290 Introduction to Statistical Research Methodology
Intermittent: 9 units
This course is designed to introduce statistical research methodology—the procedures by which statisticians go about approaching and analyzing data —to early undergraduates. Students will learn basic concepts of statistical learning—inference vs. prediction, supervised vs. unsupervised learning, regression vs. classification, etc.—and will reinforce this knowledge by applying, e.g., linear regression, random forest, principal components analysis, and/or hierarchical clustering and more to datasets provided by the instructor. Students will also practice disseminating the results of their analyses via oral presentations and posters. Analyses will primarily be carried out using the R programming language, but with attention paid to how one would perform similar analyses using Python. Previous knowledge of R is not required for this course. Space is very limited; there will be an application process. The course is currently open to sophomore statistics students only.

36-300 Statistics & Data Science Internship
Summer: 3 units
The Department of Statistics & Data Science considers experiential learning as an integral part of our program. One such option is through an internship. If a student has an internship, they dont have to register for this class unless they want it listed on their official transcripts. This process should be used by international students interested in Curricular Practical Training (CPT) and should also be authorized by the Office of International Education (OIE). More information regarding CPT is available on OIE's website. This course will be taken as Pass/Fail, and students will be charged tuition for 3 units. There is an approval process in order to register for this course. Please contact the Department of Statistics & Data Science for more details.

36-303 Sampling, Survey and Society
Spring: 9 units
This course will revolve around the role of sampling and sample surveys in the context of U.S. society and its institutions. We will examine the evolution of survey taking in the United States in the context of its economic, social and political uses. This will eventually lead to discussions about the accuracy and relevance of survey responses, especially in light of various kinds of nonsampling error. Students will be required to design, implement and analyze a survey sample.
Prerequisites: 88-250 or 36-208 or 36-218 or 36-226 or 36-202 or 36-625 or 36-225 or 73-261 or 36-309 or 70-208

Course Website: http://www.stat.cmu.edu/academics/courselist

36-304 Biostatistics
Fall: 9 units
TBD

36-309 Experimental Design for Behavioral & Social Sciences
Fall: 9 units
Statistical aspects of the design and analysis of planned experiments are studied in this course. A clear statement of the experimental factors will be emphasized. The design aspect will concentrate on choice of models, sample size and order of experimentation. The analysis phase will cover data collection and computation, especially analysis of variance and will stress the interpretation of results. In addition to a weekly lecture, students will attend a computer lab once a week.
Prerequisites: 36-207 or 36-220 or 36-217 or 36-200 or 36-201 or 36-247

Course Website: http://www.stat.cmu.edu/academics/courselist

36-311 Statistical Analysis of Networks
Intermittent: 9 units
Networks are omnipresent. In this course, students will get an introduction to network science, mainly focusing on social network analysis. The course will start with some empirical background, and an overview of concepts used when measuring and describing networks. We will also discuss network visualization. Most traditional models cannot be applied straightforwardly to social network data, because of their complex dependence structure. We will discuss random graph models and statistical network models, that have been developed for the study of network structure and growth. We will also cover models of how networks impact individual behavior.
Prerequisite: 36-226

36-314 Biostatistics
Fall: 9 units
This course is an introduction to methods used frequently in biostatistics and public health applications.
Prerequisites: 36-226 or 88-250 or 36-225 or 70-208 or 36-303 or 36-309 or 36-202 or 36-208 or 36-625

36-315 Statistical Graphics and Visualization
Spring: 9 units
Graphical displays of quantitative information take on many forms as they help us understand both data and models. This course will serve to introduce the student to the most common forms of graphical displays and their uses and misuses. Students will learn both how to create these displays and how to understand them. As time permits the course will consider some more advanced graphical methods such as computer-generated animations. Each student will be required to engage in a project using graphical methods to understand data collected from a real scientific or engineering experiment. In addition to two weekly lectures there will be lab sessions where the students learn to use software to aid in the production of appropriate graphical displays.
Prerequisites: 21-325 or 36-625 or 36-225 or 36-309 or 36-303 or 70-208 or 36-218 or 36-217 or 88-250 or 36-226 or 36-208 or 36-202

Course Website: http://www.stat.cmu.edu/academics/courselist

36-326 Mathematical Statistics (Honors)
Spring: 9 units
This course is a rigorous introduction to the mathematical theory of statistics. A good working knowledge of calculus and probability theory is required. Topics include maximum likelihood estimation, confidence intervals, hypothesis testing, Bayesian methods, and regression. A grade of C or better is required in order to advance to 36-401, 36-402 or any 36-46x course. Not open to students who have received credit for 36-625. Prerequisites: 15-359 or 21-325 or 36-217 or 36-225 with a grade of A AND advisor approval. Students interested in the course should add themselves to the waitlist pending review.
Prerequisites: 36-225 Min. grade A or 15-359 Min. grade A or 36-218 Min. grade A or 21-325 Min. grade A or 36-217 Min. grade A

36-350 Statistical Computing
Fall and Spring: 9 units
Statistical Computing: An introduction to computing targeted at statistics majors with minimal programming knowledge. The main topics are core ideas of programming (functions, objects, data structures, flow control, input and output, debugging, logical design and abstraction), illustrated through key statistical topics (exploratory data analysis, basic optimization, linear models, graphics, and simulation). The class will be taught in the R language. No previous programming experience required. 36-225 is a pre-req.
Prerequisites: 21-325 Min. grade C or 36-217 Min. grade C or 36-225 Min. grade C or 15-259 Min. grade C or 36-218 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist

36-375 Data Ethics & Responsible Conduct of Research
Intermittent: 3 units
TBD

36-401 Modern Regression
Fall: 9 units
This course is an introduction to the real world of statistics and data analysis. We will explore real data sets, examine various models for the data, assess the validity of their assumptions, and determine which conclusions we can make (if any). Data analysis is a bit of an art; there may be several valid approaches. We will strongly emphasize the importance of critical thinking about the data and the question of interest. Our overall goal is to use a basic set of modeling tools to explore and analyze data and to present the results in a scientific report. A grade of C is required to move on to 36-402 or any 36-46x course.
Prerequisites: (36-226 Min. grade C or 36-218 Min. grade B or 36-625 Min. grade C or 36-326 Min. grade C) and (21-240 or 21-241)

Course Website: http://www.stat.cmu.edu/academics/courselist

36-402 Advanced Methods for Data Analysis
Spring: 9 units
This course introduces modern methods of data analysis, building on the theory and application of linear models from 36-401. Topics include nonlinear regression, nonparametric smoothing, density estimation, generalized linear and generalized additive models, simulation and predictive model-checking, cross-validation, bootstrap uncertainty estimation, multivariate methods including factor analysis and mixture models, and graphical models and causal inference. Students will analyze real-world data from a range of fields, coding small programs and writing reports. Prerequisites: 36-401
Prerequisite: 36-401 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist

36-410 Introduction to Probability Modeling
Spring: 9 units
An introductory-level course in stochastic processes. Topics typically include Poisson processes, Markov chains, birth and death processes, random walks, recurrent events, and renewal theory. Examples are drawn from reliability theory, queuing theory, inventory theory, and various applications in the social and physical sciences.
Prerequisites: 36-225 or 36-217 or 21-325 or 36-625

Course Website: http://www.stat.cmu.edu/academics/courselist

36-428 Time Series
Spring: 6 units
The course is designed for graduate students and advanced undergraduate students. It will introduce the analysis and some of the theory of sequences of serially-dependent random variables (known as time series). Students should already have learned mathematical probability and statistics, including multivariate and conditional distributions, linear regression, calculus, matrix algebra, and the fundamentals of complex variables and functions. The focus will be on popular models for time series and the analysis of data that arise in applications.
Prerequisite: 36-401 Min. grade C

36-431 Foundations of Causal Inference
Intermittent: 6 units
This course will provide an introduction to the fundamentals of causal inference. Causal inference is concerned with whether and how one can go beyond statistical associations to draw causal conclusions from observational data. Topics will include: counterfactuals (potential outcomes and graphs), identification and estimation of average treatment effects in experiments and observational studies, nonparametric bounds, sensitivity analysis, instrumental variables, effect modification, and longitudinal studies. Special permission is required for undergraduate students.

36-432 Modern Causal Inference
Intermittent: 6 units
This course will provide an in-depth look at modern causal inference. Topics will include: optimal treatment regimes, mediation, principal stratification, stochastic interventions, accounting for complex confounding and exposures, and methods for efficient nonparametric estimation. Some background in mathematical statistics is advised. Special permission is required for undergraduate students.

36-459 Statistical Models of the Brain
Spring: 12 units
This new course is intended for CNBC students, as an additional option for fulfilling the computational core course requirement, but it will also be open to Statistics and Machine Learning students. It should be of interest to anyone wishing to see the way statistical ideas play out within the brain sciences, and it will provide a series of case studies on the role of stochastic models in scientific investigation. Statistical ideas have been part of neurophysiology and the brainsciences since the first stochastic description of spike trains, and the quantal hypothesis of neurotransmitter release, more than 50 years ago. Many contemporary theories of neural system behavior are built with statistical models. For example, integrate-and-fire neurons are usually assumed to be driven in part by stochastic noise; the role of spike timing involves the distinction between Poisson and non-Poisson neurons; and oscillations are characterized by decomposing variation into frequency-based components. In the visual system, V1 simple cells are often described using linear-nonlinear Poisson models; in the motor system, neural response may involve direction tuning; and CA1 hippocampal receptive field plasticity has been characterized using dynamic place models. It has also been proposed that perceptions, decisions, and actions result from optimal (Bayesian) combination of sensory input with previously-learned regularities; and some investigators report new insights from viewing whole-brain pattern responses as analogous to statistical classifiers. Throughout the field of statistics, models incorporating random ``noise'' components are used as an effective vehicle for data analysis. In neuroscience, however, the models also help form a conceptual framework for understanding neural function. This course will examine some of the most important methods and claims that have come from applying statistical thinking
Prerequisite: 36-401 Min. grade C

36-461 Special Topics: Statistical Methods in Epidemiology
Intermittent: 9 units
Epidemiology is concerned with understanding factors that cause, prevent, and reduce diseases by studying associations between disease outcomes and their suspected determinants in human populations. Epidemiologic research requires an understanding of statistical methods and design. Epidemiologic data is typically discrete, i.e., data that arise whenever counts are made instead of measurements. In this course, methods for the analysis of categorical data are discussed with the purpose of learning how to apply them to data. The central statistical themes are building models, assessing fit and interpreting results. There is a special emphasis on generating and evaluating evidence from observational studies. Case studies and examples will be primarily from the public health sciences.
Prerequisite: 36-401 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist

36-462 Special Topics: Data Mining
Intermittent: 9 units
Data mining is the science of discovering patterns and learning structure in large data sets. Covered topics include information retrieval, clustering, dimension reduction, regression, classification, and decision trees.
Prerequisites: 36-401 (C or better).
Prerequisite: 36-401 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist

36-463 Special Topics: Multilevel and Hierarchical Models
Intermittent: 9 units
Multilevel and hierarchical models are among the most broadly applied "sophisticated" statistical models, especially in the social and biological sciences. They apply to situations in which the data "cluster" naturally into groups of units that are more related to each other than they are the rest of the data. In the first part of the course we will review linear and generalized linear models. In the second part we will see how to generalize these to multilevel and hierarchical models and relate them to other areas of statistics, and in the third part of the course we will learn how Bayesian statistical methods can help us to build, estimate and diagnose problems with these models using a variety of data sets and examples.
Prerequisite: 36-401 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist

36-464 Special Topics: Applied Multivariate Methods
Intermittent: 9 units
This course is an introduction to applied multivariate methods. Topics include a discussion of the multivariate normal distribution, the multivariate linear model, repeated measures designs and analysis, principle component and factor analysis. Emphasis is on the application and interpretation of these methods in practice. Students will use at least one statistical package.
Prerequisites: 36-401 (C or better).
Prerequisite: 36-401 Min. grade C

Course Website: http://www.stat.cmu.edu/academics/courselist

36-465 Special Topics: An Introduction to Bayesian Inference
Intermittent: 9 units
The aim of this course is to introduce students to theory and application of Bayesian statistical modeling and inference. The course starts with epistemological differences between the Bayesian and Frequentist paradigms and the treatment of simple models, such as those based on well-known distributions. Concepts of conjugate and non informative priors are illustrated, for single- and multi-parameters models. Basic treatment of hierarchical models and linear regression models are also covered. Bayesian computational methods such as the Gibbs sampler and Metropolis-Hastings algorithms, are briefly presented with an emphasis on their implementation and use on simple cases.
Prerequisite: 36-401 Min. grade C

36-466 Special Topics: Statistical Methods in Finance
Intermittent: 9 units
Financial econometrics is the interdisciplinary area where we use statistical methods and economic theory to address a wide variety of quantitative problems in finance. These include building financial models, testing financial economics theory, simulating financial systems, volatility estimation, risk management, capital asset pricing, derivative pricing, portfolio allocation, proprietary trading, portfolio and derivative hedging, and so on and so forth. Financial econometrics is an active field of integration of finance, economics, probability, statistics, and applied mathematics. Financial activities generate many new problems and products, economics provides useful theoretical foundation and guidance, and quantitative methods such as statistics, probability and applied mathematics are essential tools to solve quantitative problems in finance. Professionals in finance now routinely use sophisticated statistical techniques and modern computation power in portfolio management, proprietary trading, derivative pricing, financial consulting, securities regulation, and risk management.

36-467 Special Topics: Data over Space & Time
Intermittent: 9 units
This course is an introduction to the opportunities and challenges of analyzing data from processes unfolding over space and time. It will cover basic descriptive statistics for spatial and temporal patterns; linear methods for interpolating, extrapolating, and smoothing spatio-temporal data; basic nonlinear modeling; and statistical inference with dependent observations. Class work will combine practical exercises in R, a little mathematics on the underlying theory, and case studies analyzing real problems from various fields (economics, history, meteorology, ecology, etc.). Depending on available time and class interest, additional topics may include: statistics of Markov and hidden-Markov (state-space) models; statistics of point processes; simulation and simulation-based inference; agent-based modeling; dynamical systems theory. Co-requisite: For undergraduates taking the course as 36-467, 36-401. For graduate students taking the course as 36-667, consent of the professor.

36-468 Special Topics: Text Analysis
Intermittent: 9 units
The analysis of language is concerned with how variables relate to people (their gender, age, and location, for example), how variables relate to use (such as writing in different academic disciplines), and how variables change over time. While we are surrounded by data that might potentially shed light on many of these questions, working with real-world linguistic data can present some unique challenges in sampling, in the distribution of features, and in their high dimensionality. In this course, we work through some of these issues, paying particular attention to the aligning of the statistical questions we want to investigate with the choice of statistical models, as well as focusing on the interpretation of results. Analysis will be carried out in R and students will develop a suite of tools as they work through their course projects.

36-490 Undergraduate Research
Intermittent: 9 units
This course is designed to give undergraduate students experience using statistics in real research problems. Small groups of students will be matched with clients and do supervised research for a semester. Students will gain skills in approaching a research problem, critical thinking, statistical analysis, scientific writing, and conveying and defending their results to an audience.
Prerequisite: 36-401

Course Website: http://www.stat.cmu.edu/academics/courselist

36-492 Topic Detection and Document Clustering
Intermittent: 6 units
Imagine if someone read all your email. Everything you sent, everything you received. What would they find? Do you have repeating topics? How do the topics change over time? The Enron Corporation was an energy, commodities, and services company in Houston, Texas that went spectacularly bankrupt in 2001 after it was revealed that it was engaging in systematic, planned accounting fraud. At its peak, it employed over 20,000 people with revenues over $100 billion. Its downfall was related to deregulation of California's energy commodity trading and a series of rolling power blackouts over months. For example, Enron traders encouraged the removal of power during the energy crisis by suggesting plant shutdowns. The resulting increase in the price for power made them a fortune. After Enron's collapse, journalists used the Freedom of Information Act to release the emails sent/received by the employees of Enron. Subsequently, the emails were analyzed to see who knew what and when. Every news article, email, letter, blog, tweet, etc can be thought of as an observation. We characterize these documents by their length, what words they use and how often, and possibly extra information like the time, the recipient, etc. Topic detection and document clustering methods are statistical and machine learning tools that extract and identify related documents, possibly over time. These methods need to be flexible enough to handle both very small and very large clusters of documents, topics that change in importance, and topics that appear and disappear. This class will emphasize application of methods and real-world data analysis. Class time will be split into lecture and "lab". (Bring your laptop.) Occasional homeworks and final project, but mostly we'll focus on the downfall of Enron as our overarching case study.
Prerequisite: 36-401

36-494 Astrostatistics
Intermittent: 6 units
Since a young age, many of us have pondered the vastness and beauty of the Universe as we gazed up at the night sky. Planets, moons, stars, galaxies, and beyond have fascinated humanity for centuries. It turns out it also provides a plethora of interesting and complex statistical problems. In this course, problems in astronomy, cosmology, and astrophysics are going provide motivation for learning about some advanced statistical methodology. Possible topics include computational statistics, topological data analysis, nonparametric regression, spatial statistics, and statistical learning. While exploring newer statistical methodology, we will get to sample a variety of problems that appeal to astrostatisticians Statistical problems related to exoplanets (planets orbiting stars outside our Solar System), the large-scale structure of the Universe (the "Cosmic Web''), dark matter (over 80% of the matter in the Universe is thought to be invisible), Type Ia supernova (a dying star eats its companion star until explodes), cosmic microwave background (a.k.a. "baby pictures of the Universe'') are some possibilities. This course will be suitable for advanced undergraduate statistics majors through Ph.D. level statistics students, and astronomy Ph.D. students with some background in statistics.
Prerequisite: 36-401 Min. grade C

36-497 Corporate Capstone Project
Fall and Spring: 9 units
This course is designed to give undergraduate students experience applying statistics & data science methodology to real industry projects. Small groups of students will be matched with industry clients and do supervised projects for a semester. Students will gain skills in approaching a real world problem, critical thinking, advanced statistical analysis, scientific writing, collaborating in an industry setting, communicating results, and meeting expectations with respect to deliverables and timelines. The industry clients will change and rotate each semester; available projects will be advertised prior to registration. The course size is limited, and students will submit an application including their project preferences. Students with skill sets matching project needs will be given priority. We will also take into consideration whether or not a student has had a recent prior corporate capstone experience with the goal of providing experiences to a broad group of qualified students.

36-601 Perspectives in Data Science I
Fall: 6 units
This course covers the principles and practice of Data Science including data input and cleaning, exploratory data analysis, intermediate R programming, beginning SAS programming, beginning to intermediate python programming, and SQL. For Master's in Statistical Practice students only.

36-602 Perspectives in Data Science II
Spring: 9 units
This course is a continuation of 36-601 and covers interactive data visualization with Shiny, advanced R programming techniques, intermediate SAS (macros), web scraping, Hadoop, and Spark. For Master's in Statistical Practice students only.
Prerequisite: 36-601 Min. grade C

36-611 Professional Skills for Statisticians I
Fall: 6 units
This course covers a variety of professional skills including resumes and cover letters, writing reports, oral presentations, teamwork, and project planning. Consulting skills are developed in the form of a whole-class consulting project. For Master's in Statistical Practice students only.

36-612 Professional Skills for Statisticians II
Spring: 6 units
This course is a continuation of 36-611 and covers additional writing and presentation skills, as well as interview skills. For Master's in Statistical Practice students only.
Prerequisite: 36-611 Min. grade C

36-617 Applied Linear Models
Fall: 12 units
This course covers the theory and practice of linear models in matrix form with emphasis on practical skills for working with real data and communicating results to technical and non-technical audiences. For Master's in Statistical Practice students only.

36-618 Experimental Design & Time Series
Spring: 12 units
This course covers fundamentals of experimental design including various ANOVA models, Latin squares and factorial and fractional factorial designs. The time series components covers exponential smoothing models and ARIMA, including seasonal models and transfer function models. Special topics are intermittent. For Master's in Statistical Practice students only.
Prerequisites: 36-601 Min. grade C and 36-617 Min. grade C

36-625 Probability and Mathematical Statistics I
Fall: 12 units
This course is a rigorous introduction to the mathematical theory of probability, and it provides the necessary background for the study of mathematical statistics and probability modeling. A good working knowledge of calculus is required. Topics include combinatorial analysis, conditional probability, generating functions, sampling distributions, law of large numbers, and the central limit theorem. Undergraduate students studying Computer Science, or considering graduate work in Statistics or Operations Research, must receive permission from their advisor and from the instructor. Prerequisite: 21-122 and 21-241 and (21-256 or 21-259).
Prerequisites: 21-123 or 21-256 or 21-118 or 21-122

36-626 Probability and Mathematical Statistics II
Intermittent: 12 units
An introduction to the mathematical theory of statistical inference. Topics include likelihood functions, estimation, confidence intervals, hypothesis testing, Bayesian inference, regression, and the analysis of variance. Not open to students who have received credit for 36-226. Students studying Computer Science should carefully consider taking this course instead of 36-220 or 36-226 after consultation with their advisor. Prerequisite: 36-625.
Prerequisite: 36-625

36-635 Applied Survival Analysis
Intermittent: 6 units
TBD

36-636 Methods for Clinical Trials
Intermittent: 6 units
TBD

36-650 Statistical Computing
Spring: 9 units
A detailed introduction to elements of computing relating to statistical modeling, targeted to advanced undergraduates, masters students, and doctoral students in Statistics. Topics include important data structures and algorithms; numerical methods; databases; parallelism and concurrency; and coding practices, program design, and testing. Multiple programming languages will be supported (e.g., C, R, Python, etc.). Those with no previous programming experience are welcome but will be required to learn the basics of at least one language via self-study. There are very limited spots for undergraduates; special permission from both advisor and instructor required.

36-651 Advanced Statistical Computing
Intermittent: 6 units
A project-based course in statistical computing. Students will choose individual projects on computing topics related to statistical modeling and practice, including databases, parallel and cluster programming, big data frameworks (e.g. Spark or Hadoop), algorithms and data structures, numerical methods, and other topics based on student interest. The course will include introductions to each topic as well as student presentations on the results of their projects. Multiple programming languages will be supported. Recommended prerequisite: 36-650 or 36-750
Prerequisite: 36-650 Min. grade B

36-661 Special Topics: Statistical Methods in Epidemiology
Intermittent: 9 units
Epidemiology is concerned with understanding factors that cause, prevent, and reduce diseases by studying associations between disease outcomes and their suspected determinants in human populations. Epidemiologic research requires an understanding of statistical methods and design. Epidemiologic data is typically discrete, i.e., data that arise whenever counts are made instead of measurements. In this course, methods for the analysis of categorical data are discussed with the purpose of learning how to apply them to data. The central statistical themes are building models, assessing fit and interpreting results. There is a special emphasis on generating and evaluating evidence from observational studies. Case studies and examples will be primarily from the public health sciences.

36-663 Multilevel and Hierarchical Models
Intermittent: 9 units
Multilevel and hierarchical models are among the most broadly applied "sophisticated" statistical models, especially in the social and biological sciences. They apply to situations in which the data "cluster" naturally into groups of units that are more related to each other than they are the rest of the data. In the first part of the course we will see how to generalize linear models to multilevel and hierarchical models and relate them to other areas of statistics, and in the last part of the course we will learn how Bayesian statistical methods can help us to build, estimate and diagnose problems with these models using a variety of data sets and examples.

36-665 Special Topics: Bayesian Methods
Intermittent: 9 units
TBD

36-666 Special Topics: Statistical Methods in Finance
Intermittent: 9 units
Financial econometrics is the interdisciplinary area where we use statistical methods and economic theory to address a wide variety of quantitative problems in finance. These include building financial models, testing financial economics theory, simulating financial systems, volatility estimation, risk management, capital asset pricing, derivative pricing, portfolio allocation, proprietary trading, portfolio and derivative hedging, and so on and so forth. Financial econometrics is an active field of integration of finance, economics, probability, statistics, and applied mathematics. Financial activities generate many new problems and products, economics provides useful theoretical foundation and guidance, and quantitative methods such as statistics, probability and applied mathematics are essential tools to solve quantitative problems in finance. Professionals in finance now routinely use sophisticated statistical techniques and modern computation power in portfolio management, proprietary trading, derivative pricing, financial consulting, securities regulation, and risk management.

36-667 Special Topics: Data over Space & Time
Intermittent: 9 units
This course is an introduction to the opportunities and challenges of analyzing data from processes unfolding over space and time. It will cover basic descriptive statistics for spatial and temporal patterns; linear methods for interpolating, extrapolating, and smoothing spatio-temporal data; basic nonlinear modeling; and statistical inference with dependent observations. Class work will combine practical exercises in R, a little mathematics on the underlying theory, and case studies analyzing real problems from various fields (economics, history, meteorology, ecology, etc.). Depending on available time and class interest, additional topics may include: statistics of Markov and hidden-Markov (state-space) models; statistics of point processes; simulation and simulation-based inference; agent-based modeling; dynamical systems theory.

36-668 Special Topics: Text Analysis
Intermittent: 9 units
TBD

36-675 Data Ethics & Responsible Conduct of Research
Intermittent: 3 units
TBD

36-692 Topic Detection and Document Clustering
Intermittent: 6 units
Imagine if someone read all your email. Everything you sent, everything you received. What would they find? Do you have repeating topics? How do the topics change over time? The Enron Corporation was an energy, commodities, and services company in Houston, Texas that went spectacularly bankrupt in 2001 after it was revealed that it was engaging in systematic, planned accounting fraud. At its peak, it employed over 20,000 people with revenues over $100 billion. Its downfall was related to deregulation of California's energy commodity trading and a series of rolling power blackouts over months. For example, Enron traders encouraged the removal of power during the energy crisis by suggesting plant shutdowns. The resulting increase in the price for power made them a fortune. After Enron's collapse, journalists used the Freedom of Information Act to release the emails sent/received by the employees of Enron. Subsequently, the emails were analyzed to see who knew what and when. Every news article, email, letter, blog, tweet, etc can be thought of as an observation. We characterize these documents by their length, what words they use and how often, and possibly extra information like the time, the recipient, etc. Topic detection and document clustering methods are statistical and machine learning tools that extract and identify related documents, possibly over time. These methods need to be flexible enough to handle both very small and very large clusters of documents, topics that change in importance, and topics that appear and disappear. This class will emphasize application of methods and real-world data analysis. Class time will be split into lecture and "lab". (Bring your laptop.) Occasional homeworks and final project, but mostly we'll focus on the downfall of Enron as our overarching case study.

36-699 Statistical Immigration
Fall: 3 units
Students are introduced to the faculty and their interests, the field of statistics, and the facilities at Carnegie Mellon. Each faculty member gives at least one elementary lecture on some topic of his or her choice. In the past, topics have included: the field of statistics and its history, large-scale sample surveys, survival analysis, subjective probability, time series, robustness, multivariate analysis, psychiatric statistics, experimental design, consulting, decision-making, probability models, statistics and the law, and comparative inference. Students are also given information about the libraries at Carnegie Mellon and current bibliographic tools. In addition, students are instructed in the use of the Departmental and University computational facilities and available statistical program packages. THIS COURSE IS FOR PHD STUDENTS IN THE DEPT OF STATISTICS ONLY.

36-700 Probability and Mathematical Statistics
Fall: 12 units
This is a one-semester course covering the basics of statistics. We will first provide a quick introduction to probability theory, and then cover fundamental topics in mathematical statistics such as point estimation, hypothesis testing, asymptotic theory, and Bayesian inference. If time permits, we will also cover more advanced and useful topics including nonparametric inference, regression and classification. Prerequisites: one- and two-variable calculus and matrix algebra.

36-705 Intermediate Statistics
Fall: 12 units
This course covers the fundamentals of theoretical statistics. Topics include: probability inequalities, point and interval estimation, minimax theory, hypothesis testing, data reduction, convergence concepts, Bayesian inference, nonparametric statistics, bootstrap resampling, VC dimension, prediction and model selection.

36-707 Regression Analysis
All Semesters: 12 units
This is a course in data analysis. Topics covered include: Simple and multiple linear regression, causation, weighted least-squares, global and case diagnostics, robust regression, exponential families, logistic regression and generalized linear models; Model selection: prediction risk, bias-variance tradeoff, risk estimation, model search, ridge regression and lasso, stepwise regression, maybe boosting; Smoothing and nonparametric regression: linear smoothers, kernels, local regression, penalized regression, regularization and splines, wavelets, variance estimation, confidence bands, local likelihood, additive models; Classification: parametric and nonparametric regression, LDA, QDA, trees. Practice in data analysis is obtained through course projects. This course is primarily for first year PhD students in Statistics & Data Science; it requires an appropriate background for entering that program.

36-708 Statistical Methods in Machine Learning
All Semesters: 12 units
TBD
Prerequisite: 36-705 Min. grade A

36-709 Advanced Statistical Theory I
All Semesters: 12 units
This is a core Ph.D. course in theoretical statistics. The class will cover a selection of modern topics in mathematical statistics, focussing on high-dimensional parametric models and non-parametric models. The main goal of the course is to provide the students with adequate theoretical background and mathematical tools to read and understand the current statistical literature on high-dimensional models. Topics will include: concentration inequalities, covariance estimation, principal component analysis, penalized linear regression, maximal inequalities for empirical processes, Rademacher and Gaussian complexities, non-parametric regression and minimax theory. This will be the first part of a two semester sequence.
Prerequisite: 36-705 Min. grade A

36-710 Advanced Statistical Theory
All Semesters: 12 units
This is a core Ph.D. course in theoretical statistics. The class will cover a selection of modern topics in mathematical statistics, focussing on high-dimensional parametric models and non-parametric models. The main goal of the course is to provide the students with adequate theoretical background and mathematical tools to read and understand the current statistical literature on high-dimensional models. Topics will include: concentration inequalities, covariance estimation, principal component analysis, penalized linear regression, maximal inequalities for empirical processes, Rademacher and Gaussian complexities, non-parametric regression and minimax theory.

36-721 Statistical Graphics and Visualization
Intermittent: 6 units
An effective statistical graphic is a powerful tool for analyzing data and communicating insights. This course will introduce students to creating, understanding, and critiquing such graphical displays, choosing the right visual tool for the task at hand. Students will learn how to produce legible, self-contained, informative graphics using statistical software, as well as how to plan effective statistical graphics by following the principles of human visual perception. Beyond the most commonly used graphs for univariate and bivariate data, we will cover useful visualizations for statistical model diagnostics; cartographic maps; network- and tree-structured data; and interactive exploration of high-dimensional datasets. Through project assignments, students will practice applying the principles of graphic design and interaction design. Course materials will primarily use R (including ggplot2 and Shiny), but we will also introduce Illustrator/Inkscape and Tableau, and students may complete assignments using other software if they wish (Python, MATLAB, etc.).

36-725 Convex Optimization
Intermittent: 12 units
Nearly every problem in machine learning can be formulated as the optimization of some function, possibly under some set of constraints. This universal reduction may seem to suggest that such optimization tasks are intractable. Fortunately, many real world problems have special structure, such as convexity, smoothness, separability, etc., which allow us to formulate optimization problems that can often be solved efficiently. This course is designed to give a graduate-level student a thorough grounding in the formulation of optimization problems that exploit such structure, and in efficient solution methods for these problems. The main focus is on the formulation and solution of convex optimization problems. These general concepts will also be illustrated through applications in machine learning and statistics. Students entering the class should have a pre-existing working knowledge of algorithms, though the class has been designed to allow students with a strong numerate background to catch up and fully participate. Though not required, having taken 10-701 or an equivalent machine learning or statistics class is strongly encouraged, since we will use applications in machine learning and statistics to demonstrate the concepts we cover in class. Students will work on an extensive optimization-based project throughout the semester; those wanting to take the class without the project can register under the 9 unit option.

Course Website: http://www.stat.cmu.edu/~ryantibs/convexopt/

36-726 Statistical Practice
Spring: 12 units
Students are taught how to structure a consulting session, elicit and diagnose a problem, manage a project, and report an analysis. The class will participate in meetings with industrial and academic clients. For Master's in Statistical Practice students only.

36-727 Modern Experimental Design
Intermittent: 6 units
Designed experiments are crucial to draw causal conclusions with minimum expense and maximum precision. This course introduces the basic principles and theory of experimental design, including randomized designs, blocking, analysis of covariance, factorial designs, and power analysis, along with a selection of more advanced topics, which may include sequential and adaptive designs, A/B testing, the design of observational studies, or other topics depending on time and class interest. Students will learn to design appropriate experiments for a variety of research scenarios, and practice these skills through a course project. Coursework will primarily use R for analysis of experimental data. Students will be expected to have taken a graduate course in regression or being taking a graduate course in regression concurrently.

36-730 Graphical Models and its Applications
Intermittent: 6 units
Probabilistic graphical models (PGMs) lie at the intersection of probability and graph theory. Its application to real world problems has served useful in the process of understanding, formulating and solving problems, and in particular as tools for making decisions and calculating the probability of a particular based on (often incomplete) collections of prior knowledge. This course will introduce the fundamentals of graphical models and probability propagation algorithms; demonstrate how to build and model (PGMs) using R, focusing on DAGs. The aim will be to learn and demonstrate the versatility of PGMs, through applications and methodology, including its use in decision support, causal and temporal problems. Applications will focus on areas of public policy including criminal justice/ forensic science, health/ medical, environment, etc.

36-731 Foundations of Causal Inference
Intermittent: 6 units
This course will provide an introduction to the fundamentals of causal inference. Causal inference is concerned with whether and how one can go beyond statistical associations to draw causal conclusions from observational data. Topics will include: counterfactuals (potential outcomes and graphs), identification and estimation of average treatment effects in experiments and observational studies, nonparametric bounds, sensitivity analysis, instrumental variables, effect modification, and longitudinal studies.

36-732 Modern Causal Inference
Intermittent: 6 units
This course will provide an in-depth look at modern causal inference. Topics will include: optimal treatment regimes, mediation, principal stratification, stochastic interventions, accounting for complex confounding and exposures, and methods for efficient nonparametric estimation. Some background in mathematical statistics is advised.

36-733 Probability Models and Stochastic Processes
Intermittent: 6 units
By the end of this course you will be able to handle basic discrete and continuous time stochastic processes, including random walks, branching processes, Markov chains, Markov chain Monte Carlo (MCMC), Poisson processes, birth and death processes, renewal processes, and queuing processes. This class is not overly mathematical, but techniques such as generating functions, difference and differential equations, linear systems of equations, are needed at a basic level. Students will be expected to have taken a graduate course in regression or being taking a graduate course in regression concurrently. Knowledge of R or similar statistical packages is needed.

36-736 Methods for Clinical Trials
Intermittent: 6 units
TBD

36-741 Statistics meets Optimization: Randomized Sketching Methods
All Semesters: 6 units
In this mini, we will discuss some aspects of the interface between statistics and optimization. The goal of these lectures is to touch on various evolving areas at this interface. The objectives of optimization can be influenced by underlying statistical objectives in many ways, for example, the statistics precision caused by not having enough sample size is often of higher order than the machine precision; worst-case instance can be too conservative compared to the random ensembles; polynomial-time complexity may still be too large to be tractable. To further discuss these issues, we will start with a dimension reduction technique based on random projections and analyze how this technique helps us achieve faster optimization convergence without hurting statistical precision.

36-742 Statistics meets Optimization: Approximate Message Passing Algorithm
All Semesters: 6 units
In this mini, we focus our attention on the recent development of the approximate message passing algorithm. We follow a rigorous approach that builds upon ideas from statistical physics, information theory and graphical models, and is based on the analysis of an highly efficient reconstruction algorithm. We start with some basics for the probability graphical model, introduce the message passing algorithm and motivate the AMP algorithm along the way. Then we will discuss the exact asymptotic characterization in terms of the so-called state evolution and talk about the applications in LASSO and more generally, high-dimensional robust M-estimation.

36-743 Statistical Methods for Reproduciblity and Replicability: Static Settings
Intermittent: 6 units
See http://www.stat.cmu.edu/~aramdas/reproducibility19/

36-744 Statistical Methods for Reproducibility and Replicability: Dynamic Settings
All Semesters: 6 units
See http://www.stat.cmu.edu/~aramdas/reproducibility19/

36-746 Statistical Methods for Neuroscience and Psychology
Intermittent: 12 units
This course provides a survey of basic statistical methods, emphasizing motivation from underlying principles and interpretation in the context of neuroscience and psychology. Though 36-746 assumes only passing familiarity with school-level statistics, it moves faster than typical university-level first courses. Vectors and matrices will be used frequently, as will basic calculus. Topics include Probability, Random Variables, and Important Distributions (binomial, Poisson, and normal distributions; the Law of Large Numbers and the Central Limit Theorem); Estimation and Uncertainty (standard errors and confidence intervals; the bootstrap); Principles of Estimation (mean squared error; maximum likelihood); Models, Hypotheses, and Statistical Significance (goodness-of-fit, p-values; power); General methods for testing hypotheses (permutation, bootstrap, and likelihood ratio tests); Linear Regression (simple linear regression and multiple linear regression); Analysis of Variance (one-way and two-way designs; multiple comparisons); Generalized Linear and Nonlinear Regression (logistic and Poisson regression; generalized linear models); and Nonparametric regression (smoothing scatterplots; smoothing histograms).

36-750 Statistical Computing
Fall: 9 units
A detailed introduction to elements of computing relating to statistical modeling, targeted to advanced undergraduates, masters students, and doctoral students in Statistics. Topics include important data structures and algorithms; numerical methods; databases; parallelism and concurrency; and coding practices, program design, and testing. Multiple programming languages will be supported (e.g., C, R, Python, etc.). Those with no previous programming experience are welcome but will be required to learn the basics of at least one language via self-study.

36-751 Advanced Statistical Computing
Intermittent: 6 units
A project-based course in statistical computing. Students will choose individual projects on computing topics related to statistical modeling and practice, including databases, parallel and cluster programming, big data frameworks (e.g. Spark or Hadoop), algorithms and data structures, numerical methods, and other topics based on student interest. The course will include introductions to each topic as well as student presentations on the results of their projects. Multiple programming languages will be supported. Recommended prerequisite: 36-650 or 36-750
Prerequisite: 36-750 Min. grade B

36-759 Statistical Models of the Brain
Intermittent: 12 units
This new course is intended for CNBC students, as an additional option for fulfilling the computational core course requirement, but it will also be open to Statistics and Machine Learning students. It should be of interest to anyone wishing to see the way statistical ideas play out within the brain sciences, and it will provide a series of case studies on the role of stochastic models in scientific investigation. Statistical ideas have been part of neurophysiology and the brainsciences since the first stochastic description of spike trains, and the quantal hypothesis of neurotransmitter release, more than 50 years ago. Many contemporary theories of neural system behavior are built with statistical models. For example, integrate-and-fire neurons are usually assumed to be driven in part by stochastic noise; the role of spike timing involves the distinction between Poisson and non-Poisson neurons; and oscillations are characterized by decomposing variation into frequency-based components. In the visual system, V1 simple cells are often described using linear-nonlinear Poisson models; in the motor system, neural response may involve direction tuning; and CA1 hippocampal receptive field plasticity has been characterized using dynamic place models. It has also been proposed that perceptions, decisions, and actions result from optimal (Bayesian) combination of sensory input with previously-learned regularities; and some investigators report new insights from viewing whole-brain pattern responses as analogous to statistical classifiers. Throughout the field of statistics, models incorporating random ``noise'' components are used as an effective vehicle for data analysis. In neuroscience, however, the models also help form a conceptual framework for understanding neural function. This course will examine some of the most important methods and claims that have come from applying statistical thinking

36-762 Data Privacy
Fall: 6 units
Protection of individual data is a growing problem due to the large amount of sensitive and personal data being collected, stored, analyzed, and shared across multiple domains and stakeholders. Researchers are facing new policies and technical requirements imposed by funding agencies on accessing and sharing of the research data. This course will introduce students to (1) key principles associated with the concepts of confidentiality and privacy protection, and (2) techniques for data sharing that support useful statistical inference while minimizing the disclosure of sensitive personal information. Methodologies to be considered will include tools for disclosure limitation used by government statistical agencies and those associated with the approach known as differential privacy which provides a formal privacy guaranteed. Students will explore specific techniques using special tools in R.

36-763 Multilevel and Hierarchical Models
Fall: 6 units
Multilevel and hierarchical models are among the most broadly applied "sophisticated" statistical models, especially in the social and biological sciences. They apply to situations in which the data "cluster" naturally into groups of units that are more related to each other than they are the rest of the data. In the first part of the course we will review linear and generalized linear models. In the second part we will see how to generalize these to multilevel and hierarchical models and relate them to other areas of statistics, and in the third part of the course we will learn how Bayesian statistical methods can help us to build, estimate and diagnose problems with these these models using a variety of data sets and examples.

36-765 Writing in Statistics
Intermittent: 6 units
There is no one correct way to write. But there are things you can do that tend to make it difficult for a reader to absorb the ideas you are writing about, or make it easier for the reader. Thus, it is important to focus on the reader, and the constraints and habits of mind that most readers (even in the rarefied population of academics who can understand the technical details of your work) bring to the task of reading what you have written. The goals for students in this course are: to understand that writing requires an intellectual investment similar to the investment that you put into other areas of your research, from developing research questions, data collection, and data analysis, to writing and testing algorithms, and formulating and proving theorems; to understand ways of organizing your writing that make it more likely that the reader will interpret and understand your ideas in the way that you intend; and to gain experience writing with these ideas in mind. The course is most suitable for graduate students in statistics who are engaged in a writing project (ADA paper, journal article, thesis work, etc.).

36-771 Martingales 1: Concentration Inequalities, The Basics
Intermittent: 6 units
Martingales are a central topic in statistics, but are even more relevant today due to modern applications to sequential learning and decision making problems. This course will present a unified derivation of a wide-variety of new and old concentration inequalities for martingales. We will prove inequalities for scalars and matrices, that hold under a wide variety of nonparametric assumptions. For example, we will encounter exponential concentration inequalities for martingales whose increments have heavy-tails, for continuous-time martingales, and for martingales in general Banach spaces. This course will be a pre-requisite for the second mini, which focuses more on applications.

36-772 Martingales 2: Concentration Inequalities, Applications to Sequential Analysis
Intermittent: 6 units
This second mini will focus on deriving guarantees for a variety of important problems in sequential analysis using the tools developed in the first mini, as well as new tools such as uniform nonasymptotic versions of the law of the iterated logarithm for scalars and matrices. Applications include sequential analogs of the t-test, that are valid without a Gaussian assumption, best-arm identification in multi-armed bandits, average treatment effect estimation in sequential clinical trials, sequential covariance matrix estimation, and other such problems.

36-775 Data Ethics & Responsible Conduct of Research
Intermittent: 3 units
TBD

36-777 Multivariate Analysis I
Intermittent: 6 units
This is the first part of a semester long course on multivariate analysis. The aim of the class is to provide fundamental tools in understanding multivariate (including high dimensional) data. In this MINI we will study in detail the multivariate Gaussian distribution, the Wishart and Hotelling distributions. Time permitting we will cover principal component analysis (PCA) as well as discriminant analysis.

36-778 Multivariate Analysis II
All Semesters: 6 units
This is the second part of the multivariate analysis class. This MINI will discuss asymptotic inequalities for eigenvalues of Gaussian matrices, quadratic form concentration inequalities, and matrix estimation (including multivariate regression, covariance matrix estimation, PCA). Time permitting the class might also cover dimension reduction and graphical models.

36-779 Topics in Modern Multivariate Analysis II
Intermittent: 6 units
This is the second part of a semester-long course on modern multivariate analysis. In this MINI we will introduce recent research results focusing on high dimensional multivariate analysis. Topics include high dimensional mean and covariance testing, kernel based methods, structured high dimensional subspace estimation (sparse PCA, functional data), and network data.

36-791 Central Limit Theorem in High-Dimensions
Intermittent: 6 units
TBD

36-792 Topic Detection and Document Clustering
Intermittent: 6 units
Imagine if someone read all your email. Everything you sent, everything you received. What would they find? Do you have repeating topics? How do the topics change over time? The Enron Corporation was an energy, commodities, and services company in Houston, Texas that went spectacularly bankrupt in 2001 after it was revealed that it was engaging in systematic, planned accounting fraud. At its peak, it employed over 20,000 people with revenues over $100 billion. Its downfall was related to deregulation of California's energy commodity trading and a series of rolling power blackouts over months. For example, Enron traders encouraged the removal of power during the energy crisis by suggesting plant shutdowns. The resulting increase in the price for power made them a fortune. After Enron's collapse, journalists used the Freedom of Information Act to release the emails sent/received by the employees of Enron. Subsequently, the emails were analyzed to see who knew what and when. Every news article, email, letter, blog, tweet, etc can be thought of as an observation. We characterize these documents by their length, what words they use and how often, and possibly extra information like the time, the recipient, etc. Topic detection and document clustering methods are statistical and machine learning tools that extract and identify related documents, possibly over time. These methods need to be flexible enough to handle both very small and very large clusters of documents, topics that change in importance, and topics that appear and disappear. This class will emphasize application of methods and real-world data analysis. Class time will be split into lecture and "lab". (Bring your laptop.) Occasional homeworks and final project, but mostly we'll focus on the downfall of Enron as our overarching case study.

Dietrich College Interdisciplinary Majors

When addressing complex issues, we often rely on approaches that take advantage of a variety of relevant disciplines. The college houses the special category of "interdepartmental majors" for programs where this interdisciplinary approach is most pronounced and in which the varied disciplinary perspectives are most fully integrated. These majors are presented here separately, rather than as departmentally-based options, to reflect and underscore their sponsorship by more than one academic department and the unique features that follow from this structure.

Interdepartmental majors are administered by the academic department of the major's faculty advisor.

The Major in Economics and Mathematical Sciences

Kathleen Conway, Academic Advisor
Location: Tepper Quad 2407
kconway@andrew.cmu.edu

The B.S. in Economics and Mathematical Sciences (http://coursecatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/undergraduateeconomicsprogram/#bsineconomicsandmathematicalsciencescurriculum) is a collaborative effort between the Department of Mathematical Sciences and the Undergraduate Economics Program. Combining advanced mathematics with advanced economic theory is the hallmark of this curriculum. The curriculum provides students with courses that complement and develop depth of understanding of economic theory, applied economics, and applied mathematics. This major offers an integrated curriculum, guiding students through a program of coursework that exploits and builds upon the synergies between mathematics and economics. This degree program equips students with the mathematical tools that are essential for success in Ph.D. programs in economics; mathematics; and key functional areas of business including finance, accounting, marketing, and information systems. Students pursuing this degree will be well prepared for the beginning of their research careers in academia, government, and industry. There are a limited number of student slots in this program; interested students may apply as early as their sophomore year.

The Major in Economics and Politics

Kathleen Conway, *Senior Academic Advisor, Economics*
Location: Tepper Quad 2407
kconway@andrew.cmu.edu

Emily Half, *Deputy Director, Institute for Politics and Strategy Advising*
Location: Baker Hall A55B
ehalf@andrew.cmu.edu

Politics and economics are deeply interconnected. Political institutions and decision-making impact economic growth, income distribution, and many other aspects of economic life. Both fiscal and monetary policies affect the economy, but these policies are often employed with political considerations in mind and can influence political activity. Conversely, economic outcomes shape political preferences and policy choices. The overlap between these two disciplines is endless. For example, while the United Nations is often thought of in purely political terms, the Security Council can and does impose sanctions on countries- an example of an economic policy used for political change.

The Economics and Politics major (p. 305) is offered jointly between the Undergraduate Economics Program (https://www.cmu.edu/tepper/programs/undergraduate-economics) (UEP) and the Institute for Politics and Strategy (https://www.cmu.edu/ips) (IPS). Students are equal members of both academic units and receive advising from both units. The major will appeal to any student interested in the design, evaluation, and political implementation of policy. It will be especially attractive to students considering careers in politics, government agencies, political and business consulting, lobbying, or the law.

The B.S. in Economics and Politics is an interdisciplinary major. The major will develop the political context and underpinnings of economic policy making. It will explore how political institutions resolve the tradeoffs and disagreements associated with policymaking and how they can facilitate or impede desirable economic outcomes.

IPS strengths lie in topics like national security, grand strategy, and globalization. Economic policy is just one facet of grand strategy, through which an administration pursues domestic and international goals. This major will also address key issues such as the complementarity between the multilateral economic institutions such as the IMF and World Bank and the use of economic coercion, and enable students to understand economic statecraft more broadly. Whether coercion is successful depends not just on the levers of power but on also on variations in authoritarian regime structure, and complex linkages in the international economy. This is also important for our understanding of the relationship between international economics on human rights practices, extending even to how treaty commitments can facilitate compliance with a global initiative to combat climate change. And, not least important, there is broad recognition that the viability of the "Euro Zone" depends on whether the political-economic agreements necessary to mitigate institutional weaknesses are politically feasible or destined to failure.

Economics and Politics is available as both a primary and additional major.

The Major in Economics and Statistics

Samantha Nielsen, *Statistics & Data Science Lead Academic Advisor*
Kathleen Conway, *Economics Senior Academic Advisor*
Rebecca Nugent and Edward Kennedy, *Faculty Advisors*
Carol Goldburg, Executive Director, *Undergraduate Economics Program*

Statistics & Data Science Location: Baker Hall 132
statadvising@stat.cmu.edu

Economics Location: Tepper 2400
econprog@andrew.cmu.edu

The B.S. in Economics and Statistics is jointly advised by the Department of Statistics and Data Science and the Undergraduate Economics Program.

The Major in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. With joint curriculum from the Department of Statistics and Data Science and the Undergraduate Economics Program, the major provides students with a solid foundation in the theories and methods of both fields. Students in this major are trained to advance the understanding of economic issues through the analysis, synthesis and reporting of data using the advanced empirical research methods of statistics and econometrics. Graduates are well positioned for admission to competitive graduate programs, including those in statistics, economics and management, as well as for employment in positions requiring strong analytic and conceptual skills - especially those in economics, finance, education, and public policy.

All economics courses counting towards an economics degree must be completed with a grade of "C" or higher.

The requirements for the B.S. in Economics and Statistics are the following:

I. Prerequisites 38-39 units

1. Mathematical Foundations 38-39 units

Calculus

21-120	Differential and Integral Calculus	10

and *one* of the following:

21-256	Multivariate Analysis	9
21-259	Calculus in Three Dimensions	9

Note: Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

Note: Taking/having credit for both 21-111 and 21-112 is equivalent to 21-120. The Mathematical Foundations total is then 48-49 units. The Economics and Statistics major would then total 201-211 units.

Linear Algebra

One of the following three courses:

21-240	Matrix Algebra with Applications	10
21-241	Matrices and Linear Transformations	10
21-242	Matrix Theory	10

Note: 21-241 and 21-242 are intended only for students with a very strong mathematical background.

II. Foundations 18-36 units

2. Economics Foundations 18 units

73-102	Principles of Microeconomics	9
73-103	Principles of Macroeconomics	9

3. Statistical Foundations 9-18 units

Sequence 1 (For students beginning their freshman or sophomore year)

Beginning*

Choose *one* of the following courses:

36-200	Reasoning with Data	9
36/70-207	Probability and Statistics for Business Applications	9
36-220	Engineering Statistics and Quality Control	9
36-247	Statistics for Lab Sciences	9

Note: Students who enter the program with 36-225 or 36-226 should discuss options with an advisor. Any 36-300 or 36-400 level course in Data Analysis that does not satisfy any other requirement for the Economics and Statistics Major may be counted as a Statistical Elective.

Intermediate*

Choose *one* of the following courses:

36-202	Statistics & Data Science Methods **	9
36-208	Regression Analysis	9
36-290	Introduction to Statistical Research Methodology	9
36-309	Experimental Design for Behavioral & Social Sciences	9

* Or extra data analysis course in Statistics

** Must take prior to 36-401 Modern Regression.

Advanced
Choose *two* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

Sequence 2 (For students beginning later in their college career)

Advanced
Choose *three* of the following courses:

36-303	Sampling, Survey and Society	9
36-311	Statistical Analysis of Networks	9
36-315	Statistical Graphics and Visualization	9
36-461	Special Topics: Statistical Methods in Epidemiology	9
36-462	Special Topics: Data Mining	9
36-463	Special Topics: Multilevel and Hierarchical Models	9
36-464	Special Topics: Applied Multivariate Methods	9
36-466	Special Topics: Statistical Methods in Finance	9
36-467	Special Topics: Data over Space & Time	9
36-468	Special Topics: Text Analysis	9
36-490	Undergraduate Research	9
36-497	Corporate Capstone Project	9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

III. Disciplinary Core 126 units

1. Economics Core 45 units

73-230	Intermediate Microeconomics	9
73-240	Intermediate Macroeconomics	9
73-270	Professional Communication for Economists	9
73-265	Economics and Data Science	9
73-274	Econometrics I	9
73-374	Econometrics II	9

2. Statistics Core 36 units

36-225	Introduction to Probability Theory *#	9

and *one* of the following two courses:

36-226	Introduction to Statistical Inference *	9
36-326	Mathematical Statistics (Honors) *	9

and *both* of the following two courses:

36-401	Modern Regression *	9
36-402	Advanced Methods for Data Analysis	9

*In order meet the prerequisite requirements for the major, a grade of C or better is required in 36-225 (or equivalents), 36-226 or 36-326 and 36-401.

#It is possible to substitute 36-217, 36-218, or 21-325 for 36-225 36-225 36-22536-225. (36-225 36-225 36-22536-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll), and 21-325 21-325 21-32521-325 is a rigorous Probability Theory course offered by the Department of Mathematics.)

3. Computing 9 units

36-350	Statistical Computing *	9

*In rare circumstances, a higher level *Statistical* Computing course, approved by your Statistics advisor, may be used as a substitute.

4. Advanced Electives 36 units

Students must take two advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-374) and two (or three - depending on previous coursework, see Section 3) advanced Statistics elective courses (numbered 36-303, 36-311, 36-315, 36-46x, 36-490, or 36-497).

Students pursuing a degree in Economics and Statistics also have the option of earning a concentration area (https://www.cmu.edu/tepper/programs/undergraduate-economics/curriculum/concentrations) by completing a set of interconnected electives. While a concentration area is not required for this degree, it is an additional option that allows students to explore a group of aligned topics and/or develop a specialized and advanced skill set appropriate for a desired career path. The electives required for this degree may count towards your concentration area. To fulfill a concentration, students must take four courses from the designated set of electives. Please make sure to consult an advisor when choosing these courses.

Total number of units for the major	**191-201 units**
Total number of units for the degree	**360 units**

Professional Development

Students are strongly encouraged to take advantage of professional development opportunities and/or coursework. One option is 73-210 Economics Colloquium I, a fall-only course that provides information about careers in Economics, job search strategies, and research opportunities. The Department of Statistics and Data Science also offers a series of workshops pertaining to resume preparation, graduate school applications, careers in the field, among other topics. Students should also take advantage of the Career and Professional Development Center.

Additional Major in Economics and Statistics

Students who elect Economics and Statistics as a second or third major must fulfill all Economics and Statistics degree requirements. Majors in many other programs would naturally complement an Economics and Statistics Major, including Tepper's undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Economics and three Statistics) that do not count for their primary major. If students do not have at least six, they typically take additional advanced data analysis or economics electives, depending on where the double counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a Major in Economics and Statistics.

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Economics and Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Economics and Statistics.

Sample Program

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

Freshman		**Sophomore**	
Fall	**Spring**	**Fall**	**Spring**
21-120 Differential and Integral Calculus	36-202 Statistics & Data Science Methods	36-225 Introduction to Probability Theory	21-240 Matrix Algebra with Applications
36-200 Reasoning with Data	21-256 Multivariate Analysis	73-230 Intermediate Microeconomics	36-226 Introduction to Statistical Inference
73-102 Principles of Microeconomics	73-103 Principles of Macroeconomics	73-210 Economics Colloquium I *not required	73-240 Intermediate Macroeconomics
73-060 Economics: BaseCamp *not required	-----		73-274 Econometrics I
-----	-----	73-265 Economics and Data Science	-----

Junior		**Senior**	
Fall	**Spring**	**Fall**	**Spring**
36-350 Statistical Computing	36-402 Advanced Methods for Data Analysis	Statistics Elective	Economics Elective
36-401 Modern Regression	73-270 Professional Communication for Economists	Economics Elective	Statistics Elective
73-374 Econometrics II	-----	-----	-----
-----	-----	-----	-----
-----		-----	-----

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Prospective PhD students might add 21-127 fall of sophomore year, replace 21-240 with 21-241, add 21-260 in spring of junior year and 21-355 in fall of senior year.

Additional Major in Environmental Policy

Professor Abigail E. Owen, *Faculty Advisor*
aeowen@cmu.edu, Wean Hall 3709, 412-268-2953

Dr. Andrew Ramey, *Academic Advisor*
aramey@andrew.cmu.edu, Baker Hall 240, 412-268-7906

The additional major in Environmental Policy focuses on human - environment interactions from a multitude of disciplinary perspectives. The curriculum draws on the expertise of faculty across several Carnegie Mellon colleges in order to provide students with the interdisciplinary background and skills necessary to understand environmental problems and the means to mitigate them. It emphasizes three general areas: (1) natural science and technology; (2) social sciences; and (3) the humanities. The flexible curriculum features training in research methods; a set of core courses on fundamental environmental issues including energy, pollution, and biological diversity; and a project course experience geared toward policy formulation. The total units required are 121.

Note that some courses carry prerequisites and/or reserve seats for primary majors. Students interested in pursuing the additional major must meet beforehand with the Faculty Advisor and their home unit academic advisor in order to evaluate the feasibility of completing the additional major and to map out a course of study. Double counting follows guidelines set by the Dietrich College. Students are encouraged to be alert to new course offerings; every effort will be made to find equivalent courses that meet student interest when done in consultation with the Faculty Advisor.

Prerequisites (55-57 units)

Complete ALL of the following courses:

		Units
21-111	Differential Calculus-(or equivalent)	10
36-200	Reasoning with Data Students entering CMU prior to 2018 may substitute 36-201 for 36-200.	9
36-202	Statistics & Data Science Methods	9

Complete THREE of the following courses:

03-121	Modern Biology	9
03-124	Modern Biology Laboratory (03-121 is corequisite)	9
03-125	Evolution	9
03-128	Biology for Life Special Topics Biology for Life: Environmental Science (Fall 2019, Section A only)	9
09-103	Atoms, Molecules and Chemical Change	9
09-105	Introduction to Modern Chemistry I	10
09-106	Modern Chemistry II	10
09-225	Climate Change: Chemistry, Physics and Planetary Science	9

Disciplinary Perspectives: Complete TWO of the following courses (18 units)

09-510	Chemistry and Sustainability	9
73-427	Sustainability, Energy, and Environmental Economcs	9
76-319	Environmental Rhetoric	9
99-236	Introduction to Environmental Ideas	9

Thematic Electives: Complete TWO of the following courses (18 units)

12-100	Exploring CEE: Infrastructure and Environment in a Changing World	12
19-101	Introduction to Engineering and Public Policy	12
19-424	Energy and the Environment	9
76-395	Science Writing	9
79-283	Hungry World: Food and Famine in Global Perspective	9
79-315	Thirsty Planet: The Politics of Water in Global Perspective	9
79-336	Oil & Water: Middle East Perspectives	6
79-372/90-765	Cities, Technology, and the Environment	6
79-394	Exploring History through Geography	6
80-348	Health, Human Rights, and International Development	9
88-223	Decision Analysis	12
88-302	Behavioral Decision Making	9
90-765/79-372	Cities, Technology and the Environment	6
90-798	Systems Thinking for Environmental Policy & Planning	12
90-808	Energy Policy	6

(90-xxx Heinz College courses open only to seniors)

Research and Analytical Methods: Complete TWO of the following courses (18 units)

		Units
36-309	Experimental Design for Behavioral & Social Sciences	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
88-251	Empirical Research Methods	9
88-252	Causal Inference in the Field	9

Project Course: Complete ONE of the following courses (12 units)

19-451	EPP Projects (pre-approved topics)	12
19-452	EPP Projects (pre-approved topics)	12

The Major in Ethics, History, and Public Policy

Alex John London, *Director*
Location: Baker Hall 150A
ajlondon@andrew.cmu.edu
www.cmu.edu/dietrich/ehpp

The B.A./B.S. in Ethics, History, and Public Policy is an interdepartmental major offered jointly by the Departments of History and Philosophy. It prepares students for leadership positions by providing them with a rigorous, interdisciplinary humanistic and social-scientific education. It also serves as an excellent springboard for graduate study in a wide variety of disciplines such as law, public policy, ethics, and advocacy. The program focuses equally on the historical understanding of how modern-day problems have evolved, and the importance of developing clear criteria for ethical decision-making. The capstone project course provides students with the opportunity to engage with real-world public policy challenges using the methods, theories, and knowledge that they have gained through the major. Offered jointly by the departments of History and Philosophy, the B.A./B.S. in EHPP encourages specialization, internship experiences, and research in a wide range of policy areas.

Curriculum

Students graduating with a primary major in Ethics, History, and Public Policy may elect to receive either a Bachelor of Arts or a Bachelor of Science Degree (additional requirements apply; see below). Basic requirements include 120 units encompassing 9 units in Economics, 36 units in History, 36 units in Philosophy, 27 units of elective courses, and a 12-unit senior capstone course. This program may also be taken as an additional (e.g., second) major. All courses toward the major must be taken for a letter grade, and 79-300 must be passed with a grade of "C" or better. Students can double count any course for the major with another major or minor, with the exception of Social and Political History, for which a student can double count a maximum of two courses.

I. Foundations of Public Policy — 9 units

Choose one 9-unit course from the list below.

73-102	Principles of Microeconomics	9
84-104	Decision Processes in American Political Institutions	9
84-110	Foundations of Political Economy	9

II. History Core — 36 units

Choose one 9-unit course from each category below:

Policy History (9 units)

79-300	Guns in American History: Culture, Violence, and Politics	9

U.S. History (9 units)

79-240	Development of American Culture	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-249	20th & 21st Century U.S. History	9
79-320	Women, Politics, and Protest	9

Non-U.S. History (9 units)

79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-203	Social and Political Change in 20th Century Central and Eastern Europe	9
79-205	20th Century Europe	9
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-237	Comparative Slavery	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-264	Tibet and China: History and Propaganda	6
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-307	Religion and Politics in the Middle East	9

History Elective (9 units)

Take at least 9 additional units in the History Department with course number 79-200 or above. The following courses may not count: 79-400, 79-420, 79-449, 79-491, 79-505, 79-506.

III. Philosophy Core — 36 units

Choose one 9-unit course from each category below. No more than 9 units at the 100 level may be counted toward the Philosophy Core.

Ethics (9 units)

80-130	Introduction to Ethics	9
80-330	Ethical Theory	9

Political Philosophy (9 units)

80-135	Introduction to Political Philosophy	9
80-335	Social and Political Philosophy	9

Foundations of Social Science (9 units)

80-221	Philosophy of Social Science	9
80-321	Causation, Law, and Social Policy	9
80-324	Philosophy of Economics	9

Applied Philosophy (9 units)

80-136	Social Structure, Public Policy & Ethics	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-249	AI, Society, and Humanity	9
80-336	Philosophy of Law	9
80-348	Health, Human Rights, and International Development	9
80-447	Global Justice	9

IV. Senior Capstone Project Course — 12 units

79-449	EHPP Project Course [cross-listed]	12
80-449	EHPP Project Course	12

The Ethics, History and Public Policy Project Course is required for the Ethics, History and Public Policy major and is taken in the fall semester of the senior year. In this capstone course, Ethics, History and Public Policy majors carry out a collaborative research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis. The students develop an original research report based on both archival and contemporary policy analysis and they present their results to a client organization in the community.

V. Elective Courses — 27 units

Choose any three courses (at least 27 units) from any category or categories shown below. Substitution of elective courses that cohere with a student's interest or concentration may be allowed after consultation with and approval from the Director.

Engineering and Public Policy (some courses have prerequisites; see EPP catalog listing)

19-424	Energy and the Environment	9

Business

70-311	Organizational Behavior	9
70-321	Negotiation and Conflict Resolution	9
70-332	Business, Society and Ethics	9
70-364	Business Law	9
70-365	International Trade and International Law	9
70-430	International Management	9

Economics (some courses have prerequisities; see Economics catalog listing)

73-352	Public Economics	9
73-359	Benefit-Cost Analysis	9
73-365	Firms, Market Structures, and Strategy	9
73-372	International Money and Finance	9
73-408	Law and Economics	9
73-476	American Economic History	9

English

76-492	Rhetoric of Public Policy	9

History

Courses from the EHPP History Core (above) may be taken as electives only if they are not being used to fulfill the core requirement. Double counting is not permitted.

79-206	Crime and Punishment in Early Modern Europe	9
79-228	The Civil Rights Movement and the World	9
79-233	The United States and the Middle East since 1945	9
79-234	Technology and Society	9
79-242	African American History: Reconstruction to the Present	9
79-247	African Americans, Imprisonment, and the Carceral State	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-288	Bananas, Baseball, and Borders: Latin America and the United States	9
79-298	Mobile Phones & Social Media in Development & Human Rights: A Critical Appraisal	6
79-299	From Newton to the Nuclear Bomb: History of Science, 1750-1950	9
79-301	History of Surveillance: From the Plantation to Data Capitalism	6
79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
79-303	Pittsburgh and the Transformation of Modern Urban America	6
79-305	Moneyball Nation: Data in American Life	9
79-310	Modern U. S. Business History: 1870 to the Present	9
79-315	Thirsty Planet: The Politics of Water in Global Perspective	9
79-320	Women, Politics, and Protest	9
79-322	Stalin and the Great Terror	9
79-325	U.S. Gay and Lesbian History	6
79-330	Medicine and Society	9
79-331	Body Politics: Women and Health in America	9
79-336	Oil & Water: Middle East Perspectives	6
79-338	History of Education in America	9
79-339	Juvenile Delinquency & Film: From Soul of Youth (1920) to West Side Story (1961)	6
79-340	Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)	6
79-342	Introduction to Science and Technology Studies	9
79-343	Education, Democracy, and Civil Rights	9
79-349	United States and the Holocaust	6
79-370	Disasters in American History (2):Epidemics & Fires	6
79-371	African American Urban History	9
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
79-397	Environmental Crises and the City	6

Philosophy

Courses from the EHPP Philosophy Core (above) may be taken as electives only if they are not being used to fulfill the core requirement. Double counting is not permitted.

80-256	Modern Moral Philosophy	9
80-305	Choices, Decisions, and Games	9
80-405	Game Theory	9

Institute for Politics and Strategy

84-310	International Political Economy	9
84-380	Grand Strategy in the United States	9
84-393	Legislative Decision Making: US Congress	6
84-402	Judicial Politics and Behavior	6

Social and Decision Sciences

88-223	Decision Analysis	12
88-281	Topics in Law: 1st Amendment	9
88-444	Public Policy and Regulation	9

VI. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Director of EHPP to accept equivalent courses as substitutions.

21-257	Models and Methods for Optimization	9
36-202	Statistics & Data Science Methods	9
or 36-208	Regression Analysis	
or 70-208	Regression Analysis	
36-303	Sampling, Survey and Society	9
36-309	Experimental Design for Behavioral & Social Sciences	9
70-257	Optimization for Business	9
80-305	Choices, Decisions, and Games	9
80-405	Game Theory	9
84-265	Political Science Research Methods	9
88-251	Empirical Research Methods	9
88-221	Analytical Foundations of Public Policy	9
88-223	Decision Analysis	12
88-300	Programming and Data Analysis for Social Scientists	9

Additional Major

The B.A./B.S. in Ethics, History, and Public Policy may be scheduled as an additional major in consultation with the Director of Ethics, History, and Public Policy, Professor Alex John London, ajlondon@andrew.cmu.edu.

Ethics, History, and Public Policy Sample Curriculum

Junior Year		Senior Year	
Fall	**Spring**	**Fall**	**Spring**
Core requirement in Economics	Core requirement in History or Philosophy	Capstone Course	EHPP Elective Course
Core requirement in History or Philosophy	Core requirement in History or Philosophy	EHPP Elective Course	Second Course (open)
Core requirement in History or Philosophy	Core requirement in History or Philosophy	EHPP Elective Course	Third Course (open)
Core requirement in History or Philosophy	Core requirement in History or Philosophy	Fourth Course (open)	Fourth Course (open)
Core requirement in History or Philosophy	Fifth Course (open)	Fifth Course (open)	Fifth Course (open)

The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be. Students may enter the EHPP major, and begin major course requirements, as early as the start of the sophomore year, or even in the first year. Students should consult their advisor when planning their program.

The Major in Information Systems

Randy S. Weinberg, *Faculty Program Director*

Location: Porter Hall 224C, rweinberg@cmu.edu

Carol Young, *Program Advisor*
Location: Porter Hall 222F, caroly@cmu.edu

Faculty: C.F. Larry Heimann, Jeria Quesenberry, Raja Sooriamrthi

Information Systems (IS) is a unique and innovative undergraduate interdisciplinary program, drawing on a wide range of exciting college and university strengths. IS is an internationally recognized undergraduate major for students who want to design and implement effective solutions to meet organizational and management needs for information and decision support. IS majors learn how elements of organizations, technology, economics, social aspects and human interaction work together to create effective computer-based information systems to affect real outcomes. Graduates of the Program are ideally situated to take a leading role in managing and shaping our information-based future.

For full program information, go to The Major in Information Systems (http://coursecatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/informationsystems).

The Major in Linguistics

Tom Werner, *Director*
Location: Baker Hall 155F
twerner@andrew.cmu.edu
www.cmu.edu/dietrich/linguistics

Linguistics is the study of human language, and it encompasses a broad spectrum of research questions, approaches and methodologies. Some linguists are concerned with the cognitive aspects of language learning, production and comprehension; some are concerned with language as a social and cultural phenomenon; others engage in the analysis of linguistic form and meaning, some from a functional and others from a formal perspective. There are also computational approaches to linguistics with both applied and theoretical goals.

The major in Linguistics reflects the multidisciplinary character of the field and of the Linguistics faculty here at Carnegie Mellon, offering a program which provides students with the fundamental tools of linguistic analysis while maintaining a focus on the human context in which language is learned and used. The major is available as either a primary major or an additional major. It is an ideal choice for students with a general interest in their own or other languages, and combines well thematically with studies in any of the departments represented in the major.

Curriculum

The Linguistics primary major requires a total of 12 courses plus a senior thesis. The Linguistics additional major requires at total of 13 courses. This includes 2 semesters of language study for all majors. At least three courses (not including specific language courses) must be at the 300-level or higher. All courses counted towards the major must be taken for a letter grade and passed with a grade of "C" or above. Students may double count any course for the major simultaneously with another major or minor.

Linguistics Core (36 units)

Complete the following requirements.

80-180	Nature of Language	9
80-282	Phonetics and Phonology I	9
80-280	Linguistic Analysis	9
or 80-285	Natural Language Syntax	
80-381	Meaning in Language	9
or 80-383	Language in Use	

Extended Core (27 units)

Choose three courses (27 units) from Extended Core and/or additional courses from Linguistics Core.

80-283	It Matters How You Say It	9
80-284	Invented Languages	9
80-286	Words and Word Formation: Introduction to Morphology	9
80-287	Language Variation and Change	9
80-288	Intonation: Transcription and Analysis	9
80-382	Phonetics and Phonology II	9
80-384	Linguistics of Turkic Languages	9
80-385	Linguistics of Germanic Languages	9
80-388	Linguistic Typology: Diversity and Universals	9

Electives

Primary majors choose **three** additional electives (27 or more units).
Additional majors choose **four** additional electives (36 or more units).
Primary majors see thesis requirement below.

These can be **additional courses from the Core or Extended Core courses listed above**, **the electives list below**, or any other course which is approved by the Director as a linguistics elective. Listed below are the additional electives taught on a regular basis. **Additional appropriate courses** are offered irregularly or on a one-off basis. The Director will provide students with a list of possible electives each semester, and will assist students in selecting electives which are consistent with their goals and interests.

Philosophy

80-380	Philosophy of Language	9
80-484	Language and Thought	9

English

76-318	Communicating in the Global Marketplace	9
76-325	Intertextuality	9
76-385	Introduction to Discourse Analysis	9
76-386	Language & Culture	9
76-389	Rhetorical Grammar	9

Modern Languages

82-283	Language Diversity & Cultural Identity	9
82-305	French in its Social Contexts	9
82-373	Structure of the Japanese Language	9
82-383	Second Language Acquisition: Theories and Research	9
82-585	Topics in Second Language Acquisition	9

Psychology

85-354	Infant Language Development	9
85-421	Language and Thought	9

Language Technologies Institute

11-411	Natural Language Processing	12
11-423	ConLanging: Lrng. Ling. & Lang Tech via Constru Artif. Lang.	12
11-492	Speech Processing	12
11-661	Language and Statistics	12
11-722	Grammar Formalisms	12

Language Requirement

Students must successfully complete two semesters of consecutive language courses. (Note that students may not 'test out' of this requirement. However, language courses taken at other institutions or as part of a study abroad program will typically substitute for a semester of language study.)

Senior Thesis [primary majors only]

Primary majors must complete a senior thesis (a workload equivalent to a 12-unit course) during their senior year. Topics must be approved by an advisor, who will work with the student and guide the thesis project. Students are responsible for identifying their topic and securing their thesis advisor. Students should work with the director of the major to begin the process of identifying their thesis topic and advisor during the fall of their senior year at the latest. Students will be required to submit a written proposal of their thesis project, signed by their thesis faculty advisor, before the end of the second week of classes in which the thesis is being completed.

Note

- All 11-xxx courses have significant Computer Science prerequisites. Interested students should check with the course instructor before registering.

The Major in Psychology and Biological Sciences

This unified major is intended to reflect the interdisciplinary nature of our current research in the fields of psychology and biology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences. Students entering from the Dietrich

College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students entering from the Mellon College of Sciences receive a Bachelor of Science in Biological Sciences and Psychology.

Pre-Major Requirements

The unified major specifies particular pre-major requirements in the areas of mathematical sciences and statistics, natural science, and computational reasoning. Particular courses are specified in these areas because they are prerequisites for courses required in the major and therefore they are the most efficient way to complete the general education requirements for either Dietrich College or SHS. All other general education categories can be filled in any way that satisfies the requirements of the student's college or of the SHS program.

The major in Psychology and Biological Sciences is offered only as a B.S. degree. Full curriculum requirements can be viewed under the Department of Psychology (p. 471) section of the Catalog.

Student-Defined Major Program

Joseph E. Devine, *Director and Associate Dean for Undergraduate Studies*
Location: Baker Hall 154F
jd0x@andrew.cmu.edu
www.cmu.edu/dietrich/academics/degrees-majors-minors/student-defined-majors.html

For Dietrich College students whose educational goals cannot be as adequately served by the curricula of existing majors, the college offers the opportunity to self-define a major. The procedure for establishing such a major centers on a written proposal, submitted to the Dietrich College Dean's Office. This proposal consists of two parts:

Major Description and Rationale

A description of the components of the proposed program of study; a presentation of the objectives of the program of study, how it represents a coherent and (given available faculty, courses, and other resources) viable course of study, and the reason(s) why these objectives cannot be accomplished within one or more of the college's existing majors.

Curriculum

Presentation of a complete outline of all courses that will comprise the requirements for the major. These courses should be categorized in two ways: first, according to that component of the major program to which each belongs (e.g., mathematical prerequisites; research methods; theoretical perspectives; etc.); and second, a semester-by-semester outline that indicates when each course is to be taken (or, for any already taken, when taken and grade received). In addition to courses taken at Carnegie Mellon, the major's curriculum may include courses taken (or to be taken) at other schools, related projects or internships, or programs of study abroad. The minimum requirements for graduation is, as with all majors in the college, 360 units of credit and completion of the Dietrich College general education program.

Proposals and curricula are evaluated for clarity of focus, coherence and depth in related areas, and viability. Proposals should generally be developed no later than the sophomore year, and approved majors begin their program generally no later than the junior year.

The student-defined option is also possible to propose as an additional major or minor. These options extend to undergraduates from all Carnegie Mellon colleges.

Dietrich College Interdisciplinary Minors

Dietrich College interdepartmental minors are programs whose content and components span two or more academic departments to form coherent patterns of study.

A number of interdepartmental minors are offered by Dietrich College and are, in general, available to all Carnegie Mellon undergraduate students. As well, there are numerous other minors offered by other colleges in the university that are generally available to Dietrich College students. The full list of minors available to Carnegie Mellon students is located in the catalog index under “Minors.”

Completion of the requirements for any of these minors is noted on the final transcript.

To declare a Dietrich College interdepartmental minor, students should contact the college's Academic Advisory Center (AAC) and the faculty advisor for that minor.

To discuss the possibility of declaring a non-Dietrich College minor, contact the advisor listed for the minor in question.

In general, unless noted, no course taken to fulfill requirements for these interdepartmental minors may apply toward any other program's requirements.

The Minor in African and African American Studies

Professor Edda L. Fields-Black, *Faculty Advisor*
fieldsblack@andrew.cmu.edu, Baker Hall 362, 412-268-8012

Dr. Andrew Ramey, *Academic Advisor*
aramey@andrew.cmu.edu, Baker Hall 240, 412-268-7906

Mission

The African and African American Studies minor introduces students to several large regions of the world: sub-Saharan Africa, the Americas, and the Caribbean. Broad geographic coverage and a comparative framework encourage students to make connections between Africa and the African Diaspora, as well as among different Diasporan communities. The minor offers undergraduates the opportunity to undertake an empirical and theoretical examination of the cultural, political, social, and historical experiences of Africans and people of African descent.

This unique transnational minor brings together several departments and colleges within the university and allows students to develop analytical skills particular to the arts, humanities, social sciences, public policy, and management. The African and African American Studies minor allow students a considerable degree of freedom in their choice of electives and independent research projects, including opportunities to study and conduct research in a relevant foreign language.

Courses taken to fulfill requirements in other major or minor programs may only be applied to this minor with permission of the Faculty Advisor.

Requirements

- The minor is composed of 54 units - two core courses and four elective courses.
- The elective courses must include one course that requires a research paper or project.
- Students may take an additional two core courses as electives, but not more than four total courses.
- Students must take courses in at least two of the four regions (African, African American, Latin American, and the Caribbean) between their core and elective courses.

Core Courses 18 units

Choose two from the History and/or English Department courses listed below:

African		
79-226	African History: Earliest Times to 1780	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
African American		
76-232	Introduction to Black Literature	9
76-332	African American Literature: The African American Crime Novel	9
79-241	African American History: Africa to the Civil War	9
79-242	African American History: Reconstruction to the Present	9
Caribbean		
79-235	Caribbean Cultures	9

Elective Courses 36 units

African		
79-225	West African History in Film	9
79-237	Comparative Slavery *	9
79-290	The Slave Passage: From West Africa to the Americas	6
79-291	Globalization in East African History	6
79-385	Out of Africa: The Making of the African Diaspora *	9
79-386	Entrepreneurs in Africa, Past, Present and Future *	9
82-304	The Francophone World **	9
African American		
57-480	History of Black American Music	6
76-238	What Was the Hip-Hop Generation?	9
76-332	African American Literature: The African American Crime Novel	9
76-333	Race and Controversy in the Arts	9
76-432	Advanced Seminar in African American Studies *	9
79-237	Comparative Slavery *	9
79-304	African Americans in Pittsburgh	6
79-371	African American Urban History	9
Caribbean		
79-237	Comparative Slavery *	9
79-385	Out of Africa: The Making of the African Diaspora *	9
82-304	The Francophone World **	9
Latin American		
79-317	Art, Anthropology, and Empire	9
82-343	Latin America Language and Culture	9
82-451	Studies in Latin American Literature and Culture	9

Notes:

* Denotes courses that require a research paper/project.

** Denotes courses taught in a foreign language

The Minor in Film and Media Studies

Laura E. Donaldson, *Academic Advisor*
Jeffrey Hinkelman, *Faculty Advisor*

Location: Department of English, Baker Hall 259

Film and the electronic media are a crucial part of contemporary culture and society; they constitute an important tool for under-standing social arrangements, historical changes, and play an increasingly important role in the development of aesthetic and cultural theory. The Dietrich College minor in Film and Media Studies takes an interdisciplinary approach to the study of film and other electronic media. Courses provide techniques for analyzing and criticizing film and other media, for assessing their value as historical, anthropological and social scientific data, and for understanding the aesthetic and philosophical premises of various media texts.

A maximum of two courses may double count with other programs.

The courses listed below are offered with at least general regularity. Participating departments may subsequently develop and offer other courses that, while not listed here, are deemed appropriate for this minor. A faculty advisor for the minor should be consulted (especially when the schedule of courses to be offered for a given semester becomes available) to identify such additional courses.

Required Introductory Course — 9 units

76-239	Introduction to Film Studies (prerequisite for 76-439)	9

Required Intermediate Course — 9 units

76-310	Advanced Studies in Film and Media	9

Film and Media Electives — 27 units

Complete a minimum of 27 units of course work at the 200-level or above when the primary topic is film and media. Courses may include, but are not limited to, the following:

76-238	What Was the Hip-Hop Generation?	9
76-269	Survey of Forms: Screenwriting	9
76-312	Crime and Justice in American Film	9
76-338	The American Cinema	9
76-339	Topics in Film and Media: Hollywood vs. the World *	9
76-353	Transnational Feminisms: Fiction and Film	9
76-367	Fact Into Film: Translating History into Cinema	9
76-374	IDeATe - Dietrich College Cuban Interactive Documentary Project	9
76-377	Shakespeare and Film	9
76-381	Mad-Men, Television, and the History of Advertising	9
76-419	Media in a Digital Age	9
76-438	The Wire: Crime, Realism, and Long-Form TV	9
76-439	Seminar in Film and Media Studies: Class, Race, & Gender in Film	9
76-448	Shakespeare on Film	9
76-456	Independent Study in Film & Media Studies	Var.
76-469	Screenwriting Workshop: Screenwriting/ Television Writing	9
76-472	Topics in Journalism: Storytelling in a Digital Age	9
79-214	Paris in Revolt: History, Literature, Film	6
79-220	Screening Mexico: Mexican Cinema, 1898 to Present	6
79-306	Fact into Film: Translating History into Cinema	9
79-308	Crime and Justice in American Film	9
79-309	The Chinese Revolution Through Film (1949-2000)	9
79-319	India Through Film	6
79-340	Juvenile Delinquency & Film: From "Boyz N the Hood"(1991) to "The Wire"(2002-08)	6
79-341	The Cold War in Documents and Film	9
82-215	Arab Culture Through Film & Literature	9
82-278	Japanese Film and Literature: The Art of Storytelling	9
82-296	A Century of Russian Film	9
82-362	Italian Language and Culture II	9
82-253	Korean Culture Through Film	9
82-428	History of German Film	9
82-456	Topics in Hispanic Studies	9
82-533	Cultural Topics in Chinese Studies	9

* May be taken up to three times and counted for additional credit toward Film and Media Electives if topics differ.

Students should consult with a faculty advisor for the minor regarding courses not listed above.

400-level Film and Media Course — 9 units

Complete one 400-level course that concentrates on film/media directly or that uses it as a tool of social or cultural analysis.

76-419	Media in a Digital Age	9
76-438	The Wire: Crime, Realism, and Long-Form TV	9
76-439	Seminar in Film and Media Studies: Class, Race, & Gender in Film	9
76-448	Shakespeare on Film	9
76-456	Independent Study in Film & Media Studies	Var.
76-469	Screenwriting Workshop: Screenwriting/ Television Writing	9
76-472	Topics in Journalism: Storytelling in a Digital Age	9

The Minor in Gender Studies

Lisa Tetrault, *Professor of History and Faculty Advisor*
tetrault@andrew.cmu.edu
Location: English Department, Baker Hall 259

Gender studies is an interdisciplinary field that investigates how gender is embedded in social, cultural, and political relationships. It understands gender as a category of power that intersects with other power relations, including race, class, and sexuality.

Courses allow students to develop a deeper understanding of how gender operates, and to transfer the analytical skills they acquire to other courses as well as to their personal and professional lives. The minor combines coursework in some combination of the following fields: English, history, anthropology, psychology, philosophy, economics, and modern languages.

Courses listed are only examples. Course offerings change regularly, so please consult semester offerings and the minor advisor for other courses.

The courses listed below are offered with at least general regularity. Participating departments may develop and offer other courses that, while not listed here, are appropriate for the study of gender. Consult the minor advisor to confirm the relevance of unlisted, gender-focused courses.

Complete 1 of the following required courses. — 9 units

76-241	Introduction to Gender Studies	9
79-320	Women, Politics, and Protest	9
79-331	Body Politics: Women and Health in America	9

Complete 5 or more additional courses totaling at least 45 units. — 45 units

See examples below, but other courses may fulfill this requirement.*

76-205	Jane Austen	9
76-311	Acting Out in the London Theatre	9
76-327	Influential Women Writers	9
76-329	Unruly Women in Early Modern Drama	9
76-341	Gender and Sexuality in Performance	9
76-353	Transnational Feminisms: Fiction and Film	9
76-412	Performance and 18th Century Theatrical Culture	9
76-422	Gender and Sexuality Studies	4.5
76-441	Theorizing Sexuality	9
79-244	Women in American History	9
79-320	Women, Politics, and Protest **	9
79-323	Family, Gender, and Sexuality in European History, 500-1800	9
79-324	#MeToo: Naming and Resisting Gender Violence	6
79-325	U.S. Gay and Lesbian History	6
79-327	Modern Girlhood: Historical and Contemporary Perspectives	6
79-331	Body Politics: Women and Health in America **	9
79-333	Sex, Gender & Anthropology	9
80-224	Race, Gender and Science	9
82-300	Language & Society in the Arab World	9
84-312	Gender and Development in Sub-Saharan Africa	6
85-350	Psychology of Prejudice	9
85-446	Psychology of Gender	9

* Consult with Gender Studies Minor Advisor Professor Lisa Tetrault at tetrault@andrew.cmu.edu.

** If not taken as a requirement.

The Minor in Global Systems and Management

Brandy Wilson, *Faculty Advisor*
Location: HBH 3029

Graduates across all disciplines are increasingly likely to find themselves working as part of a global development team on a wide variety of business, consumer, and intellectual products and services.

The Global Systems and Management minor (GSM) is intended for students wishing to develop skills essential for participating in emerging opportunities in global business systems, systems development, product development and global project management. GSM exposes students to contemporary issues and practices facing organizations, managers and individuals working on a global scale across political, cultural and temporal boundaries. GSM presents an opportunity for students to learn about being part of an organization that works globally with its employees, business partners, customers and supply chains.

Students will learn about global project management, outsourcing and cross-cultural communications from theoretical and practical viewpoints. An organized elective structure enables students to tailor the minor to reflect their specific interests.

Curriculum 63

GSM is offered jointly across the departments and programs of the Dietrich College of Humanities and Social Sciences with participation from the Tepper School of Business. The minor is administered by the Dietrich College Information Systems program. The minor requires students to complete 63 units. Note that the courses listed below may be subject to change:

- one Information Systems course: 67-329 Contemporary Themes in Global Systems (offered annually)
- two courses in Communications
- a combination of 36 units with at least 9 units in each of the categories of:
  - Humanities, Heritage and Culture
  - International Management

Study Abroad Options

Students are encouraged to complete a semester of study abroad. With prior approval from the GSM Advisor, study abroad courses may be applied to GSM minor requirements except for 67-329 Contemporary Themes in Global Systems. Please consult with the GSM Advisor before embarking on the semester of study abroad.

Double Counting of Courses

Students may double count up to three courses with other major and minor programs.

Core Course

Required course:		
67-329	Contemporary Themes in Global Systems (offered annually)	9

Communications 18 units

Complete two courses:		
05-341	Organizational Communication	9
70-321	Negotiation and Conflict Resolution	9
70-340	Business Communications	9
70/85/88-341	Team Dynamics and Leadership	9
70-342	Managing Across Cultures	9
70-350	Acting for Business	9
70-483	Advertising and Marketing Communications	9
73-341	Within the Firm: Managing through Incentives	9
76-270	Writing for the Professions	9
76-318	Communicating in the Global Marketplace	9
76-386/786	Language & Culture	9
76-428	Visual Verbal Communication	9
85-375	Crosscultural Psychology	9
88-419	International Negotiation	9

Humanities, Heritage and Culture (HHC) & International Management (IM) 36 units

(Complete at least 9 units of HHC or IM)

Humanities, Heritage and Culture

Humanities Heritage and Culture consists of:

- History Department courses: 79-200 level or above covering international/regional studies that are outside of U.S. history
- Modern Languages Department courses: 82-200 level or above, covering international or regional studies but not including elementary or intermediate language courses
- At least 9 units in total

History course 79-200 level or above covering international/ regional studies that are outside of U.S. history		
82-215	Arab Culture Through Film & Literature	Var.
82-238	Topics in Chinese Culture	9
82-253	Korean Culture Through Film	9
82-254	World of Korea, Then and Now	9
82-273	Introduction to Japanese Language and Culture	9
82-278	Japanese Film and Literature: The Art of Storytelling	9
82-293	Russian Cinema: From the Bolshevik Revolution to Putin's Russia	9
82-303	Introduction to French Culture	9
82-304	The Francophone World	9
82-305	French in its Social Contexts	9
82-311	Advanced Arabic I	9
82-312	Advanced Arabic II	9
82-320	Contemporary Society in Germany, Austria and Switzerland	9
82-323	Germany, Austria and Switzerland in the 20th Century	9
82-333	Introduction to Chinese Language and Culture	Var.
82-342	Spain: Language and Culture	9
82-343	Latin America Language and Culture	9
82-345	Introduction to Hispanic Literary & Cultural Studies	9
82-361	Italian Language and Culture I	9
82-362	Italian Language and Culture II	9
82-399	Special Topics: Russian in Context	Var.
82-400	Russian Studies Topics	6
82-415	Topics in French and Francophone Studies	9
or 82-416	Topics in French and Francophone Studies	
82-425	Topics in German Literature and Culture	9
82-433	Topics in Contemporary Culture of China	9
82-441	Studies in Peninsular Literature and Culture	9
82-450	Advanced Research in Hispanic Language & Culture	9
82-456	Topics in Hispanic Studies	9
82-473	Topics in Japanese Studies	9
or 82-474	Topics in Japanese Studies	
82-474	Topics in Japanese Studies	9
84-275	Comparative Politics	9
84-312	Gender and Development in Sub-Saharan Africa	6
84-315	Contemporary Debates in Human Rights	9
84-389	Terrorism and Insurgency	9

International Management

- At least 9 units in total

19-411	Global Competitiveness: Firms, Nations and Technological Change	9
67-319-67-331	Global Technology Consulting Groundwork - Technology Consulting in the Global Community (these two courses are taken sequentially)	6
67-331	Technology Consulting in the Global Community	3
70-342	Managing Across Cultures	9
70-364	Business Law	9
70-365	International Trade and International Law	9
70-430	International Management	9
70-480	International Marketing	9

73-341	Within the Firm: Managing through Incentives	9
73-372	International Money and Finance	9
84-310	International Political Economy	9
84-311	International Development: Theory and Praxis	9
84-319	U.S. Foreign Policy and Interventions in World Affairs	9
84-320	Domestic Politics and International Affairs	9
84-321	Autocrats and Democrats	9
84-322	Nonviolent Conflict and Revolution	9
84-323	War and Peace in the Contemporary Middle East	9
84-362	Diplomacy and Statecraft	9
84-363	Comparative Legal Systems	9
84-387	Technology and Policy of Cyber War	9
84-388	Concepts of War and Cyber War	6
84-405	The Future of Warfare	9
84-414	International and Subnational Security	9
88-411	Rise of the Asian Economies	9
88-418	Domestic Negotiation	9

MINIMUM NUMBER OF UNITS REQUIRED FOR MINOR 63

Minor in Health Care Policy and Management

Sponsored by:
Heinz College of Information Systems and Public Policy
Dietrich College of Humanities and Social Sciences
Mellon College of Science

Faculty Advisors:
Jason D'Antonio, Mellon College of Science
James F. Jordan, H. John Heinz III College

The face of health care is changing. The practice of medicine is being fundamentally altered by the forces of change in public policy, health care organizations and in the industry as a whole. The role of individual professionals in this industry is changing as rapidly as the industry itself. Traditional career paths have disappeared overnight to be replaced by new opportunities that require new skills. New organizations are placing new demands on their professional and medical staffs. The criteria of efficiency and financial stability are entering the domains of diagnosis and treatment.

This minor is designed to provide students considering a career in the health professions with an understanding of how these changes are likely to affect their careers. Students will become familiar with the critical policy and management issues and will begin to learn to operate effectively in the emerging health care environment. The curriculum combines economic, organizational, managerial, historical and psychological perspectives on these issues to provide a foundation for a deepened understanding of the changing structure of health care organizations and policy.

Required Courses for HCPM Minor

A total of 54 units are required to complete this minor. Entry into the minor requires completion of 73-102 Principles of Microeconomics or the equivalent by approval.

Required Courses

Complete a total of 27 units from the following:		
79-330	Medicine and Society	9
90-836	Health Systems	6
90-721	Healthcare Management	6
90-861	Health Policy	6

Elective Courses

Complete a minimum of 18 units from these two sections:

Heinz College Courses		
90-831	Advanced Financial Management of Health Care	6
94-705	Health Economics	12
90-832	Health Law	6
90-833	Population Health	6
90-818	Health Care Quality & Performance Improvement	6
90-834	Health Care Geographical Information Systems	12
Other courses as approved		

Humanities and Social Sciences Courses (9 units each)		
80-245	Medical Ethics	9
76-494	Healthcare Communications	9
88-365	Behavioral Economics and Public Policy	9
67-476	Innovation in Information Systems: Health Care	9
42-444	Medical Devices	9
Other courses as approved		

Please note that some of these courses have prerequisites that will not count toward the completion of the requirements for this minor.

Elective Focus Areas

Focus areas are suggested groupings of electives based on student interest. Students *do not* need to take all electives within one focus area; they are free to choose their 18-unit elective minimum from any combination of focus areas.

Health Management/Administration Focus		Units
90-831	Advanced Financial Management of Health Care	6
90-832	Health Law	6
90-818	Health Care Quality & Performance Improvement	6
80-245	Medical Ethics	9
76-494	Healthcare Communications	9

Health Policy Focus		Units
94-705	Health Economics	12
90-832	Health Law	6
90-833	Population Health	6
88-365/90-882	Behavioral Economics and Public Policy	9
Other courses as approved		

Health Analytisc & IT Focus		Units
90-834	Health Care Geographical Information Systems	12
67-476	Innovation in Information Systems: Health Care	9
42-444	Medical Devices	9
Other courses as approved		

The Minor in Linguistics

Tom Werner, *Director*
Location: Baker Hall 155F
twerner@andrew.cmu.edu

The Interdepartmental Minor in Linguistics combines courses from the departments of Philosophy, English, Modern Languages, Psychology and the Language Technologies Institute. It synthesizes the linguistics related offerings in these departments and provides students with an academic experience that reflects the interdisciplinary character of the subject.

The Minor in Linguistics requires a total of 6 courses: the introductory linguistics course; two fundamental skills courses; and three additional electives. All courses counted towards the Minor must be taken for a letter grade and passed with a grade of "C" or above.

Introductory Course

80-180	Nature of Language	9

Fundamental Skills

Take **one** course from **two** of the following core subject areas:

Sounds		
80-282	Phonetics and Phonology I	9

Structure		
76-389	Rhetorical Grammar	9
80-280	Linguistic Analysis	9
80-285	Natural Language Syntax	9

Meaning		
80-381	Meaning in Language	9
80-383	Language in Use	9
76-385	Introduction to Discourse Analysis	9
or 76-484	Discourse Analysis	

Electives

Take three additional linguistics courses. These can be additional courses from the Fundamental Skills categories above, or any other course which is approved by the Director as a linguistics elective. For electives taught on a regular basis, see courses listed as Breadth or Electives in the Undergraduate Catalog entry for the Linguistics Major.

Neural Computation Minor

Dr. Tai Sing Lee, *Director*
Melissa Stupka, *Administrative Coordinator*
www.cnbc.cmu.edu/upnc/nc_minor

Neural computation is a scientific enterprise to understand the neural basis of intelligent behaviors from a computational perspective. Study of neural computation includes, among others, decoding neural activities using statistical and machine learning techniques, and developing computational theories and neural models of perception, cognition, motor control, decision-making and learning. The neural computation minor allows students to learn about the brain from multiple perspectives, and to acquire the necessary background for graduate study in neural computation. Students enrolled in the minor will be exposed to, and hopefully participate in, the research effort in neural computation and computational neuroscience at Carnegie Mellon University.

The minor in Neural Computation is an intercollege minor jointly sponsored by the School of Computer Science, the Mellon College of Science, and the Dietrich College of Humanities and Social Sciences, and is coordinated by the Center for the Neural Basis of Cognition (CNBC) (http://www.cnbc.cmu.edu).

The Neural computation minor is open to students in any major of any college at Carnegie Mellon. It seeks to attract undergraduate students from computer science, psychology, engineering, biology, statistics, physics, and mathematics from SCS, CIT, H&SS and MCS.

The Neural Computation minor is open to students in any major of any college at Carnegie Mellon. It seeks to attract undergraduate students from computer science, psychology, engineering, biology, statistics, physics, and mathematics from SCS, CIT, Dietrich College and MCS. The primary objective of the minor is to encourage students in biology and psychology to take computer science, engineering and mathematics courses, to encourage students in computer science, engineering, statistics and physics to take courses in neuroscience and psychology, and to bring students from different disciplines together to form a community. The curriculum and course requirements are designed to maximize the participation of students from diverse academic disciplines. The program seeks to produce students with both basic computational skills and knowledge in cognitive science and neuroscience that are central to computational neuroscience.

APPLICATION

tudents must apply for admission no later than November 30 of their senior years; an admission decision will usually be made within one month. Students are encouraged to apply as early as possible in their undergraduate careers so that the director of the Neural Computation minor can provide advice on their curriculum, but should contact the program director any time even after the deadline.

To apply, send email to the director of the Neural Computation minor Dr. Tai Sing Lee (tai@cnbc.cmu.edu) and copy Melissa Stupka (mstupka@cnbc.cmu.edu). Include in your email:

- Full name
- Andrew ID
- Preferred email address (if different)
- Your class and College/School at Carnegie Mellon
- Semester you intend to graduate
- All (currently) declared majors and minors
- Statement of purpose (maximum 1 page) – Describes why you want to take this minor and how it fits into your career goals
- Proposed schedule of required courses for the Minor (this is your plan, NOT a commitment)
- Research projects you might be interested in

Curriculum

The Minor in Neural Computation will require a total of five courses: four courses drawn from the four core areas (A: neural computation, B: neuroscience, C: cognitive psychology, D: intelligent system analysis), one from each area, and one additional depth elective chosen from one of the core areas that is outside the student's major. The depth elective can be replaced by a one-year research project in computational neuroscience. No more than two courses can be double counted toward the student's major or other minors. However, courses taken for general education requirements of the student's degree are not considered to be double counted. A course taken to satisfy one core area cannot be used to satisfy the course requirement for another core area. The following listing presents a set of current possible courses in each area. Other computational neuroscience courses are being developed at Carnegie Mellon and University of Pittsburgh that will also satisfy core area A requirement and the requirements will be updated as they come on-line. Substitution is possible but requires approval.

A. Neural Computation

		Units
15-386	Neural Computation	9
15-387	Computational Perception	9
15-883	Computational Models of Neural Systems	12
85-419	Introduction to Parallel Distributed Processing	9
86-375	Computational Perception	9
Pitt-Mathematics-1800 Introduction to Mathematical Neuroscience		9

B. Neuroscience

03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
03-365	Neural Correlates of Learning and Memory	9
42-630	Introduction to Neuroscience for Engineers (crosslisted with 18-690)	12
85-765	Cognitive Neuroscience	Var.
Pitt-Neuroscience 1000 Introduction to Neuroscience		9

C. Cognitive Psychology

85-211	Cognitive Psychology	9
85-213	Human Information Processing and Artifical Intelligence	9
85-412	Cognitive Modeling	9
85-419	Introduction to Parallel Distributed Processing	9
85-426	Learning in Humans and Machines	9
85-765	Cognitive Neuroscience	Var.

D. Intelligent System Analysis

10-301	Introduction to Machine Learning	12
or 10-315	Introduction to Machine Learning (Undergrad)	
15-281	Artificial Intelligence: Representation and Problem Solving	12
15-386	Neural Computation	9
15-387	Computational Perception	9
15-494	Cognitive Robotics: The Future of Robot Toys	12
16-299	Introduction to Feedback Control Systems	12
16-311	Introduction to Robotics	12
16-385	Computer Vision	12
18-290	Signals and Systems	12
24-352	Dynamic Systems and Controls	12
36-225	Introduction to Probability Theory	9
36-247	Statistics for Lab Sciences	9
36-401	Modern Regression	9
36-410	Introduction to Probability Modeling	9
36-746	Statistical Methods for Neuroscience and Psychology	12
42-631	Neural Data Analysis	9
42-632	Neural Signal Processing	12
86-375	Computational Perception	9
86-631	Neural Data Analysis	9

Prerequisites

The required courses in the above four core areas require a number of basic prerequisites: basic programming skills at the level of 15-110 Principles of Computing and basic mathematical skills at the level of 21-122 Integration and Approximation or their equivalents. Some courses in Area D require additional prerequisites. Area B Biology courses require, at minimum, 03-121 Modern Biology. Students might skip the prerequisites if they have the permission of the instructor to take the required courses. Prerequisite courses are typically taken to satisfy the students' major or other requirements. In the event that these basic skill courses are not part of the prerequisite or required courses of a student's major, one of them can potentially count toward the five required courses (e.g. the depth elective), conditional on approval by the director of the minor program.

Research Requirements (Optional)

The minor itself does not require a research project. The student however may replace the depth elective with a year-long research project. In special circumstances, a research project can also be used to replace one of the five courses, as long as (1) the project is not required by the student's major or other minor, (2) the student has taken a course in each of the four core areas (not necessarily for the purpose of satisfying this minor's requirements), and (3) has taken at least three courses in this curriculum not counted toward the student's major or other minors. Students interested in participating in the research project should contact any faculty engaged in computational neuroscience or neural computation research at Carnegie Mellon or in the University of Pittsburgh. A useful webpage that provides listing of faculty in neural computation is www.cnbc.cmu.edu/computational-neuroscience. The director of the minor program will be happy to discuss with students about their research interest and direct them to the appropriate faculty.

Fellowship Opportunities

The Program in Neural Computation (PNC) administered by the Center for the Neural Basis of Cognition currently provides 3-4 competitive full-year fellowships ($11,000) to Carnegie Mellon undergraduate students to carry out mentored research in neural computation. The fellowship has course requirements similar to the requirements of the minor. Students do not apply to the fellowship program directly. They have to be nominated by the faculty members who are willing to mentor them. Therefore, students interested in the full-year fellowship program should contact and discuss research opportunities with any CNBC faculty at Carnegie Mellon or University of Pittsburgh working in the area of neural computation or computational neuroscience and ask for their nomination by sending email to Dr. Tai Sing Lee, who also administers the undergraduate fellowship program at Carnegie Mellon. See www.cnbc.cmu.edu/training/undergraduate/undergraduate-research-fellowships-in-computational-neuroscience/ for details.

The Program in Neural Computation also offers a summer training program for undergraduate students from any U.S. undergraduate college. The students will engage in a 10-week intense mentored research and attend a series of lectures in neural computation. See www.cnbc.cmu.edu/training/undergraduate/summer-undergraduate-research-program-in-computational-neuroscience/ for application information.

The Minor in Religious Studies

Professor Allyson Creasman, *Faculty Advisor*
acreasman@cmu.edu (aeowen@cmu.edu), Baker Hall 242D, 412-268-9832

Dr. Andrew Ramey, *Academic Advisor*
aramey@andrew.cmu.edu, Baker Hall 240, 412-268-7906

The Religious Studies minor offers students a range of intellectual tools for thinking about religious ideas, behaviors and institutions. It also enables students to build a base of knowledge that extends beyond any one particular religious tradition.

Curriculum 54 units

The minor consists of six courses, totaling at least 54 units. Courses taken to fulfill requirements in other major or minor programs may only be applied to this minor with permission of the Faculty Advisor.

Religious Studies minors must satisfy the requirements listed below:

Required Core Course 9 units

All Religious Studies minors are required to take 79-281, Introduction to Religion. This required course introduces several modes of inquiry into religion, such as the philosophy of religion, sociological and behavioral approaches to religion, historical analysis of religious subject, literary and critical analysis of religious texts, theological modes of thought, and anthropological treatments of religion. This course is offered regularly, usually in the Spring semester.

79-281	Introduction to Religion	9

Distribution Requirements 18 units

In addition to the required Core Course, students must complete Distribution Courses totaling 18 units (usually two 9-unit courses). A Distribution Course is one that applies a particular discipline to more than one religion. Some examples of qualifying Distribution Courses that have been offered include:

Historical Approaches		
79-208	Witchcraft and Witch-Hunting	9
79-307	Religion and Politics in the Middle East	9
79-352	Christianity Divided: The Protestant and Catholic Reformations, 1450-1650	9
Philosophical Approaches		
80-276	Philosophy of Religion	9
Textual Approaches		
76-346	Angels and Diplomats -- Renaissance Poetry from Wyatt to Milton	9

In addition to the courses listed above, participating departments often offer other courses that may qualify as Distribution Courses for the minor. The Faculty Advisor should be consulted to identity qualifying courses (especially after the Schedule of Courses for a given semester becomes available).

Elective Courses 27 units

In addition to the required Core Course and the Distribution Courses, students must complete Elective Courses totaling at least 27 units (usually three 9-unit courses). Unlike Distribution Courses, an Elective Course may focus on the study of only one religion (although courses examining more than one religious tradition can also count as Elective Courses if not otherwise used to fulfill the Distribution Requirement).

Some examples of qualifying Elective Courses that have been offered include:

76-337	Representations of Islam in Early Modern England	9
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-296	Religion in American Politics	6
79-349	United States and the Holocaust	6
79-350	Early Christianity	9
79-375	Science & Religion	6

In addition to the courses listed above, participating departments often offer other courses that may qualify as Elective Courses for the minor. The Faculty Advisor should be consulted to identify qualifying courses (especially after the Schedule of Courses for a given semester becomes available).

In addition to courses offered at CMU, relevant courses taken at the University of Pittsburgh, Duquesne University, or other Pittsburgh institutions may count toward the Elective Requirement with the permission of the Religious Studies minor’s Faculty Advisor. The option to cross-register for relevant courses at other local institutions allows students some flexibility in meeting the minor’s requirements and gives them the opportunity to explore interests in religious subjects that might not otherwise be covered at CMU. Students who wish to cross-register for courses at other institutions should consult with the Faculty Advisor about whether the selected course(s) will meet the minor’s Elective Requirement.

The Minor in Science, Technology and Society

Professor Christopher J. Phillips, *Faculty Advisor*
cjp1@cmu.edu, Baker Hall 235C, 412-268-1753

Dr. Andrew Ramey, *Academic Advisor*
aramey@andrew.cmu.edu, Baker Hall 240, 412-268-7906

This minor provides interdisciplinary perspectives on the development and meaning of science and technology in modern society. The core courses enable you to explore the philosophical underpinnings, cultural and historical contexts, and economic and literary assessments of the interplay among science, technology, and society. Elective courses enable you to pursue in greater depth and variety subjects and approaches that build on both the core courses and your primary major.

Courses taken to fulfill requirements in other major or minor programs may only be applied to this minor with permission of the Faculty Advisor.

Curriculum 54 units

Core Courses 27 units

Complete one course from each area. Additional courses from the History of Science Core and the History of Philosophy Core may count as electives for the minor.

Area 1. History of Science Core

Take at least 1 course from the list below.

79-234	Technology and Society	9
79-299	From Newton to the Nuclear Bomb: History of Science, 1750-1950	9
79-305	Moneyball Nation: Data in American Life	9
79-330	Medicine and Society	9
79-342	Introduction to Science and Technology Studies	9
79-380	Hostile Environments: The Politics of Pollution in Global Perspective	9

Area 2. Philosophy of Science Core

Take at least 1 course from the list below.

80-220	Philosophy of Science	9
80-221	Philosophy of Social Science	9
80-226	Revolutions in Science	9
80-244	Environmental Ethics	9
80-245	Medical Ethics	9
80-249	AI, Society, and Humanity	9

Area 3. Science Core

Take at least 1 course (9 units total) from the following departments: 15-xxx Computer Science, 09-xxx Chemistry, 03-xxx Biological Sciences, 33-xxx Physics

Electives 27 units

Complete three courses from the approved list of elective courses. Courses listed in Areas 1 and 2 may also be taken as electives if not already completed for an Area requirement. To petition for a course not listed to be approved as an elective, contact the Faculty Advisor, cjp1@cmu.edu, directly.

18-482	Telecommunications Technology and Policy for the Internet Age	12
48-448	History of Sustainable Architecture	9
73-427	Sustainability, Energy, and Environmental Economcs	9
76-319	Environmental Rhetoric	9
76-395	Science Writing	9
76-425	Science in the Public Sphere	9
76-476	Rhetoric of Science	9
76-492	Rhetoric of Public Policy	9
76-494	Healthcare Communications	9
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-208	Witchcraft and Witch-Hunting	9
79-213	The American Railroad: Decline and Renaissance in the Age of Deregulation	6
79-246	Industrial America	9
79-283	Hungry World: Food and Famine in Global Perspective	9
79-302	Killer Robots:The Ethics, Law, and Politics of Lethal Autonomous Weapons Systems	6
79-331	Body Politics: Women and Health in America	9
79-354	Kids and Schools in the 20th Century	6
79-381	Energy and Empire: How Fossil Fuels Changed the World	9
80-110	Nature of Mathematical Reasoning	9
80-150	Nature of Reason	9
80-214	Computing, AI, and Philosophy	9
80-222	Measurement and Methodology	9
80-223	Causality and Probability	9
80-248	Engineering Ethics	9
80-312	Mathematical Revolutions	9
80-321	Causation, Law, and Social Policy	9
80-322	Philosophy of Physics	9
80-323	Philosophy of Biology	9
80-324	Philosophy of Economics	9
84-387	Technology and Policy of Cyber War	9
85-380	In Search of Mind: The History of Psychology	9

The Minor in Sociology

Saurabh Bhargava, *Faculty Director*
Connie Angermeier, *Program Advisor*
Location: Porter Hall 208A
cla2@andrew.cmu.edu

The Sociology minor introduces the student to central concepts in sociological theory and methods of empirical inquiry needed to broadly understand social behavior, including its structure, history, and dynamics. Students choose among a range of methodological approaches and substantive topic areas including social psychology, work and organizations, social networks, technology and society, medical sociology, and gender and family. Exposure to these topics will help students understand and appreciate the processes by which families, groups, and organizations form and evolve over time; by which individuals affect and are affected by the society in which they live; and by which technology and institutions shape and influence society. This background in empirical tools and social theory will strengthen the student's ability to pursue graduate studies in sociology, social history, social science, and organizational theory; to begin professional careers involving social analysis, network analysis, data analysis of teams, groups and organizations, social analysis within journalism, political institutions, the government, and online; and to enter the corporate environment with a thorough understanding of organizational activity.

Curriculum 54 units

In addition to the general education requirements of the student's college and the requirements of the student's major, Sociology minors must satisfy the following requirements. The Core courses comprise 18 units of the minor. One course is taken from the Organizations cluster, and one course is taken from the Methodology cluster. The Elective courses comprise 36 units of the minor. Sociology minors should consult with the program advisor to plan a course schedule prior to registration.

NOTE: The core courses are offered regularly; the elective courses are offered with at least general regularity. Participating departments may subsequently develop and offer other courses that, while not listed here, are deemed appropriate for this minor. The program advisor should be consulted (especially when the schedule of courses to be offered for a given semester becomes available) to identify such additional courses.

No more than 9 units in the Sociology minor may be counted to fulfill any other major or minor's requirements.

Core Courses 18 units

A. Organizations

Complete one course.

70-311	Organizational Behavior	9

B. Methodology

Complete one course.

36-202	Statistics & Data Science Methods	9
70-208	Regression Analysis	9
85-310	Research Methods in Cognitive Psychology	9
85-340	Research Methods in Social Psychology	9
88-251	Empirical Research Methods	9
88-252	Causal Inference in the Field	9

Elective Courses 36 units

Complete four courses (a minimum of 36 units) from the following list. Two courses (18 units) must be taken from one category to complete the depth requirement. One course (9 units) must be taken from the other category. The remaining course (9 units) may be taken from either category. Appropriate courses offered by the Department of Sociology at the University of Pittsburgh (available during the academic year through cross-registration) may also be included as part of this option. Contact the Sociology program advisor for more information.

1. Sociology of Gender, Family, and Culture

70-342	Managing Across Cultures	9
70-385	Consumer Behavior	9
76-241	Introduction to Gender Studies	9
79-244	Women in American History	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-308	Crime and Justice in American Film	9
79-320	Women, Politics, and Protest	9
79-323	Family, Gender, and Sexuality in European History, 500-1800	9
79-331	Body Politics: Women and Health in America	9
79-343	Education, Democracy, and Civil Rights	9
79-377	Food, Culture, and Power: A History of Eating	9
80-224	Race, Gender and Science	9
80-245	Medical Ethics	9
80-246	Moral Psychology	9
80-256	Modern Moral Philosophy	9
80-305	Choices, Decisions, and Games	9
80-335	Social and Political Philosophy	9
80-348	Health, Human Rights, and International Development	9
84-369	Decision Science for International Relations	9
85-241	Social Psychology	9
85-350	Psychology of Prejudice	9
85-352	Evolutionary Psychology	9
85-358	Pro-Social Behavior	9
85-377	Attitudes and Persuasion	9
85-442	Health Psychology	9
85-446	Psychology of Gender	9
88-230	Human Intelligence and Human Stupidity	9
88-380	Dynamic Decisions	9
88-388	Psychological Models of Decision Making	9

2. Sociology of Work, Organizations, and Technology

70-332	Business, Society and Ethics	9
73-348	Behavioral Economics	9
79-275	Introduction to Global Studies	9
79-342	Introduction to Science and Technology Studies	9
88-275	Bubbles: Data Science for Human Minds	9
80-341	Computers, Society and Ethics	9
88-255	Strategic Decision Making: Cooperation and Competition in Social Interactions	9
88-341	Team Dynamics and Leadership	9
88-365	Behavioral Economics and Public Policy	9
88-366	Behavioral Economics of Poverty and Development	9
88-402	Modeling Complex Social Systems	9
88-406	Behavioral Economics in Organizations	9
88-409	Behavioral Economics Perspectives on Ethical Issues	9
88-418	Domestic Negotiation	9
88-419	International Negotiation	9
88-435	Decision Science and Policy	9
88-451	Policy Analysis Senior Project	12
or 88-452	Policy Analysis Senior Project	

Note: Some courses have additional prerequisites.

Dietrich College Interdisciplinary Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

Dietrich College Interdisciplinary Courses

66-103 HSP First-Year Seminar: Appalachia (for HSP students only)
Fall: 9 units
The Appalachian region - which stretches from Georgia to New York's southern plateau - has a particular place in American history and memory. This course will examine the political, literary, economic and historical narratives that surround the region, as well as examining the role that Appalachia can play as a model for developing regions in other parts of the world. This course fulfills the First-Year Seminar requirement for the Humanities Scholars Program. Enrollment is restricted to first-year HSP students.

66-106 QSSS First-Year Seminar: Applied Quantitative Social Science I (QSSS students)
Fall: 9 units
The QSSS First-Year Seminar provides a fast-paced introduction to a range of methods in the quantitative social sciences. Organized around a set of case studies, the course introduces the language and methods of empirical research through a combination of seminar-style discussions of academic papers, and hands-on lab work using the statistical software R. Students will replicate results from a high-profile labor market discrimination paper, explore agent-based models of neighborhood segregation, and scrape Wikipedia data to examine imbalances in gender representation. Enrollment restricted to first-year QSSS students.

66-107 First-Year Seminar: Modeling Complex Systems
Fall: 9 units
Most of the major issues confronting humanity—-such as climate change, financial collapse, ecosystem survival, terrorism, and disease epidemics —-are the result of complex systems where the interactions of the pieces of the system create a whole that is rather different than any of its parts. Unfortunately, traditional scientific methods that focus on reducing systems to their parts and then analyzing each part provide little insight into such systems. This seminar explores the behavior of complex systems as well as how to model and understand them using both traditional tools and computer-based approaches.

66-109 Grand Challenge First-Year Seminar: Climate Change
Fall and Spring: 9 units
Many consider climate change to be the most serious social, political, and environmental issue of the 21st century. As human activities increase the level of greenhouse gases in the atmosphere, scientists have established the reality of climate change and have estimated its impacts on human society and the natural world. Despite the scientific consensus on its existence, causes, and consequences, a substantial number of Americans and citizens of other countries still question these conclusions and a small but vocal group of doubters continue to challenge the science and scientific consensus on climate change. In spite of some social division over these issues, governments at local, national, and international levels have made concerted efforts to craft policies to address climate change. These policies have shifted over time as the information, attitudes, and technology associated with climate change have evolved. In this course, we will explore the challenges and complexities of climate change by investigating the subject from a variety of angles: scientific, political, rhetorical, cultural, economic, technological, and ethical. Over the course of the semester, we will inquire: What is climate change? How do scientists know it is happening? Why is there public debate over it? What solutions are available? And what are the pros and cons of the different solutions?

66-110 DC Grand Challenge First-Year Seminar: Inequality
Intermittent: 9 units
This Grand Challenge first-year seminar on inequality is inspired in part by the specter of global income inequality. Income inequality has reached such a peak that eight men own as much wealth as half the world's population, the world's poorest 3.6 billion people. Inequality may be a feature of all societies across history to some degree. But inequality strikes us an especially timely topic because of the current demands for greater political, social, and economic equality. The four of us will use the disciplines we come from - economics, anthropology, history, psychology, and literary/ cultural studies - to introduce you to the concept of inequality in the age of capitalism. We will consider how inequality emerged as a social and political problem in the 18th and 19th centuries, and how it has re-emerged as a key concept for socio-political movements in our current moment. We will conclude with an inquiry into what the future of inequality might look like, especially with the coming of increased automation and the elimination of at least 50% of the jobs currently being done by human beings.

66-114 DC Grand Challenge First-Year Seminar: Racism
Intermittent: 9 units
Racism is everywhere in the twenty-first century. In August 2009, the renowned Indian actor, Sharukh Khan, was detained at Newark International Airport. According to Khan, his Muslim surname led American immigration officials to question him about the nature of his visit for over two hours. Was his treatment racist? In 2011, Luis Suarez a Uruguayan soccer player was punished for allegedly calling French footballer Patrice Evra "negro" in England. But was the word "negro," said in Spanish, racist? Racism is a complex phenomenon that refers to historically hierarchical power differences between groups (e.g. Native populations and Europeans during the conquest), ideas about how humans can be classified into groups by "race," and also discriminatory practices against non-dominant groups. This system of social relations and ideology serves to justify social inequality and differential treatment. If we are to end racism, we must strive to understand it. What are the historical origins of racism? How is racism reproduced? How does race influence identity formation? Can racism produce positive identities? Why has the struggle against racism shifted from a demand for human rights to a search for diversity and inclusion? This course will examine racism in Pittsburgh, in the United States, and in several other countries and regions throughout the world. We will approach racism from multiple academic perspectives with a team of three faculty from the departments of History, English and Modern Languages. This team-based interdisciplinary approach to First-Year Seminars draws on several departments and guest speakers.

66-117 DC Grand Challenge First-Year Seminar: Political Rhetoric
Fall: 9 units
Without language, there would be no politics. Politics is about persuading others to adopt policies, to vote for candidates, to get out and march. Politics is about careful choices of language to frame issues, to make others see those issues in our preferred way. In this course, we will put the rhetoric of politics under the microscope, to identify its components and understand how they fit together into a powerful structure. We will use the tools of multiple disciplines in our analysis: rhetorical theory, both ancient and modern; cognitive science; contemporary discourse analysis; ethics; and philosophy of language. We will ask what it means for political rhetoric to be propaganda. We'll explore how political advertising uses marketing techniques, taking advantage of our innate biases and cognitive dispositions. We will look at how a skillful speaker can control the topic in a dialogue or a debate. And throughout, we will ask the question: is this ethical? Where does persuasion cross the boundary into manipulation, and does that matter? What type of rhetoric do we want our political process to rely on? Our goal in this course is to provide students with the skills to recognize the rhetorical tools that political agents are using, and to develop their own responses in a skillful and informed way.

66-118 DC Grand Challenge First-Year Seminar: Thinking With Evidence
Fall: 9 units
In a time of big data and widespread skepticism of science, it is crucial to understand how data and facts can be turned into conclusions, and then into public policy. Using topics from medicine, epidemiology, and public health, this course provides students an introduction into the grand challenge of understanding how evidence is used (and abused) in support of scientific conclusions. Questions of health and disease are particularly important areas for thinking about facts and figures because many life-or-death decisions have to be made on the basis of fragmentary and unreliable evidence. Every trip to the doctor, illness, and vaccination involves a complicated mix of public policy, scientific evidence, and emotional and historical factors. This course helps students understand the sciences and the humanities as united in their desire for rigorous argumentation rather than as competing or incompatible ways of thinking. Moreover, by taking a wide-angle lens to the topic, students will see how and why standards of scientific proof have changed over time, and track what these changes mean for thinking about evidence. Co-taught by a statistician and historian, this course draws on many different disciplines, providing students a broad introduction to reasoning across the humanities and social sciences. Students will be required to participate in written and oral arguments, read scientific articles as well as political, historical, and legal documents, and prepare a capstone project in which they will be asked to weigh real-life evidence and recommend a course of action to the Food and Drug Administration. Other topics may include vaccination controversies, regulation of carcinogens and toxic chemicals, mammography screening standards, and the treatment of infectious diseases in global health settings.

66-119 DC Grand Challenge First-Year Seminar: Feeding the World, Feeding Ourselves
Fall: 9 units
Food in the twenty-first century is ripe with paradox: fewer people than ever work as farmers or ranchers, but the quantity and global variety of foods available to consumers continues to expand; public health officials around the world are raising alarms about diseases linked to the over-consumption of fats and sugars, even as hundreds of millions of people do not know where their next meal is coming from; organic agriculture is booming, while agribusiness giants like Monsanto continue to expand. Producing food consumes more land and water resources than any other human activity. The individual and collective decisions people make about food shape individual and community health, social justice, and sustainability. If we are to make sound decisions about how to feed the world and feed ourselves, we need to understand the highly creative and contentious ways that people produce and consume food. In this class we will address the following central questions in order to unravel some paradoxes, and help us make informed choices, about foods we consume: (1) What are the origins of agriculture, and why does it matter for the future of food? (2) How do cultural, ecological, economic, and technological contexts shape food acquisition, preparation, and consumption? (3) What are the causes of hunger - can we feed 8 billion people healthy food and not trash the planet? And (4) what roles have science and technology played in shaping "industrial food," and in shaping the world around us?

66-122 DC Grand Challenge First-Year Seminar: Beyond Earth
Spring: 9 units
Space, as a television series once told us, is the final frontier. But what lies out there? It could be that the billions of rocky planets and moons in the Milky Way are just inert and ready to be terraformed and colonized...but what happens when we encounter life, intelligent or otherwise? In Beyond Earth, co-taught by an astrostatistician and a linguist, students will consider the various rationales for engaging with the rest of the galaxy...and the potential consequences of doing so. Why should one consider leaving the Earth, and where would he or she go? Just to Mars, or to other planetary systems? How long would it take to get to these other systems? The distances involved in space travel are immense, and we cannot rely on warp drives. Inter-generational space travel is a possibility, but who is willing to leave Earth and spend the rest of his or her life on board a spaceship? When one's descendants finally arrive in a suitable planetary system, what happens if they find life? If so, what should they do - communicate with it, control it, or fly away from it? Perhaps these are the wrong questions...perhaps we need to ask if humans have the right to occupy other planets and moons in the first place. But even if we choose not to leave Earth, there will still be the issue of communication: from radio signals to satellites leaving the Solar System to proposed light sails that will be pushed to the nearest stars, we are making ourselves known. Should we do this? And if we send signals into space, how should we design them to make ourselves understood? What should we talk about? Just how should we go about engaging with the rest of our galaxy? By the end of the course, every student will be able to make an informed and dispassionate decision: stay on Earth and improve what we all have, or strike out into the great Beyond?

66-123 DC Grand Challenge First-Year Seminar: Science on Stage
Spring: 9 units
Art and Science — two fields of study that are most often considered diametrically opposed. Art is frivolous entertainment. Science is hard rational fact. In this Grand Challenge course, we hope to break that supposition or at least examine it in great detail. Specifically, we will use theater to argue that drama can produce challenging, demanding and intelligent work that showcases the impact of science on current discourse. We want to link the two cultures. The word "theater" has the same etymological root as "theory" - both words come from the Greek thea meaning view. This shared origin demonstrates ways we can work to analyze and interpret both fields and show the common ground between these two cultures. As we attend to plays and writing ranging from Tom Stoppard¿s Arcadia and Michael Frayn¿s Copenhagen to Caryl Churchill¿s A Number and Oliver Sacks¿ Man Who Mistook his Wife for a Hat, our class discussions will consider questions that include: Why is science a trend in contemporary theater? Does it reflect on our dependence on technology? What kinds of questions are being asked when science or scientific theory is presented on the stage? Are people attracted to plays about science because of their difficult subject matter or does it does it lack the engagement of popular culture? In addition to integrating humanities and scientific approaches within Dietrich College, this course will utilize the expertise of both individuals in the School of Drama and the producers in the local theater community, and local science writers. Finally, in addition to weekly writing assignments, the course will ask students to produce original dramatic scenes that incorporate scientific exploration which will, ultimately, lead to staged readings of their work.

66-161 DC Grand Challenge First-Year Seminar: Artificial Intelligence and Humanity
Fall and Spring: 9 units
In 1965 British mathematician I.J. Good wrote, "An ultraintelligent machine could design even better machines; there would then unquestionably be an 'intelligence explosion,' and the intelligence of man would be left far behind." As we enter an age where companies like Uber are testing driverless cars in Pittsburgh and innovative interfaces like IBM's Watson can play Jeopardy and learn techniques for medical diagnoses, how are we to negotiate an 'intelligence explosion' that for many individuals might threaten the very notions of what it means to be human? The future of human-to-machine relationships will likely define our historical epoch and yet, many young technologists and humanists underestimate the downstream impact of technological innovations on human society. Presently, we have little choice but to attend to this rapidly anxiety-ridden question. This seminar will attend to the challenge of contemporary existential questions on what it means to be human (read not machine) in the context of a rapidly advancing technological age. We will consider human narratives throughout history that exam how governments and individual citizens defined humanity in the context of slavery and colonialism as a framework for exploring and projecting what it means to be human in the age of rapidly advancing 'intelligent' machines. We will trace the technological advancements of the recent five decades and identify historical precedents and speculative narratives that help us to consider issues like labor, economic disparity, negotiations of power, human dignity and ethical responsibility within the context of human relations with advancing technological tools that are now coined, artificial intelligence.

66-202 Pathways: Dietrich College Career Exploration Seminar
Intermittent: 3 units
Designed for Dietrich College students, this seminar will assist students in effective career decision making, development of internship and job search skills, and workplace readiness. Students will participate in activities involving self-reflection/self-awareness, major and career exploration, personal branding techniques, and communication skills. We will invite guest speakers including alumni, employers, and on-campus resources. Students will also be required to participate in an evening networking event with alumni throughout the country.

66-204 Film Festival
Spring
Students will take on the project of planning and managing a film festival that draws a college- and city-wide audience. Students will collaborate on all aspects of the festival: selecting films, generating and distributing marketing materials, designing and scheduling events, arranging facilities and general logistics, coordinating internal and external public relations, organizing fundraisers, rallying the local communities - in short, all the aspects involved in making the event a spectacular/sensational success! A unique feature of this course-cum-festival will be several directors' participation as guest speakers on the festival theme and other issues informing their films. Previous Film Festivals have covered such topics as: Democracy, Mechanization, Realism, Globalization, Migration, Media and Work. This course is also designed to supplement the study of film with the historical, political and sociological background that students need for critically analyzing the images and ideologies they see on the screen and understand how those images effect our views of the past and present time.

66-221 Topics of Law: Introduction to Intellectual Property Law
Intermittent: 9 units
Topics for this course vary, to include such foci as intellectual property, introduction to U.S. law, great American trials, and the U.S. Constitution. Topics and courses are designed to be broadly relevant and interesting for university undergraduates, and not narrowly tailored for students interested in law school.

66-304 DC Grand Challenge Research Seminar
Intermittent: 9 units
TBA

66-307 Independent Study
All Semesters
This course is intended for students with a special interest in an interdisciplinary area in the humanities and/or social sciences not covered by a normal course. Readings and other works are developed by the student and an individual faculty member. The number of units will be assigned at the time of registration based on the number of hours to be completed (decided in advance with the sponsoring faculty member).

66-320 Internship
All Semesters
Internships-for-credit allow students to apply course-based knowledge in a non-classroom setting, under joint supervision and evaluation by an on-site supervisor and a faculty sponsor. Approved internships must conform to college guidelines for internships-for-credit, and are available by permission only arranged through the Associate Dean's Office in Baker Hall 154.

66-400 Dietrich College Senior Honors Colloquium
Fall: 1 unit
The purpose of this course is to provide students admitted to the Dietrich College Senior Honors Program with a shared set of intellectual and practical sessions that will enhance their senior honors thesis experience. The course will consist of seven bi-weekly 80-minute meetings. Each will be organized around a theme and related topics that are relevant to the senior honors thesis experience, and that take advantage of both the high caliber and interdisciplinary diversity of the course members. Guest visitors will also be a common feature of the course. Topics could include: the meaning(s) of "honors;" getting started and keeping pace: the ebb and flow of an independent research project (including how to recognize and avoid procrastination; forging a successful relationship with your thesis advisor - the myth of the separation of research from writing; writing for publication); ethics in research; "interdisciplinarity," or the "unity of knowledge;" funding for research; preparing for and delivering effective presentations; intellectual property rights, and human subjects policy. Guest speakers invited to address and engage class members in discussion/debate of topics that lend themselves to interdisciplinary discussion and debate (e.g., stem cell research, which calls into play science, ethics, etc.). Course requirements will include mandatory attendance, occasional readings (where appropriate), acting as co-leader for at least one session, and - at course's end - (a) a written, formal preliminary thesis statement and action plan, endorsed by the thesis advisor, and tentatively, (b) a brief oral presentation of the thesis statement and plan to the class + thesis advisors during the last class meeting. All students will participate in critiques of fellow-students' presentations and plans.

66-501 H&SS Senior Honors Thesis I
Fall and Spring: 9 units
This sequence is open only to those seniors who have been admitted to the H&SS Senior Honors Program. This is the first semester of a two-semester sequence that culminates in an original, year-long independent research or creative project. Thesis topics are selected by faculty and students.

Course Website: http://www.cmu.edu/dietrich/undergraduate/programs/shp/index.html

66-502 H&SS Senior Honors Thesis II
Fall and Spring: 9 units
This sequence is open only to those seniors who have been admitted to the H&SS Senior Honors Program. This second semester course is the culmination of an original, year-long independent research project. Research topics are selected by faculty and students.
Prerequisite: 66-501

Course Website: http://www.cmu.edu/dietrich/undergraduate/programs/shp/index.html

66-503 Dietrich College Senior Honors Thesis
All Semesters: 18 units
This course is a one-semester alternative to the two-semester Dietrich College Senior Honors Thesis sequence 66-501/66-502. The course is open only to students who have been approved for entry into the Dietrich College Senior Honors Program, and whose senior honors thesis project has been approved as a one-semester undertaking. Thesis topics are selected by faculty and students, and reviewed and approved through the senior honors program application process. The thesis culminates in an original independent research or creative project. Dietrich College senior honors students are also required to participate in the annual Meeting of the Minds Undergraduate Research Symposium, offering either an oral presentation or poster session based on their senior honors thesis.

66-504 Senior Capstone I
All Semesters: 9 units
TBA

66-505 Senior Capstone II
All Semesters: 9 units
TBA

66-506 Senior Capstone
All Semesters
TBA

General Dietrich College Courses

65-201 Humanities Scholars III
Fall: 9 units
Humanities Scholars Program III: Poetry and Power (Fall 2019) Audre Lorde wrote, "Poetry is not a luxury. It is a vital necessity of our existence." Poetry is often perceived as an elite art, practiced within the confines of academia and understood only by a chosen few. But poetry is grounded historically in an oral tradition and a sense of public ownership. Does poetry have power in our society? What is its social function? How is poetry distinct from other modes of writing and art? Can poetry advance social movements and connect people with perspectives beyond their comfort zones? This course will consider arguments about poetry and its relationship with society. Students will read and discuss poetry both on and off the page, as well as explore arguments about poetry, poetics, and power via essays, literature, performance, media, and community engagement.
Prerequisite: 65-102

Course Website: http://www.hss.cmu.edu/hsp/

65-203 Applied Quantitative Social Science II
Spring: 9 units
Applied Quantitative Social Science II is the second course in the QSSS core sequence. Conducted in a seminar format, the course will feature guest lectures from a series of faculty at CMU. Students will discuss ongoing research across the social sciences, and over the course of the semester will develop a research project proposal. Seminar participation is limited to QSSS students.

Heinz College of Information Systems and Public Policy

Ramayya Krishnan, Dean
Location: 1003 Hamburg Hall
www.heinz.cmu.edu

The next generation of leaders must deeply understand this critical point of intersection: People, policy, and technology. The connections between the three define our time, and will continue to shape the future of humankind.

At Heinz College, we've understood this since our founding, and we provide students with a foundation of data analytics, technology, evidence-based management, and rich experiential learning in contexts that are crucial to society, such as public policy, health care, information systems, cybersecurity, the arts, and entertainment.

Our research programs are best described as data-intensive social science. Our economists, statisticians, operations researchers, computer scientists, and management experts sit side by side, collaborating constantly and not sitting in traditional departmental silos. For this reason, they are able to approach complex societal problems in an altogether different way and impart this interdisciplinary mindset to our students.

The unique co-location of our two schools, the School of Public Policy and Management (https://www.heinz.cmu.edu/about/public-policy-management) and the School of Information Systems and Management (https://www.heinz.cmu.edu/about/information-systems-management), offers opportunities for collaboration that simply cannot be duplicated elsewhere. We also offer two groundbreaking Joint Degree Programs with the CMU College of Fine Arts (https://www.heinz.cmu.edu/about/fine-arts).

Graduates of Heinz College are highly sought by employers across sectors for their interdisciplinary expertise and ability to use relevant data to solve complex problems. Our alumni work for government agencies at the federal, state, and local levels. They work in roles that directly impact national security. They work for tech giants, big consulting firms, major media outlets, cultural institutions, top hospitals and health systems, non-profits, and community organizations of all sizes. They work for startups—or they found their own.

Learn more about Heinz College graduate degree programs (https://www.heinz.cmu.edu/programs).

Public Interest Technology

Public Interest Technology (PIT) is an emerging field unto itself, but Carnegie Mellon University has been a leader in this space for over 50 years, promoting the use of technology to advance the public interest. Continued excellence in this space is a priority for Heinz College.

Learn more about PIT at Heinz College (https://www.heinz.cmu.edu/about/public-interest-technology).

Minor in Health Care Policy and Management

Sponsored by:
Heinz College of Information Systems and Public Policy
Dietrich College of Humanities and Social Sciences
Mellon College of Science

Faculty Advisors:
Jason D'Antonio, Mellon College of Science
James F. Jordan, H. John Heinz III College

The face of health care is changing. The practice of medicine is being fundamentally altered by the forces of change in public policy, health care organizations and in the industry as a whole. The role of individual professionals in this industry is changing as rapidly as the industry itself. Traditional career paths have disappeared overnight to be replaced by new opportunities that require new skills. New organizations are placing new demands on their professional and medical staffs. The criteria of efficiency and financial stability are entering the domains of diagnosis and treatment.

This minor is designed to provide students considering a career in the health professions with an understanding of how these changes are likely to affect their careers. Students will become familiar with the critical policy and management issues and will begin to learn to operate effectively in the emerging health care environment. The curriculum combines economic, organizational, managerial, historical and psychological perspectives on these issues to provide a foundation for a deepened understanding of the changing structure of health care organizations and policy.

Required Courses for HCPM Minor

A total of 54 units are required to complete this minor. Entry into the minor requires completion of 73-102 Principles of Microeconomics or the equivalent by approval.

Required Courses

Complete a total of 27 units from the following:		
79-330	Medicine and Society	9
90-836	Health Systems	6
90-721	Healthcare Management	6
90-861	Health Policy	6

Elective Courses

Complete a minimum of 18 units from these two sections:

Heinz College Courses		
90-831	Advanced Financial Management of Health Care	6
94-705	Health Economics	12
90-832	Health Law	6
90-833	Population Health	6
90-818	Health Care Quality & Performance Improvement	6
90-834	Health Care Geographical Information Systems	12
Other courses as approved		

Humanities and Social Sciences Courses (9 units each)		
80-245	Medical Ethics	9
76-494	Healthcare Communications	9
88-365	Behavioral Economics and Public Policy	9
67-476	Innovation in Information Systems: Health Care	9
42-444	Medical Devices	9
Other courses as approved		

Please note that some of these courses have prerequisites that will not count toward the completion of the requirements for this minor.

Elective Focus Areas

Focus areas are suggested groupings of electives based on student interest. Students *do not* need to take all electives within one focus area; they are free to choose their 18-unit elective minimum from any combination of focus areas.

Health Management/Administration Focus		Units
90-831	Advanced Financial Management of Health Care	6
90-832	Health Law	6
90-818	Health Care Quality & Performance Improvement	6
80-245	Medical Ethics	9
76-494	Healthcare Communications	9

Health Policy Focus		Units
94-705	Health Economics	12
90-832	Health Law	6
90-833	Population Health	6
88-365/90-882	Behavioral Economics and Public Policy	9
Other courses as approved		

Health Analytisc & IT Focus		Units
90-834	Health Care Geographical Information Systems	12
67-476	Innovation in Information Systems: Health Care	9
42-444	Medical Devices	9
Other courses as approved		

Five-Year (Accelerated) Master's Programs

Students with the drive to develop as leaders and enter the job market more quickly can earn their CMU undergraduate degree **and** a professional master's degree from Heinz College together in five years instead of the typical six.

An Accelerated Master's Program (AMP) isn't just a savings of time. It's also a considerable savings in cost, and adds a tremendous level of experience and expertise in a specific industry.

In the Heinz College AMP program, students complete 3 years in a CMU undergraduate program (any major), followed by 1 year of integrated study, followed by 1 full year at Heinz College.

The following Heinz College master's degree programs offer accelerated options for CMU undergraduates:

- Master of Arts Management (MAM)
- Master of Entertainment Industry (MEIM)*
- Master of Information Systems Management (MISM)
- Master of Science in Health Care Policy and Management (MSHCPM)
- Master of Science in Information Security Policy and Management (MSISPM)
- Master of Information Security Policy and Management (MSISPM)
- Master of Science in Public Policy and Management (MSPPM)*

Students must apply and be admitted to Heinz College. Learn more about Heinz College admissions requirements (https://cms.heinz.cmu.edu/entity/open.act?type=page&id=9aeb56a680021b851d4afb14fbaf800f&confId=a9cdd07a80021b851d4afb14d072acf3).

For more information on Accelerated Master's Programs, please contact the Heinz College Office of Admissions at hnzadmit@andrew.cmu.edu or by phone 412-268-2164.

***Note on AMP planning for MEIM and MSPPM - Washington, D.C.:** Due to the rigorous format and unique academic demands of the MEIM and MSPPM – Washington D.C. programs—with their second years at CMU's Los Angeles and D.C. campuses, respectively—interested students should begin the AMP planning process as early as possible in their undergraduate career. Students must ensure that they have satisfied all requirements for their undergraduate degree, as well as their first-year master's requirements, by the end of the fourth AMP year.

Ph.D. Program

Distinguished by the interdisciplinary model of Heinz College and Carnegie Mellon University, our Ph.D. programs prepare graduates to lead change in their chosen fields through meaningful collaborations and hands-on work with our renowned and extremely accessible faculty.

Heinz College features the unique co-location of two schools: The School of Information Systems and Management and The School of Public Policy and Management; however, below that larger structure, we are a college without departments and their characteristic silos. Our faculty, students, and research centers thrive by working together to solve problems across subjects, disciplines, and business verticals.

In the Heinz College Ph.D. program, you will conduct innovative research to address increasingly complex challenges facing society, whether those challenges are technical, organizational, political, economic, social, or—as is often the case—some combination thereof.

- Ph.D. in Information Systems and Management (https://www.heinz.cmu.edu/programs/phd-programs/information-systems-management)
- Ph.D. in Public Policy and Management (https://www.heinz.cmu.edu/programs/phd-programs/public-policy-management)
- Joint Ph.D. Programs (https://www.heinz.cmu.edu/programs/phd-programs/joint-phd)
- Recent Ph.D. Placements (https://www.heinz.cmu.edu/programs/phd-programs/phd-placements)

Faculty and Research Centers

FACULTY

Heinz College has an international reputation for the quality of its research. Our interdisciplinary environment creates exciting opportunities for collaboration and produces a breadth of research work not typically found in schools of our size.

Our faculty and research centers consistently receive funding support from government agencies, foundations and corporate partners, like the National Science Foundation; the Heinz Endowments; the Mellon Foundation; the U.S. Departments of Defense, Commerce, Health and Human Services, and Housing and Urban Development; the Sloan Foundation; and the National Institute of Justice.

Visit our Faculty pages (https://www.heinz.cmu.edu/faculty-research) to learn more about individual faculty members, accomplishments, and current research.

RESEARCH CENTERS

We host, or are closely associated with, these CMU research centers:

- Arts Management and Technology Laboratory (AMTLab) (http://amt-lab.org)
- Block Center for Technology and Society (https://www.cmu.edu/block-center)
- Center for Behavioral Decision Research (CBDR) (http://cbdr.cmu.edu)
- Center for Economic Development (CED) (https://www.heinz.cmu.edu/ced)
- CyLab (http://www.cylab.cmu.edu)
- Event and Pattern Detection Lab (EPD Lab) (http://epdlab.heinz.cmu.edu)
- iLab (http://ilab.heinz.cmu.edu)
- Initiative for Digital Entertainment Analytics (IDEA) (http://idea.heinz.cmu.edu)
- Living Analytics Research Centre (LARC) (https://larc.smu.edu.sg)
- Metro21: Smart Cities Institute (http://www.ices.cmu.edu/metro21)
- Privacy Economics Experiments (PEEX) Lab (https://peex.heinz.cmu.edu)
- Program for Research and Outreach on Gender Equity in Society (PROGRESS) (http://progress.heinz.cmu.edu)
- Risk and Regulatory Services Innovation Center (sponsored by PwC) (https://www.cmu.edu/risk-reg-center)
- Traffic21 (https://traffic21.heinz.cmu.edu)

Diversity and Inclusion

The Heinz College of Information Systems and Public Policy represents over 50 nations and over 40 U.S. states, which increases our ability to foster a community with greater variation in perspectives and approaches to our work.

By design, Heinz College is an empathetic and open environment that inspires continuous learning, conversation, and intelligent action that will impact society for the better.

Diversity, inclusion, and equity are not radical concepts. Rather, the ongoing pursuit of these ideals is fundamental to the energetic exchange of ideas; the success of our students, faculty, and staff; and the unlocking of innovations that will improve the human condition.

Heinz College proudly champions the unique experiences of all members of our campus community. It is a priority for Heinz College to attract, maintain, and nurture a student body of diverse viewpoints, backgrounds, and talents. We are also committed to improving access to our graduate programs, in particular for underrepresented populations. We support these efforts through a variety of initiatives, programming, and partnerships in addition to Carnegie Mellon University's campus-wide efforts.

Learn more about Diversity & Inclusion at Heinz College (https://www.heinz.cmu.edu/about/diversity).

Faculty

ALESSANDRO ACQUISTI, Assistant Professor of Information Systems and Public Policy – Ph.D., UC Berkeley; Carnegie Mellon, 2003–

SHAMENA ANWAR, Assistant Professor of Economics and Public Policy – Ph.D., Yale University; Carnegie Mellon, 2007–

LINDA BABCOCK, James M. Walton Professor of Economics – Ph.D., University of Wisconsin at Madison; Carnegie Mellon, 1988–

EDWARD BARR, Associate Teaching Professor – M.S., Indiana University of Pennsylvania; Carnegie Mellon, 2000–

ALFRED BLUMSTEIN, J. Erik Jonsson University Professor of Urban Systems and Operations Research; Director, National Consortium on Violence Research – Ph.D., Cornell University; Carnegie Mellon, 1969–

SILVIA BORZUTSKY, Associate Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2001–

LEE BRANSTETTER, Associate Professor of Economics – Ph.D., Harvard University; Carnegie Mellon, 2006–

KATHLEEN CARLEY, Professor of Organizational Sociology – Ph.D., Harvard University; Carnegie Mellon, 2011–

JONATHAN CAULKINS, Professor of Operations Research and Public Policy; Faculty Chair, Master of Public Policy and Management Program – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1990–

JACK CHOW, Distinguished Service Professor – M.D., University of California at San Francisco School of Medicine; Carnegie Mellon, 2011–

KAREN CLAY, Assistant Professor of Economics and Public Policy – Ph.D., Stanford University; Carnegie Mellon, 1997–

JACQUELINE COHEN, Principal Research Scientist – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1982–

WESLEY COHEN, (Affiliated) Professor of Economics and Social Sciences – Ph.D., Yale University; Carnegie Mellon, 1982–

LAURA DABBISH, Assistant Professor of Information Technology and Organizations – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2006–

GEORGE T. DUNCAN, Professor of Statistics, Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 2011–

DENNIS EPPLE, (Affiliated) Thomas Lord Professor of Economics – Ph.D., Princeton University; Carnegie Mellon, 1974–

JENDAYI E. FRAZER, Distinguished Service Professor – Ph.D., Stanford University; Carnegie Mellon, 2011–

MARTIN GAYNOR, E.J. Barone Professor of Economics and Health Policy; Faculty Chair, Ph.D. Program – Ph.D., Northwestern University; Carnegie Mellon, 1995–

WILPEN GORR, Professor of Public Policy and Management Information Systems – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1985–

ROBERT HAMPSHIRE, Assistant Professor of Operations Research and Public Policy – Ph.D., Princeton University; Carnegie Mellon, 2007–

JAMES F. JORDAN, Distinguished Service Professor – M.B.A., Boston University; Carnegie Mellon, 2011–

MARK S. KAMLET, Provost, CMU, and H. John Heinz III Professor of Economics and Public Policy – Ph.D., University of California at Berkeley; Carnegie Mellon, 1978–

WILLIAM P. KITTREDGE, Associate Teaching Professor – Ph.D., Maxwell School of Public Affairs and Citizenship; Carnegie Mellon, 2011–

STEVEN KLEPPER, (Affiliated) Professor of Economics and Social Science – Ph.D., Cornell University; Carnegie Mellon, 1980–

DAVID KRACKHARDT, Professor of Organizations and Public Policy – Ph.D., University of California at Irvine; Carnegie Mellon, 1991–

RAMAYYA KRISHNAN, William W. and Ruth F. Cooper Professor of Management Science and Information Systems; Faculty Chair, Master of Information Systems Management Program – Ph.D., University of Texas at Austin; Carnegie Mellon, 1987–

KRISTIN KURLAND, Associate Teaching Professor (joint with School of Architecture) – B.A., University of Pittsburgh; Carnegie Mellon, 1999–

LESTER LAVE, James Higgins Professor of Economics and Finance, Professor of Urban and Public Affairs, Professor of Engineering and Public Policy – Ph.D., Harvard University; Carnegie Mellon, 1963–

GORDON LEWIS, Associate Professor of Sociology; Faculty Chair, Master of Public Management Program – Ph.D., Stanford University; Carnegie Mellon, 1969–

PAMELA LEWIS, Teaching Professor of Professional Speaking – D.A., Carnegie Mellon University; Carnegie Mellon, 1980–

ARI LIGHTMAN, Practice Professor, Digital Media and Marketing – M.B.A., Carnegie Mellon University; Carnegie Mellon, 2011–

PETER MADSEN, Senior Lecturer in Ethics and Public Policy – Ph.D., Duquesne University; Carnegie Mellon, 1988–

DONALD MARINELLI, (Affiliated) Professor of Drama and Arts Management (College of Fine Arts) – Ph.D., University of Pittsburgh; Carnegie Mellon, 1984–

DAN MARTIN, Director, Master of Arts Management Program, and Associate Professor (College of Fine Arts) – M.F.A., Brooklyn College/City University of New York; Carnegie Mellon, 1993–

MICHAEL MCCARTHY, Associate Teaching Professor of Information Systems Management – M.S., University of Pittsburgh; Carnegie Mellon, 1999–

JOE MERTZ, Associate Teaching Professor – Ph.D., Carnegie Mellon; Carnegie Mellon, 1994–

KARYN MOORE, Assistant Teaching Professor of Information Systems – M.S., Industrial Administration, Carnegie Mellon University; Carnegie Mellon, 2003–

M. GRANGER MORGAN, Lord Chair Professor of Engineering and Public Policy, and Head, Department of Engineering and Public Policy – Ph.D., University of California at San Diego; Carnegie Mellon, 1974–

DANIEL NAGIN, Theresa and H. John Heinz III Professor of Public Policy, and Research Director, National Consortium on Violence Research – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1979–

DANIEL NEILL, Assistant Professor of Information Systems – M.S., University of Pittsburgh; Carnegie Mellon, 2007–

ERIC NYBERG, Assistant Professor of Computer Science and Public Policy (joint with School of Computer Science) – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1986–

REMA PADMAN, Professor of Operations Research and Information Management; Faculty Chair, Master of Science in Health Care Policy and Management Program – Ph.D., University of Texas at Austin; Carnegie Mellon, 1989–

LYNNE PASTOR, Visiting Associate Teaching Professor – M.S., Industrial Administration, Carnegie Mellon University; Carnegie Mellon, 2007–

SETH RICHARDS-SHUBIK, Assistant Professor of Economics and Public Policy – Ph.D., University of Pennsylvania; Carnegie Mellon, 2011–

STEPHEN ROEHRIG, Associate Professor of Information Systems and Public Policy – Ph.D., University of Pennsylvania Wharton School; Carnegie Mellon, 1991–

DENISE ROUSSEAU, H. J. Heinz II Professor of Organizational Behavior (joint with Graduate School of Industrial Administration) – Ph.D., University of California at Berkeley; Carnegie Mellon, 1994–

KIRON SKINNER, (Courtesy) Assistant Professor of History and Political Science – Ph.D., Harvard University; Carnegie Mellon, 1999–

DONALD SMITH, Professor of Practice; University Director for Economic Development – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1995–

KATHLEEN SMITH, Associate Teaching Professor – Ph.D., candidate, University of Pittsburgh; Carnegie Mellon, 1991–

MICHAEL SMITH, Assistant Professor of Information Technology – Ph.D., Alfred P. Sloan School of the Massachusetts Institute of Technology; Carnegie Mellon, 2000–

RICHARD STAFFORD, Distinguished Service Professor – M.S., Public Policy and Management, Carnegie Mellon University; Carnegie Mellon, 2005–

SHELBY STEWMAN, Professor of Sociology and Demography – Ph.D., Michigan State University; Carnegie Mellon, 1973–

ROBERT STRAUSS, Professor of Economics and Public Policy; Faculty Chair, Master of Science in Educational Technology Management Program – Ph.D., University of Wisconsin; Carnegie Mellon, 1979–

LAURA SYNNOTT, Associate Teaching Professor, Healthcare Policy and Management – M.S., Health Services Administration, University of Michigan; Carnegie Mellon, 2004–

JANUSZ SZCZYPULA, Associate Teaching Professor in Information Systems – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2000–

JOEL TARR, Richard S. Caliguiri Professor of Urban and Environmental History and Policy – Ph.D., Northwestern University; Carnegie Mellon, 1967–

LOWELL TAYLOR, Professor of Economics and Public Policy; Associate Dean of Faculty – Ph.D., University of Michigan; Carnegie Mellon, 1990–

RAHUL TELANG, Assistant Professor of Information Systems – Ph.D., Carnegie Mellon; Carnegie Mellon, 2001–

MARK WESSEL, Dean University of Wisconsin; Carnegie Mellon, 1992–

TIM ZAK, Associate Teaching Professor – M.B.A., New York University; Carnegie Mellon, 2011–

Mellon College of Science

Rebecca W. Doerge, Dean

Maggie Braun, Associate Dean for Undergraduate Affairs

Kenneth Hovis, Assistant Dean for Educational Initiatives

Location: Doherty Hall 1324
www.cmu.edu/mcs

The Mellon College of Science (MCS) has provided the undergraduate training for many of today's leading scientists. We have earned national recognition for our integration of undergraduate education and research from such organizations as the National Science Foundation, the Howard Hughes Medical Institute, and the Beckman Foundation. MCS students gain a broad education in science, mathematics, and the liberal arts while using state-of-the-art computational approaches in their courses, laboratories, and research activities. Our faculty members are committed to teaching as well as to a wide range of scientific research. This combined emphasis on education and research brings special benefits to students, including increased awareness of current scientific developments that are incorporated in classroom instruction, and, most importantly, opportunities to participate with faculty, graduate students, and other research scientists in a variety of research projects.

In the context of rigorous training in each field, the MCS curriculum emphasizes problem-solving, communication, and analytical skills, and it teaches our students the value of hard work and discipline. Our students go on to highly successful careers in a broad range of fields like astrophysics, biotechnology, computer science, business management, environmental science, health care policy, investment banking, marketing analysis, medicine, patent law, and pharmaceuticals. Our alumni credit their education in science for preparing them for a lifetime of learning and achievement; their employers attest to their ability to succeed and to continue learning in an ever-changing world.

The MCS Departments of Biological Sciences, Chemistry, Mathematical Sciences, and Physics each outline their degree programs and courses in the departmental sections. Students select their major in the spring of the first year so that the sophomore year begins with a focus within a department. Most of the courses required within a major are scheduled in the sophomore and junior years, leaving much of the senior year and part of the junior year open for electives. This provides the opportunity to participate in undergraduate research, explore interdisciplinary studies, study abroad, pursue additional majors or minors in other fields, or take other specialty courses oriented toward immediate job placement upon graduation or entry into graduate studies.

Science education in the 21st Century demands educational experiences that are much broader than the traditional preparation of a scholar in a chosen field of science. We want our MCS graduates to be **scholars** who are deeply trained in their discipline(s), and also **professionals** adept at communicating to broad audiences, accustomed to working in diverse, multidisciplinary teams, and keenly aware of the global context of their work. We want them to be **citizens** who are actively involved and globally engaged, and to grow as **persons** with a sense of wellness and balance.

With these ambitions in mind, we have set forth fifteen (15) outcomes that all MCS undergraduate students should complete in their time at Carnegie Mellon. Upon graduation, MCS students should be able to:

1. Apply foundational and advanced mathematical and scientific knowledge in a chosen field of study appropriately and fluently to solve complex problems, to integrate concepts across disciplines, and to adapt their knowledge to new situations.
2. Critically assess their current state of knowledge and expertise and acquire new knowledge in pursuit of both specific scientific goals and new intellectual interests broadly throughout their lifetime.
3. Communicate effectively via oral, visual, and written formats with an understanding of the perspectives and expectations of diverse audiences, including those within their chosen discipline, outside that discipline (but within STEM), and non-scientists.
4. Participate effectively in multidisciplinary research and/or other teams pursuing a shared vision while optimizing team outcomes.
5. Use the appropriate tools and required media literacy to acquire, assess, and analyze data and information from diverse sources.
6. Recognize and explain the importance of at least one current research topic in a STEM field outside of their major.
7. Recognize and explain the similarities and differences in analyzing/approaching problems, including in technical and non-technical fields other than their major.
8. Demonstrate knowledge of the arts, humanities, and social sciences.
9. Recognize the interplay of science, society, public policy, business, and economics.
10. Identify global examples of the reciprocal relationships among science, technology, political forces, societal contexts, and environmental issues.
11. Describe multiple similarities and differences between one's own culture and that of others.
12. Engage in recursive, reflective processes to assess their own levels of physical, emotional, and social wellness and then to choose activities that promote these aspects of wellness.
13. Engage in recursive, reflective processes to balance multiple endeavors by setting priorities and managing time in academic, meta-curricular, and personal dimensions.
14. Recognize ethical issues and appreciate the complexities of interrelationships among them, and the use of information in ethical and legal manners.
15. Articulate how one's own developing skills in science and technology can be increasingly used in constructive community service or engagement that recognizes the potential impact on local and global issues, including environmental impact and sustainability.

Tailoring Your Education

The Mellon College of Science offers students tremendous opportunity for tailoring their education to meet individual professional objectives. Whether you target your degree to a particular field in your discipline via departmental options and concentrations, add a secondary major, minor, or degree to your primary degree program, participate in honors programs, or pursue a master's degree along with your bachelor's degree, MCS has much to offer you. Many of these opportunities are outlined below.

Departmental Concentrations

Each department in MCS offers degrees and programs that allow students to explore particular fields within a science discipline. These are outlined below — see the departmental sections for further details.

Biological Sciences

- Biochemistry
- Biophysics

- Cell Biology
- Computational Biology
- Developmental Biology
- Genetics
- Molecular Biology
- Neuroscience

Chemistry

- Biochemistry
- Biological Chemistry
- Colloids, Polymers, and Surfaces
- Computational Chemistry
- Environmental Chemistry
- Management
- Material Chemistry
- Polymer Science

Mathematical Sciences

- Computational and Applied Mathematics
- Computational Finance
- Discrete Mathematics and Logic
- Mathematics
- Operations Research
- Statistics

Physics

- Applied Physics
- Astrophysics
- Biological Physics
- Chemical Physics
- Computational Physics

Minors, Double Majors, and Double Degrees

As an MCS student, you can pursue additional majors and minors to complement your primary degree, not only within the science college, but also through the other colleges at Carnegie Mellon. Carnegie Mellon offers many exciting interdisciplinary majors and minors, some of which are listed below. In addition, every college and most departments have designed minors or second majors in their discipline so that you can gain expertise in their fields as well.

Some students choose to gain this expertise by following a double degree program. This results in two distinct bachelor's degrees. Please see the section on Undergraduate Academic Regulations for a more formal definition of these "Multiple Degree" programs.

Interdisciplinary Majors and Minors

Here is a sampling of just a few of the interdisciplinary minors and majors offered at Carnegie Mellon (not all are in MCS). Please see the appropriate sections elsewhere in this catalog for specific descriptions and course requirements.

- Biological Sciences and Psychology Major
- Computer Science Minor
- Engineering Studies Minor
- Environmental and Sustainability Studies Minor
- Environmental Policy Major
- Health Care Policy and Management Minor
- International Affairs Minor
- Mathematics and Economics Major
- Neuroscience Major and Minor
- Robotics Minor
- Scientific Computing Minor
- Technology and Policy Minor

For a complete list of the minors offered at Carnegie Mellon, please go to Undergraduate Options (http://coursecatalog.web.cmu.edu/aboutcmu/undergraduateoptions/#minorstext).

University Student-Defined Majors

With a well-thought proposal, you may be able to pursue a major you have designed to meet your particular interests and goals. Please see the catalog section on Student-Defined Majors (http://coursecatalog.web.cmu.edu/aboutcmu/undergraduateoptions/#studentdefinedmajortext).

General Education Requirements

Students pursuing any MCS bachelor's degree will fulfill the 15 Core Education outcomes through their primary MCS major and by completing the following technical and nontechnical breadth requirements prior to graduation.

Technical Breadth Requirements

As a 21st Century practicing scientist or mathematician, our graduates will work with others from a variety of technical backgrounds. Therefore, all of our students will be broadly trained within the technical fields of science and math. Students will fulfill this training by completing four (4) technical courses in the Science, Technology, Engineering, and/or Mathematics (STEM) fields at Carnegie Mellon University.

A student must take at least 9 units, outside of their primary major department, from each of four categories listed below. These may include prerequisite courses or courses required by their major Department but must be outside their home Department. AP/IB/Cambridge credit may not be used to fulfill these requirements. At least three of these courses must be taken in their first year. The categories are:

A. Life Sciences

(Refer to your specific department for how this category should be fulfilled. Some courses have prerequisites that can be satisfied by AP, IB, Cambridge A Level Exams. Please check the prerequisites requirements as necessary.)

LIFE SCIENCES		
02-223	Personalized Medicine: Understanding Your Own Genome	9
02-250	Introduction to Computational Biology	12
or 03-250	Introduction to Computational Biology	
02-261	Quantitative Cell and Molecular Biology Laboratory	9
03-116	Phage Genomics Research	6
03-117	Frontiers, Analysis, and Discovery in Biological Sciences	6
03-121	Modern Biology	9
03-151	Honors Modern Biology	10
03-124	Modern Biology Laboratory	9
03-125	Evolution	9
03-127	How Biological Experiments Work - A Project Course	9
03-132	Basic Science to Modern Medicine	9
03-133	Neurobiology of Disease	9
03-135	Structure and Function of the Human Body	9
03-161	Molecules to Mind	9
03-231	Honors Biochemistry	9
or 03-232	Biochemistry I	
42-101	Introduction to Biomedical Engineering	12
42-202	Physiology	9
85-219	Biological Foundations of Behavior	9

B. Physical Sciences

(Refer to your specific department for how this category should be fulfilled. Some courses have prerequisites that can be satisfied by AP, IB, Cambridge A Level Exams. Please check the prerequisites requirements as necessary.)

PHYSICAL SCIENCES		
09-105	Introduction to Modern Chemistry I	10
09-106	Modern Chemistry II	10
09-107	Honors Chemistry: Fundamentals, Concepts and Applications	10
09-214	Physical Chemistry	9
09-217	Organic Chemistry I	9
09-219	Modern Organic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12

09-225	Climate Change: Chemistry, Physics and Planetary Science	9
09-348	Inorganic Chemistry	10
33-121	Physics I for Science Students	12
33-122	Physics II for Biological Sciences and Chemistry Students	9
33-141	Physics I for Engineering Students	12
33-142	Physics II for Engineering and Physics Students	12
33-151	Matter and Interactions I	12
33-152	Matter and Interactions II	12
33-211	Physics III: Modern Essentials	10
33-224	Stars, Galaxies and the Universe	9
33-225	Quantum Physics and Structure of Matter	9

C. Mathematics, Statistics, and Computer Science

(Refer to your specific department for how this category should be fulfilled. Some courses have prerequisites that can be satisfied by AP, IB, Cambridge A Level Exams. Please check the prerequisites requirements as necessary.)

MATH, STATS, and CS		
02-201	Programming for Scientists	10
21-120	Differential and Integral Calculus	10
21-122	Integration and Approximation	10
21-124	Calculus II for Biologists and Chemists	10
21-127	Concepts of Mathematics	10
21-128	Mathematical Concepts and Proofs	12
21-228	Discrete Mathematics	9
21-241	Matrices and Linear Transformations	10
or 21-240	Matrix Algebra with Applications	
or 21-242	Matrix Theory	
21-259	Calculus in Three Dimensions	9
or 21-268	Multidimensional Calculus	
or 21-269	Vector Analysis	
21-260	Differential Equations	9
or 21-261	Introduction to Ordinary Differential Equations	
36-200	Reasoning with Data	9
36-202	Statistics & Data Science Methods	9
36-217	Probability Theory and Random Processes	9
36-220	Engineering Statistics and Quality Control	9
36-225	Introduction to Probability Theory	9
36-247	Statistics for Lab Sciences	9
36-309	Experimental Design for Behavioral & Social Sciences	9
15-110	Principles of Computing	10
15-112	Fundamentals of Programming and Computer Science	12
15-122	Principles of Imperative Computation	10
15-150	Principles of Functional Programming	10
15-251	Great Ideas in Theoretical Computer Science	12

D. STEM Course

- All of the above courses
- Any introductory engineering course from CIT
- A STEM course approved by an MCS advisor

Technical Breadth-Departmental Requirements

Some of the majors in MCS require certain courses from the technical breadth requirement that are necessary for either prerequisite knowledge in the major or scientific breadth. For each of the four majors in MCS the Technical Breadth Requirement is completed as follows. If these requirements are met by AP/IB/Cambridge A Level Exams, students can choose any course from the categories to fulfill the Technical Breadth Requirement.

Biological Sciences

1. Life Sciences: any courses in this category **except** for the 03-XXX courses
2. Physical Sciences: 09-105, 09-106, 33-121 and 33-122
3. Math/CS/Stats: 21-120 and (21-122 or 21-124)
4. STEM Elective: will be filled by courses above or any STEM course from the approved list.

Chemistry

1. Life Sciences: 03-121 or 03-231 or 03-232
2. Physical Sciences: 33-121 and 33-122
3. Math/CS/Stats: 21-120 and (21-122 or 21-124)
4. STEM Elective: will be filled by courses above or any STEM course from the approved list.

Mathematical Sciences

1. Life Sciences: any courses in this category
2. Physical Sciences: any course in this category
3. Math/CS/Stats: any course in this category **except** for the 21-XXX courses, 36-200 Reasoning with Data, or 36-202
4. STEM Elective: any STEM course from the approved list.

Physics

1. Life Sciences: 03-121
2. Physical Sciences: 09-105
3. Math/CS/Stats: 21-120, 21-122, 21-259
4. STEM Elective: will be fulfilled by courses above or any STEM course from the approved list.

Nontechnical Breadth Requirements

MCS aspires for all of our undergraduates to leave our campus with a strong sense of personal integrity, social responsibility, ethics, working with diverse others, global engagement, and personal health and well-being. The following nontechnical breadth requirements will require students to develop a personalized plan for their course selection and meta-curricular participation to maximize their CMU experience. Our graduates will be well trained to be life-long and life-wide learners that will lead the scientific community and the world at large.

All candidates for MCS bachelor's degrees must complete the following nontechnical breadth requirements:

A. The following three courses must be taken in the first year:

38-101	EUREKA!: Discovery and Its Impact	6
76-101	Interpretation and Argument A total of nine units must be completed in order to fulfill this requirement	9
or 76-102	Advanced First Year Writing: Special Topics	
or 76-106	Writing about Literature, Art and Culture	
or 76-107	Writing about Data	
or 76-108	Writing about Public Problems	
99-101	Computing @ Carnegie Mellon	3

B. The following courses must be taken in the Spring of the junior year:

38-302 Science and Society and either 38-303 Professional Development and Life Skills or 70-246 Innovation & Entrepreneurial Mindset

C. ENGAGE Courses:

The ENGAGE courses are self-directed learning opportunities (using the MyCORE online platform) designed to enhance students' engagement with wellness, the arts and community service. Please see the course description for information on when these courses should be taken:

ENGAGE COURSES		
38-110	ENGAGE in Service	1
38-220	ENGAGE in the Arts	2
38-230	ENGAGE in Wellness: Looking Inward	1
38-330	ENGAGE in Wellness: Looking Outward	1
38-430	ENGAGE in Wellness: Looking Forward	1

D. Cultural/Global Understanding Course:

Cultural or global understanding course(s) may be taken at any time. Nine (9) or more units from the following group of courses will fulfill this requirement. Any student who finds an appropriate Carnegie Mellon course not on the list below that might fulfill this requirement should contact their academic advisor to review the course description to determine if it can be substituted. Cultural and global understanding courses that are taken while studying abroad can be used to fulfill this category. In addition, transfer courses will also be considered for this category. However, this course requirement *cannot* be satisfied with AP/IB/Cambridge exam credit.

CULTURAL/GLOBAL UNDERSTANDING		
57-173	Survey of Western Music History	9
57-209	The Beatles	9

57-306	World Music	9
70-342	Managing Across Cultures	9
76-221	Books You Should Have Read by Now: 16th & 17th C. Pop Culture	9
76-227	Comedy	9
76-232	Introduction to Black Literature	9
76-239	Introduction to Film Studies	9
76-241	Introduction to Gender Studies	9
76-386	Language & Culture	9
79-104	Global Histories	9
79-201	Introduction to Anthropology	9
79-202	Flesh and Spirit: Early Modern Europe, 1400-1750	9
79-205	20th Century Europe	9
79-210	Identity, Nationhood, and State	9
79-211	Modern Southeast Asia: Colonialism, Capitalism, and Cultural Exchange	9
79-213	The American Railroad: Decline and Renaissance in the Age of Deregulation	6
79-214	Paris in Revolt: History, Literature, Film	6
79-216	Genghis Khan and the Mongol Empire	3
79-217	The War in Vietnam	6
79-220	Screening Mexico: Mexican Cinema, 1898 to Present	6
79-223	Mexico: From the Aztec Empire to the Drug War	9
79-227	Modern Africa: The Slave Trade to the End of Apartheid	9
79-229	Origins of the Arab-Israeli Conflict, 1880-1948	9
79-230	Arab-Israeli Conflict Since 1948	9
79-232	Arabian Peninsula Environmental History	9
79-233	The United States and the Middle East since 1945	9
79-235	Caribbean Cultures	9
79-240	Development of American Culture	9
79-241	African American History: Africa to the Civil War	9
79-242	African American History: Reconstruction to the Present	9
79-244	Women in American History	9
79-245	Capitalism and Individualism in American Culture	9
79-261	The Last Emperors: Chinese History and Society, 1600-1900	9
79-262	Modern China: From the Birth of Mao ... to Now	9
79-263	Mao and the Chinese Cultural Revolution	9
79-264	Tibet and China: History and Propaganda	6
79-265	Russian History: From the First to the Last Tsar	9
79-266	Russian History and Revolutionary Socialism	9
79-267	The Soviet Union in World War II: Military, Political, and Social History	9
79-275	Introduction to Global Studies	9
79-307	Religion and Politics in the Middle East	9
79-345	Roots of Rock & Roll	9
79-349	United States and the Holocaust	6
79-350	Early Christianity	9
79-377	Food, Culture, and Power: A History of Eating	9
80-100	Introduction to Philosophy	9
80-250	Ancient Philosophy	9
80-251	Modern Philosophy	9
80-253	Continental Philosophy	9
80-254	Analytic Philosophy	9
80-255	Pragmatism	9
80-276	Philosophy of Religion	9
82-xxx	Any course from Modern Languages	
99-3xx	Any of the Country Today courses	3

E. Nontechnical Elective Courses

To fulfill this requirement, students must complete a minimum of four (4) nontechnical courses totaling at least 36 units in the College of Fine Arts, the Tepper School of Business, and/or the Dietrich College for Humanities and Social Sciences. A maximum of 18 units of these units may be fulfilled via AP/IB/Cambridge exam credit. Up to 36 units of these nontechnical elective units may be filled by transfer credit (with prior approval through the MCS transfer credit process). Courses counted toward the Cultural/Global Understanding requirement and the First-Year Writing requirement **do not** count toward this requirement.

Note: Check our web site for courses from DC, CFA, and Tepper that may NOT be used (http://www.cmu.edu/mcs/undergrad/advising/hss-finearts/deletions.html) to satisfy this requirement because they are too technical in nature, plus a list of courses in other colleges (including SCS, CIT, and Heinz College) that do satisfy (http://www.cmu.edu/mcs/undergrad/advising/hss-finearts/additions.html) this requirement.

The following requirements apply to all MCS bachelor's degrees:

1. Students must complete a minimum of 360 units.
2. The four courses required for the Technical Breadth category can be completed at Carnegie Mellon or via transfer credit.
3. AP/IB/Cambridge exam credit cannot be used to fulfill the Cultural/Global Requirement. Cultural and global understanding courses that are taken while studying abroad can be used to satisfy this requirement. In addition, transfer courses will also be considered for this category.
4. For the Nontechnical Electives requirement, students must complete a minimum of four courses totaling at least 36 units with a maximum of 18 units from AP/IB/Cambridge exam credit. In addition, transfer courses will also be considered for this category.

Honors Degree Programs in MCS

Several of the departments in MCS offer students an opportunity to participate in a departmental honors degree program. Some of these programs result in a master's degree along with the bachelor's degree (see next section on accelerated master's programs). These programs are listed below; see the department's section of the catalog for more details.

- Honors Program in Research Biology
- Departmental Honors in Chemistry
- Honors B.S./M.S. Program in Chemistry
- Honors B.S./M.S. Program in Mathematical Sciences

Accelerated Master's Programs

Carnegie Mellon offers some accelerated master's programs for motivated students, whereby students complete both the bachelor's and the master's degree in four or five years. Some programs are in the student's home department in MCS as part of an honors program, while others are offered through one of our graduate schools at Carnegie Mellon. Below is a listing of the programs currently available to MCS students; please see the appropriate sections of the catalog for more details.

- Honors B.S./M.S. Program in Chemistry
- Honors B.S./M.S. Program in Mathematical Sciences
- Accelerated Master's Program in the Heinz College

Study Abroad

There are many programs for studying abroad, usually during your junior year. Please see the catalog section on Undergraduate Options for more details, and talk with the Office of International Education to get information and advice specifically for you.

Pre-Professional Programs

Many students in the Mellon College of Science decide to pursue professional training such as medical school or law school after completing their undergraduate work. Carnegie Mellon offers strong advising services to support these students. Through these programs, students get help with everything from course selection to identification of important experiential opportunities to the application process itself.

Health Professions Program

Faculty Contact: Jason D'Antonio

Please see the Undergraduate Options (http://coursecatalog.web.cmu.edu/aboutcmu/undergraduateoptions/#healthproftext) section for details on the Health Professions Program.

Pre-Law Advising Program

Faculty Contact: Joseph Devine

Please see the Undergraduate Options (http://coursecatalog.web.cmu.edu/aboutcmu/undergraduateoptions/#prelawtext) section for details on the Pre-Law Advising Program.

Intercollege Programs

Bachelor of Science and Arts Degree Program (BSA)

Students in the Bachelor of Science and Arts Degree Program (http://coursecatalog.web.cmu.edu/servicesandoptions/intercollegeprograms/bxaintercollege/.html) are jointly admitted to MCS and the College of Fine Arts (CFA). This is a degree program for students who are naturally gifted in both the arts and the sciences, and allows for the combining of talents in these areas.

Science and Humanities Scholars Program (SHS)

Students who entered Carnegie Mellon prior to the fall of 2018 are eligible for this program and should see their entering year catalog (http://coursecatalog.web.cmu.edu/previous) for more information and the SHS general education requirements.

Applying Your Education Through Research

An important feature of education in MCS is the opportunity for undergraduate research experience. This experience may be arranged as a course taken for credit or occasionally as a part-time job.   Our website (http://coursecatalog.web.cmu.edu/schools-colleges/melloncollegeofscience/www.cmu.edu/mcs) offers a range of useful information including links to faculty research areas, links to undergraduate research programs at other institutions, and ideas on how to get involved. Because of the strong research base of MCS, undergraduate research positions offer an exciting opportunity to apply your theoretical training to participate in the discovery of new knowledge.

Students can earn MCS Research Honors for significant research accomplishments; see the policy outlined below for the requirements.

Mellon College of Science Research Honors

Undergraduates in the Mellon College of Science will be awarded MCS College Honors at the completion of their degree if they have met one of these requirements:

1. Successfully completed the Honors BS/MS program in the Department of Chemistry or Department of Mathematical Sciences.
2. Successfully completed the departmental honors program in the Department of Biological Sciences or the Department of Chemistry.
3. Earned a cumulative grade point average of ≥3.20 (by their seventh semester or by the time of graduation) and carried out significant research. Typically, this would consist of an academic project carried out for at least two semesters. However, a single project that spans a summer and a semester or that the research mentor deems to be significant and sustained, even if the student worked for pay rather than credit, will be allowed. In addition, some form of public dissemination of this research, which has been approved by the MCS Associate Dean for Undergraduate Affairs, such as a peer reviewed publication, research thesis, or presentation at an external scientific meeting is required. The Meeting of the Minds by itself is not sufficient and participation in a pre-approved judged competition (eg. Sigma Xi, Math Department competition, or Psychology department competition) is necessary.

Final approval of nominations for MCS Honors will come from the Dean of MCS and the MCS Associate Dean for Undergraduate Affairs.

Research Centers

The Mellon College of Science is home to a number of innovative research centers. These centers are particularly strong because of the interdisciplinary collaboration of their scientists. This interdisciplinary research brings international prestige to the college. Many students conduct undergraduate research with one of these centers.

The Bruce and Astrid McWilliams Center for Cosmology joins research efforts in astrophysics and particle physics and partners with computer science, statistics, and other disciplines to unravel the mysteries of the universe.

The Center of Atmospheric Particle Study’s goal is to be the world leader in science, engineering, and policy covering the full role of fine particulate matter in the atmosphere. Our goal in research is to advance the state of knowledge across this spectrum substantially, to provide both policy-relevant research, and to participate directly and actively in the evolution of environmental policy related to particulate matter.

The Center for Computational Finance’s mission is to improve the interaction between academic research and the finance industry.

The Center for Macromolecular Engineering’s goals are to enhance the benefits of polymer science to society by developing new methods to prepare advanced polymer materials, train and develop tomorrow’s scientists, and transfer technology to industry.

The Center of Nano-enabled Device and Energy Technologies’ mission is to work on real-world problems that can be solved potentially with appropriate nano-enabled technologies.

The Center for the Neural Basis of Cognition is a joint program between Carnegie Mellon University and the University of Pittsburgh. It synthesizes the disciplines of basic and clinical neuroscience, cognitive psychology, and computer science, combining neurobiological, behavioral, computational, and brain imaging methods.

The Center for Nonlinear Analysis was established in 1991. A special focus for applications emphasizes new and innovative methods to study contemporary issues in materials science. The center has created a vigorous environment for collaboration among mathematical and allied scientists.

The Center for Nucleic Acids Science and Technology is a community of Carnegie Mellon scientists and engineers unified by interests in the chemistry, biology, and physics of DNA, RNA, and PNA (peptide nucleic acid).

The Institute for Green Science has been established as a research, education, and development center in which a holistic approach to sustainability science is being developed. The focus of the institute is in three areas: renewable energy technologies, chemical feedstocks, and benign alternatives to polluting technologies.

The Molecular Biosensor and Imaging Center uses an interdisciplinary approach to develop reagents, microscopes, and imaging tools and applies them to the investigation of fundamental problems in biology and biotechnology.

The Pittsburgh Supercomputing Center provides information on advanced scientific computing for engineering and research.

Academic Standards

Academic Actions

MCS Dean’s List

Each semester MCS recognizes those students with outstanding academic records by naming them to the Dean’s List. The criteria for such recognition are as follows:

Dean’s List

The student must earn a quality point average of at least 3.50 while completing a minimum of 36 factorable units and earning no incomplete grades.

Dean’s List High Honors

The student must earn a quality point average of at least 3.75 while completing a minimum of 36 factorable units and earning no incomplete grades.

Probation, Suspension, and Drop

In the first year, quality point averages below 1.75 in either semester invoke an academic action. For all subsequent semesters an academic action will be taken if the semester QPA or the cumulative QPA (excluding the first year) is below 2.00.

The progression below between probation, suspension, and drop is typical. However, in unusual circumstances, MCS College Council may choose to suspend or drop a student without prior probation.

Warning of probation

First-year students who earn between a 1.75 and 1.99 semester QPA will receive a Warning of Probation. This indicates that the student did not qualify for probation because they are a first-year student (see below for details of probation standards), but if their semester

QPA is below 2.0 in subsequent semesters, it will result in academic probation.

Probation

The action of probation will be taken if:

- One semester of the first year is below 1.75 QPA.
- The semester QPA of a student in good standing beyond the first year falls below 2.00.
- A student drops below full-time status (less than 36 units) after the 10th day of classes in a semester. The student would be on probation for the next semester (fall and spring only).

The term of probation is one semester as a full-time student. A student is occasionally continued on probation who has had one semester on probation and is not yet meeting minimum requirements but whose record indicates that the standards are likely to be met at the end of the next semester of study. First-year students are no longer on probation at the end of the second semester if their semester QPA is 1.75 or above.

Suspension

A student who does not meet minimum standards at the end of one semester of probation will be suspended.

A first-year student will be suspended if the QPA from the first two semesters is below 1.75.

A student in the third or subsequent semester of study will be suspended if the semester factor or the cumulative factor (excluding the first year) is below 2.00 for two consecutive semesters.

The minimum period of suspension is one academic year (two semesters). At the end of that period a student may return to school on probation by:

- Receiving permission in writing from the MCS Associate Dean for Undergraduate Affairs.
- Completing a Return from Leave form from Enrollment Services.
- Providing transcripts and clearance forms if the student has been in a degree program at another college or university, even though academic credit earned will not transfer to Carnegie Mellon unless prior approval has been granted by the MCS Associate Dean for Undergraduate Affairs.

Employment within the university in non-student jobs is possible for students on academic suspension, subject to the hiring criteria of the hiring department. However, a student on academic suspension wishing to accept a job on campus must speak with the Associate Dean of the student’s college to ensure that the employment will not constitute a violation of the terms of suspension. The Associate Dean will generally allow such employment, in consultation with the Dean of Student Affairs. One employment benefit not available to students on academic suspension who accept a full-time job with the University is the option to take courses through tuition remission. The option to take courses becomes available only after the academic suspension is over.

Drop

This is a permanent severance from the Mellon College of Science. Students are dropped when it seems clear that they will never be able to meet minimum standards. A student who has been suspended and who fails to meet minimum standards after returning to school is dropped.

A student who has been academically dropped or academically suspended and who is not employed by the University must absent themselves from campus and is, for the term of the suspension, barred from all activities and affiliations that stem from one’s status as an enrolled student. These include registering or enrolling for courses, sitting in on classes, living in residence halls or Greek houses, membership and participation in student activities, and employment in student jobs. (NOTE: Exceptions to the restriction from student jobs for students on academic suspension will in general be granted for summer employment if the position was accepted prior to the decision to drop.)

Transfer into MCS Departments

This section describes the variety of entry points into the Mellon College of Science for students already admitted to a university (Carnegie Mellon or another university). All prospective students should contact the Office of Admission for details about the application process for Carnegie Mellon University.

Students entering MCS or already declared in MCS:

Entering undergraduate students admitted to MCS can choose to pursue any major within MCS. This choice must be made prior to the first semester of the sophomore year (normally during the second semester of the first year) and does not require approval by any department.

Students who have declared a major in MCS and wish to transfer into another department within MCS must have approval (https://www.cmu.edu/mcs/undergrad/advising/forms) from the new department (generally through the primary academic advisor (https://www.cmu.edu/mcs/undergrad/advising) in the new department) and from the MCS Associate Dean for Undergraduate Affairs. Students wishing to transfer into the Mathematical Sciences Department must have completed 21-127 Concepts of Mathematics or 21-128 Mathematical Concepts and Proofs AND 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory with grades of B or better in both courses as well as an overall QPA of 3.5 or higher.

MCS undergraduate students beyond the first year wishing to transfer into another MCS department may do so if they are not on academic probation and if there is room in the department of their choice. If the demand for any department exceeds the space available, then the department will admit students based on a comparative evaluation of all applicants at the end of each semester, up to the limit of available space.

Students enrolled in another college at Carnegie Mellon:

Undergraduate students admitted to colleges other than MCS and wishing to transfer into an MCS department during their first year should consult with the MCS Associate Dean for Undergraduate Affairs (https://www.cmu.edu/mcs/undergrad/advising). Students may submit an internal transfer request (https://www.cmu.edu/mcs/undergrad/advising/forms) no earlier than the first day of their second semester.

Potential transfer students into the departments of Biological Sciences, Chemistry, or Physics must also have credit for 21-120 Differential and Integral Calculus and, depending on major choice, should have completed one of the following courses at Carnegie Mellon: 03-121 Modern Biology, 09-105 Introduction to Modern Chemistry I, or 33-111 Physics I for Science Students. Higher level courses will also be considered by the MCS Associate Dean as alternatives to these courses. Students wishing to transfer into the Mathematical Sciences Department must have completed 21-127 Concepts of Mathematics or 21-128 Mathematical Concepts and Proofs AND 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory with grades of B or better in both courses as well as an overall QPA of 3.5 or higher.

Undergraduate students not in MCS and wishing to transfer into a department in MCS beyond the first semester will be considered for transfer on a space available/academic performance basis. An MCS department may refuse a transfer to a non-MCS student if there are space restrictions and/or if the student’s chance for success is determined to be questionable based on past academic performance.

Students wishing to transfer from another university into an MCS department:

A student first applies through the Office of Admission. If the Office of Admission believes the applicant is acceptable, the student’s record is sent to the appropriate department for evaluation and a decision on acceptance. The MCS department head has the right to refuse to accept the student if there are space restrictions and/or if the student’s chance for success in the MCS department is determined to be questionable based on past academic performance.

Graduation Requirements

To be eligible to graduate, undergraduate students must complete all course requirements for their program with a cumulative Quality Point Average of at least 2.00 for all courses taken. For undergraduate students who enrolled at Carnegie Mellon as freshmen and whose freshman grades cause the cumulative QPA to fall below 2.00, this requirement is modified to be a cumulative QPA of at least 2.00 for all courses taken after the freshman year. Note, however, the cumulative QPA that appears on the student's final transcript will be calculated based on all grades in all courses taken, including freshman year. Some programs may have additional QPA requirements in order to graduate. Students are encouraged to confirm all graduation requirements with their academic advisor.

A minimum of 360 units must be completed. This will include the MCS Core Courses (technical and nontechnical electives) and all departmental course requirements.

Students will be required to meet the residency requirement and to have met all financial obligations to the university before being awarded a degree. The residency requirement is detailed in the Academic Regulations section of the catalog. A student may seek permission to modify graduation requirements by petition to the MCS College Council.

Graduation Honors

There are two types of honors awarded at graduation.

University Honors

University Honors are automatically awarded to students who have earned a cumulative Q.P.A. of 3.5 or better after either seven semesters or by the time they are certified for graduation.

College Research Honors

Please see the section “Mellon College of Science Research Honors (p. 541)” for information on how to qualify for College Research Honors.

Faculty

WILLIAM ALBA, Assistant Dean for Diversity – Ph.D.,

MAGGIE BRAUN, Associate Dean for Undergraduate Affairs – Ph.D. ,

JASON D'ANTONIO, Director of Health Professions Program – Ph.D.,

KENNETH HOVIS, Assistant Dean for Educational Initiatives – Ph.D.,

MANFRED PAULINI, Associate Dean for Graduate and Faculty Affairs – Ph.D.,

Administration

CHARLOTTE BARTOSH, Interdisciplinary Laboratory Research Technician

CHRISTINE GILCHRIST, Senior Academic Coordinator, MCS

TARA PRIMIERO, Administrative Coordinator

MAY SIMAAN, Administrative Coordinator

Department of Biological Sciences

Veronica Hinman, Department Head

Becki Campanaro, Assistant Department Head for Undergraduate Affairs

Location: Doherty Hall 1321
www.cmu.edu/bio

A major revolution is occurring in the field of biological sciences. Biology is undergoing unprecedented technological advances in biochemistry, biophysics, cell biology, genetics, molecular biology, developmental biology, neuroscience and computational biology. Carnegie Mellon's Department of Biological Sciences is nationally recognized as one of the outstanding departments in these areas. Advances in basic research are already being used to solve problems, not only in medicine and public health, but also in areas such as agriculture, forestry, mining, energy, and in industrial and pharmaceutical manufacturing processes. The department provides its students with an education that has both intellectual breadth and depth of exposure to modern research biology. This education can be used to gain employment immediately after graduation in government, industry or academic research laboratories, or to pursue graduate studies in a variety of areas such as science, medicine, public health, law, or business. A degree in biological sciences provides excellent preparation for medical school or other graduate programs in the health professions. These students are aided by the Carnegie Mellon Health Professions Program (HPP), an advisory and resource service for all Carnegie Mellon students who are considering careers in the health care field. (See the HPP (http://coursecatalog.web.cmu.edu/servicesandoptions/undergraduateoptions/#healthprofessionsprogram) section in this catalog or www.cmu.edu/hpp for more information.)

The department offers a Bachelor of Science (B.S.) degree in Biological Sciences. This program has a distinctive core curriculum that provides a foundation in biology, chemistry, computer science, mathematics, and physics. In addition to the core courses, the program includes six biology electives, free electives as well as humanities, social science and fine arts electives. With these electives, students can shape a degree program according to their own interests and career goals. For students who have an interest in a particular field of biology and wish to have a specialized focus, the department offers options in biochemistry, biophysics, cell biology, computational biology, developmental biology, genetics, molecular biology and neuroscience that provide the relevant training in each area. The options are especially recommended for students who are considering graduate school in one of these areas.

In this exciting era that includes the influence of biology and the life sciences on many fields from medicine to law, the in-depth exposure to multiple disciplines provides opportunities for students to prepare for involvement at the forefront of emerging new fields, markets, and policy changes. The Department of Biological Sciences at Carnegie Mellon is working at these new interfaces through interdisciplinary research and educational programs. Innovative interdisciplinary degrees which are offered by the department include the inter-college B.S. degree in Neuroscience as well as the unified B.S. degree in Biological Sciences and Psychology. Students also explore interdisciplinary studies through the Science and Humanities Scholars program, or pursue interests at the interface between the arts and sciences through the Bachelor of Science and Arts (B.S.A.) degree program combining biological sciences with a discipline in the College of Fine Arts. A stand-alone Bachelor of Arts (B.A.) degree is available for students who wish to expand their educational training into other fields. Many students choose to broaden their education by pursuing minors and additional majors in disciplines throughout the university, not just within the Mellon College of Science.

One of the most important features of the Department of Biological Sciences is the opportunity for undergraduate students to interact with faculty. Providing a solid foundation to scientific practice is critical; therefore, the department offers first-year students a variety of inquiry-based, hands-on courses that incorporate a wide range of topics and interests within Biological Sciences. These courses kick-start the transformation of science students to scientists. We encourage our students to get to know their faculty through one of these courses, or through mentored, independent research projects in the faculty laboratories. Our faculty members are prominent research scientists who also teach beginning and advanced courses. The upper level teaching laboratories are located in the same building as the faculty research laboratories and share scientific equipment. We encourage students to make themselves aware of the research areas of the faculty and to develop research projects with faculty. While such research is usually most important in the senior year, it may begin earlier in a student's undergraduate training. The department has an Honors Program in Research Biology to facilitate a more intensive involvement in research for eligible students. During the past four years, more than 85 percent of the undergraduate biology majors have worked with faculty on their research and, in some cases, have been co-authors of research papers and have given presentations at national meetings.

Since the fall of 2011, the Department of Biological Sciences has offered B.S. degrees in Biological Sciences as well as Computational Biology at Carnegie Mellon University in Doha, Qatar. Students enrolled in either of these degree programs will also complete the requirements outlined below. However, a limited number of required courses for the CMU-Qatar program are offered through a collaboration with the Weill Cornell Medical College in Qatar. For a listing of how the degree requirements are fulfilled for students enrolled in Doha, please consult the CMU-Qatar website (www.qatar.cmu.edu/curriculum-bs).

Program Outcomes

Upon graduation recipients of the BS or BA degree in Biological Sciences will:

- Use the basic concepts and experimental, computational, and theoretical methods of the core fields of science, mathematics and technology.
- Use foundational knowledge from the natural sciences and mathematics for advanced work in the discipline.
- Understand and apply the scientific method.
- Apply disciplinary knowledge toward solving problems.
- Use modern methods for finding and sharing current scientific information and primary literature.
- Convey information including scientific content in written and oral formats within Biological Sciences.
- Work in multidisciplinary and culturally diverse teams.
- Demonstrate proper values and ethics within Biological Sciences, the University, and the larger scientific community.

B.S. Biological Sciences

The Bachelor of Science (B.S.) in Biological Sciences is built around a core program and elective units as detailed in the following section.

Degree Requirements:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-201	Undergraduate Colloquium for Sophomores	2
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
03-250	Introduction to Computational Biology	12
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	12
03-344	Experimental Biochemistry	12
or 03-345	Experimental Cell and Developmental Biology	
or 03-346	Experimental Neuroscience	
03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	Biological Sciences Electives [1]	54
Total Biology units		131

[1] Details on electives can be found in the "Biological Sciences Electives" section (see below).

Mathematics, Physics and Computer Science		Units
02-201	Programming for Scientists	10
or 15-110	Principles of Computing	
or 15-112	Fundamentals of Programming and Computer Science	
21-120	Differential and Integral Calculus	10
21-124	Calculus II for Biologists and Chemists	10

or 21-122	Integration and Approximation	
33-121	Physics I for Science Students	12
or 33-141	Physics I for Engineering Students	
33-122	Physics II for Biological Sciences and Chemistry Students	9
or 33-142	Physics II for Engineering and Physics Students	
99-101	Computing @ Carnegie Mellon	3
Total Science units		54

Chemistry		Units
09-105	Introduction to Modern Chemistry I [2]	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
or 09-219	Modern Organic Chemistry	
09-218	Organic Chemistry II	9
or 09-220	Modern Organic Chemistry II	
09-207	Techniques in Quantitative Analysis	9
or 09-221	Laboratory I: Introduction to Chemical Analysis	
09-208	Techniques for Organic Synthesis and Analysis	9
or 09-222	Laboratory II: Organic Synthesis and Analysis	
Total Chemistry units		56

[2] Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

Elective Units	Units
Free Electives	48
MCS Nontechnical Breadth Requirements	72
Total Elective units	120

Minimum number of units required for degree: 360

MCS Technical Breadth Requirements

Majors entering CMU and majoring in Biological Sciences (or affiliated majors) in the Fall of 2015 or beyond will fulfill the MCS Technical Breadth requirements as follows:

1. Life Sciences: any courses in this category except for the 03-XXX courses (these can be counted as general bio electives towards your degree)
2. Physical Sciences: 09-105, 09-106, 33-121 and 33-122
3. Math/CS/Stats: 21-120 and (21-122 or 21-124)
4. STEM Elective: will be filled by courses above or any STEM course from the approved list.

Biological Sciences Electives

The following specifications apply to Biological Sciences electives:

- At least 18 units must be at the 03-3xx level or above, exclusive of 03-445 and 03-370.
- Up to three interdisciplinary electives may count as biology electives.
- Up to 18 units of 03-445 Undergraduate Research may count as general biology electives; a maximum of 36 units can count for the minimum units required for graduation.
- Courses in biology taken through cross-registration or study abroad at another university may count as electives if prior permission is obtained from the Carnegie Mellon Department of Biological Sciences advisor.

Departmental Electives Group

03-117	Frontiers, Analysis, and Discovery in Biological Sciences	6
03-124	Modern Biology Laboratory	9
03-125	Evolution	9
03-126	Cellular Response to the Environment	4
03-127	How Biological Experiments Work - A Project Course	9
03-133	Neurobiology of Disease	9
03-161	Molecules to Mind	9
03-326	Evolution of Regulatory Genomics	4.5
03-327	Phylogenetics	9
03-350	Developmental Biology	9
03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
03-364	Developmental Neuroscience	9
03-365	Neural Correlates of Learning and Memory	9
03-366	Biochemistry of the Brain	9
03-370	Principles of Biotechnology	9
03-390	Molecular and Cellular Immunology	9
03-391	Microbiology	9
03-392	Microbiology Laboratory	6
03-428	Genome Editing Biotechnology	4.5
03-435	Cancer Biology	9
03-439	Introduction to Biophysics	9
03-442	Molecular Biology	9
03-445	Undergraduate Research	Var.
03-451	Advanced Developmental Biology and Human Health	9
03-511	Computational Molecular Biology and Genomics	9
03-512	Computational Methods for Biological Modeling and Simulation	9
03-534	Biological Imaging and Fluorescence Spectroscopy	9
03-545	Honors Research	9
03-620	Techniques in Electron Microscopy	9
03-711	Computational Molecular Biology and Genomics	12
03-712	Computational Methods for Biological Modeling and Simulation	12
03-713	Bioinformatics Data Integration Practicum	6
03-726	Evolution of Regulatory Genomics	6
03-727	Phylogenetics	12
03-728	Genome Editing Biotechnology	6
03-730	Advanced Genetics	12
03-740	Advanced Biochemistry	12
03-741	Advanced Cell Biology	12
03-742	Advanced Molecular Biology	12
03-744	Membrane Trafficking	9
03-751	Advanced Developmental Biology and Human Health	12
03-762	Advanced Cellular Neuroscience	12
03-763	Advanced Systems Neuroscience	12
03-765	Advanced Neural Correlates of Learning and Memory	12
03-770	Principles of Biotechnology	12
03-791	Advanced Microbiology	12
03-871	Structural Biophysics	12

Interdisciplinary Electives Group

Up to three of the following courses may count as biology electives:

09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
09-519	Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry	9
09-521	Metals in Biology: Function and Reactivity	6
09-535	Applied topics in Macromolecular and Biophysical Techniques	9
21-127	Concepts of Mathematics	10
21-259	Calculus in Three Dimensions	9
21-260	Differential Equations	9
36-200	Reasoning with Data	9
36-247	Statistics for Lab Sciences	9
42-202	Physiology	9
85-219	Biological Foundations of Behavior	9

Options for the B.S. in Biological Sciences

Students who wish to specialize in a particular area of biology can do so through a set of departmentally defined options. A student who completes the required biology electives for any option can have up to two noted on his or her transcript. Options need not be declared. The elective courses required for each of the options are listed below.

Biochemistry Option

Required Biology Electives:

03-740	Advanced Biochemistry	12
21-259	Calculus in Three Dimensions	9
or 21-260	Differential Equations	

Any ONE of the following courses:

09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
09-519	Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry	9
09-521	Metals in Biology: Function and Reactivity	6

Recommended Biology Electives:

03-442	Molecular Biology	9
03-534	Biological Imaging and Fluorescence Spectroscopy	9
03-439	Introduction to Biophysics	9
03-871	Structural Biophysics	12

Biophysics Option

Required Biology Electives:

03-740	Advanced Biochemistry	12
03-439	Introduction to Biophysics	9
21-259	Calculus in Three Dimensions	9
or 21-260	Differential Equations	

Recommended Biology Electives:

03-534	Biological Imaging and Fluorescence Spectroscopy	9
03-871	Structural Biophysics	12

Cell Biology Option

Required Biology Electives:

03-350	Developmental Biology	9
03-741	Advanced Cell Biology	12

Any ONE of the following courses:

03-362	Cellular Neuroscience	9
03-390	Molecular and Cellular Immunology	9

Computational Biology Option

Required Biology Electives:

03-711	Computational Molecular Biology and Genomics	12
15-210	Parallel and Sequential Data Structures and Algorithms	12

Any ONE of the following courses:

36-247	Statistics for Lab Sciences	9
21-260	Differential Equations	9
21-241	Matrices and Linear Transformations	10

Recommended Biology Electives:

03-512	Computational Methods for Biological Modeling and Simulation	9
15-451	Algorithm Design and Analysis	12
09-560	Computational Chemistry	12

Developmental Biology Option

Required Biology Electives:

03-350	Developmental Biology	9
03-442	Molecular Biology	9
03-751	Advanced Developmental Biology and Human Health	12

Recommended Biology Electives:

03-326	Evolution of Regulatory Genomics	4.5
03-741	Advanced Cell Biology	12

Genetics Option

Required Biology Electives:

03-326	Evolution of Regulatory Genomics	4.5
03-327	Phylogenetics	9
03-442	Molecular Biology	9
03-730	Advanced Genetics [6]	12

[6] Minimum grade of B in 03-330 or 03-220 required.

Recommended Biology Electives:

03-391	Microbiology	9

Molecular Biology Option

Required Biology Electives:

03-442	Molecular Biology	9
09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
03-726	Evolution of Regulatory Genomics	6
03-727	Phylogenetics	12

Recommended Biology Electives:

03-390	Molecular and Cellular Immunology	9
03-391	Microbiology	9
03-730	Advanced Genetics	12

Neuroscience Option

Required Biology Electives:

03-362	Cellular Neuroscience [7]	9
03-363	Systems Neuroscience [7]	9

Any ONE of the following courses:

03-133	Neurobiology of Disease	9
03-350	Developmental Biology	9
03-364	Developmental Neuroscience	9
03-365	Neural Correlates of Learning and Memory	9
03-366	Biochemistry of the Brain	9
03-534	Biological Imaging and Fluorescence Spectroscopy	9
42-202	Physiology	9
85-219	Biological Foundations of Behavior	9

[7] One of these courses must be completed at the Graduate Level (Complete either 03-762 or 03-763).

B.S. Biological Sciences/Neuroscience Track

The Bachelor of Science in Biological Sciences/Neuroscience Track provides an option for those Biological Sciences majors who are interested in an intensive curricular focus in neuroscience. The requirements of the Track are the same as those listed for the B.S. in Biological Sciences with the following changes to the biological sciences elective requirements:

Degree Requirements:

03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
03-765	Advanced Neural Correlates of Learning and Memory	12

Plus three of the following electives:

03-133	Neurobiology of Disease	9
03-350	Developmental Biology	9
03-364	Developmental Neuroscience	9
03-366	Biochemistry of the Brain	9
03-534	Biological Imaging and Fluorescence Spectroscopy	9
15-385	Introduction to Computer Vision	6
15-386	Neural Computation	9

42-202	Physiology	9
85-211	Cognitive Psychology	9
85-213	Human Information Processing and Artifical Intelligence	9
85-219	Biological Foundations of Behavior	9

B.S. Neuroscience

The Bachelor of Science in Neuroscience is listed in the Intercollege Programs (http://coursecatalog.web.cmu.edu/servicesandoptions/intercollegeprograms/#bachelorofscienceinneurosciencetext) section of this catalog. It is a joint degree program offered between the Mellon College of Science and the Dietrich College of Humanities and Social Sciences. Current MCS students interested in pursuing this degree should contact Biological Sciences Undergraduate Programs Office (bio-ungrad@andrew.cmu.edu). More information can also be found on the CMU Neuroscience website (http://www.cmu.edu/neuro).

B.S. Biological Sciences and Psychology

Veronica Hinman, *Department Head, Biological Sciences*

Michael Tarr, *Department Head, Psychology*

This major is intended to reflect the interdisciplinary nature of current research in the fields of biology and psychology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences.

Note: Students entering from the Dietrich College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students in the Mellon College of Science will earn a Bachelor of Science in Biological Sciences and Psychology.

Depending on a student's home college (DC or MCS), General Education (GenEd) requirements will be different. GenEd requirements for DC (http://coursecatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/#hampssgeneraleducationprogram160) and MCS (http://coursecatalog.web.cmu.edu/melloncollegeofscience) are found on their respective Catalog pages.

Degree Requirements:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	12
03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	General Biology Elective [1]	9
03-3xx	Advanced Biology Elective [1]	18
Total Biology units		78

[1] Please see description and requirements for electives under the B.S. in Biological Sciences section of this Catalog.

Mathematics, Statistics, Physics and Computer Science		Units
21-120	Differential and Integral Calculus	10
21-124	Calculus II for Biologists and Chemists	10
or 21-122	Integration and Approximation	
36-247	Statistics for Lab Sciences	9
or 36-200	Reasoning with Data	
36-309	Experimental Design for Behavioral & Social Sciences	9
or 85-309	Experimental Design for Behavioral & Social Sciences - Psychology	
33-121	Physics I for Science Students [2]	12
or 33-141	Physics I for Engineering Students	
15-110	Principles of Computing	10-12
or 15-112	Fundamentals of Programming and Computer Science	
or 02-201	Programming for Scientists	
99-101	Computing @ Carnegie Mellon	3
Total Science units		63-65

[2] MCS students must also complete 33-122 Physics II for Biological Sciences and Chemistry Students.

Chemistry		Units
09-105	Introduction to Modern Chemistry I	10
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
or 09-219	Modern Organic Chemistry	
09-218	Organic Chemistry II	9
or 09-220	Modern Organic Chemistry II	
09-207	Techniques in Quantitative Analysis	9-12
or 09-221	Laboratory I: Introduction to Chemical Analysis	
09-208	Techniques for Organic Synthesis and Analysis	9-12
or 09-222	Laboratory II: Organic Synthesis and Analysis	
Total Chemistry units		56-62

Psychology Courses		Units
85-102	Introduction to Psychology	9
85-219	Biological Foundations of Behavior	9
85-2xx	Survey Psychology Courses *	18
85-310	Research Methods in Cognitive Psychology	9
or 85-340	Research Methods in Social Psychology	
or 85-320	Research Methods in Developmental Psychology	
or 85-314	Cognitive Neuroscience Research Methods	
or 85-330	Analytic Research Methods	
85-3xx	Advanced Psychology Electives	18
Total Psychology units		63

* Excluding 85-261 Abnormal Psychology

Additional Advanced Elective 9 units

(Choose one of the following courses)		
85-3xx	Advanced Psychology Elective	9
or		
03-3xx	Advanced Biology Elective	9

Additional Laboratory or Research Methods 9-12 units

(Choose one of the following courses)		
03-344	Experimental Biochemistry	12
03-345	Experimental Cell and Developmental Biology	12
03-346	Experimental Neuroscience	12
85-310	Research Methods in Cognitive Psychology	9
85-314	Cognitive Neuroscience Research Methods	9
85-320	Research Methods in Developmental Psychology	9
85-340	Research Methods in Social Psychology	9

Elective Units	Units
Free Electives	33-36
MCS Nontechnical Breadth or DC General Education requirements	36-48
Total Elective units	69-84

Minimum number of units required for degree: 360

B.A. Biological Sciences

The Department of Biological Sciences offers a Bachelor of Arts (B.A.) degree that is intended for students who wish to combine their interest in science with their interest(s) in other discipline(s) across campus. The requirements for the B.A. degree are distributed as follows:

Degree Requirements:

Biological Sciences		Units
03-151	Honors Modern Biology	10
or 03-121	Modern Biology	
03-201	Undergraduate Colloquium for Sophomores	2
03-220	Genetics	9

or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
03-320	Cell Biology	9
03-343	Experimental Techniques in Molecular Biology	9-12
or 03-124	Modern Biology Laboratory	
03-411	Topics in Research	1
03-412	Topics in Research	1
03-xxx	General Biology Electives [8]	18
03-3xx	Advanced Biology Electives [8]	18
Total Biology units		86-89

[8] Please see description and requirements for electives under the B.S. in Biological Sciences section of this Catalog.

Chemistry		Units
09-105	Introduction to Modern Chemistry I [9]	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-217	Organic Chemistry I	9
or 09-219	Modern Organic Chemistry	
09-218	Organic Chemistry II	9
or 09-220	Modern Organic Chemistry II	
09-207	Techniques in Quantitative Analysis	9-12
or 09-221	Laboratory I: Introduction to Chemical Analysis	
Total Chemistry units		47-50

[9] Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

Mathematics, Physics, and Computer Science		Units
02-201	Programming for Scientists	10
or 15-110	Principles of Computing	
or 15-112	Fundamentals of Programming and Computer Science	
21-120	Differential and Integral Calculus	10
21-124	Calculus II for Biologists and Chemists	10
or 21-122	Integration and Approximation	
33-121	Physics I for Science Students	12
or 33-141	Physics I for Engineering Students	
33-122	Physics II for Biological Sciences and Chemistry Students	9
or 33-142	Physics II for Engineering and Physics Students	
99-10x	Computing at Carnegie Mellon	3
Total Science units		54

Elective courses	Units
MCS Nontechnical Breadth Requirements	72
Free Electives	96-99
Total Elective units	168-171

360Minimum number of units required for degree:

Minor in Biological Sciences

All university students are eligible to pursue a minor in biological sciences in conjunction with a major in any other department in the university. A minimum of six biological sciences courses (and two chemistry prerequisites) must be completed to fulfill the minor in biological sciences. The curriculum includes four required courses and two elective courses as specified below. Units awarded for undergraduate research are not applicable to elective courses. Courses taken in other departments or colleges will be considered on an individual basis.

Courses for the Minor in Biological Sciences

Prerequisites:		Units
09-105	Introduction to Modern Chemistry I	10
09-217	Organic Chemistry I	9

Required courses:		Units
03-121	Modern Biology	9
or 03-151	Honors Modern Biology	
03-220	Genetics	9
or 03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	
03-231	Honors Biochemistry	9
or 03-232	Biochemistry I	
03-320	Cell Biology	9
03-xxx	General Biology Elective	9
03-3xx	Advanced Biology Elective	9

73Minimum number of units required for the Minor in Biological Sciences:

Minor in Neuroscience

The curriculum within the Neuroscience minor will allow students from various disciplines to gain fundamental knowledge of neuroscience concepts. The interdisciplinary nature of the coursework echoes the nature of the field itself; students will select courses from the natural, social, and computer sciences. Neuroscientists not only require foundational knowledge of molecular, cellular, and systems neuroscience, but they should also understand the behavioral significance and appreciate how computational work and imaging techniques can aid in clarifying normal and abnormal functioning of these fundamental processes.

Students pursuing the minor in Neuroscience will:

- Acquire foundational knowledge of the basic biological foundations of the nervous system, from the cellular through systems levels.
- Understand the effects of basic neurological function on behavior, including cognition.
- Gain an appreciation of the interdisciplinary nature of the field of neuroscience.

NOTE: Because the curriculum within this minor may overlap with some degree requirements, no more than 2 courses fulfilling Neuroscience Minor requirements may count towards the requirements of a student's major or other minor.

Course Requirements

Minimum units required for Neuroscience minor 63

Required courses (4):

		Units
03-121	Modern Biology	9
or 03-151	Honors Modern Biology	
03-362	Cellular Neuroscience	9
03-363	Systems Neuroscience	9
85-219	Biological Foundations of Behavior	9
or 03-161	Molecules to Mind	

Distribution Requirements:

Three courses, including at least 1 from each of the following categories:

Approaches to Neuroscience Category		Units
15-386	Neural Computation	9
15-883	Computational Models of Neural Systems	12
85-412	Cognitive Modeling	9
85-414	Cognitive Neuropsychology	9
85-419	Introduction to Parallel Distributed Processing	9
85-429	Cognitive Brain Imaging	9

Cognitive Neuroscience Category		Units
03-133	Neurobiology of Disease	9
03-364	Developmental Neuroscience	9
85-211	Cognitive Psychology *	9
85-356	Music and Mind: The Cognitive Neuroscience of Sound	9
85-370	Perception	9
85-390	Human Memory	9
85-406	Autism: Psychological and Neuroscience Perspectives	9

*NOTE: 85-213 may be used instead of 85-211 when offered

Masters Degree in Computational Biology

Students who are interested in more advanced training in this emerging field may want to consider the Master of Science Program in Computational Biology. For more information about this program, contact the Biological Sciences Graduate Programs Office (bio-gradoffice@andrew.cmu.edu).

Honors Program in Research Biology

The departmental Honors Program offers an opportunity to become extensively involved in research. The program requires students to conduct an independent project and to prepare a formal thesis that is written and defended in the senior year. This program does not preclude a student from completing any of the options within the department nor is it the only way in which students can participate in undergraduate research, although it is excellent preparation for graduate studies.

Transfer credit for Modern Biology

Students wishing to transfer credit for 03-121 Modern Biology from another institution must meet the following requirements:

1. The course in question should have at least an 80% match in topics with 03-121. Topics in 03-121 cover the genetic, molecular, cellular, developmental, and evolutionary mechanisms that underlie biological processes and include: Cell theory; Cell chemistry; Cell structure; Function and structure of proteins, DNA, RNA, lipids and carbohydrates; Cell respiration and fermentation; The cell cycle; Cell-cell interactions and communication; Transcription; Translation; RNA processing in Eukaryotes; DNA replication; DNA mutation and repair; Meiosis; Mitosis; and Regulation of Gene Expression.
   This information is sometimes available in the course description, but more detail is often found in a course syllabus.
2. The textbook used in the transfer course should be at a comparable level to S. Freeman (2010) "Biological Science, Vol. 1 (The Cell, Genetics, and Development)," Fourth Edition, Pearson Benjamin Cummings, ISBN 0-321-61347-3.
3. Introductory level courses that focus on other biology areas (i.e. anatomy, physiology, ecology, evolution, and/or development) will not be accepted for 03-121 credit. These courses may receive credit for a general biology elective.
4. Students should contact their departmental academic advisor for the transfer credit approval process in their college.

Faculty

NESRINE AFFARA, Assistant Teaching Professor, Carnegie Mellon-Qatar – Ph.D., The Ohio State University; Carnegie Mellon, 2006–

ALISON L. BARTH, Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 2002–

MOHAMED BOUAOUINA, Assistant Teaching Professor, Carnegie Mellon-Qatar – Ph.D.,Carnegie Mellon, 2013–

DANIEL BRASIER, Associate Teaching Professor and Assistant Department Head for Graduate Affairs – Ph.D., University of California, San Diego; Carnegie Mellon, 2012–

MAGGIE BRAUN, Teaching Professor and Associate Dean of Undergraduate Affairs for MCS – Ph.D., University of Pittsburgh; Carnegie Mellon, 2008–

MARCEL BRUCHEZ, Professor in Biological Sciences and Chemistry, Director of MBIC – Ph.D., University of California, Berkeley; Carnegie Mellon, 2006–

AMY L. BURKERT, Teaching Professor and Vice Provost for Education – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1997–

BECKI M. CAMPANARO, Assistant Teaching Professor and Assistant Department Head for Undergraduate Affairs – Ph.D., Arizona State University; Carnegie Mellon, 2015–

JASON M. D'ANTONIO, Assistant Teaching Professor and Director of the Health Professions Program – Ph.D., University of Pittsburgh School of Medicine; Carnegie Mellon, 2013–

CARRIE B. DOONAN, Teaching Professor and Director of Undergraduate Laboratories – Ph.D., University of Connecticut; Carnegie Mellon, 1993–

EMILY DRILL, Assistant Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2012–

M. DANNIE DURAND, Associate Professor – Ph.D., Columbia University; Carnegie Mellon, 2000–

CHARLES A. ETTENSOHN, Professor – Ph.D., Yale University; Carnegie Mellon, 1987–

ARYN GITTIS, Associate Professor – Ph.D., University of California, San Diego; Carnegie Mellon, 2012–

N. LUISA HILLER, Associate Professor – Ph.D., Northwestern University Medical School; Carnegie Mellon, 2012–

VERONICA F. HINMAN, Associate Professor and Department Head – Ph.D., University of Queensland; Carnegie Mellon, 2006–

KENNETH HOVIS, Associate Teaching Professor and Assistant Dean for Educational Initiatives for MCS – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2011–

VALENTIN ILYIN, Associate Teaching Professor of Computational Biology at CMU-Qatar – Ph.D.,Carnegie Mellon, 2012–

JONATHAN W. JARVIK, Associate Professor – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1978–

SANDRA KUHLMAN, Associate Professor – Ph.D., Univeristy of Kentucky; Carnegie Mellon, 2012–

FREDERICK LANNI, Associate Professor – Ph.D., Harvard University; Carnegie Mellon, 1982–

CHRISTINA H. LEE, Associate Professor – Ph.D., University of California, San Francisco; Carnegie Mellon, 2000–

ADAM D. LINSTEDT, Professor – Ph.D., University of California, San Francisco; Carnegie Mellon, 1995–

A. JAVIER LOPEZ, Associate Professor – Ph.D., Duke University; Carnegie Mellon, 1989–

BROOKE M. MCCARTNEY, Associate Professor – Ph.D., Duke University; Carnegie Mellon, 2003–

NATALIE M. MCGUIER, Assistant Teaching Professor – Ph.D., Medical University of South Carolina; Carnegie Mellon, 2015–

C. JOEL MCMANUS, Associate Professor – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2011–

JONATHAN S. MINDEN, Professor – Ph.D., Albert Einstein College of Medicine; Carnegie Mellon, 1990–

AARON P. MITCHELL, Professor – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2008–

ROBERT F. MURPHY, Professor of Biological Sciences and Department Head of Computational Biology – Ph.D., California Institute of Technology; Carnegie Mellon, 1983–

GORDON S. RULE, Professor and Associate Dean for Research, Carnegie Mellon-Qatar – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1996–

RUSSELL S. SCHWARTZ, Professor – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2002–

ANNETTE VINCENT, Associate Teaching Professor, Carnegie Mellon-Qatar – Ph.D., National University of Singapore; Carnegie Mellon, 2012–

JOHN L. WOOLFORD JR., Professor and Co-Director of CNAST – Ph.D., Duke University; Carnegie Mellon, 1979–

STEPHANIE WONG-NOONAN, Assistant Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2016–

IHAB YOUNIS, Assistant Teaching Professor, Carnegie Mellon-Qatar – Ph.D., The Ohio State University; Carnegie Mellon, 2005–

ERIC YTTRI, Assistant Professor – Ph.D., Washington University in St. Louis; Carnegie Mellon, 2017–

HUAIYING ZHANG, Assistant Professor – Ph.D., McGill University; Carnegie Mellon, 2019–

YONGXIN ZHAO, Assistant Professor – Ph.D., University of Alberta; Carnegie Mellon, 2017–

Affiliated Faculty

BRUCE A. ARMITAGE, Professor of Chemistry and Co-Director of CNAST – Ph.D., University of Arizona; Carnegie Mellon, 1997–

ZIV BAR-JOSEPH, Associate Professor of Computer Science and Machine Learning – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2003–

PHIL G. CAMPBELL, Research Professor at the Institute for Complex Engineering Systems – Ph.D., Pennsylvania State University; Carnegie Mellon, 1999–

PHILLIP COMPEAU, Assistant Teaching Professor – Ph.D., University of California-San Diego; Carnegie Mellon, 2015–

KRIS DAHL, Associate Professor of Biomedical Engineering – Ph.D., University of Pennsylvania; Carnegie Mellon, 2006–

WILLIAM F. EDDY, Professor of Statistics – Ph.D., Yale University; Carnegie Mellon, 1976–

ALEX EVILEVITCH, Associate Professor of Physics – Ph.D., Lund University; Carnegie Mellon, 2009–

T.D. JACOBSEN, Assistant Director and Principal Research Scientist at the Hunt Institute for Botanical Documentation – Ph.D., Washington State University; Carnegie Mellon, 1979–

ROBERT W. KIGER, Distinguished Service Professor and Botany Professor and the History of Science Director and Principal Research Scientist for the Hunt Institute for Botanical Documentation – Ph.D., University of Maryland; Carnegie Mellon, 1974–

CARLETON L. KINGSFORD, Associate Professor of Computational Biology – Ph.D., Princeton University; Carnegie Mellon, 2005–

CHRISTOPHER J. LANGMEAD, AssociatAssistant Professor of Computational Biology – Ph.D., Dartmouth College; Carnegie Mellon, 2004–

PHILIP R. LEDUC, Professor of Mechanical Engineering – Ph.D., The Johns Hopkins University; Carnegie Mellon, 2002–

CARL R. OLSON, Professor of the CNBC – Ph.D., University of California, Berkeley; Carnegie Mellon, 1996–

ANDREAS R PFENNING, Assistant Professor of Computational Biology – Ph.D., Duke University ; Carnegie Mellon, 2016–

ALAN J. RUSSELL, Professor of Chemical Engineering and Director of Disruptive Health Technology Institute – Ph.D., Imperial College of Science and Technology, University of London; Carnegie Mellon, 1987–

FREDERICK H. UTECH, Principal Research Scientist at the Hunt Institute for Botanical Documentation – Ph.D., Washington University; Carnegie Mellon, 1977–

ERIC P. XING, Associate Professor of Computer Science, Language Technologies Institute, and Machine Learning – Ph.D., University of California, Berkeley; Carnegie Mellon, 2004–

GE YANG, Assistant Professor of Biomedical Engineering and the Lane Center for Computational Biology – Ph.D., University of Minnesota, Twin Cities; Carnegie Mellon, 2010–

Adjunct Faculty

RITA BOTTINO, Adjunct Associate Professor and Principal Investigator at Institute of Cellular Therapeutics - Allegheny Health Network – Ph.D. , University of Genova; Carnegie Mellon, 1990–

YONG FAN, Adjunct Associate Professor and Principal Investigator at Institute of Cellular Therapeutics - Allegheny Health Network – Ph.D., University of Pittsburgh; Carnegie Mellon, 1999–

NICK GIANNOUKAKIS, Adjunct Associate Professor and Principal Investigator at Institute of Cellular Therapeutics - Allegheny Health Network – Ph.D., McGill University in Montreal; Carnegie Mellon, 1997–

JON W. JOHNSON, Professor of Neuroscience at the University of Pittsburgh – Ph.D., Stanford University; Carnegie Mellon, 2006–

KARL KANDLER, Professor of Otolaryngology and Neurobiology at the University of Pittsburgh – Ph.D., University of Tubingen, Germany; Carnegie Mellon, 2006–

CYNTHIA LANCE-JONES, Associate Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Massachusetts; Carnegie Mellon, 2006–

CYNTHIA M. MORTON, Associate Curator and Head of Botany at the Carnegie Museum of Natural History – Ph.D., New York Botanical Garden/CUNY; Carnegie Mellon, 2002–

PETER L. STRICK, Co-Director of CNBC and Distinguished Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Pennsylvania; Carnegie Mellon, 2000–

D. LANSING TAYLOR, President and Chief Executive Officer of Cellumen, Inc. – Ph.D., State University of New York at Albany; Carnegie Mellon, 1982–

EDDA THIELS, Assistant Professor of Neurobiology at the University of Pittsburgh – Ph.D., Indiana University; Carnegie Mellon, 2006–

MASSIMO TRUCCO, Adjunct Associate Professor and Principal Investigator at Institute of Cellular Therapeutics - Allegheny Health Network – M.D., University of Torino School of Medicine;

NATHAN URBAN, Professor and Vice Chair, Neurobiology, University of Pittsburgh – Ph.D., University of Pittsburgh ; Carnegie Mellon, 1998–

KARL WILLIAMS, Adjunct Professor of Otolaryngology and Neurobiology - University of Pittsburgh – M.D., University of Pittsburgh School of Medicine ; Carnegie Mellon, 1974–

Emeriti Faculty

PETER B. BERGET, Professor Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 1986–

ERIC W. GROTZINGER, Teaching Professor Emeritus – Ph.D., University of Pittsburgh; Carnegie Mellon, 1979–

DAVID D. HACKNEY, Professor Emeritus – Ph.D., University of California, Berkeley; Carnegie Mellon, 1978–

CHIEN HO, Professor Emeritus – Ph.D., Yale University; Carnegie Mellon, 1979–

LINDA R. KAUFFMAN, Teaching Professor Emeritus – Ph.D., University of Pittsburgh; Carnegie Mellon, 1977–

WILLIAM R. MCCLURE, Professor Emeritus – Ph.D., University of Wisconsin; Carnegie Mellon, 1981–

JOHN F. NAGLE, Professor Emeritus – Ph.D., Yale University; Carnegie Mellon, 1967–

ALAN S. WAGGONER, Professor Emeritus – Ph.D., University of Oregon; Carnegie Mellon, 1999–

JAMES F. WILLIAMS, Professor Emeritus – Ph.D., University of Toronto; Carnegie Mellon, 1976–

C. ROY WORTHINGTON, Professor Emeritus – Ph.D., Adelaide University; Carnegie Mellon, 1969–

Department of Biological Sciences Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

03-050 Study Abroad
Fall
Missing Course Description - please contact the teaching department.

03-051 Study Abroad
Spring
Missing Course Description - please contact the teaching department.

03-101 Biological Sciences First Year Seminars
Fall and Spring: 3 units
Various seminars are offered that introduce first-year students to current topics of modern biology. These are mini courses that meet for half a semester. Topics have included: Proteins in Disease, Genes and Diseases, Pills and Poisons, Curing Cancer, Organ Transplantation & Blood Substitutes, and Prions - Mad Cows and Englishman. Courses restricted to first year students in the Mellon College of Science.

03-116 Phage Genomics Research
Spring: 6 units
Spring Semester: The DNA sequences will be analyzed with bioinformatic tools and compared with those of phages isolated at other locations to identify genes, their organization, the differences that may characterize different phage groups, and how these have arisen during evolution.
Prerequisite: 03-115

03-117 Frontiers, Analysis, and Discovery in Biological Sciences
Fall and Spring: 6 units
In this hands-on laboratory class, students will investigate a current biology problem. Students will read literature articles, design hypotheses, plan and carry out experiments, analyze and interpret data, and design future questions as part of a collaborative research team. In addition, teams will work with faculty and fellow students to understand and explore the relevance of their projects in the field of biology and other disciplines. Finally, teams will communicate results in an oral presentation to peers and faculty. Students will gain research skills, analytical skills, communication skills (both written and oral), and project design skills.
Prerequisites: 03-121 or 03-110 or 03-151

03-118 Beer: A Yeast's Perspective
Spring: 6 units
This is a combined lecture and laboratory course in which students will investigate the biochemistry of fermentation using strains of yeast commonly used in brewing science. Lectures and readings will cover all necessary information to succeed in the course, including topics like yeast metabolism, fermentation at the micro and industrial levels, and a history of fermentation's influence on society. Lab experiments will investigate yeast growth and fermentation processes in various strains used in brewing, and quantitative assessments of beer at the molecular level. The course puts a focus on microbiology lab techniques and yeast biochemistry; however, no previous lab experience or biology coursework is required, and anyone with an interest in the science behind brewing yeast can succeed in the class.

03-120 Biology for Life Special Topics Mini
Fall and Spring: 6 units
Special Topics in Biological Sciences Mini Courses. Topics will vary depending on the semester and instructor. Courses offered under this course number will not require prior knowledge of or exposure to biological sciences and are open to students from any major and class year. Please read individual section descriptions for more information. Fall 2019 Section A1: "Germs": The Good, The Bad, and The Ugly Bacteria are a scourge to humankind, causing life-threatening infections like tuberculosis, meningitis, and pneumonia to the less severe ear infections and strep throats that plague many childhoods. On the other hand, the healthy human microbiota is a community of microorganisms dominated by trillions of bacteria that reside everywhere from our skin to nasal passages and gut. This "virtual organ" is estimated to weigh as much as the human brain and contributes to essential bodily functions like food metabolism and defense against infection, while also impacting memory, anxiety, and depression. Changes in the gut microbiota are also associated with diseases including autism, obesity, allergies, and inflammatory bowel disease. Why the incidence of these chronic diseases is increasing is unclear, but it may be the result of excessive antibiotic use, dietary changes that harm our gut microbes, or both. This century will be marked by both the challenge of antibiotic resistant infectious "bad" bacteria, and the possibilities to harness "good" bacteria to promote human health. In this course, we explore how bacteria make you healthy and what we can do to nurture our microbiota, and how bacteria make you sick and what we can do to stop them.

Course Website: https://www.cmu.edu/bio/undergrad/academics/intro_courses.html

03-121 Modern Biology
All Semesters: 9 units
This is an introductory course that provides the basis for further studies in biochemistry, cell biology, genetics and molecular biology. This course emphasizes the chemical principles underlying biological processes and cell structures as well as the analysis of genetics and heredity from a molecular perspective. This is the introductory biology course for all science and non-science majors.

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html

03-124 Modern Biology Laboratory
Fall and Spring: 9 units
This laboratory is designed to introduce students to modern concepts in the biological sciences. The experiments illustrate many of the principles covered in 03-121 and 03-230. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.

03-125 Evolution
Fall: 9 units
Evolutionary theory is the unifying principle of biology. A good comprehension of the concepts that underlie this theory is therefore important to properly appreciate and understand any biological process. This course is designed for students intending to continue studies in biology so that they may gain an understanding of the evolutionary framework in their more advanced courses, and also non-biology majors who want to extend their knowledge of biology at an introductory level. The lectures will include (i) an examination of the history and development of evolutionary theory, (ii) consideration of some of the facts that have established the theory, (iii) an introduction to the concepts of phylogenetics, (iv) discussion of the patterns and mechanism that lead to the diversity and origins of the groups of life, (v) an introduction to genetics and population genetic theory, and (vi) discussion of and how this applies to natural selection and speciation. The course will also include some more specialist topics, including evolution of development, sexual selection, evolutionary applications to medicine and conservation biology, and genome evolution. Assessment will be based on several in-class exams and quizzes, homework assignments, a written term paper, and a final exam.

03-126 Cellular Response to the Environment
Spring: 4 units
This laboratory course provides a multifaceted view of the cell, with the opportunity for new discovery, through microscopic imaging of a cell's response to environmental changes. We will identify yeast gene products that undergo changes in expression or subcellular localization after simple environmental perturbations or drug treatments. Students will be trained in basic molecular biological methods, including recombinant DNA manipulation, and basics of functional genomic resources. Enrollment is limited to first-year students in MCS. Special permission required.

03-127 How Biological Experiments Work - A Project Course
Spring: 9 units
The goal of this course is to provide an understanding of the nuts and bolts of biological experimentation. We will discuss the molecular principles behind the wide variety of experiments that were used to discover how cells work. The first half of the class will be a lecture based discussion of key experimental methods used in biological research. The second half of the class will be dedicated to group projects that create "story boards" to explain in molecular terms how these experiments work. The story boards will be used by modelers at the Pittsburgh Supercomputing Center to generate high-end animations of these experimental processes. This will prepare students for working in research labs and biology courses beyond "Modern Biology". This course is limited to first, second, and third year students.
Prerequisites: 03-121 or 03-151

03-128 Biology for Life Special Topics
Fall and Spring: 9 units
Special Topics in Biological Sciences. Topics will vary depending on the semester and instructor. Courses offered under this course number will not require prior knowledge of or exposure to biological sciences and are open to students from any major and class year. Please read individual section descriptions for more information. Fall 2019 Section A: Environmental Science Environmental science is a highly interdisciplinary field that integrates knowledge and modes of inquiry from across the sciences to understand some of the most important challenges of 21st century. This course provides a foundational background in scientific method, critical thinking and problem solving strategies used to study and evaluate the environment. Modules include, principles of ecology and eco-systems, biological diversity, biogeochemical cycles, endangered species management, human population growth, atmosphere, climate and global warming. Assessment will include class attendance, quizzes, individual and small group projects, in class exams. Projects may involve visits to local sites.

Course Website: https://www.cmu.edu/bio/undergrad/academics/intro_courses.html

03-131 Genes Drugs & Diseases
Fall: 9 units
The central goals of this course are to explore the genetic basis of diseases and to explain the molecular basis of action for various drugs used to treat diseases. The first part of the course provides the student with sufficient background to understand the biological basis of drug action with emphasis on retroviral inhibitors. The usefulness of genetic engineering in the production of proteins for drug discovery is then explored. This is followed by an overview of DNA replication, transcription, and protein synthesis, with an emphasis on the inhibitory action of antibiotics on prokaryotic processes. The fundamental properties of carbohydrates, lipids, and membranes are discussed at a level to develop an understanding of penicillin and the treatment of elevated cholesterol levels. Signaling processes in eukaryotic cells is discussed with reference to cancer treatment and pain management. The treatment of disease using antibody, and the treatment of inappropriate immune responses (allergy) is also discussed. The course ends with a discussion of inheritance and genetic deficiencies that give rise to disease.

Course Website: http://www.andrew.cmu.edu/user/rule/03_131/

03-132 Basic Science to Modern Medicine
Fall and Summer: 9 units
This course will focus on the genetics, cell biology, and developmental biology behind human biology and human disease, as well as the growing opportunities for novel therapeutic options that basic science delivers. This is a topics based course, with topics chosen to cover aspects of human biology and health that students are likely to encounter in their daily lives such as cancer, stem cells, genome sequencing, and the human microbiota. Students will explore these topics from both a basic science and a human health perspective.

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html

03-133 Neurobiology of Disease
Fall and Summer: 9 units
This course will explore the biological basis of several neurological and neuropsychiatric diseases, with an emphasis on medical diagnostic tools and techniques. It will include discussions of the anatomical basis of neurological diseases as well as recent research into understanding the mechanisms of disease. This course is intended to broaden students' understanding of how diseases are diagnosed and studied. Students will also learn how basic neurological and psychiatric evaluations are conducted and gain proficiency in these evaluation techniques. We will begin with a discussion of clinical neuroanatomy to serve as a basis for understanding brain structures and functional alterations in a variety of developmental, degenerative, neurological, and psychiatric disorders. Specific diseases covered may vary from year to year.

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html

03-135 Structure and Function of the Human Body
Fall: 9 units
Structure and Function of the Human Body is a non-majors course designed to explore fundamental relationships between form and function of the human body. The anatomy and physiology of major organ systems will be studied in the context of normal and disease states. Because no prerequisite knowledge is required, students will learn about critical biological processes such as the central dogma, membrane diffusion and transport, cell signaling, gas exchange, blood flow, nutrient absorption, blood pH balance, and action potential generation and propagation. Students will then apply this knowledge to understand how organs respond to various inputs in maintaining homeostasis. Hands-on demonstrations will be incorporated to provide a practical framework for the information presented in lectures. At the culmination of the semester, students will gain a broad understanding of how the body systems function at the cellular, tissue and organ levels and be able to relate simple physiological processes to better understand highly prevalent diseases in society.

03-151 Honors Modern Biology
Fall: 10 units
This course will cover in some depth, the basics of the structure and function of the major biomolecules in the cell, cellular structure and function, genetic replication, transmission and expression of biological information, and cell-cell interactions. While similar core topics will be covered in all sections of Modern Biology, this section will be offered at an accelerated pace, requiring more independent learning. The extra class time this pacing provides will allow the exploration of the molecular basis of life to help students integrate and apply the core principles of biology covered in the course. THIS SECTION IS RESERVED FOR INCOMING FIRST-YEAR MCS STUDENTS.

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html

03-161 Molecules to Mind
Spring: 9 units
This course provides a depth-first approach to understanding neuroscience. We will begin with a clinical focus on neuroanatomy, introducing students to some basic neurological diagnostic techniques. We will then explore the biological basis of neuronal function and link the function of individual neurons to a broader context of neural systems. This will be done in the context of primary literature. Students who complete this course will therefore have an understanding of research methods and be prepared to evaluate scientific literature. The course will have a strong focus on the biological and cellular basis of neuronal excitability and also give students significant, in depth exposure to the function of synapses and their plasticity. Finally, the course will give students an in depth look at sensory and/or motor systems by focusing on one system in particular, rather than providing a broad overview of many different sensory and motor systems.

03-201 Undergraduate Colloquium for Sophomores
Fall
The purpose of this seminar series is to update biology undergraduates about university and departmental functions, seminars, etc. that are pertinent or useful. In addition, research talks by faculty and undergraduates will be used to introduce students to the research being conducted in faculty laboratories. Additional topics may include graduate and medical school applications, career options, topics in the press, and important scientific discoveries.

03-202 Undergraduate Colloquium for Sophomores
Spring
Missing Course Description - please contact the teaching department.

03-206 Biomedical Engineering Laboratory
Fall and Spring: 9 units
This laboratory course is designed to provide students with the ability to make measurements on and interpret data from living systems. The experimental modules reinforce concepts from 42-101 Introduction to Biomedical Engineering and expose students to four areas of biomedical engineering: biomedical signal and image processing, biomaterials, biomechanics, and cellular and molecular biotechnology. Several cross-cutting modules are included as well. The course includes weekly lectures to complement the experimental component. Priority for enrollment will be given to students who have declared the Additional Major in Biomedical Engineering. Notes: This course number is reserved for students who are CIT majors and registered with the HPP program. If you require a biology lab for pre-health admissions requirements, please contact Dr. Conrad Zapanta and Dr. Maggie Braun (in the same email) for permission to register for 03-206 instead of 42-203. Priority for enrollment will be given to students who have declared the Additional Major in Biomedical Engineering.
Prerequisites: (03-121 or 03-151) and 42-101

03-210 Independent Study
Fall and Spring
Students will read papers from the original literature under the direction of a faculty member. Students will be required to demonstrate mastery of the readings by discussions with the sponsoring faculty member, oral presentations, or writing of one or more papers summarizing and extending the information in the readings. If appropriate, students may write a program(s) to satisfy this last requirement. A student may take this course only once. This is a mini format course. Special permission required.

03-220 Genetics
Fall: 9 units
The mechanisms of transmission of inherited traits in viruses, bacteria, fungi, plants and animals are discussed. Molecular mechanisms of gene expression and gene regulation are analyzed. Recombinant DNA and its applications in genetic analysis, biotechnology, forensics, agriculture, medicine, and the pharmaceutical industry are presented. Special topics in human genetics are considered, such as the genetics of cancer. Principles and methods for the study of developmental genetics, population genetics and complex traits are also introduced.
Prerequisites: 03-151 or 03-121

03-221 Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis
Fall: 9 units
Scientific and technical advances in genetics have accelerated dramatically since the draft human genome sequence was published in 2001. The development of massively parallel DNA sequencing and associated technologies has transformed the way we approach genetic questions. Contemporary genetics is increasingly concerned with generating, processing and analyzing vast amounts of data to extract information about genetic variation, expression, interactions and associations. At the same time, comparative genomics, bioinformatic and reverse genetic methods are transforming the way in which gene functions are investigated, while the development of powerful methods for precise modification of genomes is opening the way to cell- and gene-based therapies for disease. In parallel, the promise of precision or personalized medicine is predicated on advances in understanding of complex traits, genetic interactions and networks. These and other topics will be covered following a review of basic principles of gene structure and expression, the fundamental principles of Mendelian genetics, and their underpinnings in cellular mechanisms for the replication, recombination and transmission of genetic material. Although the topics overlap extensively with 03220 (Genetics), they will be presented at a more advanced level, with a greater emphasis on current methods of quantitative and statistical analysis. This course is recommended for students with a particular interest in emerging technologies for analysis of human genetics, genomics, gene therapy and precision medicine.
Prerequisites: (03-121 Min. grade B or 03-151 Min. grade B) and (15-359 Min. grade C or 36-247 Min. grade C or 15-259 Min. grade C or 36-218 Min. grade C or 36-201 Min. grade C or 21-124 Min. grade C or 36-200 Min. grade C or 36-217 Min. grade C)

03-230 Intro to Mammalian Physiology
Spring: 9 units
This course will survey the major organ systems, with an emphasis on cellular physiology and biochemistry. Current ideas of research and scientific controversy will also be presented. This course is intended to broaden students' exposure to cellular processes in the context of complex organ systems.
Prerequisite: 03-121

03-231 Honors Biochemistry
Spring: 9 units
This course provides an introduction to molecules and processes found in living systems. Amino acids, sugars, lipids and nucleotides and their corresponding higher structures, the proteins, polysaccharides, membranes and nucleic acids are studied. Kinetics and mechanisms of enzymes as well as elementary metabolic cycles and the energetics of biological systems are discussed.
Prerequisites: (03-121 or 03-151) and (09-217 or 09-219)

03-232 Biochemistry I
Spring: 9 units
This course provides an introduction to the application of biochemistry to biotechnology. The functional properties of amino acids, nucleotides, lipids, and sugars are presented. This is followed by a discussion of the structural and thermodynamic aspects of the organization of these molecules into higher-order structures, such as proteins, nucleic acids, and membranes. The kinetics and thermodynamics of protein-ligand interactions are discussed for non-cooperative, cooperative, and allosteric binding events. The use of mechanistic and kinetic information in enzyme characterization and drug discovery are discussed. Topics pertinent to biotechnology include: antibody production and use, energy production in biochemical systems, expression of recombinant proteins, and methods of protein purification and characterization. The course is an alternate to 03-231.
Prerequisites: (09-219 or 09-217) and (06-221 or 09-106)

03-250 Introduction to Computational Biology
Spring: 12 units
This class provides a general introduction to computational tools for biology. The course is divided into two modules, which may be taken individually as courses 03-251/02-251 and 03-252/02-252. Module 1 covers computational molecular biology/genomics. It examines important sources of biological data, how they are archived and made available to researchers, and what computational tools are available to use them effectively in research.
In the process, it covers basic concepts in statistics, mathematics, and computer science needed to effectively use these resources and understand their results. Specific topics covered include sequence data, searching and alignment, structural data, genome sequencing, genome analysis, genetic variation, gene and protein expression, and biological networks and pathways. Module 2 covers computational cell biology, including biological modeling and image analysis. It includes homeworks requiring use or modification of Matlab scripts. The modeling component includes computer models of population dynamics, biochemical kinetics, cell pathways, neuron behavior, and stochastic simulations. The imaging component includes basics of machine vision, morphological image analysis, image classification and image-derived models. Lectures and examinations are joint with 02-250 but recitations are separate. Recitations for this course are intended primarily for biological sciences or biomedical engineering majors at the undergraduate or graduate level who have had little or no prior experience with computer science or programming. Students may not take both 03-250/02-250 and either 03-251/02-251 or 03-252/02-252 for credit.
Prerequisites: (03-121 or 03-131 or 03-151) and (15-110 or 02-201 or 15-112)

03-251 Introduction to Computational Molecular Biology
Spring: 6 units
This class provides a general introduction to computational tools for biology with specific emphasis on molecular biology and genomics. Along with 03-252, it makes up one half of the full Introduction to Computational Biology, 03-250, although either half can be taken individually. 03-251 will examine important sources of biological data, how they are archived and made available to researchers, and what computational tools are available to use them effectively in research. In the process, it will cover basic concepts in statistics, mathematics, and computer science needed to effectively use these resources and understand their results. Specific topics to be covered include sequence data, searching and alignment, structural data, genome sequencing, genome analysis, genetic variation, gene and protein expression, and biological networks and pathways. Lectures and examinations are joint with 02-251 but recitations are separate. Recitations for this course are intended primarily for biological sciences or biomedical engineering majors at the undergraduate or graduate level who have had little or no prior experience with computer science or programming. Students may not take both 03-251/02-251 and 03-250/02-250 for credit.
Prerequisite: 03-121 or permission of the instructor.
Prerequisites: 03-121 or 03-151

03-252 Introduction to Computational Cell Biology
Spring: 6 units
This course presents an overview of important modeling and image analysis applications of computers to solve problems in cell biology. Along with 03-251, it makes up one half of the full Introduction to Computational Biology, 03-250, although either half can be taken individually. Major topics covered are computer models of population dynamics, biochemical kinetics, cell pathways, neuron behavior, and stochastic simulations. The imaging component includes basics of machine vision, morphological image analysis, image classification and image-derived models. It includes homeworks requiring use or modification of Matlab scripts. Lectures and examinations are joint with 02-252 but recitations are separate. Recitations for this course are intended primarily for biological sciences or biomedical engineering majors at the undergraduate or graduate level who have had little or no prior experience with computer science or programming. Students may not take both 03-252/02-252 and 03-250/02-250 for credit. Prerequisite: 03-121 or permission of the instructor.
Prerequisites: 03-151 or 03-121

03-302 Undergraduate Colloquium for Juniors
Spring
Missing Course Description - please contact the teaching department.

03-320 Cell Biology
Fall: 9 units
This course provides descriptive information and mechanistic detail concerning key cellular processes in six areas: membrane function, protein targeting, signaling, cytoskeleton, cell division, and cell interaction. An attempt is made to introduce the methodology that was used to obtain this information and to discuss how our understanding of these processes relates to the treatment of human disease.
Prerequisites: (03-121 or 03-151 or 03-120) and (03-232 or 03-233 or 03-231)

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html

03-326 Evolution of Regulatory Genomics
Fall: 4.5 units
This course will introduce central concepts of evolutionary theory, e.g. drift, selection, phylogenetics and an introduction into how genomes are sequenced, assembled and annoted. This will require a basic undertsanding of genetics. Course topics will then unify these two areas of biology to examine process by which genomes evolve and how this in turn has lead to the diversity of animal pheonotypes. This will include discussion of how genomes control embryonic development, how gene regulation has evolved (focusing on cis regulatory evolution and non-coding RNA regulatory evolution) and the concept of gene regulatory network evolution. Concepts and specific examples will come through lectures, selected readings from advanced texts and primary literature.
Prerequisites: 03-231 or 03-232

03-327 Phylogenetics
Intermittent: 9 units
An advanced introduction to theory and practice of phylogenetic analysis (evolutionary tree reconstruction), with a focus on molecular evolution. Basic concepts will be introduced in the context of a historical survey of phylogeny reconstruction. A comprehensive introduction to phylogenetic methods will be presented, including data selection, multiple sequence alignment, character state data versus distance matrices, sequence evolution models, and the four major approaches to phylogeny reconstruction: Parsimony, Distance matrix, Maximum likelihood, and Bayesian analysis. Sources of error and methods for assessing the reliability of phylogenetic inference will be discussed. We will cover additional topics as time allows, such as phylogenetic hypothesis testing, genome scale approaches, the interface between phylogenetics and population genetics, gene tree reconciliation, horizontal gene transfer, and phylogenetic networks.
Prerequisites: 03-232 or 03-231 or 03-250

Course Website: http://www.cs.cmu.edu/~durand/Phylogenetics/

03-330 Genetics
Intermittent: 9 units
The mechanisms of transmission of inherited traits in viruses, bacteria, fungi, plants and animals are discussed. Molecular mechanisms of gene expression and gene regulation are analyzed. Recombinant DNA and its applications in genetic analysis, biotechnology, forensics, agriculture, medicine, and the pharmaceutical industry are presented. Special topics in human genetics are considered, such as the genetics of cancer. Principles and methods for the study of developmental genetics, population genetics and complex traits are also introduced.
Prerequisites: 03-121 or 03-151

03-342 Introduction to Biological Laboratory Practices
Fall: 1 unit
This course is designed for students in the BS in Computational Biology degree program. It is a required co-requisite for 03-343, Experimental Genetics and Molecular Biology and is designed to be an introduction to basic laboratory practices. The course will introduce biological and chemical safety training and basic laboratory practices. Techniques of solution preparation and titration, pipetting, UV/VIS spectroscopy, and quantitation of biological compounds will be covered.

03-343 Experimental Techniques in Molecular Biology
Fall: 12 units
This laboratory course is designed to teach experimental methods of modern biology. Experiments in microbial genetics, molecular biology and eukaryotic genetics are performed. Emphasis is placed on understanding and applying the biological principles of each experiment. This course is designed to be taken during the junior year and is intended to prepare students for undergraduate research. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.
Prerequisites: (03-231 or 03-232) and (09-208 or 09-222)

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html

03-344 Experimental Biochemistry
Spring: 12 units
This course is designed to be taken as a sequel to 03-343. Experiments cover a variety of methods for investigating the structure and function of biological molecules. Experimental methods with proteins, enzyme kinetics, lipids, spectroscopy, and isolation and quantization of biological molecules are covered. During several experiments, students design their own projects. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.
Prerequisites: 03-343 and (03-231 or 03-232)

03-345 Experimental Cell and Developmental Biology
Spring: 12 units
This laboratory is designed to teach concepts and experimental methods in cell and developmental biology. Students work with a variety of organisms to examine how cells traverse development from rapidly dividing, undifferentiated cells, through cell commitment and the establishment of spatial and temporal patterns of gene expression, to the specific characteristics and responses of terminally differentiated cells. The course makes extensive use of video microscopy with phase contrast, DIC and fluorescence microscopes. Biochemical, immunological and molecular biological techniques are used to probe the molecules and processes of cells undergoing development. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.
Prerequisites: 03-343 and (03-231 or 03-232) and (03-320 or 03-240)

03-346 Experimental Neuroscience
Intermittent: 12 units
This laboratory is designed to teach concepts and experimental methods in neurobiology. Students work with a variety of organisms to study the anatomy, function, and development of the nervous system. Immunological, molecular, biochemical, and ballistic labeling techniques are used to examine the gene expression and structure in the mature and developing nervous system. Students study the function of neurons through neurophysiological techniques in invertebrates and computer simulation. This course makes extensive use of video microscopy and phase contrast, DIC, and fluorescence microscopes.
Prerequisites: (03-240 or 03-320) and 03-362 and 03-343

03-350 Developmental Biology
Spring: 9 units
How does a complex, multicellular organism arise from a single cell? How do cells with identical genomes acquire distinctive properties? What are the medical consequences of abnormal embryonic development? How does regeneration occur? How has evolution modified developmental programs to produce different body plans? These are some of the central questions in the field of developmental biology. This course serves as an introduction to current concepts and experimental approaches in this rapidly advancing field. Topics in the course include genomics, differential gene expression, cell signaling, cell movements, tissue morphogenesis, stem cells, human development, and regeneration. The course examines the genes and signaling pathways that control development and the role that mis-regulation of these pathways plays in human disease.
Prerequisites: 03-240 or 03-320

03-355 Stem Cell Engineering
Spring: 9 units
This course is offered only at CMU's campus in Qatar. This course covers the progress of stem cell research and its application to tissue engineering and regenerative therapy. The students will learn about the different types of stem cells, the biochemical stimuli that are responsible for regulating stem cell differentiation and techniques involved in the culture of stem cells. This subject will also highlight the development of various biomaterials that are used as biological substitutes in regenerative therapy. Current and emergent stem cell technologies in selected applications of tissue engineering in bone, skin and vascular tissues will be emphasized. The course will be delivered through problem-based learning where students are expected to participate in discussions, perform literature search, present their findings through presentations and written reports on selected topics. The class is designed for undergraduates with a strong interest in stem cell biology and tissue engineering, and the desire to actively contribute to discussions in the class.
Prerequisite: 03-240

03-362 Cellular Neuroscience
Fall: 9 units
Modern neuroscience is an interdisciplinary field that seeks to understand the function of the brain and nervous system. This course provides a comprehensive survey of cellular and molecular neuroscience ranging from molecules to simple neural circuits. Topics covered will include the properties of biological membranes, the electrical properties of neurons, neural communication and synaptic transmission, mechanisms of brain plasticity and the analysis of simple neural circuits. In addition to providing information the lectures will describe how discoveries were made and will develop students' abilities to design experiments and interpret data.
Prerequisites: 85-219 or 42-202 or 03-161 or 03-320 or 03-240

03-363 Systems Neuroscience
Spring: 9 units
Modern neuroscience is an interdisciplinary field that seeks to understand the function of the brain and nervous system. This course provides a comprehensive survey of systems neuroscience, a rapidly growing scientific field that seeks to link the structure and function of brain circuitry to perception and behavior. This course will explore brain systems through a combination of classical, Nobel prize-winning data and cutting edge primary literature. Topics will include sensory systems, motor function, animal behavior and human behavior in health and disease. Lectures will provide fundamental information as well as a detailed understanding of experimental designs that enabled discoveries. Finally, students will learn to interpret and critique the diverse and multimodal data that drives systems neuroscience.
Prerequisites: 42-202 or 03-240 or 03-320 or 03-161 or 85-219

03-364 Developmental Neuroscience
Fall: 9 units
This course examines the principles that govern the developmental assembly of a complex nervous system. Topics range from the earliest steps of induction of neural tissue and birth of neurons to the plasticity within developing circuits and the development of behavior. By the end of this course students should be able to describe the major steps in neural development and to interpret key experiments using vertebrate and invertebrate models have helped to elucidate these steps. This course is taught on the University of Pittsburgh campus by faculty from Carnegie Mellon and Pitt.
Prerequisites: 03-363 or 03-362 or 03-240

03-365 Neural Correlates of Learning and Memory
Spring: 9 units
This course will examine the biological substrates of learning, memory, and behavioral adaptation. The focus will be on addressing how neural circuits change during new skill acquisition and adapt to variations in the environment. An introduction to experience-dependent changes in neural structure and function, in addition to behavioral learning paradigms, will be provided. Then we will consider the ways in which specific changes in biological substrates give rise to the emergent properties that drive behavioral adaptation, followed by in depth coverage of deciphering which biological substrates constitute a lasting memory trace. Finally, the concept of age-dependent learning will be examined. Concepts and specific examples will come through reading of primary literature and selected readings from advanced texts.
Prerequisites: 03-161 or 85-219 or 03-240 or 03-320

03-366 Biochemistry of the Brain
Fall: 9 units
This course is designed to give students a comprehensive understanding of the major neurotransmitter systems in the brain. Students will explore qualitative and quantitative approaches to understanding how various neurotransmitters function as well as how they are modulated by endogenous and exogenous agents. The qualitative exploration will include basic principles of neural communication, signal transduction and second messenger systems, main classes of neurotransmitters, and the effects of medications and drugs of abuse. Quantitatively, we will explore the kinetics of neurotransmitter binding, affinity of different receptors for their neurotransmitters, and apply concepts of competitive, uncompetitive, and mixed inhibition to understanding the effects of exogenous agonists and antagonists on these receptors. Students will learn how these qualitative and quantitative biochemical processes affect the endocrine system, neuroinflammatory responses, addictive behaviors, and neurotoxic or degenerative conditions.
Prerequisites: (03-231 or 03-232) and (03-161 or 85-219 or 03-362)

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html

03-370 Principles of Biotechnology
Spring: 9 units
This course is intended to provide an introduction to a set of core areas important for understanding and managing biotechnology business. Essentially, the focus of the course will be the basics of the biotechnology entrepreneurial process and a deep background on biotechnology enabled products. The objective is to provide the background for management-level personnel to make decisions based on knowledge of contemporary biotechnologies and the legal and regulatory environment. Because it is impossible to be comprehensive with regard to all applications, the goal is to provide students with sufficient familiarity with current biotechnology and with a framework for assessing bio-related business questions that they may encounter in the future through a combination of independent research, assessment of opportunities and pitfalls, and historical comparisons. NOTE: This course CANNOT be counted towards the advanced biology electives for any major or minor in Biological Sciences.
Prerequisites: (03-231 or 03-232) and (03-240 or 03-320)

03-380 Virology
Fall: 9 units
The concepts and methods of virology are covered, with emphasis on animal viruses, within the framework of cell biology, genetics, molecular biology, immunology, pathology, and epidemiology. The strategies that a wide variety of different DNA and RNA viruses, including some new and emerging ones, use to replicate and express their genomes during infection of host cells will be examined in some detail. The effects that viruses inflict on these cells will also be examined, as will some of the host cell responses generated by such virus-cell interactions, including interferon induction, the antiviral response generated by interferon, and oncogenic transformation. In addition, anoverview of procedures used for prevention and treatment of viral diseases via vaccinesand antiviral drugs, respectively, will be presented, as will a brief discussion of viroids and prions, and the characteristics of these agents which distinguish them from viruses.
Prerequisite: 03-240

03-390 Molecular and Cellular Immunology
Spring: 9 units
This course offers the student a comprehensive view of modern immunology at the molecular and cellular level. The first half of the course presents the fundamentals of immunology, beginning with innate immunity, followed by a discussion of the structure and function of important molecules in the immune system, such as antibodies, major histocompatibility antigens, complement, and the T-cell receptor. This portion of the course is concluded with a discussion of the development and function of the cellular immune response. The second half of the course is focused on applied immunology and discusses hypersensitivity, autoimmunity, immunodeficiencies, tumor immunology, infectious disease, and transplantation immunology. Presentations at the end of the course provide an opportunity for the student to explore additional topics in contemporary immunology.
Prerequisites: (03-232 or 03-231) and (03-240 or 03-320)

03-391 Microbiology
Spring: 9 units
The course provides introductory level microbial science and molecular biology that is aimed for students from all disciplines of natural science. It covers microbiology, genetics, genomics, as well as bacterial, fungal, and protozoan pathogenesis. Topics include: the human microbiome, genome sequencing, gene transfer across species, virulence, and drug resistance.
Prerequisites: 03-231 or 03-232

03-392 Microbiology Laboratory
Intermittent: 6 units
This is an upper level biology course for students who have taken or are currently taking the Microbiology course and are interested in laboratory experience in microbiology. It is designed with the recommendations of the American Society for Microbiology for a student laboratory course in mind in order to introduce the student to a broad spectrum of techniques in microbiology. You will learn the skills needed to perform experiments that help to differentiate various types of microbes, examine antimicrobial and antibiotic sensitivity and resistance, and begin to explore microbial diversity. Finally, you will develop an understanding of the theory behind the techniques you use and will be given the opportunity to further develop your skills in the process of experimental design. THIS COURSE WILL BE OFFERED EVERY OTHER SPRING, BEGINNING IN THE SPRING 2017 (NOT offered spring 2016).

03-402 Undergraduate Colloquium for Seniors
Spring
Missing Course Description - please contact the teaching department.

03-409 Special Topics
Intermittent: 3 units
Note: This class is available only on the Qatar campus. This course covers the progress of stem cell research and its application to tissue engineering and regenerative therapy. This is an advanced Biology elective. The students will learn about the different types of stem cells, the biochemical stimuli that are responsible for regulating stem cell differentiation and techniques involved in the culture of stem cells. This subject will also highlight the development of various biomaterials that are used as biological substitutes in regenerative therapy. Current and emergent stem cell technologies in selected applications of tissue engineering in bone, skin and vascular tissues will be emphasized. The course will be delivered through problem-based learning where students are expected to participate in discussions, perform literature search, present their findings through presentations and written reports on selected topics. The class is designed for upper undergraduates with a strong interest in stem cell biology, and the desire to actively contribute to discussions in the class.

03-410 Special Topics in Biological Sciences
Fall and Spring: 9 units
Special Topics in Biological Sciences. Topics will vary depending on the semester and instructor. Please read the individual section descriptions for more information. Genome Editing Biotechnology Description: This course will introduce students to the revolution in genome editing biotechnology based on the CRISPR bacterial immune system. Specific topics include CRISPR moving parts, discovery and diversity of CRISPR systems, CRISPR implementation in mammals, and other mammalian genetic engineering systems. We will view these topics in the context of human genetic diseases and the use of mouse genetics for disease research. We will consider ethical challenges including triparental embryos and CRISPR patent rights.
Prerequisites: 03-151 or 03-709 or 03-121

03-411 Topics in Research
Fall
During the year students attend and submit brief summaries of weekly seminars given by outside speakers or members of the Biology Department on current research topics in modern biology; some seminars outside of the department may be substituted.

03-412 Topics in Research
Spring
During the year students attend and submit brief summaries of weekly seminars given by outside speakers or members of the Biology Department on current research topics in modern biology. Some seminars outside of the department may be substituted.

03-428 Genome Editing Biotechnology
Fall: 4.5 units
How can we create genetically engineered cells, animals, plants, and even humans? This course will focus on the technologies that enable genome modification, with an emphasis on the recently developed CRISPR-Cas9 system. Specific topics will include an introduction to CRISPR technology and its history; DNA double strand break repair; Off target effects; Gene regulator CRISPRs; Alternate technologies; Ethics of modifying our genomes; Applications - cell screening; Applications - organism engineering; Applications - anti-HIV and immunotherapy; Overview of Gene therapy.
Prerequisites: 03-151 or 03-121 or 03-709

03-435 Cancer Biology
Fall: 9 units
Cancer affects roughly 1 in 3 people worldwide, and originates from both hereditary as well as environmental causes. Its prevalence makes it practically inescapable. Its of great relevance from both scientific and sociocultural perspectives. This course aims to examine various hallmarks of the biology of cancer while exploring novel concepts that challenge our understanding of cell biology. From the perspective of a cancer cell, we will learn about basic concepts of cell division, DNA replication, cell signaling, cell cycle control, cell metabolism, the regulation of gene expression in human cells, oncogenes, tumor suppressor genes, mutations, the process of metastasis, cancer diagnosis, cancer treatments and ethical questions surrounding treating patients, the epidemiology of cancer including prevalence and historical trends in diagnosis, as well as social impacts of a cancer diagnosis. Students will also explore the primary literature and scientific review articles to better understand research and methods of investigation into the cellular and molecular processes of tumorigenesis. This course will include interactive lectures, guest speakers, and in class discussion exercises aimed at building class participation and association, as well as confidence in public speaking about the sciences. Given the well-documented link between stress and cancer, there will also be a small component aimed at making students aware of health and wellness, such as reducing stress and anxiety.
Prerequisites: 03-330 or 03-220

03-439 Introduction to Biophysics
Fall: 9 units
This intermediate level course is primarily offered to Physics and Biology undergrads (junior/senior) and provides a modern view of molecular and cellular biology as seen from the perspective of physics, and quantified through the analytical tools of physics. This course will not review experimental biophysical techniques (which are covered, e.g., in 03-871). Rather, physicists will learn what sets "bio" apart from the remainder of the physics world and how the apparent dilemma that the existence of life represents to classical thermodynamics is reconciled. They also will learn the nomenclature used in molecular biology. In turn, biologists will obtain (a glimpse of) what quantitative tools can achieve beyond the mere collecting and archiving of facts in a universe of observations: By devising models, non-obvious quantitative predictions are derived which can be experimentally tested and may lead to threads that connect vastly different, apparently unrelated phenomena. One major goal is then to merge the two areas, physics and biology, in a unified perspective.
Prerequisites: (03-121 or 03-151) and (33-152 or 33-107 or 33-122 or 33-132 or 33-112 or 33-142)

Course Website: http://www.cmu.edu/smsl/teaching/IntroBioPhys.html

03-442 Molecular Biology
Fall: 9 units
The structure and expression of eukaryotic genes are discussed, focusing on model systems from a variety of organisms including yeast, flies, worms, mice, humans, and plants. Topics discussed include (1) genomics, proteomics, and functional proteomics and (2) control of gene expression at the level of transcription of mRNA from DNA, splicing of pre-mRNA, export of spliced mRNA from the nucleus to the cytoplasm, and translation of mRNA.
Prerequisites: 03-221 Min. grade B or 03-220 Min. grade B or 03-330 Min. grade B

Course Website: http://www.cmu.edu/bio/undergrad/courses/index.html

03-445 Undergraduate Research
Fall and Spring
Students may investigate research problems under the supervision of members of the faculty. Permission of a faculty advisor required.

03-451 Advanced Developmental Biology and Human Health
Fall: 9 units
This course will examine current research in developmental biology, focusing on areas that have important biomedical implications. The course will examine stem cell biology, cellular reprogramming, cell signaling pathways, tissue morphogenesis, and genetic/developmental mechanisms of birth defects and human diseases. Emphasis will be placed on the critical reading of recent, original research papers and classroom discussion, with supporting lectures by faculty.
Prerequisites: (03-320 or 03-240) and (03-220 or 03-330)

03-511 Computational Molecular Biology and Genomics
Fall: 9 units
An advanced introduction to computational molecular biology, using an applied algorithms approach. The first part of the course will cover established algorithmic methods, including pairwise sequence alignment and dynamic programming, multiple sequence alignment, fast database search heuristics, hidden Markov models for molecular motifs and phylogeny reconstruction. The second part of the course will explore emerging computational problems driven by the newest genomic research. Course work includes four to six problem sets, one midterm and final exam.
Prerequisites: (03-121 or 03-151) and 15-122

Course Website: http://www.cs.cmu.edu/~durand/03-711/

03-512 Computational Methods for Biological Modeling and Simulation
Fall: 9 units
This course covers a variety of computational methods important for modeling and simulation of biological systems. It is intended for graduates and advanced undergraduates with either biological or computational backgrounds who are interested in developing computer models and simulations of biological systems. The course will emphasize practical algorithms and algorithm design methods drawn from various disciplines of computer science and applied mathematics that are useful in biological applications. The general topics covered will be models for optimization problems, simulation and sampling, and parameter tuning. Course work will include problems sets with significant programming components and independent or group final projects.
Prerequisites: (03-121 or 03-151) and 15-122

03-534 Biological Imaging and Fluorescence Spectroscopy
Fall: 9 units
Fluorescence detection is a powerful technology that is the basis of most biomedical imaging, high speed flow cytometry, cell sorting, DNA sequencing, gene expression arrays, diagnostics and drug discovery. It is not surprising, then, that it is the basis of many commercial technology organizations with billions of dollars in sales. It is almost impossible to turn the page of a biomedical journal without seeing multicolor images acquired with powerful microscopes and fluorescent probes of cell structure and function. The sensitivity of fluorescence detection is so high that single biological molecules can be monitored as they function in living cells. This course covers principles and applications of optical methods in the study of structure and function in biological systems. Topics to be covered include: absorption and fluorescence spectroscopy; interaction of light with biological molecules, cells, and systems; design of fluorescent probes and optical biosensor molecules; genetically expressible optical probes; photochemistry; optics and image formation; transmitted-light and fluorescence microscope systems; laser-based systems; scanning microscopes; electronic detectors and cameras: image processing; multi-mode imaging systems; microscopy of living cells; and the optical detection of membrane potential, molecular assembly, transcription, enzyme activity, and the action of molecular motors. This course is particularly aimed at students in science and engineering interested in gaining in-depth knowledge of modern light microscopy.
Prerequisites: 09-106 and (03-320 or 03-240) and (21-122 or 21-124) and (33-111 or 33-121 or 33-141) and (03-231 or 03-232)

03-545 Honors Research
Spring: 9 units
This semester of research consists primarily of research and preparation of an acceptable written thesis. Oral presentation and defense of the thesis research will be required. This course ordinarily will be taken in the second semester of the senior year. Permission of the research advisor required.
Prerequisite: 03-445

03-601 Computational Biology Internship
All Semesters
This course allows a student to gain computational biology experience in a "real-world" setting. Internships vary widely in scope, but common to all is the chance to practice computational biology skills acquired in the classroom. Typically, students seek and secure their own internships.

03-620 Techniques in Electron Microscopy
Spring: 9 units
This course is designed to teach basic methods in transmission electron microscopy to graduate and undergraduate students. Sophomores with an interest in electron microscopy are encouraged to enroll, and will have the option and opportunity to utilize their skills in various laboratories during their junior or senior year. The course will be offered once each year, during the spring semester. Course enrollment will be limited to 4-6 students. Preferential enrollment will be given to graduate students and undergraduate students who have demonstrated a need for this technique in their research. The class will include one hour of lecture and 4 hours of laboratory each week (some additional laboratory time outside of the scheduled laboratory time is required). Students will learn basic methods in specimen preparation for both transmission and scanning electron microscopy (fixation, embedding and ultramicrotomy, drying and metal coating) and will be trained in the operation of both the Hitachi 7100 and 2460N electron microscopes. Lectures and laboratories during the last few weeks of the semester will introduce the students to special techniques (e.g. immunoelectron microscopy , cryoultramicrotomy, freeze substitution, variable pressure SEM, etc.) and will allow them to work with samples from their own research. Experimentation using living organisms and/or their tissues, cells or molecules is an essential component of this course.

03-700 MS Thesis Research
All Semesters
A student enrolled in this course conducts an independent investigation on a project in a faculty advisor's lab. The project is selected from a major area of research study with the advice and approval of the faculty advisor. This course is required of students who are enrolled in the Master of Science program and wish to write and defend a thesis.

03-709 Applied Cell and Molecular Biology
Fall: 12 units
The purpose of this course is to review key cellular and molecular phenomenon in biological pathways with strong emphasis on latest experimental techniques used in applications including but not limited to disease diagnosis, therapeutics, large-scale genomic and proteomic analysis. Knowledge gained from this course will be both conceptual and analytical. Students will periodically write extensive research reports on select topics and give oral presentations on a select few, while critically analyzing primary literature.

03-711 Computational Molecular Biology and Genomics
Fall: 12 units
An advanced introduction to computational molecular biology, using an applied algorithms approach. The first part of the course will cover established algorithmic methods, including pairwise sequence alignment and dynamic programming, multiple sequence alignment, fast database search heuristics, hidden Markov models for molecular motifs and phylogeny reconstruction. The second part of the course will explore emerging computational problems driven by the newest genomic research. Course work includes four to six problem sets, one midterm and final exam.
Prerequisites: (03-121 or 03-151) and 15-122

Course Website: http://www.cs.cmu.edu/~durand/03-711/

03-712 Computational Methods for Biological Modeling and Simulation
Spring: 12 units
This course covers a variety of computational methods important for modeling and simulation of biological systems. It is intended for graduates and advanced undergraduates with either biological or computational backgrounds who are interested in developing computer models and simulations of biological systems. The course will emphasize practical algorithms and algorithm design methods drawn from various disciplines of computer science and applied mathematics that are useful in biological applications. The general topics covered will be models for optimization problems, simulation and sampling, and parameter tuning. Course work will include problems sets with significant programming components and independent or group final projects.
Prerequisites: 15-110 or 02-201 or 15-112 or 02-613

03-713 Bioinformatics Data Integration Practicum
Spring: 6 units
This course provides a hands-on, self-directed experience dealing with biological data and integrating it to produce software and analyses that are of use to biologists. Data are taken from a variety of sources, including academic research labs, large scale public genomics projects and data from private industry partners. Students will be given a project and asked to design a solution using a combination of existing tools and their own developed software.

03-726 Evolution of Regulatory Genomics
Fall: 6 units
This course in will examine the processes by which genomes evolve and how this genetic variation leads to phenotypic diversity. An introduction to gene regulation, how the genome controls development, comparisons of development and the phenotypic diversity in animals will be provided. Then we will consider ways in which genomes evolve, followed by in depth coverage of how gene regulation has evolved (focusing on cis regulatory evolution and non-coding RNA regulatory evolution). Finally the concept of gene regulatory network control of development and understanding evolution as change in these networks will be examined. Concepts and specific examples will come through reading of primary literature and selected readings from advanced texts. Grading will be based on written assignments from readings of literature, participation in class discussion, and two in class exams. The graduate level course (03-726) will in addition require a term paper based on thorough and critical reading of primary literature focused on one of the general topics presented in the course.

03-727 Phylogenetics
Intermittent: 12 units
An advanced introduction to theory and practice of phylogenetic analysis (evolutionary tree reconstruction), with a focus on molecular evolution. Basic concepts will be introduced in the context of a historical survey of phylogeny reconstruction. A comprehensive introduction to phylogenetic methods will be presented, including data selection, multiple sequence alignment, character state data versus distance matrices, sequence evolution models, and the four major approaches to phylogeny reconstruction: Parsimony, Distance matrix, Maximum likelihood, and Bayesian analysis. Sources of error and methods for assessing the reliability of phylogenetic inference will be discussed. We will cover additional topics as time allows, such as phylogenetic hypothesis testing, genome scale approaches, the interface between phylogenetics and population genetics, gene tree reconciliation, horizontal gene transfer, and phylogenetic networks. Course work will include readings from textbooks and seminal articles from the primary literature, problem sets, a final exam and possibly in class exams. Students in 03-727 will also carry out a major data analysis project, intended to familiarize the student with the practical application of principles taught in class. A short paper summarizing the results of this project will be required.

Course Website: http://www.cs.cmu.edu/~durand/Phylogenetics/

03-728 Genome Editing Biotechnology
Fall: 6 units
How can we create genetically engineered cells, animals, plants, and even humans? This course will focus on the technologies that enable genome modification, with an emphasis on the recently developed CRISPR-Cas9 system. Specific topics will include an introduction to CRISPR technology and its history; DNA double strand break repair; Off target effects; Gene regulator CRISPRs; Alternate technologies; Ethics of modifying our genomes; Applications - cell screening; Applications - organism engineering; Applications - anti-HIV and immunotherapy; Overview of Gene therapy. Student in-class presentations will cover late-breaking topics and specific areas of student interest.

03-730 Advanced Genetics
Spring: 12 units
This course considers selected current topics in genetics at an advanced level. Emphasis is on classroom discussion of research papers. Topics change yearly. Recent topics have included nucleocytoplasmic trafficking of RNA in yeast, genome imprinting in mammals, genetics of learning and memory in Drosophila, and viral genomics.
Prerequisites: (03-330 Min. grade B or 03-220 Min. grade B) and (03-742 or 03-442)

03-740 Advanced Biochemistry
Spring: 12 units
This is a special topics course in which selected topics in biochemistry will be analyzed in depth with emphasis on class discussion of papers from the recent research literature. Topics change yearly. Recent topics have included single molecule analysis of catalysis and conformational changes; intrinsically disordered proteins; cooperative interactions of aspartate transcarbamoylase; and the mechanism of ribosomal protein synthesis.

03-741 Advanced Cell Biology
Spring: 12 units
This course covers fourteen topics in which significant recent advances or controversies have been reported. For each topic there is a background lecture by the instructor, student presentations of the relevant primary research articles and a general class discussion. Example topics are: extracellular matrix control of normal and cancer cell cycles, force generating mechanisms in trans-membrane protein translocation, signal transduction control of cell motility, and a molecular mechanism for membrane fusion.
Prerequisites: (03-240 or 03-320) and (03-231 or 03-232)

03-742 Advanced Molecular Biology
Fall: 12 units
The structure and expression of eukaryotic genes are discussed, focusing on model systems from a variety of organisms including yeast, flies, worms, mice, humans, and plants. Topics discussed include (1) genomics, proteomics, and functional proteomics and (2) control of gene expression at the level of transcription of mRNA from DNA, splicing of pre-mRNA, export of spliced mRNA from the nucleus to the cytoplasm, and translation of mRNA.

03-744 Membrane Trafficking
Spring: 9 units
While the focus of this course is to analyze membrane/protein traffic along both the biosynthetic and endocytic pathways, our general goal is to teach students how to read and interpret the literature. In particular, we emphasize the conclusions and discuss their validity. The course is updated each year to include topics in which new and interesting developments have occurred. Emphasis is placed on how membrane traffic is regulated and where applicable how it is disrupted or subverted during disease processes. The course is of general interest to students, fellows, and faculty interested in cell biology, immunology, neurobiology, pharmacology and virology.
Prerequisites: 03-320 or 03-240

03-745 Core Course in Biochemistry
Fall: 6 units
This course is designed to provide first year doctoral students in the Department of Biological Sciences with a broad foundation in biochemistry and biophysical techniques. Topics include protein structure, enzymology, and methods to characterize protein structure and function. Students will be evaluated throughout the course, and with a final exam.

03-746 Core Course in Cell Biology
Fall: 6 units
This course is designed to provide first year doctoral students in the Department of Biological Sciences with a broad foundation in cell biology. Topics include, but are not limited to, intracellular trafficking, signal transduction, the cytoskeleton, the cell cycle, and cell-cell interactions. This is a lecture-based course and will include some discussion of the primary literature. Students will be evaluated weekly, and with a final exam. Enrollment requires instructor permission.

03-747 Proposal Preparation and Peer Review
Fall: 4 units
The concise and clear presentation of an experimental research plan is an essential skill for research scientists. This mini course is designed to introduce 2nd year students to the structure and preparation of a structured research proposal as well as formalize instruction in professional standards in research ethics, CV preparation, and scientific writing and data presentation. Course material is taken from actual grant proposals and previous years' qualifying exam proposals, as well as primary research publications and faculty grant proposals. The course is highly interactive, and students are required to participate in review of each others' work throughout the duration of the course. Coursework is expected to form the basis of the Ph.D. qualifying exam proposal in the winter of the second year.

03-748 Scientific Speaking and Peer Review
Fall: 3 units
Effective public presentation of scientific data is an important skill for every scientist. This interactive course will provide students with specific guidelines on organizing, preparing, and delivering an effective and engaging scientific talk. The topics covered include data organization, choice of content based on audience, PowerPoint and graphic design, charts and graphs representation, use of animation, fonts and color schemes, body language, overcoming stage-fear, and compensation for accents. The course is designed for third year graduate students. Students will present their upcoming Journal Club talk a week or two before in class, and receive formal review from a panel comprising of other students in the class, departmental multimedia designer, and the instructor. Further, each talk will be video recorded, and students will use the recording for self-critique and further input from the instructor. Each students Journal Club talk will then be recorded to provide a benchmark for the final talk incorporating the critiques provided. Students are required to participate in review of each others work throughout the duration of the course, and will therefore actively learn the elements of an effective presentation.

03-750 Graduate Seminar
Fall and Spring: 1 unit
Each semester, all Department of Biological Sciences graduate students are required to register for and attend the weekly departmental Research Seminar (03-750; 1 unit). Graduate students are strongly urged to meet the speakers to broaden their knowledge of cutting-edge biological science, to discuss career paths and strategies and to make useful contacts; the faculty host can arrange group meetings for interested students.

03-751 Advanced Developmental Biology and Human Health
Fall: 12 units
This course will examine current research in developmental biology, focusing on areas that have important biomedical implications. The course will examine stem cell biology, cellular reprogramming, cell signaling pathways, tissue morphogenesis, and genetic/developmental mechanisms of birth defects and human diseases. Emphasis will be placed on the critical reading of recent, original research papers and classroom discussion, with supporting lectures by faculty.
Prerequisites: (03-240 or 03-320) and (03-330 or 03-220)

03-755 Graduate Research Seminar
Fall and Spring: 3 units
Each semester, all Departmental of Biological Sciences graduate students are required to register for and attend the weekly departmental Journal Club (Graduate Research Seminar 03-755; 3 units) during which students and faculty members give 25-minute presentations. Second-year students present a research paper or topic from the literature, and more senior students present their research results; typically, graduate students give four Journal Club presentations during their time in the department. Each succeeding year those students who speak at the Departmental Retreat or who are graduating by May of their fifth year are not required to present at Journal Club that year.

03-757 Special Topics
Intermittent: 12 units
Special topics course for graduate students.

03-758 Special Topics
Fall: 6 units
Special topics course for graduate students. 03-758-A1: Biosensors Biological systems are essentially 3D, highly-linked networks that sense, compute and respond to internal or external stimuli via widely distributed and diversified cells interacting over various timescales. To understand such complex biological systems, ideally, it would require observation of the activity of numerous populations of cells with a high degree of precision and resolution down to molecular building block. In this way, we can understand the functions and dynamics that are produced by the interactions between different cells as well as subcellular signaling events within individual cells. This course explores up-to-date tools that enable insight into how biological components work together to implement physiological functions, and how these interactions go awry in disease states. 03-758-A2: Synthetic Biology This course explores the following: Structure of, expression and regulation in prokaryotic and eukaryotic systems, including their viruses. Advanced biotechnological methods comprising cloning, mutagenesis, polymerase chain reaction, synthesis of nucleic acids, DNA sequence determination, synthetic genomics, CRISPR-Cas9, directed evolution, alternative splicing and computational modeling. Experimental characterization of structural and functional properties of biomolecules. Bioinformatic analysis and characterization of genes and biomolecules.

03-762 Advanced Cellular Neuroscience
Fall: 12 units
This course is an introductory graduate course in cellular neuroscience. As such it will assume little or no background but will rapidly progress to discussions of papers from the primarily literature. The structure of the course will be about half lectures and half discussions of new and classic papers from the primary literature. These discussions will be substantially led by students in the course. Topics covered will include ion channels and excitability, synaptic transmission and plasticity, molecular understanding of brain disease and cell biology of neurons. Assessment will be based on class participation, including performance on in-class presentations and a writing assignment.

03-763 Advanced Systems Neuroscience
Spring: 12 units
This course is a graduate version of 03-363. Students will attend the same lectures as the students in 03-363, plus an additional once weekly meeting. In this meeting, topics covered in the lectures will be addressed in greater depth, often through discussions of papers from the primary literature. Students will read and be expected to have an in depth understanding of several classic papers from the literature as well as current papers that illustrate cutting edge approaches to systems neuroscience or important new concepts. Use of animals as research model systems will also be discussed. Performance in this portion of the class will be assessed by supplemental exam questions as well as by additional homework assignments.
Prerequisites: 03-121 or 03-762 or 03-362 or 03-151

03-765 Advanced Neural Correlates of Learning and Memory
Spring: 12 units
This course will examine the biological substrates of learning, memory, and behavioral adaptation. The focus will be on addressing how neural circuits change during new skill acquisition and adapt to variations in the environment. An introduction to experience-dependent changes in neural structure and function, in addition to behavioral learning paradigms, will be provided. Then we will consider the ways in which specific changes in biological substrates give rise to the emergent properties that drive behavioral adaptation, followed by in depth coverage of deciphering which biological substrates constitute a lasting memory trace. Finally, the concept of age-dependent learning will be examined. Concepts and specific examples will come through reading of primary literature and selected readings from advanced texts.

03-770 Principles of Biotechnology
Spring: 12 units
This course is intended to provide an introduction to a set of core areas important for understanding and managing biotechnology business. Essentially, the focus of the course will be the basics of the biotechnology entrepreneurial process and a deep background on biotechnology enabled products. The objective is to provide the background for management-level personnel to make decisions based on knowledge of contemporary biotechnologies and the legal and regulatory environment. Because it is impossible to be comprehensive with regard to all applications, the goal is to provide students with sufficient familiarity with current biotechnology and with a framework for assessing bio-related business questions that they may encounter in the future through a combination of independent research, assessment of opportunities and pitfalls, and historical comparisons. NOTE: This course CANNOT count towards the advanced electives required for majors or minors in Biological Sciences.

03-791 Advanced Microbiology
Spring: 12 units
This course will use both lectures and current research literature in the area of Microbiology and Infectious Diseases to introduce such topics as prokaryotic cytoskeletal functions, the human microbiome and its impact, metabolic engineering, transposon mutagenesis for gene function elucidation, synthetic genome construction and applications, pathogenicity islands, functional and expression-based identification of pathogenicity determinants, horizontal gene transfer, regulatory RNAs, biofilm formation quorum sensing, and antimicrobial drug development.

03-871 Structural Biophysics
Fall: 12 units
The physical properties of biological macromolecules and the methods used to analyze their structure and function are discussed. Topics covered include: protein architecture and folding; nucleic acid structures and energetics; structure determination by X-ray crystallography and NMR; biological spectroscopy with emphasis on absorption, fluorescence, and NMR spectroscopies; other methods to characterize proteins and protein-ligand interactions, such as mass spectrometry, calorimetry, and surface plasmon resonance. Sufficient detail is given to allow the student to critically evaluate the current literature.
Prerequisites: (03-231 or 03-232) and (09-345 or 09-214) and (21-122 or 21-120)

03-900 Doctoral Thesis Research
All Semesters
Doctoral Thesis Research consists of an independent investigation on a project selected from a major area of research study with the advice and approval of the faculty advisor.

Department of Chemistry

Linda Peteanu, Department Head

Karen H. Stump, Director of Undergraduate Studies

Location: Doherty Hall 1316
www.chem.cmu.edu

Chemistry at Carnegie Mellon University is a shared mission to advance energy and sustainability solutions and to improve human health by generating, exploring, and harnessing new molecular design paradigms.

Chemistry is an area of science involved with the study of the properties and reactions of substances ranging from living cells to subatomic particles. It is at the center of many sciences and technical fields, providing the fundamental knowledge and tools needed to address many of society's needs and to explore the unknown. Fields as diverse as genetic engineering, materials science and nanotechnology look to chemistry when they look to the future, for that is where the ultimate in understanding — the molecular level — resides.

The chemistry profession is extraordinarily diverse, with career opportunities available in the chemical, petroleum, renewable energy, nuclear power, novel polymeric materials, metals, personal care and pharmaceutical industries, among many others. Chemistry plays an increasingly important role in the rapidly expanding biomedical and biotechnology industries. In addition to careers in industry and academia, many chemists find rewarding careers in the public sector in the laboratories of the National Institutes of Health, the Department of Agriculture, the Environmental Protection Agency, the National Institute of Standards and Technology, and the Department of Energy as well as in consulting. Chemistry graduates also find employment in technical fields unrelated to science but where their problem solving and communication skills are highly valued.

Chemistry is a particularly suitable major for pre-medical and other pre-health profession students. Medical schools look favorably on the rigorous reasoning skills chemists develop, as evidenced by an excellent record for student admission to advanced education in these areas. An increasing number of our graduates are seeking careers in dentistry, pharmacy or pharmacology. The Health Professions Program advises all Carnegie Mellon students considering careers in health fields. (See Health Professions Program description in this catalog for more information.) Chemistry is also excellent preparation for careers in law, especially for those with an interest in specializing in patent, intellectual property or environmental law. The curriculum has the flexibility to allow these students to participate in the CMU Washington Semester Program with the possibility of an internship in science policy should they desire. Students interested in industrial careers often combine their chemistry program with undergraduate courses in business administration or eventually go on to study for an M.B.A.

The Department offers three Bachelor's degrees: the B.S. in Chemistry, The B.S. in Chemistry/Biological Chemistry Track and the B.A. in Chemistry. One third of the courses for the B.A. degree are free electives that may be taken in any of the departments of the University and therefore offers a high degree of flexibility. For the B.S. degrees, electives often are technical courses in chemistry or related fields of science, technology and engineering, such as biology, physics, mathematics, chemical, biomedical or materials science engineering or computer science, although they can be in other non-technical areas as well. It is possible to have all of the technical requirements completed after the junior year in the B.S. and B.A. degree programs, allowing students the flexibility to combine electives in the senior year into a focused program of specialization or to allow for additional breadth in their undergraduate experience. Students interested in graduate studies in chemistry may enroll in graduate courses. Those desiring immediate job placement may be interested in one or more of the formal options that supplement the chemistry B.S. degree. These are described in detail later in this section of the catalog. Carnegie Mellon has one of the strongest polymer science programs in the world and the undergraduate polymer science, materials chemistry or colloids, polymers and sciences options offer training that is particularly valuable for an industrial career. The Computational Chemistry option provides students with expertise in scientific computing that is highly sought after by employers in the pharmaceutical industry.

The overlap between the fields of chemistry and biological sciences continues to grow, with increased emphasis on synthetic chemicals that are used as probes or reporters of biological function and diagnostic and/or therapeutic agents. In addition, the application of sophisticated spectroscopic, structural and scanning probe/force methods on scales as low as single molecules is driving innovation and education at the chemistry/biology interface. Based on these trends the department offers the B.S. in Chemistry/Biological Chemistry Track to better prepare students for advanced studies and a job market that values knowledge and skills from both disciplines. A combination of advanced research-focused lecture course offerings and a novel laboratory course in bioorganic chemistry allows students to build the strong foundation typical of a successful chemistry major, while expanding out into applications of chemistry in the biological sciences. Students who complete the track will have been exposed to the latest research accomplishments and unanswered questions in biological chemistry while also gaining experience in experimental methods unique to research at this interface.

An honors program is offered for highly motivated undergraduates. It is designed primarily for students who wish to undertake a strong research-intensive program of study in contemporary chemistry. The program B.S. in Chemistry with Departmental Honors requires the completion of at least one graduate level course in chemistry, a research project, and the writing and defense of a bachelor's level honors thesis. An advanced track leading to the B.S. in Chemistry with Departmental Honors together with a Master of Science degree in chemistry involves completion of five graduate level courses and a more extensive thesis research project. This degree path is especially attractive to students who plan to pursue an industrial career. With enough advanced placement credit or by carrying heavier than usual course loads, students can complete the Honors/M.S. degree program in 8 semesters, with research during one to two summers. The majority of openings in the chemical industry presently are at the Bachelors and Masters degree levels.

Additional majors (double majors) are available with nearly all other departments in the university provided the student can fit the required courses into the schedule. Generally, all the requirements for both departments must be met for an additional major (except for some courses with similar content). Programs are also available that lead to the degree B.S. in Chemistry with a minor in another discipline. Requirements for most minor programs are described by individual departments in this catalog. However, it is recommended that students who are interested in pursuing a minor as part of their degree consult with the department involved for the current requirements and further guidance about scheduling. Dual degree programs are available in which students receive two separate undergraduate degrees from two different departments in the University. These require students to complete at least 90 units of work per additional degree in addition to the units required for the first degree and the core curriculum from both colleges if the programs are in different units. Several five-year programs have been developed to allow a Carnegie Mellon undergraduate student to earn both a B.S. in Chemistry and a Master of Science degree in fields such as Health Care Policy and Management, Materials Science Engineering, Colloids, Polymers and Surfaces or Biomedical Engineering.

Study abroad programs are available for chemistry majors and programs of one to two semesters can generally be accommodated without delaying time to graduation beyond 8 semesters. One example of a formal exchange program is spending two semesters at École Polytechnique Féderále de Lausanne (EPFL) in Switzerland. Students can also study at the Carnegie Mellon campus in Qatar. Study abroad is encouraged by the chemistry department and can be arranged on an individual basis at universities throughout the world including Europe, Asia, Africa, New Zealand, and Australia during the academic year, the summer and winter or spring breaks. Students interested in study abroad should consult with their academic advisor and the MCS Study Abroad Advisor in the Office of International Education.

One of the most attractive features of the Department of Chemistry is the opportunity for students to interact with prominent research scientists in entry-level as well as advanced courses and in research. Undergraduate laboratory instruction takes place in a state-of-the-art facility located in Doherty Hall. Participation in undergraduate research is encouraged and qualified students may begin projects as early as their second year. Chemistry majors interested in beginning research should consult with the Director of Undergraduate Studies to begin the process of identifying a research mentor. Approximately 90 to 98% of the graduating chemistry majors during the past ten years have taken part in research either for pay or for credit as part of their undergraduate training. Chemistry majors have been very successful in obtaining Small Undergraduate Research Grants (SURG) and Summer Undergraduate Research Fellowships (SURF) from the University to help support their research projects. Several students each summer obtain iSURF support, International Summer Undergraduate Research Fellowships, to work with research collaborators abroad. Undergraduate and research laboratories are equipped with the latest scientific instrumentation. The use of computational tools is emphasized throughout the curriculum.

Program Outcomes

The faculty members of the Department of Chemistry have approved the following as a statement of our learning outcomes for recipients of an undergraduate degree in chemistry.

Upon graduation recipients of the BS or BA degree in Chemistry will:

Foundational knowledge/theory

- Have a firm foundation in the quantitative and computational thinking that underlies chemistry, including use of modern computational tools.
- Have a firm foundation in the theories and models that form the basis for reasoning about molecular systems.
- Understand how the different subdisciplines of chemistry relate to and complement one another.
- Be able to apply chemical reasoning across disciplines, such as biology, environmental science, materials science, nanotechnology, and engineering.

Practical/Experimental

- Understand that chemistry is fundamentally an experimental science, and be able to identify or create an appropriate model, formulate a hypothesis, choose an appropriate set of tools and techniques, and design an experiment that tests the hypothesis and analyze the results from that experiment drawing sound scientific conclusions from the results obtained.
- Be proficient in the use of both classical and modern tools for analysis of chemical systems.
- Be able to design and carry out synthesis of both organic and inorganic systems.
- Be able to use experience and knowledge gained through theoretical and practical design projects to conduct further research.
- Know and follow the proper procedures and regulations for safe handling and use of chemicals and chemical equipment.

Communication

- Be able to convey information, both orally and in writing, to a range of audience levels and for a variety of purposes.
- Understand how scientific information is shared between peers in modern science, including responsible conduct for acknowledging prior and current contributions.
- Be able to locate, identify, understand and critically evaluate the chemical literature.
- Develop the interpersonal skills to function cooperatively in a team setting.

Society and ethics

- Understand the opportunities and consequences of chemistry for the environment and society for both the short term and for long-term sustainability.
- Understand and apply ethics and values to all professional activities.

Professional development

- Develop an understanding of career opportunities both within and outside of chemistry, including through contacts with faculty, the career and professional development center and alumni.
- Be prepared to pursue a life and career that builds on their experiences at Carnegie Mellon to achieve their personal goals and to contribute positively to society.

B.S. in Chemistry

The majority of undergraduate degrees awarded by the Department of Chemistry are Bachelor of Science degrees. This degree program provides the most appropriate preparation for further graduate study and for industrial positions in research and development or analytical chemistry. The curriculum provides a strong foundation in the fundamental areas of study in chemistry: organic, physical, inorganic and analytical chemistry, along with a rich set of research-focused, instrumentation intensive laboratory experiences aligned with those areas. Students interested in less technical areas of employment or graduate study in areas such as business, policy or law may find the Bachelor of Arts degree a more suitable alternative.

Curriculum in B.S. in Chemistry and Requirements for an Additional Major in Chemistry

This catalog and the sample schedules presented are intended to be used by students in the first year class entering in the fall of 2019 or later. Upperclass students should refer to the appropriate previous version of the catalog published during their first year for the requirements that are specific to them.

The technical breadth requirement of the MCS core curriculum requires a minimum of four technical courses outside of the student's primary major. Chemistry majors must at minimum take the following non-chemistry technical courses:

Technical Breadth Requirements		Units
33-121	Physics I for Science Students	12
33-122	Physics II for Biological Sciences and Chemistry Students	9
03-121	Modern Biology	9
or 03-231	Honors Biochemistry	
or 03-232	Biochemistry I	
15-110	Principles of Computing - or other approved programming course	10
or 15-112	Fundamentals of Programming and Computer Science	
or 02-201	Programming for Scientists	
21-120	Differential and Integral Calculus	10
21-122	Integration and Approximation	10
or 21-124	Calculus II for Biologists and Chemists	

Students should complete this technical core as early as possible and preferably by the end of their fifth semester.

The non-technical breadth requirements for MCS students includes Interpretation and Argument (76-101, 9 units), four courses with a minimum of 36 units from the arts, humanities or social sciences and a course of at least 9 units from an approved list in the category of Cultural/Global understanding, three ENGAGE in Wellness courses, ENGAGE in Wellness: Looking Inward (38-230, 1 units), ENGAGE in Wellness: Looking Outward (38-330, 1 units) and ENGAGE in Wellness: Looking Forward (38-430, 1 units), ENGAGE in Service (38-110, 1 units), ENGAGE in the Arts (38-220, 2 units), EUREKA!: Discovery and Its Impact (38-101, 6 units), the MCS first-year seminar, and the junior seminar PROPEL or a total of 72 units. The junior seminar requirement (PROPEL) for MCS Is fulfilled by taking the required Science and Society (38-302, 4 units) and a second approved course. Approved as of the publication of this catalog is Professional Development and Life Skills (38-303, 2 units). A more expanded listing will be published by the MCS Dean's Office. For more information on allowed courses in the arts, humanities and social sciences and electives in the Cultural/Global Understanding category refer to the MCS section of this catalog.

Freshman Year

Fall		Units
09-105	Introduction to Modern Chemistry I	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
21-120	Differential and Integral Calculus	10
33-121	Physics I for Science Students	12
76-101	Interpretation and Argument	9
38-101	EUREKA!: Discovery and Its Impact	6
99-101	Computing @ Carnegie Mellon	3
		50

Students interested in majoring in chemistry who have a strong chemistry background, should enroll in 09-107 rather than 09-105. Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

02-201 Programming for Scientists is an acceptable alternative to 15-110 for chemistry majors as are any upper level courses in programming.

There are some elective laboratory courses offered for MCS students in the first year. These include 03-117 Frontiers, Analysis, and Discovery in Biological Sciences, 09-122 Molecular Tools for Biological and Chemical Studies or 09-115 Introduction to Undergraduate Research in Chemistry. The maximum units allowed during the first semester is 54; therefore, students wishing to take a lab should take an alternate technical course to Physics I such as 15-110 or 03-121 so that their unit total is lower.

Spring		Units
09-106	Modern Chemistry II Chemistry majors who place out of 09-106 can take 09-348 Inorganic Chemistry, 09-510 Chemistry and Sustainability as a chemistry elective or 09-116 a new course for the spring of 2020 that will allow you to shadow upperclass mentors in undergraduate research in chemistry. Chemistry majors who feel they are ready for an undergraduate research experience should meet with the Director of Undergraduate Studies. These opportunities are more prevalent in the summer after your first year or sophomore year.	10
21-122	Integration and Approximation	10
or 21-124	Calculus II for Biologists and Chemists	
33-121	Physics I for Science Students	12
or 03-121	Modern Biology	
or 15-110	Principles of Computing	
xx-xxx	Arts, Humanities and Social Sciences Course 1	9
xx-xxx	Free Elective	9.0
		50

Sophomore Year

Fall		Units
09-201	Undergraduate Seminar I	1
09-219	Modern Organic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12
33-122	Physics II for Biological Sciences and Chemistry Students Course is a prerequisite for 09-331, normally taken in the spring of the junior year	9
xx-xxx	Arts, Humanities and Social Sciences Course 2	9
		41

Spring		Units
09-202	Undergraduate Seminar II: Safety and Environmental Issues for Chemists	1
09-204	Professional Communication Skills in Chemistry (It is recommended that this course be completed prior to taking the junior level labs, 09-321 or 09-323.)	3
09-220	Modern Organic Chemistry II	10
09-222	Laboratory II: Organic Synthesis and Analysis	12
09-348	Inorganic Chemistry (Students wishing to pursue careers in the health professions or are pursuing the Biological Chemistry Track may wish to take biochemistry, 03-232, and delay inorganic until the junior or senior year spring semester)	10
38-230	ENGAGE in Wellness: Looking Inward	1
xx-xxx	Arts, Humanities and Social Sciences Course 3	9
		46

Reminder about Flexible Scheduling: Student feedback indicates that the junior year BS schedule can feel quite intense as you move into the more mathematical and physical chemistry oriented curriculum, especially if you are also engaged in undergraduate research. Remember that the senior year in chemistry is essentially open for free electives. You may use this flexibility to spread out your junior year requirements over four semesters rather than two; though you should be careful about moving too many courses to the senior year as that may create additional stress at a time when you are preparing to move forward from CMU. You should consult with your academic advisor to explore alternative schedules if you are interested.

Junior Year

Fall		Units
09-301	Undergraduate Seminar III	1
09-231	Mathematical Methods for Chemists Math methods is a co-requisite for 09-344 and a prerequisite for 09-345 (spring). If you move math methods to the fall of your senior year, you must also move 09-344, 09-345 and 09-322 to the senior year.	9
09-321	Laboratory III: Molecular Design and Synthesis This lab class is not a prerequisite for 09-322; it can be moved to the fall of your senior year without impacting the spring junior year courses.	12
or 09-323	Bioorganic Chemistry Laboratory	
09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry Quantum is a prerequisite for Lab IV. If you move Quantum to the fall of the senior year, you must move Lab IV to the spring of the senior year. 09-344 is not a prerequisite for 09-345 (spring).	9
38-330	ENGAGE in Wellness: Looking Outward	1
xx-xxx	Arts, Humanities and Social Sciences Course 4	9
		41

Spring		Units
09-302	Undergraduate Seminar IV	1
09-322	Laboratory IV: Molecular Spectroscopy and Dynamics	12
09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry This course is a co-requisite of Lab IV. If you move it to the senior year, you must also move Lab IV.	9
09-331	Modern Analytical Instrumentation This course is a co-requisite of Lab IV. If you move it to the senior year, you must also move Lab IV.	9
xx-xxx	Cultural/Global Understanding Requirement	9
38-302	Science and Society The junior seminar requirement (PROPEL) for MCS Is fulfilled by taking the required 38-302 and a second approved course.	4
xx-xxx	Approved PROPEL elective	2-9
		46-53

Senior Year

Fall		Units
09-401	Undergraduate Seminar V	1
09-xxx	Chemistry Elective (see notes on electives)	9
38-110	ENGAGE in Service	1
38-220	ENGAGE in the Arts	2
38-430	ENGAGE in Wellness: Looking Forward	1
xx-xxx	Free Electives	30
		44

Spring		Units
09-402	Undergraduate Seminar VI	3
09-xxx	Chemistry Elective (see notes on electives)	9
xx-xxx	Free Electives	27
		39

Distribution of Units for B.S. in Chemistry and Requirements for An Additional Major in Chemistry

Minimum Total Chemistry Units 163; See distribution below

Required Chemistry Courses* Units		
09-105	Introduction to Modern Chemistry I	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-204	Professional Communication Skills in Chemistry	3
09-219	Modern Organic Chemistry	10
09-220	Modern Organic Chemistry II	10
09-231	Mathematical Methods for Chemists	9
09-331	Modern Analytical Instrumentation	9
09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry	9
09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry	9
09-348	Inorganic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12

09-222	Laboratory II: Organic Synthesis and Analysis	12
09-321	Laboratory III: Molecular Design and Synthesis	12
or 09-323	Bioorganic Chemistry Laboratory	
09-322	Laboratory IV: Molecular Spectroscopy and Dynamics	12
09-xxx	Chemistry Seminars	8
09-xxx	Chemistry Electives	18

* These, plus 33-121 Physics I for Science Students and 33-122 Physics II for Biological Sciences and Chemistry Students, are the required courses for students earning an additional major in chemistry.

Students who transfer into the department and have taken 09-217 Organic Chemistry I and/or 09-218 Organic Chemistry II, will be required to complete units of 09-435 Independent Study Chemistry, 1 unit per course, under the supervision of the instructor(s) for 09-219 and/or 09-220 in order to master the course content missed in this course sequence.

Students who transfer into the department and have taken 09-207 Techniques in Quantitative Analysis and/or 09-208 Techniques for Organic Synthesis and Analysis will be required to take a 3 unit transition course (09-215 Chemistry Tech I to Lab I Transition for 09-207 and/or 09-216 Chemistry Tech II to Lab II Transition for 09-208) to fulfill the major requirements for 09-221 and/or 09-222.

Chemistry courses required for the BS degree and the additional major in chemistry that are numbered 09-2xx or higher must be taken at Carnegie Mellon University. Exceptions must be requested of and approved by the Director of Undergraduate Studies. In general such requests will be approved only under unusual or extenuating circumstances.

Other Requirements	**Units**
Biology (Modern Biology or Biochemistry)	**9**
Computer Science	**10**
Mathematics	**20**
Physics	**21**
Interpretation and Argument	**9**
Arts, Humanities and Social Sciences Courses	**36**
Cultural/Global Understanding	**9**
EUREKA! (First-year seminar)	**6**
MCS Junior Seminar	**6**
ENGAGE in Service	**1**
ENGAGE in Wellness Courses (three courses)	**3**
ENGAGE in the Arts	**2**
Computing @ Carnegie Mellon	**3**
Free Electives	**62**
Minimum number of units required for the degree:	**360**

The above B.S. curriculum recommends a range of 41–50 units per semester to meet the minimum degree requirement of 360 units. Students are strongly encouraged to take extra elective courses (except in the first year) in whatever subjects they wish in order to enrich their backgrounds and enhance their educational experience.

Notes on Electives

Chemistry Electives

A minimum of 18 units of chemical electives is required.

Chemistry electives can be satisfied by 09-445 Undergraduate Research, or by most other chemistry courses 09-3xx or higher, undergraduate or graduate level, for which the student has the necessary prerequisites, or by 03-231/03-232 Biochemistry. Biochemistry also fulfills the Life Sciences requirement for the MCS technical breadth requirement. 09-435 Independent Study Chemistry may only be used to fulfill this requirement with permission of the Director of Undergraduate Studies. Certain interdisciplinary courses (e.g. 39-xxx) relating to chemistry can also be used with the approval of the Director of Undergraduate Studies. The scheduling of these electives can vary and students should check with the department offering the course to see which courses are offered in any given year or semester and with the Director of Undergraduate Studies in the Department of Chemistry to ascertain whether the course is an acceptable chemistry elective.

Free Electives

Free electives are defined as including any course offered by Carnegie Mellon except those in science or engineering fields that are primarily intended for non-majors. A maximum of 9 units total of Physical Education, StuCo and/or ROTC courses combined can be counted as free elective units. The Chemistry Department does not require technical electives.

B.A. in Chemistry

The curriculum for the B.A. degree provides students with the opportunity to take a substantial number of elective and non-technical courses. Certain chemistry, math, and other technical courses required for the B.S. degree are replaced by free electives, making this degree an ideal choice for those who wish to earn an additional major with one of the departments in the College of Humanities and Social Sciences, College of Fine Arts, or with the Business Administration program, though this is not a requirement. It is also attractive for students wishing to pursue careers in dentistry or pharmacy, career paths that require a broader preparation at the undergraduate level and hence more coursework outside of chemistry. Students may earn one or more of the options as described for B.S. degree candidates, providing they complete the courses listed.

The suggested curriculum recommends that the required technical courses be completed at the earliest opportunity, however students have considerable flexibility to postpone these courses in favor of electives, allowing compatibility with the programs of other departments. In designing such programs for a minor or additional major with chemistry, students should note that certain required chemistry courses only are offered in specific semesters, not both. These include the Fall-only courses 09-214 Physical Chemistry, 09-219 Modern Organic Chemistry, 09-321 Laboratory III: Molecular Design and Synthesis and 09-323 Bioorganic Chemistry Laboratory and the Spring-only courses 09-220 Modern Organic Chemistry II, 09-348 Inorganic Chemistry, and 09-204 Professional Communication Skills in Chemistry. Also, in some cases, a course that is normally scheduled for the fall may be changed to a spring course (or the inverse) due to a departmental curriculum change or faculty availability.

Curriculum

This catalog and the sample schedules presented are intended to be used by students in the first year class entering in the fall of 2019. Upperclass students should refer to the appropriate previous version of the catalog published during their first year for the requirements that are specific to them.

The technical breadth requirement of the MCS core curriculum requires a minimum of four technical courses outside of the student's primary major. Chemistry majors must at minimum take the following non-chemistry technical courses:

Technical Breadth Requirements		Units
33-121	Physics I for Science Students	12
33-122	Physics II for Biological Sciences and Chemistry Students	9
03-121	Modern Biology	9
or 03-231	Honors Biochemistry	
or 03-232	Biochemistry I	
15-110	Principles of Computing	10
or 02-201	Programming for Scientists	
or 15-112	Fundamentals of Programming and Computer Science	
21-120	Differential and Integral Calculus	10
21-122	Integration and Approximation	10
or 21-124	Calculus II for Biologists and Chemists	

Students should complete this technical core as early as possible and preferably by the end of their fifth semester.

The non-technical breadth requirements for MCS students includes Interpretation and Argument (76-101, 9 units), four courses with a minimum of 36 units from the arts, humanities or social sciences and a course of at least 9 units from an approved list in the category of Cultural/Global understanding, three ENGAGE in Wellness courses, ENGAGE in Wellness: Looking Inward (38-230, 1 units), ENGAGE in Wellness: Looking Outward (38-330, 1 units) and ENGAGE in Wellness: Looking Forward (38-430, 1 units), ENGAGE in Service (38-110, 1 units), ENGAGE in the Arts (38-220, 2 units), EUREKA!: Discovery and Its Impact (38-101, 6 units), the MCS first-year seminar, and the junior seminar PROPEL or a total of 72 units. The junior seminar requirement (PROPEL) for MCS Is fulfilled by taking the required Science and Society (38-302, 4 units) and a second approved course. Approved as of the publication of this catalog is Professional Development and Life Skills (38-303, 2 units). A more expanded listing will be published by the MCS Dean's Office. For more information on allowed courses in the arts, humanities and social sciences and electives in the Cultural/Global Understanding category refer to the MCS section of this catalog.

First Year

Fall		Units
09-105	Introduction to Modern Chemistry I	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
21-120	Differential and Integral Calculus	10
33-121	Physics I for Science Students	12
76-101	Interpretation and Argument	9
38-101	EUREKA!: Discovery and Its Impact	6
99-101	Computing @ Carnegie Mellon	3
		50

Students interested in majoring in chemistry who have a strong chemistry background, should enroll in 09-107 rather than 09-105. Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

02-201 Programming for Scientists is an acceptable alternative to 15-110 for chemistry majors as are any upper level courses in programming.

There are some elective laboratory courses offered for MCS students in the first year. These include 03-117 Frontiers, Analysis, and Discovery in Biological Sciences, 09-122 Molecular Tools for Biological and Chemical Studies or 09-115 Introduction to Undergraduate Research in Chemistry. The maximum units allowed during the first semester is 54; therefore, students wishing to take a lab should take an alternate technical course to Physics I such as 15-110 or 03-121 so that their unit total is lower.

		48

Spring		Units
09-402	Undergraduate Seminar VI	3
xx-xxx	Free Electives	40
		43

Distribution of Units

Minimum Total Chemistry Units 124; See distribution below:

Required Chemistry Courses		Units
09-105	Introduction to Modern Chemistry I	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-204	Professional Communication Skills in Chemistry	3
09-219	Modern Organic Chemistry	10
09-220	Modern Organic Chemistry II	10
09-214	Physical Chemistry	9
or 09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry	
or 09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry	
09-348	Inorganic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12
09-222	Laboratory II: Organic Synthesis and Analysis	12
09-321	Laboratory III: Molecular Design and Synthesis	12
or 09-323	Bioorganic Chemistry Laboratory	
09-xxx	Chemistry Seminars	8
09-xxx	Chemistry Electives	18

09-322 Laboratory IV: Molecular Spectroscopy and Dynamics may be taken in lieu of 09-321 Laboratory III: Molecular Design and Synthesis or 09-323 Bioorganic Chemistry Laboratory. However the student must complete the necessary pre- and co-requisites of 09-231, 09-344, 09-331 and 09-345. In this case 09-331 and 09-344 will count as chemistry electives towards the B.A. degree.

Students who transfer into the department and have taken 09-217 Organic Chemistry I, and/or 09-218 Organic Chemistry II, will be required to complete units of 09-435 Independent Study Chemistry, 1 unit per course, under the supervision of the instructor(s) for 09-219 and/or 09-220 in order to master the course content missed in this course sequence.

Students who transfer into the department and have taken 09-207 Techniques in Quantitative Analysis and/or 09-208 Techniques for Organic Synthesis and Analysis will be required to take a 3 unit transition course (09-215 Chemistry Tech I to Lab I Transition for 09-207 and/or 09-216 Chemistry Tech II to Lab II Transition for 09-208) to fulfill the major requirements for 09-221 and/or 09-222.

Chemistry courses required for the B.A. degree that are numbered 09-2xx or higher must be taken at Carnegie Mellon University. Exceptions must be requested of and approved by the Director of Undergraduate Studies. In general such requests will be approved only under unusual or extenuating circumstances.

Other Requirements	Units
Biology (either Modern Biology or Biochemistry)	**9**
Computer Science	**10**
Mathematics	**20**
Physics	**21**
Interpretation and Argument	**9**
Arts, Humanities and Social Sciences courses	**36**
Cultural/Global Understanding	**9**
EUREKA! (First year seminar)	**6**
MCS Junior Seminar	**6**
ENGAGE in Wellness (3 courses)	**3**
ENGAGE in Service	**1**
ENGAGE in the Arts	**2**
Computing @ Carnegie Mellon	**3**
Free Electives	**101**
Minimum number of units for the degree	**360**

The above B.A. curriculum recommends a range of 40–50 units per semester. The total units actually taken may exceed the 360 unit minimum, but students are strongly encouraged to take the extra elective courses in whatever subjects they wish in order to enrich their backgrounds and enhance their educational experience.

Notes on Electives

Chemistry Electives

A minimum of 18 units of chemical electives is required.

Chemical electives can be satisfied by 09-445 Undergraduate Research, or by most other chemistry courses 09-3xx or higher, undergraduate or graduate, for which the student has the necessary prerequisites, or by 03-231/03-232 Biochemistry I. Biochemistry also fulfills the Life Sciences requirement for the MCS technical breadth requirement. 09-435 Independent Study Chemistry, may only be used to fulfill this requirement with permission of the Director of Undergraduate Studies. Certain interdisciplinary courses (e.g. 39-xxx) relating to chemistry can also be used with permission by the Director of Undergraduate Studies. The scheduling of these electives can vary and students should check with the department offering the course to see which courses are offered in any given year or semester and with the Director of Undergraduate Studies in the Department of Chemistry to ascertain whether the course is an acceptable chemistry elective.

Free Electives

Free electives are defined as including any course offered by Carnegie Mellon except those in science or engineering fields that are primarily intended for non-majors. A maximum of 9 units total of Physical Education and/or ROTC courses combined can be counted as free elective units. The Chemistry Department does not require technical electives.

B.S. in Chemistry/Biological Chemistry Track

This degree is ideal for students who wish to better prepare themselves for advanced studies in biological chemistry or biomedical fields and a job market that values knowledge and skills from both disciplines. A combination of advanced research-focused lecture course offerings and a novel laboratory course modeling the drug discovery process will allow students to build the strong foundation typical of a successful chemistry major, while expanding out into applications of chemistry in the biological sciences.

Curriculum

This catalog and the sample schedules presented are intended to be used by students in the first year class entering in the fall of 2019. Upperclass students should refer to the appropriate previous version of the catalog published during their first year for the requirements that are specific to them.

The technical breadth requirement of the MCS core curriculum requires a minimum of four technical courses outside of the student's primary major. Chemistry majors in the Biological Chemistry Track must at minimum take the following non-chemistry technical courses: Physics I for Science Students (33-121, 12 units), Physics II for Biological Sciences and Chemistry Students (33-122, 9 units), Modern Biology (03-121, 9 units), Principles of Computing (15-110, 10 units) (or other approved programming course), 21-120 Differential and Integral Calculus (10 units) and Integration and Approximation (21-122, 10 units) **or** Calculus II for Biologists and Chemists (21-124, 10 units). Students should complete this technical core as early as possible and preferably by the end of their fifth semester.

The non-technical breadth requirements for MCS students includes Interpretation and Argument (76-101, 9 units) , four courses with a minimum of 36 units from the arts, humanities or social sciences and a course of at least 9 units from an approved list in the category of Cultural/Global understanding, three ENGAGE in Wellness courses, ENGAGE in Wellness: Looking Inward (38-230, 1 units) , ENGAGE in Wellness: Looking Outward (38-330, 1 units) and ENGAGE in Wellness: Looking Forward (38-430, 1 units), ENGAGE in Service (38-110, 1 units) , ENGAGE in the Arts (38-220, 2 units), EUREKA!: Discovery and Its Impact (38-101, 6 units) , the MCS first-year seminar, and the junior seminar PROPEL for a total of 72 units. The junior seminar requirement (PROPEL) for MCS Is fulfilled by taking the required Science and Society (38-302, 4 units) and a second approved course. Approved as of the publication of this catalog is Professional Development and Life Skills (38-303, 2 units). A more expanded listing will be published by the MCS Dean's Office. For more information on allowed courses in the arts, humanities and social sciences and electives in the Cultural/Global Understanding category refer to the MCS section of this catalog.

Freshman Year

Fall		Units
09-105	Introduction to Modern Chemistry I	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
21-120	Differential and Integral Calculus	10
33-121	Physics I for Science Students	12
76-101	Interpretation and Argument	9
38-101	EUREKA!: Discovery and Its Impact	6
99-101	Computing @ Carnegie Mellon	3
		50

Students interested in majoring in chemistry who have a strong chemistry background, should enroll in 09-107 rather than 09-105. Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

02-201 Programming for Scientists is an acceptable alternative to 15-110 for chemistry majors as are any upper level courses in programming.

There are some elective laboratory courses offered for MCS students in the first year. These include 03-117 Frontiers, Analysis, and Discovery in Biological Sciences, 09-122 Molecular Tools for Biological and Chemical Studies or 09-115 Introduction to Undergraduate Research in Chemistry. The maximum units allowed during the first semester is 54; therefore, students wishing to take a lab should take an alternate technical course to Physics I such as 15-110 or 03-121 so that their unit total is lower.

Spring		Units
09-106	Modern Chemistry II *	10

21-122	Integration and Approximation	10
or 21-124	Calculus II for Biologists and Chemists	
03-121	Modern Biology	9
or 33-121	Physics I for Science Students	
or 15-110	Principles of Computing	
xx-xxx	Arts, Humanities and Social Sciences Course 1	9
xx-xxx	Free Elective	5
		43

* Chemistry majors who place out of 09-106 can take 09-348 Inorganic Chemistry, 09-510 Chemistry and Sustainability as a chemistry elective, or other courses yet to be announced. Chemistry majors who feel they are ready for an undergraduate research experience should meet with the Director of Undergraduate Studies. These opportunities are more prevalent in the summer after your first year or sophomore year.

Sophomore Year

Fall		Units
09-201	Undergraduate Seminar I	1
09-219	Modern Organic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12
33-122	Physics II for Biological Sciences and Chemistry Students Course is a prerequisite for 09-331, normally taken in the spring of the junior year	9
03-220	Genetics or other biological chemistry elective.	9
xx-xxx	Arts, Humanities and Social Sciences Course 2	9
		50

Spring		Units
09-202	Undergraduate Seminar II: Safety and Environmental Issues for Chemists	1
09-204	Professional Communication Skills in Chemistry (It is recommended that this course be completed prior to taking the junior level lab, 09-323.)	3
09-220	Modern Organic Chemistry II	10
09-222	Laboratory II: Organic Synthesis and Analysis	12
03-232	Biochemistry I	9
38-230	ENGAGE in Wellness: Looking Inward	1
xx-xxx	Arts, Humanities and Social Sciences Course 3	9
		45

Reminder about Flexible Scheduling: Student feedback indicates that the junior year BS schedule can feel quite intense as you move into the more mathematical and physical chemistry oriented curriculum, especially if you are also engaged in undergraduate research. Remember that the senior year in chemistry is essentially open for free electives. You may use this flexibility to spread out your junior year requirements over four semesters rather than two. You should consult with your academic advisor to explore alternative schedules if you are interested.

Junior Year

Fall		Units
09-301	Undergraduate Seminar III	1
09-231	Mathematical Methods for Chemists Math methods is a co-requisite for 09-344 and a prerequisite for 09-345 (spring). If you move math methods to the fall of your senior year, you must also move 09-344, 09-345 and 09-322 to the senior year.	9
09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry Quantum is a prerequisite for Lab IV. If you move Quantum to the fall of the senior year, you must move Lab IV to the spring of the senior year. 09-344 is not a prerequisite for 09-345 (spring).	9
09-323	Bioorganic Chemistry Laboratory This lab class is not a prerequisite for 09-322; it can be moved to the fall of your senior year without impacting the spring junior year courses.	12
38-330	ENGAGE in Wellness: Looking Outward	1
xx-xxx	Arts, Humanities and Social Sciences Course 4	9
		41

Spring		Units
09-302	Undergraduate Seminar IV	1
09-322	Laboratory IV: Molecular Spectroscopy and Dynamics	12
09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry This course is a co-requisite of Lab IV. If you move it to the senior year, you must also move Lab IV.	9
09-331	Modern Analytical Instrumentation This course is a co-requisite of Lab IV. If you move it to the senior year, you must also move Lab IV.	9
xx-xxx	Cultural/Global Understanding Requirement	9
38-302	Science and Society	4
xx-xxx	Approved PROPEL elective	2-9
		46-53

Senior Year

Fall		Units
09-401	Undergraduate Seminar V	1
09-xxx	Biological Chemistry Elective 1 (see notes on electives)	9
09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
or 09-519	Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry	
38-110	ENGAGE in Service	1
38-430	ENGAGE in Wellness: Looking Forward	1
38-220	ENGAGE in the Arts	2
xx-xxx	Free Electives	21
		44

Spring		Units
09-402	Undergraduate Seminar VI	3
09-348	Inorganic Chemistry	10
xx-xxx	Biological Chemistry Elective 2	9
xx-xxx	Biological Chemistry Elective 3	9
xx-xxx	Free Electives	18
		49

Distribution of Units

Minimum Total Chemistry Units 190; See distribution below

Required Chemistry Courses*		Units
09-105	Introduction to Modern Chemistry I	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-204	Professional Communication Skills in Chemistry	3
09-219	Modern Organic Chemistry	10
09-220	Modern Organic Chemistry II	10
03-231	Honors Biochemistry	9
or 03-232	Biochemistry I	
09-231	Mathematical Methods for Chemists	9
09-331	Modern Analytical Instrumentation	9
09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry	9
09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry	9
09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
or 09-519	Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry	
09-348	Inorganic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12
09-222	Laboratory II: Organic Synthesis and Analysis	12
09-323	Bioorganic Chemistry Laboratory	12
09-322	Laboratory IV: Molecular Spectroscopy and Dynamics	12

09-xxx	Chemistry Seminars	8
09-xxx	Biological Chemistry Electives	27

Students who transfer into the department and have taken 09-217 Organic Chemistry I and/or 09-218 Organic Chemistry II, will be required to complete units of 09-435 Independent Study Chemistry, 1 unit per course, under the supervision of the instructor(s) for 09-219 and/or 09-220 in order to master the course content missed in this course sequence.

Students who transfer into the department and have taken 09-207 Techniques in Quantitative Analysis and/or 09-208 Techniques for Organic Synthesis and Analysis will be required to take a 3 unit transition course (09-215 Chemistry Tech I to Lab I Transition for 09-207 and/or 09-216 Chemistry Tech II to Lab II Transition for 09-208) to fulfill the major requirements for 09-221 and/or 09-222.

Chemistry courses required for the BS degrees that are numbered 09-2xx or higher must be taken at Carnegie Mellon University. Exceptions must be requested of and approved by the Director of Undergraduate Studies. In general such requests will be approved only under unusual or extenuating circumstances.

Other Requirements	**Units**
Modern Biology	**9**
Computer Science	**10**
Mathematics	**20**
Physics	**21**
Interpretation and Argument	**9**
Arts, Humanities and Social Sciences courses	**36**
Cultural/Global Understandling	**9**
EUREKA! (First Year Seminar)	**6**
MCS Junior Seminar	**6**
ENGAGE in Wellness (3 courses)	**3**
ENGAGE in Service	**1**
ENGAGE in the Arts	**2**
Computing @ Carnegie Mellon	**3**
Free Electives	**35**
Minimum number of units required for the degree:	**360**

The above B.S. curriculum recommends a range of 41–50 units/semester to meet the minimum degree requirement. Students are strongly encouraged to take extra elective courses (except in the first year) in whatever subjects they wish in order to enrich their backgrounds and enhance their educational experience.

NOTES ON ELECTIVES

Biological Chemistry Electives

A minimum of three biological chemistry electives for a total of 27 units or more is required.

A list of currently approved electives is provided below. Of the three elective courses at least two should be chemistry courses and a maximum of one can be taken in biology or physics. Exceptions can be granted by the Director of Undergraduate Studies. One semester of 09-445 for 9 units may be used for one biological chemistry elective with the approval of the Director of Undergraduate Studies. It must be part of a longer term experience ensuring depth of knowledge in the area.

09-403	Chemistry of Addiction	9
09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates (One of these two courses is required for the degree. The other can be used as a Biological Chemistry elective.)	9
or 09-519	Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry	
09-705	Chemosensors and Biosensors	12
09-521	Metals in Biology: Function and Reactivity	6
09-716	Bioactive Natural Products	12
09-737	Medicinal Chemistry and Drug Development	12
09-803	Chemistry of Gene Expression	12
03-220	Genetics	9
03-221	Genomes, Evolution, and Disease: Introduction to Quantitative Genetic Analysis	9
03-320	Cell Biology	9
03-344	Experimental Biochemistry	12
03-362	Cellular Neuroscience	9
03-366	Biochemistry of the Brain	9
03-390	Molecular and Cellular Immunology	9
03-391	Microbiology	9
03-439	Introduction to Biophysics	9
03-442	Molecular Biology	9
03-534	Biological Imaging and Fluorescence Spectroscopy	9
03-740	Advanced Biochemistry	12
03-871	Structural Biophysics	12
33-441	Introduction to BioPhysics	10

Free Electives

Free electives are defined as including any course offered by Carnegie Mellon except those in science or engineering fields that are primarily intended for non-majors. A maximum of 9 units total of Physical Education, StuCo and/or ROTC courses combined can be counted as free elective units. The Chemistry Department does not require technical electives.

Options for the Bachelor's Degrees in Chemistry

The curriculum for the degree Bachelor of Science in Chemistry permits students to take a number of elective courses in chemistry and other fields, particularly in the junior and senior years. Students may wish to complete a group of elective courses from several specialty areas, called “options,” to complement their technical education. Each option will complement the Bachelor's degree in Chemistry and will provide students with expertise in a specific area not covered by the normal undergraduate curriculum. Options are noted on the student's transcript but not on the diploma.

For each of the following options, the student should refer to the previous description of the curriculum for the B.S.or B.A. degrees in chemistry. Required courses are unchanged, and the courses that should be taken as electives for each option are listed below. Chemistry courses within an option also count towards fulfillment of the chemistry elective requirement for the B.S. degree.

A student who completes the recommended courses for any of these options will receive a certificate from the Department of Chemistry at Commencement as formal evidence of the accomplishment and a notation of this will be made on the student's transcript.

BIOCHEMISTRY OPTION		Units
03-231/232	Honors Biochemistry (or Biochemistry)	9
03-330	Genetics	9
03-344	Experimental Biochemistry	12
xx-xxx	Elective in Biochemistry	
Elective course may be chosen from the following list. (Other courses listed as electives for the Biological Chemistry Track may be possible with permission.)		
03-439	Introduction to Biophysics	9
09-518	Bioorganic Chemistry: Nucleic Acids and Carbohydrates	9
09-519	Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry	9
03-740	Advanced Biochemistry	12

POLYMER SCIENCE OPTION		Units
06-466	Experimental Polymer Science	9
09-502	Organic Chemistry of Polymers	9
09-509	Physical Chemistry of Macromolecules	9
09-xxx	Elective in Polymer Science	9
Elective course may be chosen from the following list		
09-445	Undergraduate Research (in a polymer area as approved by the Director of Undergraduate Studies and generally part of a longer term project)	9
09-736	Transition Metal Catalysis for Organic and Polymer Synthesis	12
09-760	The Molecular Basis of Polymer Mechanics	12
27-324	Introduction to Polymer Science and Engineering	9

Other upper level courses in chemistry, biomedical engineering, materials science engineering or the colloids, polymers and surfaces program may be used with permission of the Director of Undergraduate Studies		

COLLOIDS, POLYMERS and SURFACES OPTION (offered jointly with the Department of Chemical Engineering)		Units
06-426	Experimental Colloid Surface Science	9
06-466	Experimental Polymer Science	9
09-509	Physical Chemistry of Macromolecules	9
06-607	Physical Chemistry of Colloids and Surfaces	9

MATERIALS CHEMISTRY OPTION		Units
27-100	Engineering the Materials of the Future	12
27-201	Structure of Materials	9
Two Elective Courses of at least 9 units each from the list below		
27-202	Defects in Materials	9
09-445	Undergraduate Research (in a materials area as approved by the Director of Undergraduate Studies and generally part of a longer term project)	9
09-502	Organic Chemistry of Polymers	9
09-507	Nanoparticles	9
09-509	Physical Chemistry of Macromolecules	9
27-xxx	MSE course approved by Director of Undergraduate Studies	

ENVIRONMENTAL CHEMISTRY OPTION		Units
09-510	Chemistry and Sustainability	9
09-445	Undergraduate Research 9 units of 09-445 can count towards this option if part of a longer term immersion and approved by the Director of Undergraduate Studies	Var.
Two elective courses of at least 9 units each from the list below		
09-225	Climate Change: Chemistry, Physics and Planetary Science	9
09-529	Introduction to Sustainable Energy Science	9
19-424	Energy and the Environment	9
19-440	Combustion and Air Pollution Control	9
19-653	Climate Change Mitigation	12
12-651	Air Quality Engineering	9
12-657	Water Resource Systems Engineering	9
12-702	Fundamentals of Water Quality Engineering	12

MANAGEMENT OPTION		Units
70-100	Global Business	9
73-102	Principles of Microeconomics	9
70-122	Introduction to Accounting	9
70-364	Business Law	9

COMPUTATIONAL CHEMISTRY OPTION		Units
15-112	Fundamentals of Programming and Computer Science	12
15-122	Principles of Imperative Computation	10
or 15-150	Principles of Functional Programming	
09-560	Computational Chemistry	12
21-127	Concepts of Mathematics	10
xx-xxx	One Upper Level Computational Elective Course from the list below	
15-210	Parallel and Sequential Data Structures and Algorithms	12
15-213	Introduction to Computer Systems	12
15-214	Principles of Software Construction: Objects, Design, and Concurrency	12
33-241	Introduction to Computational Physics	9
03-250	Introduction to Computational Biology	12
09-701	Quantum Chemistry I	12
09-702	Statistical Mechanics and Dynamics	12

B.S. in Chemistry with Departmental Honors

Outstanding students with an interest in research are encouraged to consider the Honors program by the beginning of the junior year. The program combines a slightly modified B.S. curriculum with close faculty-student contact in an individual research project, concluding with the student's presentation and defense of a Bachelor's degree honors thesis to a Thesis Committee.

The B.S. in Chemistry with Departmental Honors curriculum follows the general sequence of courses that is listed for the B.S. degree. The honors program specifies that one of the two chemistry electives be a 12-unit graduate course, numbered 09-7xx or higher, and that of the remaining electives required, at least two be undergraduate research (18 units) and one be 09-455 Honors Thesis (taken for 6 units). Students will be encouraged to do more than the minimum amount of research, so stipends from the research advisor or other sources are sometimes available for summer B.S. honors research.

At any time before the spring term of the senior year, candidates for the B.S. in chemistry may apply to be admitted for candidacy to the Honors B.S. program. Applications are available on the department Canvas site for chemistry majors. To be accepted, students will be expected to have shown excellent performance in class work – normally at least a 3.2 average QPA. Upon acceptance into the program, a Thesis Committee must be identified, which will monitor the progress of the student. The committee shall consist of at least one member of the Undergraduate Program Committee Committee to be appointed by the Director of Undergraduate Studies, the student's research advisor and a third faculty member agreed upon by the student and advisor. This third member can be from another department or institution and can be tenure track, teaching track or research track faculty. It is the student's responsibility to contact the proposed third member of their committee and confirm their participation.

A written thesis suitable for an Honors B.S. degree is required and should be a clear exposition in proper scientific format of a research project done for at least 18 units of credit in 09-445 Undergraduate Research. The thesis should describe a substantive new contribution to a particular field of research. This could include, but is not limited to, the discovery of a new phenomenon, studies that enhance our understanding of a previously reported phenomenon, or the development of a new method or technique. The student's Thesis Committee will evaluate the thesis and will require that each student participate in a public oral presentation or defense of the thesis before it approves the Honors degree. The written thesis must be supplied to the members of the student's Thesis Committee no later than 1 week prior to the scheduled public defense. The defense is usually scheduled to take place during April or early May of the senior year and the Director of Undergraduate Studies will coordinate the selection of a suitable date. Students completing the B.S. with Departmental Honors in Chemistry will receive MCS College Honors as well.

The designations of MCS College Honors and Departmental Honors are noted on the transcript but not on the diploma. Only University Honors are noted on the diploma.

Honors B.S./M.S. Program in Chemistry

Outstanding students seeking an advanced degree are encouraged to apply for admission to the B.S./M.S. Honors program as early as they can but only after having made some progress on a research project that could eventually be suitable for production of a Master's level thesis. Please note that this degree is available only with the B.S. in chemistry and cannot be obtained by students pursuing a B.A. degree in chemistry. Typically, applications are submitted during the second half of the sophomore year but no later than the first semester of the junior year. Applications are available on the Canvas site for undergraduate chemistry majors. Participants will have the opportunity to earn in four years not only the degree B.S. in Chemistry with Departmental Honors, but also the degree Master of Science in Chemistry. This program is highly research intensive and is not appropriate for all students. Requirements include completing five graduate level courses as electives. (See notes on Honors B.S./M.S. electives.)

The schedule of courses for the B.S./M.S. program generally moves as many courses as possible forward in the curriculum, though this is not a requirement. When possible, all technical core requirements should be completed in the freshman year. This gives the student the following advantages: 1) greater perspective in selection of a research advisor, 2) greater maturity in performing independent research, and 3) the possibility of initiating the graduate course sequence in the junior year. Students can achieve this accelerated schedule through advanced placement or summer school though neither is a requirement.

A completed application and degree contract finished in collaboration with their thesis advisor must be submitted to the Director of Undergraduate Studies who will then arrange for an application meeting with the student, research advisor and the department Undergraduate Program Committee. (Both forms are available on the Canvas site for undergraduate chemistry majors.) At this meeting the student is expected to give an oral presentation with visual aids that presents relevant background, a summary of work completed to date and a detailed plan for their thesis project including a projected timeline for completion of the thesis research and the thesis itself.

Upon acceptance into the program, a Thesis Committee must be identified, which will monitor the progress of the student. The committee shall consist of at least one member of the Undergraduate Program Committee appointed by the Director of Undergraduate Studies, the student's research advisor and a third faculty member agreed upon by the student and advisor. This third member can be from another department or institution and can be tenure track, teaching track or research track faculty. It is the student's responsibility to contact the third member of their committee, confirm their participation and notify the Director of Undergraduate Studies.

The student is expected to keep the research advisor selected for the duration of the thesis project. Summer thesis research for 10 weeks in each summer following the sophomore and junior years is strongly suggested to assist the student in completing research of sufficient quantity and quality to complete their thesis. Students normally will be given stipends for their summer work either by their research advisor or by competing for a summer fellowship such as a Summer Undergraduate Research Fellowship available through the Undergraduate Research Office. A minimum of 3 semesters of undergraduate research is required (normally 10 units/semester), though this is rarely sufficient as the sole research experience, as is participation in group seminars during the junior and senior years. Students must present their research at least once at the Sigma Xi competition at Meeting of the Minds, the annual Carnegie Mellon undergraduate research symposium, typically at the end of the junior year. In addition students must meet with their Thesis Committee at minimum each fall, though additional meetings may be required by the Thesis Committee, to update the committee on their progress and in the fall of the senior year must prepare a written summary of their research progress to date (5 pages) and their plans for the academic year (1 page). This report must state clearly what stage the work is in; it must be clear what work is complete and ready for publication.

By the end of the penultimate semester (normally fall of the senior year) the student should complete a thorough literature review to begin preparation for the introduction of their thesis.

At the start of the spring semester of the senior year (or their final semester if different), the student must submit a draft of the introduction for their thesis and a detailed outline of their methods, results and discussion sections to the Director of Undergraduate Studies who also chairs the Honors Committee. This will be distributed by the department and reviewed by the student's Thesis Committee.

Each student is required to submit a formal Masters Degree dissertation to the Chemistry Department in April of the senior year or at least one week prior to the date set for the thesis defense. The thesis usually has an abstract, introduction, methods, results, discussion and conclusion sections with acknowledgements. The Thesis Committee will evaluate the written thesis and the student is required to present their final oral defense of the project before the Thesis Committee. The defense is usually scheduled to take place during April or early May of the senior year and the Director of Undergraduate Studies will coordinate the selection of a suitable date. The public defense is followed by a private question and answer session with the Thesis Committee.

The dissertation, written in proper scientific format, should describe the research project in considerable detail and must withstand the scrutiny of the Thesis Committee with respect to completeness. It need not be as extensive nor contain the element of student originality characteristic of a Ph.D. thesis; however it must contain results and conclusions that are of a high enough quality to be accepted as a publication in a respected research journal, though publication of the work is not a requirement of the degree program. The student should refer to the ACS Style Guide for recommendations on appropriate presentation and formatting of written text, tables, graphs, and figures. As for all M.S. degree candidates in the Department, the dissertation must be approved first by the faculty member in charge of the work.

Research productivity is the most important criterion for success at the evaluation points, but QPA is a strong secondary criterion. While we expect that most students will maintain a QPA of 3.5, a minimum of 3.2 must be maintained to remain in the program and will be acceptable only with a strong record of research. Candidates must also maintain a QPA of at least 3.0 in the five graduate level courses required for the degree.

Students who complete this program will receive the designations of Departmental Honors and MCS College Honors. These are designated on the transcript, not on the diploma. Only University Honors are denoted on the diploma.

Students completing the requirements for this degree receive two diplomas, one for the B.S. degree and another for the M.S. degree. Since this is a combined degree program both degrees are awarded at the same time; the awarding of the two degrees cannot be separated in time.

Failure to make progress in research or coursework of sufficient quality and quantity in a timely fashion can result in a student being removed from this degree program (removal of the M.S. degree from their record). The decision will be made by the thesis committee and the Director of Undergraduate Studies. Violations of professional ethical standards can also result in a student's removal from the program.

Notes on Honors B.S./M.S. Electives

The B.S./M.S. Honors degree requires the completion of five graduate level courses. Graduate courses in chemistry are typically those numbered 09-7xx or 09-8xx. Courses numbered 09-6xx are generally remedial graduate level courses and not acceptable towards the degree requirements as the content overlaps extensively with required chemistry courses at the undergraduate level. Graduate classes in chemistry are normally 12-unit courses (or two six unit minis numbered 09-7xx or 09-8xx counting as one graduate level course). However, in order not to penalize interdisciplinary studies which may be essential to a good thesis, up to three of the five required graduate chemistry courses may be at the advanced undergraduate level (the 9 unit 09-5xx versions). All advanced undergraduate level courses used to satisfy this requirement must be approved by the Director of Undergraduate Studies. Students must earn a grade of C or better in each of the five graduate or upper level undergraduate courses fulfilling the requirements for this degree and also in 09-455, Honors Thesis. In addition students must earn a minimum of a 3.0 average in these six courses in order to fulfill their degree requirements.

Curriculum

This catalog and the sample schedules presented are intended to be used by students in the first year class entering in the fall of 2019. Upperclass students should refer to the appropriate previous version of the catalog published during their first year for the requirements that are specific to them.

The technical breadth requirement of the MCS core curriculum requires a minimum of four technical courses outside of the student's primary major. Chemistry majors must at minimum take the following non-chemistry technical courses: 33-121 Physics I for Science Students, 33-122 Physics II for Biological Sciences and Chemistry Students, either 03-121 Modern Biology **or** 03-231 Honors Biochemistry **or** 03-232 Biochemistry I, 15-110 Principles of Computing (or other approved programming course), 21-120 Differential and Integral Calculus and 21-122 Integration and Approximation **or** 21-124 Calculus II for Biologists and Chemists. Students should complete this technical core as early as possible and preferably by the end of their fifth semester.

Students should complete this technical core as early as possible and preferably by the end of their fifth semester.

The non-technical breadth requirements for MCS students includes Interpretation and Argument (76-101, 9 units), four courses with a minimum of 36 units from the arts, humanities or social sciences and a course of at least 9 units from an approved list in the category of Cultural/Global understanding, three ENGAGE in Wellness courses, ENGAGE in Wellness: Looking Inward (38-230, 1 units), ENGAGE in Wellness: Looking Outward (38-330, 1 units) and ENGAGE in Wellness: Looking Forward (38-430, 1 units), ENGAGE in Service (38-110, 1 units), ENGAGE in the Arts (38-220, 2 units), EUREKA!: Discovery and Its Impact (38-101, 6 units), the MCS first-year seminar, and the junior seminar PROPEL or a total of 72 units. The junior seminar requirement (PROPEL) for MCS Is fulfilled by taking the required Science and Society (38-302, 4 units) and a second approved course. Approved as of the publication of this catalog is Professional Development and Life Skills (38-303, 2 units). A more expanded listing will be published by the MCS Dean's Office. For more information on allowed courses in the arts, humanities and social sciences and electives in the Cultural/Global Understanding category refer to the MCS section of this catalog.

First Year

Fall		Units
09-105	Introduction to Modern Chemistry I	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
21-120	Differential and Integral Calculus	10

33-121	Physics I for Science Students	12
38-101	EUREKA!: Discovery and Its Impact	6
76-101	Interpretation and Argument	9
99-101	Computing @ Carnegie Mellon	3
		50

Students interested in majoring in chemistry who have a strong chemistry background, should enroll in 09-107 rather than 09-105. Students who complete 09-107 with an A grade will be exempted from the requirement to take 09-106 Modern Chemistry II.

02-201 Programming for Scientists is an acceptable alternative to 15-110 for chemistry majors as are any upper level courses in programming.

There are some elective laboratory courses offered for MCS students in the first year. These include03-117 Frontiers, Analysis, and Discovery in Biological Sciences and 09-122 Molecular Tools for Biological and Chemical Studies. The maximum units allowed during the first semester is 54; therefore, students wishing to take a lab should take 03-121 Modern Biology so that their unit total is lower and they get a start on their required biology courses.

Spring		Units
09-106	Modern Chemistry II Chemistry majors who place out of 09-106 can take 09-348 Inorganic Chemistry, 09-510 Chemistry and Sustainability as a chemistry elective or inquire with the Director of Undergraduate Studies about a suitable research placement.	10
21-122	Integration and Approximation	10
or 21-124	Calculus II for Biologists and Chemists	
15-110	Principles of Computing	10
or 33-121	Physics I for Science Students	
or 03-121	Modern Biology	
xx-xxx	Arts, Humanities and Social Sciences Course 1	9
xx-xxx	Free Elective	9
		48

Sophomore Year

Fall		Units
09-219	Modern Organic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12
09-201	Undergraduate Seminar I	1
33-122	Physics II for Biological Sciences and Chemistry Students This course is a prerequisite for 09-331, normally taken in the spring of the junior year.	9
09-445	Undergraduate Research	9
xx-xxx	Arts, Humanities and Social Sciences Course 2	9
		50

Spring		Units
09-202	Undergraduate Seminar II: Safety and Environmental Issues for Chemists	1
09-204	Professional Communication Skills in Chemistry	3
09-222	Laboratory II: Organic Synthesis and Analysis	12
09-220	Modern Organic Chemistry II	10
09-348	Inorganic Chemistry	10
38-230	ENGAGE in Wellness: Looking Inward	1
xx-xxx	Arts, Humanities and Social Sciences Course 3	9
		46

Summer

10 weeks Honors Research recommended

Junior Year

Fall		Units
09-301	Undergraduate Seminar III	1
09-231	Mathematical Methods for Chemists	9
09-321	Laboratory III: Molecular Design and Synthesis	12
or 09-323	Bioorganic Chemistry Laboratory	
09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry	9
09-445	Undergraduate Research	9
38-330	ENGAGE in Wellness: Looking Outward	1
xx-xxx	Arts, Humanities and Social Sciences Course 4	9
		50

Spring		Units
09-302	Undergraduate Seminar IV	1
09-322	Laboratory IV: Molecular Spectroscopy and Dynamics	12
09-445	Undergraduate Research	6
09-xxx	Graduate Chemistry Course 1 of 5 (see notes on Honors B.S./M.S. electives)	9
09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry	9
09-331	Modern Analytical Instrumentation	9
38-301	PROPEL	6
		52

Summer

10 weeks Honors Research recommended

Senior Year

Fall		Units
09-401	Undergraduate Seminar V	1
09-445	Undergraduate Research	9
09-xxx	Graduate Chemistry Course 2 of 5	12
09-xxx	Graduate Chemistry Course 3 of 5	12
xx-xxx	Cultural/Global Understanding	9
38-430	ENGAGE in Wellness: Looking Forward	1
38-110	ENGAGE in Service	1
		45

Spring		Units
09-402	Undergraduate Seminar VI	3
09-455	Honors Thesis	15
09-xxx	Graduate Chemistry Course 4 of 5	9
09-xxx	Graduate Chemistry Course 5 of 5	9
38-220	ENGAGE in the Arts	2
xx-xxx	Free Elective	9
		47

Distribution of Units

Minimum Total Chemistry Units (241, See distribution below)

Required Chemistry Courses		Units
09-105	Introduction to Modern Chemistry I	10
or 09-107	Honors Chemistry: Fundamentals, Concepts and Applications	
09-106	Modern Chemistry II	10
09-204	Professional Communication Skills in Chemistry	3
09-219	Modern Organic Chemistry	10
09-220	Modern Organic Chemistry II	10
09-231	Mathematical Methods for Chemists	9
09-331	Modern Analytical Instrumentation	9
09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry	9
09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry	9
09-348	Inorganic Chemistry	10
09-221	Laboratory I: Introduction to Chemical Analysis	12
09-222	Laboratory II: Organic Synthesis and Analysis	12
09-321	Laboratory III: Molecular Design and Synthesis	12
09-322	Laboratory IV: Molecular Spectroscopy and Dynamics	12
09-xxx	Chemistry Seminars	8
		30
09-445	Undergraduate Research (in addition 2 summers recommended)	30
09-xxx	Graduate chemistry courses (see Notes on B.S./M.S. Electives)	51-60
09-455	Honors Thesis	15

Students who transfer into the department and have taken 09-217 Organic Chemistry I, and/or 09-218 Organic Chemistry II, will be required to complete units of 09-435 Independent Study Chemistry, 1 unit per course, under the supervision of the instructor(s) for 09-219 and/or 09-220 in order to master the course content missed in this course sequence.

Students who transfer into the department and have taken 09-207 Techniques in Quantitative Analysis and/or 09-208 Techniques for Organic Synthesis and Analysis will be required to take a 3 unit transition course (09-215 Chemistry Tech I to Lab I Transition for 09-207 and/or 09-216 Chemistry Tech II to Lab II Transition for 09-208) to fulfill the major requirements for 09-221 and/or 09-222.

Chemistry courses required for the BS/MS degree that are numbered 09-2xx or higher must be taken at Carnegie Mellon University. Exceptions must be requested of and approved by the Director of Undergraduate Studies. In general such requests will be approved only under unusual or extenuating circumstances.

Other Requirements	**Units**
Biology	**9**
Computer Science	**10**
Mathematics	**20**
Physics	**21**
Interpretation and Argument	**9**
Arts, Humanities and Social Sciences courses	**36**
Cultural/Global Understanding	**9**
EUREKA! (first year seminar)	**6**
MCS Junior Seminar	**6**
ENGAGE in Wellness (3 courses)	**3**
ENGAGE in Service	**1**
ENGAGE in the Arts	**2**
Computing @ Carnegie Mellon	**3**
Free Electives	**3-12**
Minimum number of units required for degrees:	**388**

Free Electives

Free electives are defined as including any course offered by Carnegie Mellon except those in science or engineering fields that are primarily intended for non-majors. A maximum of 9 units total of Physical Education, StuCo and/or ROTC courses combined can be counted as free elective units. The Chemistry Department does not require technical electives.

Minor in Chemistry

In order for a student to receive a minor in Chemistry in conjunction with a B.S. or B.A. degree from another (primary) department, the successful completion of six courses as distributed below is required. Students pursuing the minor must inform the Chemistry Department of their intentions in writing using the MCS form for declaration of a minor so that the minor designation can be approved prior to graduation. The form may be obtained from the MCS undergraduate webpage at www.cmu.edu/mcs/undergrad/advising/forms. **It should be completed and submitted to the department office, DH 1317, no later than the end of the course add period of the final semester prior to graduation.** If you decide at a later date not to complete the minor, it would be helpful to notify the Director of Undergraduate Studies, ks01@andrew.cmu.edu, so that it can be removed from your record. Minors are listed on the transcript but not on the diploma.

Note: An introductory chemistry class equivalent to either 09-105 Introduction to Modern Chemistry I or 09-107 Honors Chemistry: Fundamentals, Concepts and Applications is a **presumed prerequisite** to beginning the minor in chemistry.

Course Requirements

A. Four Required Core Courses

09-106	Modern Chemistry II	10
09-221	Laboratory I: Introduction to Chemical Analysis	9-12
or 09-207	Techniques in Quantitative Analysis	
09-217	Organic Chemistry I	9-10
or 09-219	Modern Organic Chemistry	
Choice of one of the following courses:		
09-214	Physical Chemistry note that this course may not be offered every fall and is dependent upon sufficient enrollment	9
09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry	9
09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry	9
09-347	Advanced Physical Chemistry	12
09-348	Inorganic Chemistry	10

Courses in this group that are not used to satisfy Part A core courses may be used to satisfy elective course requirements in part B below, provided they are **not** required by the student's primary department. However the only combination of physical chemistry courses (09-344, 09-345, 09-347 and 09-214) that is allowed is 09-344 and 09-345.

Enrollment in 09-347 Advanced Physical Chemistry is only open to students majoring in chemical engineering. Students who take 09-347 may not use a second physical chemistry course as an elective.

B. Two Elective Courses from the following list.

09-344	Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry	9
or 09-214	Physical Chemistry	
09-345	Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry	9
09-348	Inorganic Chemistry	10
09-222	Laboratory II: Organic Synthesis and Analysis	9-12
or 09-208	Techniques for Organic Synthesis and Analysis	
09-218	Organic Chemistry II	9-10
or 09-220	Modern Organic Chemistry II	
03-231/232	Honors Biochemistry	9
09-xxx	Approved Upper Level Chemistry Course (must be 09-3xx or higher but see exclusions noted below)	

Courses in this section (part B above) can not be counted toward the minor if they are required **in any way** by the student's primary department or towards an additional major or minor other than as a free elective. For example, students majoring in Biological Sciences can not double count 03-231 (or 03-232), 09-208 (or 09-222), or 09-218 (or 09-220) toward the elective courses for the minor in chemistry. Chemical engineering majors can not count 03-231 (or 03-232) or a chemistry course that is used to satisfy that department's required chemistry or advanced chem/biochem elective. Also, chemical engineering majors can not use 09-344, 09-345 or 09-214 due to the similarity of these courses to 09-347 Advanced Physical Chemistry, which is required by the chemical engineering department.

09-231 Mathematical Methods for Chemists, does not count towards the minor in chemistry. The undergraduate research course 09-445 Undergraduate Research and 09-435 Independent Study Chemistry cannot be used for the minor.

Transfer credit will be accepted only for the prerequisite 09-105, 09-106 and 09-217. All other classes towards the chemistry minor must be completed at Carnegie Mellon University.

Transfer Credit for Chemistry Courses

1. Requests for transfer credit for chemistry classes taken at other institutions should be made to Karen Stump, the Director of Undergraduate Studies in the Department of Chemistry. Students making such requests should follow the policies and procedures in place within their home colleges in assembling materials for such requests. Consult with your advisor on the appropriate steps.
2. Requests should be placed before paying tuition for a class in case transfer credit is denied. Allow 1-2 weeks for approval.
3. At minimum requests must be accompanied by a complete syllabus including the textbook that will be used, a detailed list of topic areas and an indication of whether or not the course is part of the curriculum for science majors at the other institution. Check to ensure that the institution is on a semester system. Most school on a quarter system (many in the UC system of schools) teach general chemistry and organic chemistry over three quarters each; therefore one of these classes would not be equivalent to one CMU class.
4. No transfer credit will be awarded for the laboratory classes required for the chemistry or biology major at Carnegie Mellon University, 09-207, 09-221, 09-208, 09-222, 09-321, 09-323 and 09-322. Requests for transfer credit for 09-101, Introduction to Experimental Chemistry, will be accepted with the appropriate documentation.

5. In assessing the suitability of courses for transfer credit, the following factors are considered:
    - The rigor of the course must be comparable to that offered at Carnegie Mellon. This is usually assessed via the quality of the institution and its chemistry program, the textbook used and the amount of time spent on topic areas.
    - The topic areas should match to a degree of at least 80% those covered in the comparable course at Carnegie Mellon University.
6. 09-105 Introduction to Modern Chemistry I focuses primarily on structure and bonding. Detailed topics include the following:
    - History and Conceptual Basis of Modern Chemistry
    - Radiation, Quantum Mechanics, and Atomic Structure
    - Periodic Table and Trends in Elemental Properties (including discussion of exceptions to trends)
    - Bonding (bond polarity)
    - Lewis Structures (octet rule and exceptions; formal charge)
    - Resonance Structures
    - Molecular shapes
    - Molecular Polarity
    - Naming compounds
    - Interparticle (intermolecular) forces and comparing physical properties from them
    - Valence Bond (Localized Electron) and Molecular Orbital Theory
    - Determining number of moles and chemical formulas
    - Writing and balancing chemical equations (in particular completing combustion and double displacement reactions – including acid-base and precipitation reactions)
    - Stoichiometry – limiting reactant and percentage yield
    - Gases (mainly ideal) and stoichiometric applications involving them
    - Phase transitions
    - Solutions (determining concentrations, dilution problems, stoichiometric applications, application of solubility rules to determine if a precipitate forms)
    - Acid-base reactions, titrations and other stoichiometric applications of acid-base reactions
    - Oxidations Numbers and Redox Reactions/Titrations (including balancing redox reactions) and other stoichiometric applications of redox reactions
    - Colligative Properties; Mixtures and Distillation
    - Transition Metal Complexes and Crystal Field Theory (including crystal field stabilization energy and optical properties)
7. 09-106 Modern Chemistry II focuses primarily on thermodynamics, kinetics and equilibrium. Detailed topic areas include the following.
    - Thermochemistry and Thermodynamics (First, Second, and Third Laws, with gas expansion/compression applications, including reversible, adiabatic processes)
    - Internal energy, enthalpy, entropy, Gibbs Free energy, and determination of spontaneity
    - Kinetics : Determination of rate, order, rate laws (including application of pseudo-rate laws, application of integrated rate law to determine order, relationship between time and amount in a reaction, and half-life
    - Reaction mechanisms – applying fast equilibrium and steady-state approximations to determine rate law consistent with mechanism
    - Chemical Equilibrium : determination of Q and K expressions, determination of direction in which reaction proceeds to achieve equilibrium (using Q and Le Chatelier's principles, quantitative calculations to determine K or amounts at various stages, dependence of K on temperature, relationship between Gibbs Free energy, Q, and K)
    - Acid-Base Equilibria: writing dissociation equilibrium reactions and acid-base "neutralization" reactions, autoionization of water (determination of pH and pOH, use of K_w), writing K_a and K_b expressions from dissociation equilibria, quantitative equilibrium calculations for weak acids and bases, titrations between strong species, strong-weak species, and weak-weak species, buffers (calculations of pH and amounts, including how to make a buffer), polyprotic species (quantitative applications and titrations), solubility and precipitation equilibria, determination of K_{sp} expressions and quantitative applications of those expressions, complex ion formation equilibria, emphasis is placed on equilibrium problems that involve multiple types of simultaneous equilibria
    - Electrochemistry: Electrochemical cell notation and writing half-reactions from it, Faraday constant to connect number of moles of electrons / reaction amounts with current, connection of Gibbs Free Energy to cell voltage (potential) at equilibrium and non-equilibrium conditions, determination of *K*'s (acid-base, solubility constants) or amounts using Nernst equation in concentration cells (*K* for cell reaction)

Academic Advising

"*I loved the tight-knit community within the Chemistry department, where I was able to go to my advisor's house for dinner, befriend many other Chemistry majors and flex my acting skills (for the first time) through the annual departmental murder mystery.*" *~ 2018 Chemistry B.S.*

Building meaningful relationships related to your personal, academic and professional development should be a key component of your undergraduate experience. In the Department of Chemistry we believe that strong academic advising is key in facilitating this process. The Director of Undergraduate Studies is a Teaching Professor of Chemistry who acts as the academic advisor for all students with majors, additional majors and minors in chemistry. MCS students transition from their first year advisors in the Dean's Office to their department advisor once they declare their majors, generally in the spring of their first year.

In the Department of Chemistry we are committed to the MCS philosophy that holistic advising with attention to the development of the whole person in all dimensions is key to success at CMU. Your academic advisor is certainly available for the more transactional processes such as developing a course schedule that allows you to make appropriate progress towards your degree. However more importantly she is also available to both be a resource and to point you towards additional connections to enable success in all aspects of your experience. You are encouraged to connect with your advisor early and build this relationship through scheduled and impromptu visits and e-mail, social events throughout the year as well as in the classroom. You will engage with your advisor in classes and seminars throughout your time as a major, facilitating a strong working relationship that will promote discussions of your successes, challenges and areas related to your health and well-being.

"*I loved how supportive the faculty were. They were very responsive when I had questions and they helped me discover what I'm passionate about.*" *~ 2018 Chemistry B.S.*

In the Department of Chemistry most students find additional faculty mentors in small, personalized classroom experiences but even more significantly through undergraduate research where participation generally exceeds 95% in any given graduating class.

Faculty

ASHOK AJOY, Assistant Professor of Chemistry – Ph.D., University of California at Berkeley; Carnegie Mellon, 2020–

WILLIAM ALBA, Associate Teaching Professor of Chemistry and Director of the Advanced Placement/Early Admission Program and Assistant Dean for Diversity of Mellon College of Science – Ph.D., University of California at Berkeley; Carnegie Mellon, 2005–

BRUCE A. ARMITAGE, Professor of Chemistry, Co-Director Center for Nucleic Acids Science and Technology – Ph.D., University of Arizona; Carnegie Mellon, 1997–

RAVICHANDRA BACHU, Assistant Teaching Professor of Chemistry at Carnegie Mellon University-Qatar – Ph.D., Hunter College and The Graduate Center, CUNY; Carnegie Mellon, 2015–

STEFAN BERNHARD, Professor of Chemistry – Ph.D., University of Fribourg (Switzerland); Carnegie Mellon, 2009–

MARK E. BIER, Research Professor of Chemistry and Director of the Center for Molecular Analysis – Ph.D., Purdue University; Carnegie Mellon, 1996–

EMILE BOMINAAR, Associate Research Professor of Chemistry – Ph.D., University of Amsterdam (The Netherlands); Carnegie Mellon, 1994–

MARCEL P. BRUCHEZ, Professor of Biological Sciences and Chemistry, Director, Molecular Biosensor and Imaging Center – Ph.D., University of California, Berkeley; Carnegie Mellon, 2006–

TERRENCE J. COLLINS, Teresa Heinz Professor in Green Chemistry and Director of the Institute for Green Science – Ph.D., University Auckland, (New Zealand); Carnegie Mellon, 1988–

SUBHA R. DAS, Associate Professor of Chemistry – Ph.D., Auburn University; Carnegie Mellon, 2006–

NEIL M. DONAHUE, Thomas Lord University Professor of Chemistry, Professor of Chemical Engineering and Engineering and Public Policy and Director of the Steinbrenner Institute for Environmental Education and Research – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2000–

SIMON FAULKNER, Assistant Teaching Professor of Chemistry at Carnegie Mellon University- Qatar – Ph.D., University College London (United Kingdom); Carnegie Mellon, 2019–

REBECCA FREELAND, Associate Head, Department of Chemistry – Ph.D., Carnegie Mellon; Carnegie Mellon, 1993–

ROBERTO GIL, Research Professor of Chemistry and Director of the NMR Facility – Ph.D., Córdoba National University (Argentina); Carnegie Mellon, 2002–

SUSAN T. GRAUL, Associate Teaching Professor of Chemistry – Ph.D., Purdue University; Carnegie Mellon, 1992–

YISONG (ALEX) GUO, Assistant Professor of Chemistry – Ph.D., University of California at Davis; Carnegie Mellon, 2014–

MICHAEL P. HENDRICH, Professor of Chemistry – Ph.D., University of Illinois; Carnegie Mellon, 1994–

OLEXANDR ISAYEV, Assistant Professor of Chemistry – Ph.D., Jackson State University; Carnegie Mellon, 2020–

RONGCHAO JIN, Professor of Chemistry – Ph.D., Northwestern University; Carnegie Mellon, 2006–

ANNA KIETRYS, Assistant Professor of Chemistry – Ph.D., Polish Academy of Sciences; Carnegie Mellon, 2020–

HYUNG J. KIM, Professor of Chemistry – Ph.D., State University of New York at Stony Brook; Carnegie Mellon, 1992–

TOMASZ KOWALEWSKI, Professor of Chemistry – Ph.D., Polish Academy of Sciences (Poland); Carnegie Mellon, 2000–

MARIA KURNIKOVA, Associate Professor of Chemistry – Ph.D., University of Pittsburgh; Carnegie Mellon, 2003–

DANITH LY, Professor of Chemistry – Ph.D., Georgia Institute of Technology; Carnegie Mellon, 2001–

KRZYSZTOF MATYJASZEWSKI, J.C. Warner University Professor of Natural Sciences and Co-Director of the Center for Polymer-Based Protein Engineering and Director of the Center for Macromolecular Engineering – Ph.D., Polish Academy of Sciences (Poland); Carnegie Mellon, 1985–

KEVIN NOONAN, Associate Professor of Chemistry – Ph.D., University of British Columbia (Canada); Carnegie Mellon, 2011–

LINDA A. PETEANU, Professor and Head Department of Chemistry – Ph.D., University of Chicago; Carnegie Mellon, 1992–

GIZELLE SHERWOOD, Assistant Teaching Professor – Ph.D. , Carnegie Mellon University; Carnegie Mellon, 2009–

GLORIA SILVA, Associate Teaching Professor of Chemistry – Ph.D., Universidad Nacional de Córdoba (Argentina); Carnegie Mellon, 2002–

KAREN H. STUMP, Teaching Professor of Chemistry and Director of Undergraduate Studies and Laboratories – M.S., Carnegie Mellon University; Carnegie Mellon, 1983–

RYAN SULLIVAN, Associate Professor of Chemistry and Mechanical Engineering and Associate Director of the Institute of Green Science – Ph.D., University of California at San Diego; Carnegie Mellon, 2012–

STEFANIE SYDLIK, Assistant Professor of Chemistry – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2015–

LEONARD VUOCOLO, Associate Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2005–

NEWELL WASHBURN, Associate Professor of Chemistry and Biomedical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 2004–

DAVID YARON, Professor of Chemistry – Ph.D., Harvard University; Carnegie Mellon, 1992–

Emeriti

GUY C. BERRY, University Professor Emeritus of Chemistry and Polymer Science – Ph.D., University of Michigan; Carnegie Mellon, 1960–

ALBERT A. CARETTO JR., Professor Emeritus of Chemistry – Ph.D., University of Rochester; Carnegie Mellon, 1959–

JOSEF DADOK, Professor Emeritus of Chemical Instrumentation – Ph.D., Czechoslovak Academy of Sciences; Carnegie Mellon, 1967–

PAUL J. KAROL, Professor Emeritus of Chemistry – Ph.D., Columbia University; Carnegie Mellon, 1969–

MIGUEL LLINAS, Professor Emeritus of Chemistry – Ph.D., University of California at Berkeley; Carnegie Mellon, 1976–

ECKARD MÜNCK, Professor Emeritus of Chemistry – Ph.D., Technical University of Darmstadt (Germany); Carnegie Mellon, 1990–

GARY D. PATTERSON, Professor Emeritus of Chemistry – Ph.D., Stanford University; Carnegie Mellon, 1984-.–

STUART W. STALEY, Professor Emeritus of Chemistry – Ph.D., Yale University; Carnegie Mellon, 1986–

CHARLES H. VAN DYKE, Associate Professor Emeritus of Chemistry – Ph.D., University of Pennsylvania; Carnegie Mellon, 1963–

Adjunct Faculty

CATALINA ACHIM, NSF Program Director and Adjunct Professor of Chemistry – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2001–

BERNARD CRIMMINS, Adjunct Associate Professor of Chemistry and Associate Professor, Department of Civil Engineering, Clarkson University and President of Academic Environmental/Analytical Consulting Services (AEACS), LLC. – Ph.D., University of Maryland; Carnegie Mellon, 2018–

JOHN PETERSON MYERS, CEO and Chief Scientist of Environmental Health Sciences – Ph.D., University of California at Berkeley; Carnegie Mellon, 2010–

JAMES PETERSON, Adjunct Associate Professor of Chemistry and Associate Professor of Environmental and Occupational Health at the University of Pittsburgh – Ph.D., University of Essex, UK; Carnegie Mellon, 2004–

Courtesy

MICHAEL BOCKSTALLER, Professor of Materials Science Engineering and Faculty of Chemistry – Ph.D., Johannes Gutenberg University (Germany); Carnegie Mellon, 2005–

ALEX EVILEVITCH, Associate Professor of Physics and Faculty of Chemistry – Ph.D., Lund University; Carnegie Mellon, 2009–

ANDREW GELLMAN, Thomas Lord Professor of Chemical Engineering, Faculty of Materials Science Engineering and Chemistry; Co-Director W.E. Scott Institute for Energy Innovation – Ph.D., University of California, Berkeley; Carnegie Mellon, 1992–

NOA MAROM, Assistant Professor of Materials Science Engineering and Faculty of Chemistry – Ph.D., Weizmann Institute of Science (Israel); Carnegie Mellon, 2016–

GORDON RULE, Professor of Biological Sciences and Head of CMU Qatar Biological Sciences Program and Faculty of Chemistry – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1995–

JAMES SCHNEIDER, Professor of Chemical Engineering and Faculty of Biomedical Engineering and Chemistry – Ph.D., University of Minnesota; Carnegie Mellon, 1999–

ALAN S. WAGGONER, Maxwell H. & Gloria C. Connan Professor of Life Sciences, Faculty of Biomedical Engineering and Chemistry – Ph.D., University of Oregon; Carnegie Mellon, 1982–

LYNN WALKER, Professor of Chemical Engineering and Faculty of Chemistry and Materials Science Engineering – Ph.D., University of Delaware; Carnegie Mellon, 1997–

JOHN L. WOOLFORD JR., Professor of Biological Sciences; Co-Director of CNAST and Faculty of Chemistry – Ph.D., Duke University; Carnegie Mellon, 1979–

Department of Chemistry Courses

About Course Numbers:

Each Carnegie Mellon course number begins with a two-digit prefix that designates the department offering the course (i.e., 76-xxx courses are offered by the Department of English). Although each department maintains its own course numbering practices, typically, the first digit after the prefix indicates the class level: xx-1xx courses are freshmen-level, xx-2xx courses are sophomore level, etc. Depending on the department, xx-6xx courses may be either undergraduate senior-level or graduate-level, and xx-7xx courses and higher are graduate-level. Consult the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet) *each semester for course offerings and for any necessary pre-requisites or co-requisites.*

09-101 Introduction to Experimental Chemistry
Summer: 3 units
This is a seven week chemistry laboratory course that is designed to introduce students to some basic laboratory skills, techniques, and equipment commonly used in experimental chemical investigations. The experiments will apply concepts in organic synthesis, quantitative analysis using visible spectrophotometry, kinetics, acid-base chemistry, thermochemistry, transition metal chemistry, chromatography, and protein biochemistry. 1 hr. lec., 3 hrs. lab.

09-103 Atoms, Molecules and Chemical Change
Fall: 9 units
This is a one-semester introductory college level course designed for non-science and engineering majors who have had a high school course in chemistry. Students with primary or additional majors in MCS, CIT or SCS will not be allowed to enroll. Chemistry topics will be introduced on an as needed basis in the contexts of air pollution, the ozone layer, global warming, acid rain, safe drinking water, alternative energy sources, plastics, and drug design. Students will apply concepts in topics such as the classification of matter, the relationship between matter and energy, atomic theory and the Periodic Table, chemical bonding, molecular shapes, molecular polarity, interparticle forces, chemical reactions, stoichiometry, properties of aqueous solutions, acid-base chemistry, redox chemistry, and organic chemistry. Students will gain an understanding of how chemistry impacts major environmental, social, political, and economic issues that we encounter daily. They will also learn to apply chemical concepts to new situations or contexts. Students with credit for 09-105 or more advanced chemistry courses will not be allowed to enroll in this course. 3 hrs. lec., 1 hr. rec.

09-105 Introduction to Modern Chemistry I
Fall and Spring: 10 units
